A few further autographs do not fit into the categories outlined above. They include a rough score of Daniel Roseingrave's *Lord thou art become gracious* (*GB-Och* 1215), an early copy in *GB-Lbl* Add.30931 of Pelham Humfrey's anthem *By the waters of Babylon*, arranged with a somewhat inept organ accompaniment, and a canon by John Bull in a manuscript now unavailable (illustrated in T. Dart, 'Purcell and Bull', *MT*, civ (1963), 30–31). By no means all of Purcell's major works exist in autographs or even reliable scribal copies. The large-scale dramatic works, including *Dido and Aeneas*, are particularly badly represented; some of the surviving sources apparently derive from 18th-century revivals.

8. Portraits. For a comprehensive survey of portraits allegedly depicting Purcell see Zimmerman (1967). The following extant portraits seem to be authentic; some are the sources of later copies:

(i) Portrait in oils, head and shoulders, showing Purcell as a young man (fig.3). Formerly attributed to Godfrey Kneller. National Portrait Gallery, London, no.2150; Zimmerman, pl.III.H.

(ii) Engraving, head and shoulders, showing Purcell in his 24th year. By Thomas Cross junior, after unknown original. Frontispiece of *Sonnata's of III. Parts* (London, 1683); Zimmerman, pl.II.C.

(iii) Portrait in black chalk heightened with white, head (fig.6). Attributed to John Closterman, formerly attributed to Kneller. National Portrait Gallery, London, no.4994; Zimmerman, pl.III.F.

(iv) Charcoal sketch, head, related to (III). British Museum, London, Prints and Drawings Department; Zimmerman, pl.III.G.

(v) Portrait in oils, head and shoulders. By or after John Closterman, 1695. The original of the frontispiece engraving in *Orpheus Britannicus*, i (London, 1698; fig.4). National Portrait Gallery, London, no.1352; Zimmerman, pl.IV.P.

THEORETICAL WORKS

'A Brief Introduction to the Art of Descant, or Composing Musick in Parts', in J. Playford: *An Introduction to the Skill of Musick* (London, 12/1694/*R*) [also rev. the rest of Playford's treatise, which incl. material by T. Campion, C. Simpson, J. Playford and others]

(4) **Daniel Purcell** (*b c*1664; *d* London, bur. 26 Nov 1717). Composer and organist, brother of (3) Henry Purcell(ii). He was a chorister in the Chapel Royal (where payments are recorded in 1678 and 1682) and some time

around 1689–90 was appointed organist of Magdalen College, Oxford, where he was a well-known musician and socialite. Here he wrote much of his early music, including some anthems and an ode for the 1693 St Cecilia's Day celebrations. After his brother Henry died, Daniel moved to London, although he maintained his Oxford connections, writing odes for St Cecilia's Day in 1698, 1699 and 1707. In London he contributed music to over 40 plays, the bulk of it before 1700. His last such contribution was in 1707, as he was suffering because of the growing vogue for italianate opera at that time; his only contribution to this genre, the advertised setting of an adaptation of Quinault's *Orlando furioso* (1707), was never produced and may never even have been written. In 1701 he was one of the competitors for a setting of Congreve's masque *The Judgment of Paris*, and was awarded third prize. His sonatas for one or two recorders (1708–10) were performed in concerts at York Buildings. He was organist at St Dunstan's-in-the-East, and from 1713 was also organist at St. Andrew's, Holborn, where Dr Henry Sacheverell, a former colleague at Magdalen College, was vicar. Also in 1713 Daniel published his collection of Italian-style cantatas with English texts, one of the first of its type. His set of psalm interludes, *The Psalms Set Full*, was published posthumously. Although he was a victim of invidious comparison with his brother Henry, Daniel was a talented composer whose style, while perhaps too ornate, is never dull or incompetent.

WORKS

all printed works published in London

STAGE

plays with incidental music and songs unless otherwise stated

Masque in Act 5 of (3) H. Purcell's The Indian Queen (semi-op, J. Dryden, R. Howard), 1695, *GB-Lb*, 1696[5]

The Psalms Set Full, org/hpd (1718)
3 sonatas, tpt, str, *GB-Lbl*

Doubtful: Jig, g, kbd, see under 'Keyboard' in (3) Henry Purcell (ii)

(5) **Edward Purcell** (*b* Westminster, London, bap. 6 Sept 1689; *d* London, 1 July 1740). Organist and composer, son of (3) Henry Purcell (ii). He became an orphan on the death of his mother in February 1706. In her will she left him music and instruments, and mentioned that in accordance with her husband's wishes she had given him a good education. He became organist of St Clement Eastcheap, in London at the end of 1711, serving for the rest of his life. He applied unsuccessfully to succeed his uncle Daniel as organist of St Andrew's, Holborn, on 19 February 1718 and again on 3 April 1719, although he was successful at St Margaret's, Westminster, on 8 July 1726. He was a founder-member of the Royal Society of Musicians in 1739, but died the next year and was buried in St Clement Eastcheap near the organ gallery door. He published two songs, though the chants often attributed to him seem to be by an earlier namesake, perhaps his uncle Edward.

(6) **Edward Henry Purcell** (*d* London, bur. 5 Aug 1765). Organist, son of (5) Edward Purcell. He was a chorister in the Chapel Royal in 1737, and succeeded his father as organist of St Clement, Eastcheap in 1740. He was also organist of St Edmund, King and Martyr between 10 September 1747 and 10 October 1753, when he moved to St John, Hackney. He was buried near the organ gallery in St Clement Eastcheap.

PETER HOLMAN, ROBERT THOMPSON (1–3, 5–6, bibliography), MARK HUMPHREYS (4)

Purcell Room. London concert hall on the South Bank, opened in 1967. *See* LONDON, §VII, 3.

Purcell Society. English music publishing society. It was founded in February 1876 for the purpose, as the original prospectus states, 'of doing justice to the memory of Henry Purcell; firstly, by the publication of his works … and secondly, by meeting for the study and performance of his various compositions'. The idea of performances was abandoned at an early stage, and the society assumed the form simply of a body of subscribers to its publications, all of which from the start have been produced by Novello.

In 1887, by which time only two volumes had appeared, the society was reorganized with W.H. Cummings as editor and W.B. Squire as honorary secretary. Squire continued in office until 1922, by which time 20 more volumes had appeared. He was succeeded by Gerald M. Cooper and in 1923–8 four more were published. Publication of the main series was then suspended, but in 1937 Cooper began issuing, at his own expense, the Purcell Society Popular Edition in a format for practical performance.

The Society was revived in 1950 by Edward J. Dent and the remaining works were published in six volumes between 1957 and 1965, making 32 volumes in all. A programme of revision of all the volumes, employing a handier reduced format, had already been started and is still in progress. Through its then secretary, Curtis Price, the Society was responsible for setting up the Purcell Tercentenary Committee which coordinated the celebrations of the tercentenary of Purcell's death in 1995.

WATKINS SHAW/MARGARET LAURIE

Pürck [Pürk], **Wenzel Raimund (Johann).** *See* PIRCK, WENZEL RAIMUND.

Purday. English family of music publishers and musicians. Thomas Purday (*b* Rye, 30 Nov 1765; *d* Sandgate, nr Folkestone, 13 Oct 1838), a schoolmaster and subsequently bookseller in Sandgate, moved to London about 1805 and established with S.J. Button the music publishing firm of Purday & Button, at 75 St Paul's Churchyard, being the direct successor there of the important Thompson firm (founded 1746). It was known as Button & Purday from about 1807 to 1808, when Purday withdrew, returning to Sandgate, where he continued chiefly as bookseller and stationer (with a brief period in Margate, 1815–17). Button meanwhile went into partnership with John Whitaker as Button & Whitaker. Purday also composed sacred music and included many of his compositions in a substantial compilation he edited entitled *Harmonia sacra Londinensis*, which his firm published about 1805. Purday's eldest son, Thomas Edward Purday (*b* Folkestone, 14 May 1791; *d* Folkestone, 27 Oct 1873), traded in sheet songs from about 1834 to 1862 at 50 St Paul's Churchyard, London, where he took over the music publishing part of Collard & Collard, having previously been with Clementi & Co. The business was subsequently in Oxford Street as Thomas Edward Purday & Son (*c*1862–4).

Thomas Purday's second son, Zenas Trivett Purday (*b* Folkestone, 14 Oct 1792; *d* Sandgate, 11 June 1866), succeeded William Hodsell at John Bland's old shop in High Holborn in 1831, and did a large music trade, principally in humorous sheet songs. He closed the firm down in 1860 and spent his last years running the family bookselling business in Sandgate.

Charles Henry Purday (*b* Folkestone, 11 Jan 1799; *d* London, 23 April 1885), the youngest son of Thomas Purday, was a composer, writer, lecturer on music, publisher and singer. His compositions include songs, rounds, vocal studies and sacred music, although he is now remembered only by his tune 'Sandon' for Newman's hymn *Lead, kindly light*, first published in *The Church and Home Metrical Psalter* (1860), which Purday edited. He was for some time conductor of psalmody at the Scottish Church in Crown Street, Covent Garden. To improve congregational singing, he suggested providing everyone with tune books in the preface to *One Hundred and One Popular Psalm and Hymn Tunes* (1860). A concern for musical education is evident also in a letter to *The Musical World* of 2 December 1836, where he advocated introductory talks at concerts as a means of increasing an audience's appreciation, particularly of instrumental music. In 1835 Purday edited the 12 monthly issues of the short-lived periodical *The Musical Magazine*. His many editions and arrangements of sacred and secular vocal works were later published by his own firm, which was founded in 1854. He went bankrupt in November 1857, but the business was soon re-established and continued until 1870 when Purday apparently retired. In his retirement he advocated reform of the copyright laws, seemingly because of injustices he had himself suffered, and in 1877 he published *Copyright: a Sketch of its Rise and Progress*. He also assembled an interesting annotated volume of editions of *The Old English Gentleman*, a song with which he had been involved since about 1834 (now in *GB-Lbl*).

Humphries-SmithMP

J.A. Parkinson: *Victorian Music Publishers: an Annotated List* (Warren, MI, 1990)

PETER WARD JONES, R.J. GOULDEN

Purdie, John (*d* nr Stonehaven, 23 Aug 1891). Scottish music publisher, son of ROBERT PURDIE.

Purdie, Robert (*fl* 1809–*c*1837). Scottish music publisher. He was a music teacher at Jollie's Close, Canongate, Edinburgh, in 1804. In 1809 he opened a music shop and publishing house in Princes Street and by about 1820 he had become the leading music publisher in Edinburgh. Besides a great deal of sheet music, he issued the collection *The Scotish Minstrel* in six volumes (1821–4), edited by Robert Archibald Smith (1780–1829); many of the lyrics were contributed by Lady Nairne under the pseudonym 'Mrs Bogan of Bogan'. Purdie also published Smith's *The Irish Minstrel* (*c*1825) and *Select Melodies with Appropriate Words* (*c*1827). He acquired and reissued (in conjunction with Alexander Robertson & Co.) several of the Gow family's works after the bankruptcy of Nathaniel Gow in 1827.

About 1837 the business passed to Purdie's son John (*d* nr Stonehaven, 23 Aug 1891), who also published sheet music for the drawing-room market until 1887. Then Methven, Simpson & Co. continued it until 1967. (*KidsonBMP*, 191–2)

FRANK KIDSON/WILLIAM C. SMITH/DAVID JOHNSON

Pure intonation. *See* JUST INTONATION.

Purfling (Fr. *filet*; Ger. *Einlage*; It. *filetto*). A narrow inlay of wood inset in a trough cut just inside the border edge of the belly and back of certain instruments, notably viols and violins (for illustration *see* VIOLIN, fig.1). This inlay consists of three narrow strips of wood, the middle one being white or yellow and the outer ones being black. The purfling helps to protect the edges of the instrument and serves also as ornamentation. In cheap violins the purfling is sometimes painted on, maintaining the decorative element but reducing the function of the purfling as a strengthening of the edges. Sometimes instrument makers indulged their love for the ornamental by creating a double line of purfling (this is especially characteristic of Maggini violins) or additional inlay in the form of geometric designs. Stradivari (among others) occasionally adorned his violins by inlays of mother-of-pearl as part of the purfling.

DAVID D. BOYDEN

Purvis, Richard (Irven) (*b* San Francisco, 25 Aug 1913; *d* San Francisco, 25 Dec 1994). American organist. After early studies in the piano and the organ he entered the Curtis Institute of Music in Philadelphia in 1934, studying the organ with Alexander McCurdy and conducting with Fritz Reiner. Further studies were with Josef Levine in New York, Bairstow in England, Marcel Dupré in France and, after his graduation from Curtis in 1940, with Charles Courboin and Charles Heinroth. During World War II, while serving as a bandmaster with the 28th Infantry Division, he was captured and held as a prisoner of war for six months. After the war an appointment to St Mark's Lutheran Church took him back to his native city, and in 1947 he was appointed to Grace Cathedral, where he helped to form a cathedral school for boys, thus continuing the all-male choir tradition. Purvis's long and distinguished career was marked by elegant service playing, conducting and composition. After his retirement in 1971 he continued to perform and compose. His compositions include a concerto for organ and orchestra, a partita on *Christ ist erstanden*, *Four Prayers in Tone* for organ and *The Ballad of Judas Iscariot* for choir and orchestra.

CHARLES KRIGBAUM

Puschman, Adam (*b* Görlitz, 1532; *d* Breslau [now Wrocław], 4 April 1600). German poet and Meistersinger. He began working as a tailor and later became a teacher. During his journeyman years he devoted himself to Meistergesang, first in Augsburg and later, between 1556 and 1560, in Nuremberg, where his instructor was Hans Sachs. From 1578 he lived in Breslau. Puschman wrote one comedy, *Von dem Patriarchen Jakob, Joseph und seinen Brüdern* (performed in 1583), 180 Meisterlieder, sacred and secular, and more than 30 *Meistertöne* (*see* TON (i)) for which he also composed the melodies. His importance for the history of Meistergesang rests primarily on his recodification of the artistic rules for Meistersinger (known as the *Tabulatur*) and the laws of the organization (the *Schulordnung*) in his *Gründtlicher Bericht des deudschen Meistergesangs* (Görlitz, 1571, 2/1596; a manuscript copy, dated 1584, is in his *Singebuch*).

More importantly, Puschman made several manuscript collections of the *Meistertöne* melodies which had hitherto almost exclusively been transmitted orally. The most famous of these was his large *Singebuch* (1588), which was in Breslau (Stadtbibliothek, MS 356) and has been missing since 1945. It was assembled after the model of the great 15th-century collection of Meistersinger melodies, the Colmarer Liederhandschrift, and contained 350 melodies. Further manuscripts containing melodies by Puschman are in Dresden and Strasbourg (*D-Dl* M 6 and M 207; *F-Sm* V.154/3).

HORST BRUNNER

Puschmann, Josef (*b* Červená Voda, 28 July 1738; *d* Olomouc, before 4 Feb 1794). Czech composer. From early childhood he learnt several instruments and soon began to compose. From 1750 he was a pupil at the Augustinian monastery in Brno, where he sang alto and played the violin. About 1762 he entered the service of Baron Skrbenský in Hošťálkovy, Silesia, as valet and musician, and in 1764 he married Josepha Hönigschmid. Three years later he transferred to Count Ignác Dominik Chorinský (1729–92) in Velké Hoštice, Silesia, whose castle orchestra he directed until 1777. For the Opava Minorites in 1768 he composed a sacred melodrama entitled *Singspiel über das Leben des … Heiligen Joseph von Copertin*. In 1773 Puschmann was sent by Count Chorinský to study in Vienna, and in 1777 he composed a cantata for two voices to celebrate the wedding of the count's daughter Marie with Erasmus Ludwig von Stahremberg, and in the same year he applied for the post of cathedral musical director in Olomouc to succeed Anton Neumann, taking it up the next year and holding it until his death.

Both as a person and as an artist Puschmann was the most remarkable of the Olomouc Cathedral musical directors. Apart from his duties in the cathedral, he took part in the musical academies which Archbishop Colloredo organized in his palace, and he continued to keep up his musical contacts with his former employer, Count Chorinský. He composed both secular and sacred music, of which his instrumental works are in an early Classical style with Rococo traits. His dramatic works and cantatas are known only through the printed librettos.

WORKS

all unpublished; MSS in CZ-Bm, KRa, OP

Instrumental: 7 syms., 4 for use as grads; 5 serenades; 4 partitas for wind insts; 1 vn conc.; 1 va conc.; 1 hpd conc., D, ed. J. Sehnal and P. Koukal: *Organologický sborník* (Prague, 1989), 132–7

Vocal: 13 masses; 1 requiem; 2 TeD; 2 lits; 14 miscellaneous church compositions

JIŘÍ SEHNAL

Pushee, Graham (*b* Sydney, 25 April 1954). Australian countertenor. While studying with David Parker in Sydney in 1973 he made his opera début, with the University of New South Wales Opera, as Oberon in the first Australian performances of *A Midsummer Night's Dream*, revealing marked theatrical gifts, an even and characterful tone and technical agility. In 1976 he sang the title role in Handel's *Orlando* with the same company. On the basis of these opera roles and appearances in early music performances with the Sydney Renaissance Players, he received a Churchill Fellowship, enabling him to study with Paul Esswood in London and at the Schola Cantorum Basiliensis. Settling in Switzerland, he appeared in the title roles of *Poro*, *Orlando*, *Admeto*, *Giulio Cesare*, *Scipione* and *Il pastor fido* at the Karlsruhe Handel Festival. He returned to Australia in 1994 to take the title role in *Giulio Cesare* in a highly praised new production for the Australian Opera, and also sang the role in his Paris Opéra début and for Houston Grand Opera. He made his British début in 1994 with Opera North as Andronicus in Handel's *Tamerlano*, returned to the role of Oberon for Karlsruhe, Wiesbaden, Leipzig and Turin and sang Endimione in Cavalli's *La Calisto* under René Jacobs at La Monnaie in Brussels (which he recorded) and at the Deutsche Staatsoper, Berlin. Pushee's repertory also includes Ruggiero in *Alcina*, the title role in *Rinaldo* and roles in Monteverdi and Purcell. Among his recordings are a disc of Handel arias, excerpts from *Giulio Cesare* and a video of the complete opera.

ROGER COVELL

Pushkin, Aleksandr Sergeyevich (*b* Moscow, 26 May/6 June 1799; *d* St Petersburg, 29 Jan/10 Feb 1837). Russian poet. Two factors determine the enormous appeal that his writings have had for Russian composers – the extraordinary breadth and variety of their character and the purely musical appeal of their language. Pushkin combined a knowledge of French and English literature (Shakespeare and Byron in particular) and the sophistication characteristic of the upper class in Moscow and St Petersburg with a deep attachment to the Russian countryside and Russian legends and fairy stories. A liberal by nature, he was always suspect to the authorities and spent six years of his short life relegated to the provinces. His writings, prose stories, verse and verse dramas show a protean ability to identify himself with the most widely different characters and temperaments; and the lively, irreverent, sardonic tone of his correspondence, though echoed closely in such works as *Graf Nulin* and the *Gavriliada*, *The Golden Cockerel* and *The Queen of Spades*, disappears entirely not only in many of the lyrics but in such deeply compassionate and profound dramas as *Boris Godunov*, *The Miserly Knight* and *Mozart and Salieri*, where Shakespeare's influence is unmistakable. In his handling of the Don Juan legend (*The Stone Guest*) Pushkin combined a Byronic disillusion and worldliness of tone with astonishingly original touches of erotic psychology and an ability to evoke atmosphere by the most economical means.

In his use of words Pushkin emancipated the Russian language from its adolescent conventions and achieved a simplicity and directness of speech and imagery that have few parallels outside the language of ancient Greece. His ear, untrained and uninterested in music proper, had a unique instinct for combining, contrasting and exploiting the multiple vowel sounds and the extraordinary wealth

of liquid, sibilant and guttural consonants that give the Russian language its beauty and variety, while he retained a simplicity and a naturalness of expression that often give his poetry and prose an almost conversational character.

Each composer has taken what he needed from Pushkin, beginning with his contemporary Glinka, who set an early fairy story in the form of a narrative poem (*Ruslan and Lyudmila*). Dargomïzhsky also set a fairy story and then took *The Stone Guest* for his attempt to write an opera in a style characterized by César Cui as 'melodic recitative'. Musorgsky chose a historical drama (*Boris Godunov*), Rimsky-Korsakov two fairy stories (*Tsar Saltan* and *The Golden Cockerel*) and one of the dramatic scenes (*Mozart and Salieri*). Tchaikovsky took Pushkin's somewhat Byronic verse novel (*Yevgeny Onegin*), a verse historical romance (*Mazepa*) and a sardonic *conte* (*The Queen of Spades*), Rachmaninoff another of the dramatic scenes and the romantic narrative poem *The Gypsies* (*Aleko*). Stravinsky made his opera *Mavra* from the sardonic and mysterious *Little House at Kolomna*, while Glier and Asaf'yev have written ballets based on Pushkin's works, and Medtner's 32 songs to texts by Pushkin show both the fascination exercised by these lyrics and the difficulty of doing them justice. Pushkin's life has furnished the subject for Boris Shekter's opera *Puskin v Mikhaylovskom* ('Pushkin in Mikhaylovskoye', 1954–5, performed as *Pushkin v izgnanii*, 'Pushkin in Exile', 1958), and for Vladimir Kobekin's *Prorok: Pushkinskiy triptikh* ('The Prophet: a Pushkin Triptych', 1984), which incorporates settings of two of the 'little tragedies', and of reminiscences by Pushkin's contemporaries.

WORKS SET TO MUSIC

Andzhelo [Angelo]: op by A.V. Kuznetsov, 1894

Arap Petra Velikogo [Peter the Great's Moor]: op by Arapov, 1959; op by Lourié, 1961

Bakhchisarayskiy fontan [The Fountain of Bakhchisaray]: Kerim Girci, incid music by Cavos, 1825; Marie Potocká, op by Měchura, 1871; op by Fyodorov, Yekaterinoslav, 1895; op by Zubov, 1898; op op.46 by Arensky, 1899; op by A. Il'insky, excerpts perf. Moscow, 1899; op by Krïlov, 1912; op by Parusinov, 1912; ballet by Asaf'yev, 1934; Girey-Khan, op by Smetanin, 1934; radio op by Shaposhnikov, 1937, rev. 1946; incid music by Atovmyan, 1937; incid music by Vasil'yev, 1938; ov. by Y.K. Arnold'

Barïshnya–krest'yanka [Lady into Peasant Girl]: op by Larionov, St Petersburg, 1875; Ruses d'amour, ballet by Glazunov, 1898; op by Spassky, 1923; op by Biryukov, Moscow, 1947; Akulina, operetta by Kovner, 1948; ballet by Bruns, 1955; ballet by Asaf'yev

Boris Godunov: op by Musorgsky, St Petersburg, 1874; incid music by Shaporin, 1934, Prokofiev, 1936, Denbsky, 1937, Kenel, 1937, Slonov, 1937, Vasilenko, 1937, Kochurov, 1949, Kozlov

Domik v Kolomne [The Little House in Kolomna]: Mavra, op by Stravinsky, 1922; ballet by Asaf'yev, 1943

Dubrovskiy: op by Nápravník, 1895; incid music by Vlasov, 1937; incid music by Wolfenson, 1937

Graf Nulin [Count Nulin]: comic op op.44 by Lishen, 1876; op by Strelnikov, 1938; ballet by Asaf'yev, 1940–41; op by Koval, 1949

Grobovshchik [The Undertaker]: musical comedy by Yanovsky, 1923; comic op by Admoni-Krasny; ballet by Asaf'yev, 1941–3

Kamenniy gost' [The Stone Guest]: op by Dargomïzhsky, perf. 1872; incid music by Ferkelman, 1932, Shebalin, 1935, Asaf'yev, 1936, Gnesin, 1936, Denbsky, 1937, Kondrat'yev, 1937, Radchenko, 1937, Vlasov, 1937; op by Biryukov, 1941; ballet by Asaf'yev, 1943–6; sym. poem by Bunin, 1949; incid music also by Deshevov, Lobachev, Kryukov and Nikolayev

Kapitanskaya dochka [The Captain's Daughter]: op by Cui, Moscow, 1914; op by S.A. Katz, 1936–8, rev. 1946; radio op by Kryukov, 1944

Kavkazskiy plennik [The Prisoner of the Caucasus]: ballet by Cavos, St Petersburg, 1823; dramatic scenes by Alyab'yev, 1820s; op by Cui, 1883; ballet by Asaf'yev, 1936–7; sym. poem by Alekseyev

Medniy vsadnik [The Bronze Horseman]: Sym. no.10 by Myaskovsky, 1927; sym. poem by Barabshev, 1937; op by Popov, 1937; op by Asaf'yev, 1942; Suite, solo v, chorus, orch by Pozdneyev, 1942; vocal frag. by Dudkevich, 1949; ballet by Glière, 1949; 8 pf pieces by Beder

Metel' [Blizzard]: op by Dzerzhinsky, 1946

Motsart i Sal'yeri [Mozart and Salieri]: op by Rimsky-Korsakov, Moscow, 1898; incid music by Shebalin, 1937

Pikovaya dama [The Queen of Spades]: incid music by Cavos, 1836; op by Halévy, 1850; op by Tchaikovsky, St Petersburg, 1890; incid music (for film) by Prokofiev, 1934; film score by Auric, 1948

Pir Petra Velikogo [The Feast of Peter the Great]: ?cant. by Verstovsky, 1860; cant. by Afanas'yev

Pir vo vremya chumï [A Feast in Time of Plague]: op by Cui, 1901; incid music by Y.F. L'vova, 1932; op by Lourié, 1933, orch suite arr. 1943; incid music by Asaf'yev, 1936; suite by Pozdneyev, 1936; incid music by Kozlov, 1937; op by Tarnopolsky, 1937; op by Asaf'yev, 1940; op by Gol'denveyzev, 1942, perf. ?Moscow, 1945

Poltava: Maria ili Mazepa, op by Sokal'sky, 1859; Mazepa, op by Baron Vietinghof-Scheel, St Petersburg, 1858; op. by Tchaikovsky, 1884; orat by Vasileyev-Buglay, 1944; music (for radio) by Shebalin, 1945

Roslavev: op by M.M. Bagrinovsky, 1944

Rusalka: op by Dargomïzhsky, 1856; incid music by Kovner, 1937; incid music by Lobachev, 1937; music (for radio) by Shebalin, 1937

Ruslan i Lyudmila: ballet by Scholtz, 1821; op by Glinka, 1842; Volshebnoye zerkalo [The Magic Mirror], ballet by Koreshchenko, St Petersburg, 1903; Skazka [Story], incid music by Rimsky-Korsakov, 1879–80

Skazka o myortvoy tsarevne [The Story of the Dead Princess]; sym. poem by Yanovsky, 1902; op by Krasev, 1924; children's op. by Veysberg, 1937 (radio), Leningrad, 1941; incid music (for marionette play) by Gelfman, 1940; music (for radio) by Shebalin, 1944; op by Kotilko, 1946, perf. Saratov, 1947; op by Chernyak, 1947, perf. Moscow, 1957, rev.; ballet by Deshevov, 1949; children's op by Tzïbin, 1949; film music by Nikol'sky, 1951

Skazka o pope i rabotnike yego Balde [The Story of the Priest and his Workman Balda]: incid music by Oransky, 1926; incid music by Kochetov, 1937; radio op by Bakalov, Moscow, 1938; ballet by Chulaki, 1940

Skazka o Tsare Saltane [Tale of Tsar Sultan]: op by Rimsky-Korsakov, 1900; op by A.V. Nikol'sky, 1912

Skazka o zolotoy rïbke [The Story of the Golden Fish]: sym. poem by Krasnoperov, 1943; ballet by V.A. Aleksandrov, 1950s; incid music by Nikolayev, 1951

Skupoy rïtsar' [The Miserly Knight]: op by Rachmaninoff, 1921; incid music by Denbsky, 1937, Deshevov, 1937, Shebalin, 1937, Lobachev, Nikolayev; monologue, B solo, by Tikots, 1936

Stantsionnïy smotritel' [The Post Stage Master]: op by Kryukov, 1940; Postmeister Wyrin, op by F. Reuter, Berlin, 1947; ballet by Petrov, 1955

Torzhestvo Vakkha [The Triumph of Bacchus]: cant. by Dargomïzhsky, St Petersburg, 1846, rev. as lyric opera-ballet, Moscow, 1867

Tsïganï [The Gypsies]: op by Kashperov, 1850; op by Lishen, 1876; Aleko, op by Rachmaninoff, 1893; Aleko, op by Yuona, 1897; cant. by Khessin, 1899; op by Ferretto, Modena, 1900; op by Mironov, *c*1900; operatic scenes by Shefer, St Petersburg, 1901; op by Ziks, 1906; op by Galkauskas, St Petersburg, 1908; op by Leoncavallo, 1912; suite by Kalafati, 1936; music (for radio) by Shebalin, 1936; ballet by Vasilenko, 1936; incid music by Denbsky, 1937; sym. poem by Kreyn, 1937; ballet and orch suite by Sorokin, 1937; op by Kalafati, 1939–41

Vïstrel [The Shot]: op by S.K. Shtrassenburg, 1936

Yegipetskiye nochi [Egyptian Nights]: Kleopatra, ballet by Glière, 1905, perf. Moscow, 1926; ballet by Arensky, 1908; incid music by Prokofiev, 1934

Yevgeny Onegin [Eugene Onegin]: op by Tchaikovsky, 1879

Zhenikh [The Bridegroom]: op by I Blyum, *c*1900

Zolotoy petushok [The Golden Cockerel]: op by Krasev, 1907; op by Rimsky-Korsakov, Moscow, 1909; music for children's play, by Zolotaryov, 1923; incid music by Lobachev, 1937

MARTIN COOPER (text) APRIL FITZLYON (writings list)

Pustet. German firm of publishers. On 30 September 1826 Friedrich Pustet (*b* Hals, nr Passau, 25 Feb 1798; *d* Munich, 6 March 1882) founded the Pustet publishing firm and retail business in Regensburg (after 1833 the firm also produced paper). The publishing enterprise began with production of popular and academic literature on history and theology, but after 1845 it concentrated on liturgical books and thereby acquired an international reputation. Branches were founded in New York and Cincinnati in 1865 (they became independent concerns in 1912) and in Rome in 1898 (independent since 1916); Pope Pius IX appointed Pustet 'Typographus S. Sedis Apostolicae' in 1862. From 1883 until the publication of the Roman Editio Vaticana in the first decade of the 20th century, Pustet's liturgical books were regarded as the authoritative editions. The firm received a 30-year privilege for the production of all official hymnbooks (1868) and subsequently became 'Typographus Sacrorum Rituum Congregationis' (1870). Despite severe hostility the privilege was extended in 1898 for two years, but expired with the abolition of the so-called Medicaea. The company concurrently developed an equal interest in the publication of church music, serving the Regensburg movement for the restoration of church music; it issued J.G. Mettenleiter's *Enchiridion Chorale*, Proske's Musica Divina and Selectus Missarum and Haberl's continuation of Musica Divina and Repertorium Musicae Sacrae. The catalogue also contained many works by minor composers. After 1945 Pustet issued the new series Musica Divina (edited by Stäblein), Regensburger Tradition (Theobald Schrems), Die Chorsammlung (Haberl and E. Quak) and the collection of early organ pieces Cantantibus Organis (Eberhard Kraus). The firm acquired considerable importance by publishing periodicals and yearbooks of church music including the *Fliegende Blätter für katholische Kirchenmusik* (1866, later *Caecilienvereinsorgan*, 1911–37), *Musica sacra* (1868–1937) and the *Caecilien-Kalender* (1876, later *Kirchenmusikalisches Jahrbuch*, 1886–1932). It also published writings on church music by Haberl, Gottron, Johner, Karl Weinmann, Peter Wagner, Hugo Riemann and Kroyer. In 1978 Pustet was acquired by Feuchtinger and Gleichauf of Regensburg.

AUGUST SCHARNAGL

Put, Errijck de [Eryck de, Hendrik van]. *See* PUTEANUS, ERYCIUS.

Puteanus, Erycius [Ericus] [Putte, Eerryk de; Put, Errijck de; Put, Eryck de; Puy, Henry du; Put, Hendrik van; Putten, Hendrik van der] (*b* Venlo, 4 Nov 1574; *d* Leuven, 17 Sept 1646). Dutch humanist and writer on music. He entered the grammar school at Dordrecht in 1585, whence he moved in 1592 to the Gymnasium Tricoronatum at Cologne. He took the master's degree in the arts faculty of Cologne University in 1595 and obtained his baccalaureate in the law faculty of Leuven University in 1597. After receiving a doctorate in law at Padua University in 1600, he was for six years professor of rhetoric at the Schola Palatina in Milan. He returned to Leuven University in 1607 to succeed his teacher, Justus Lipsius, as professor of history, Roman literature and Roman law. In 1614 Archduke Albert appointed him governor of the nearby Brabantine ducal castle.

Besides more than 16,000 letters, Puteanus wrote over 90 works, both long and short, on theological, philosophical, historical and educational subjects. Among them is a treatise on music, *Modulata Pallas*, which also appeared in four adaptations, in places drastically abridged. The last, *Iter Nonianum*, takes its name from a villa outside Padua and is cast in the form of a dialogue on music conducted between Puteanus and a friend while on their way to it. Puteanus originally conceived the work as a concise musical primer for young people in Milan, but before publication he enlarged it into a comprehensive scholarly study. The salient feature is the extension of the Guidonian system of note names (*ut*, *re*, *mi*, *fa*, *sol*, *la*) by the addition of *bi* for the seventh note. The titles *Modulata Pallas*, *Musica Plejas* and *Musathena* are explained by Puteanus's diffuse and speculative explanations of the number seven, symbolized in antiquity by the goddess Pallas Athene and the Pleiads. His grammatical treatise *De distinctionibus syntagma* had, together with a shorter work by Justus Lipsius (*De distinctionibus epistola*), both printed in *Musathena*, some influence on Johann Mattheson's theory of musical incisions explained in *Critica Musica* (1722–5) and *Der volkommene Capellmeister* (1739).

THEORETICAL WORKS

Modulata Pallas, sive Septem discrimina vocum ad harmonicae lectionis novum et compendiarium usum aptata et contexta philologo quodam filo (Milan, 1599)
Modulatae lectionis nova et compendiaria directio ex Modulata Pallade contracta (MS)
Musica Plejas, sive Septem notae canendi Epitome Palladis Modulatae (Venice, 1600)
Musathena, sive Notarum heptas ad harmonicae lectionis novum et facilem usum (Hanau, 1602)
Iter Nonianum, dialogus, qui Epitomen Musathenae comprehendit (appx to the 1602 edn; It. trans., Milan, 1603, as *Il Noniano*)

HEINRICH HÜSCHEN

Puteus, Vincentius. *See* DAL POZZO, VINCENZO.

Putna. Monastery in the former Romanian principality of Moldavia (Moldova). Founded in 1466 by Stephen the Great, prince of Moldavia (1457–1504), it quickly became a renowned cultural centre on account of its school of liturgical chant, its scriptorium for illuminated manuscripts and its embroidery workshops. The following musical manuscripts, each the work of a different scribe, originated in Putna and are characteristic of its scriptorium: (1) The songbook of Evstatie of Putna (1511), *RUS-Mim* Shchiukin 350 and *SPan* 13.3.16; (2, 3) *RO*-Putna monastery, 56/576/544, A: ff.1–84 (? first decade of 16th century) and B: ff.85–160 (? last quarter of 15th century); (4) *RO-J* I-26 (1545); (5) *RO*-Dragomirna monastery, 52/1886; (6) *RO-Ba* sl.283 (*c*1550); (7) *Ba* sl.284 (3rd quarter of 16th century); (8) *BG*-Sofia, Nacionalen Čarkoven Istoriko-Archeologičeski Muzej, 816 (?mid-15th century); (9) *D-LEu* sl.12 (3rd quarter of 16th century); (10) *GR*-Lesbos, Leimonos Monastery, 258, B: ff.145–418 (1527) (A: ff.1–144, 17th century, is not of the Putna school).

The chants contained in these ten manuscripts belong to the AKOLOUTHIAI repertory. Written in Koukouzelian notation, they are mostly in the kalophonic style (*see* KALOPHONIC CHANT) or else in the style of *stichēra* (*see* STICHĒRON). The composers, whose names were customarily provided by the scribes, are mainly Byzantine, both contemporary and older; but three Romanians are also mentioned, Dometian the Vlach, Theodosius Zotika and, most notably, EVSTATIE OF PUTNA, who was *domestikos* and *protopsaltēs* of the monastery.

A high proportion (about 91%) of the chant texts are in Greek; only the 'Evstatie' and Putna 'A' manuscripts contain a considerable number of Slavonic texts. Some chants have texts in both languages. Four of the manuscripts, including the Evstatie autograph, also include a theoretical treatise – the PSALTIKĒ TECHNĒ – in Greek. On the basis of the 'Synodikon of Tsar Boril', a 13th-century Slavonic manuscript, the Bulgarians claimed the Putna School for their own. However, the four chants contained in this manuscript have Greek texts and their kalophonic Byzantine notation is later than the manuscript itself. Extensive research by Romanian and other Western scholars has led to the conclusion that the music of the Putna school 'reveals an impressive and remarkably conservative allegiance to traditional practices' (Conomos). Many different influences, arising from the political and cultural circumstances of the time, can be detected in the Slavonic texts: Bulgarian, Ukrainian, Polish and Serbo-Croat; there are in addition some purely Romanian grammatical forms.

ADRIANA ŞIRLI

Putnam, Ashley (Elizabeth) (*b* New York, 10 Aug 1952). American soprano. She studied at Michigan University, then became an apprentice at Santa Fe. She made her début in 1976 as Lucia at Norfolk, Virginia, where she later sang the title role in the American première of Musgrave's *Mary, Queen of Scots* (1978). She sang Angel More (*The Mother of Us All*) and Gilda at Santa Fe, Donna Elvira and Ophelia (*Hamlet*) at San Diego, Zdenka at Houston and Konstanze at Miami. At the New York City Opera (1978–83) her roles included Violetta, Elvira (*I puritani*), Giselda (*I Lombardi*), Adèle (*Le comte Ory*), Marie (*La fille du régiment*) and Donizetti's Mary Stuart. She made her European début in 1978 as Musetta at Glyndebourne, where she later sang Arabella (1984) and Vitellia (1991). Returning to Santa Fe she sang Strauss's Danae (1985), Fiordiligi (1988) and the Marschallin (1989), a role she also sang at Los Angeles (1994) and the Berlin Staatsoper (1995). In 1983 she sang Xiphares (*Mitridate*) at Schwetzingen and Aix-en-Provence. She made her Covent Garden début in 1986 as Jenůfa and her Metropolitan début in 1990 as Donna Elvira. The following year she also sang Fusako in the US première of Henze's *Das verratene Meer* in San Francisco. During the 1970s and 80s Putnam's flexible, silver-toned voice was well suited to the bel canto repertory. More recently she has increasingly taken on heavier, more dramatic roles such as Donna Anna, Kát'a Kabanová, Ellen Orford and Eva, which she first sang at Cleveland in 1995.

Puumala, Veli-Matti (*b* Kaustinen, 18 July 1965). Finnish composer. He studied composition at the Sibelius Academy in Helsinki with Heininen (1984–93) and completed his master's degree in 1993. He attended Donatoni's summer course at the Accademia Musicale Chigiana in Siena (1989–90); he has also taken part in composition courses directed by Klaus Huber, Gérard Grisey and Magnus Lindberg.

Puumala, who since the beginning of the 1990s has been the most conspicuous composer of his generation in the Nordic lands, has written almost entirely instrumental music. His work has strong stylistic links with that of his teacher Heininen: a post-serial, rigorously modernist texture centres on an abundance of detail and its precise formulation. Tone colours and the use of a variety of musical techniques are the main points of interest. The most distinctive trait of his earliest works, which are

short, is their compact mode of expression which, together with the abundant detail, is particularly noticeable in the trilogy for chamber ensemble *Scroscio* (1989), *Verso* (1991) and *Ghirlande* (1992). In *Ghirlande* especially, alternation of soft and harsh sounds is a significant feature.

The String Quartet (1994) marks a clear turning-point in Puumala's music: motifs are given more space and time than before, and from this work onwards thematic treatment is broader and more elaborate. He then became particularly interested in the transformation of motifs into series, as in *Chant Chains* (1995) and *Chains of Camenae* (1996) for chamber orchestra. Strict modernism has given way to a more freely advancing expression, particularly in *Soira* (1996) for chamber ensemble, into which he brings some of the structural features of traditional music from his native Kaustinen and also introduces novel acoustic solutions by including four groups of unspecified instruments, among them bottles that are blown into. He goes on to seek a totally new orchestral sound in his most extensive orchestral piece *Chainsprings* (1997), by, for example, seating the orchestra in quite a different way.

OSMO TAPIO RÄIHÄLÄ

Puy [pui] (Fr.). The name given to literary and musical confraternities, often religious, founded mainly in northern France from the 12th century, and to the competitions sponsored by them. The word probably derives from the Latin *podium*, referring to a raised platform from which competing compositions were delivered or judged or both. The trouvère Adam de la Halle, who competed in the *puy* of his native Arras, was the first to use the word to mean a society holding literary competitions.

Religious confraternities, most of them devoted to the Virgin Mary, were established in many cities of north-eastern France in the 12th and 13th centuries, and they flourished in Normandy from the 15th century. Abbeville, Arras, Beauvais, Caen, Dieppe, Douai, Evreux, Lille, London, Paris, Rouen, Tournai and Valenciennes are known to have had *puys* in the Middle Ages or Renaissance. The confraternities were generally made up of both clerics and laymen, aristocracy and bourgeois. Many existed first to sponsor special services on one or more Marian feast days, sometimes accompanied by a para-liturgical spectacle and a banquet, and only later instituted poetry competitions in connection with those established practices. In time, however, the competitions came to be the focus of the annual celebrations, and by the 17th century many of the Norman *puys* redefined themselves as literary academies. A number of *puys* survived in this form until the Revolution.

The poetry competitions elicited submissions in the vernacular *formes fixes* and, more rarely, in Latin. The musical settings were generally strophic. Only Evreux's 16th-century *puy* of St Cecilia awarded prizes for through-composed polyphony (attracting two submissions from Orlande de Lassus). Some competitors were professional men of letters, such as the historian Jean Froissart who won prizes at the *puys* of Valenciennes, Tournai, Abbeville and Lille, while others apparently were local amateurs. Although the surviving evidence is incomplete it seems that the invitations usually established the parameters for competition in various categories for a given year, often stipulating in each division the poem's subject, form and refrain. At Amiens the refrain for each year was included on a scroll in a panel painting showing the Virgin surrounded by contemporary figures, which was displayed in the cathedral in advance of the competition. The poetic forms most often specified are the *chant royal*, JEU-PARTI (involving two authors), serventois and ballade (*see* BALLADE (i)). In the 15th and 16th centuries treatises on versification were written in direct response to the requirements of the various *puys*. Pierre Fabri's *Le grant et vrai art de pleine rhétorique* (1521), for example, supplies rules for the verse forms admitted to Rouen's *puy*. The prizes were sometimes symbolic (such as a palm, lily or rose), redeemable for a fixed sum of money, and they sometimes took the form of signet rings embellished with imagery and/or verse. The winning *chants royaux* at the *puy* of Amiens for the years 1460–1517 and copies of the paintings that announced the refrains are contained in *F-Pn* fr.145, a presentation manuscript for Louise de Savoie. *F-Pn* fr.379 (2nd quarter of the 16th century) is an illuminated collection of *chants royaux*, ballades and rondeaux in honour of the Virgin from the *puy* of Rouen.

ELIZABETH C. TEVIOTDALE

Puy, Henry du. *See* PUTEANUS, ERYCIUS.

Puyana, Rafael (*b* Bogotá, 14 Oct 1931). Colombian harpsichordist. He began his musical studies at the age of six, going on a decade later to study at the New England Conservatory in Boston and the Hartt College in Hartford. In 1951 he began studies with Wanda Landowska in Lakeville, Connecticut, that continued until her death in 1959. Puyana made his formal début in New York in 1957 and has since pursued an active performing career in concert and on recordings. His extensive repertory includes works from the 16th to the 20th centuries. A number of contemporary composers have written works for him, including Montsalvatge, McCabe, Mompou, Evett, Orbón and Ohana. Puyana's playing, which is

often compared to Landowska's, is characterized by sharply defined rhythms that show to special advantage in the music of Scarlatti. He began performing on a *clavecin Pleyel* like Landowska's, but has subsequently changed to harpsichords of classical type. In 1961 he began to teach summer courses in Santiago de Compostela, and he has also taught regularly at Dartington Hall, the American Conservatory at Fontainebleau and Granada. In 1973 he founded the Forum International du Clavecin in Paris, where he has made his home. Puyana has assembled a fine collection of historical instruments, among them the unique three-manual 1740 H.A. Hass harpsichord.

HOWARD SCHOTT

Puzzi, Giovanni (*b* Parma, 1792; *d* London, 1 March 1876). Italian horn player. He was probably a pupil of Luigi Belloli, and also studied at Fontanello Convervatory. Renowned as a soloist at an early age, he toured the principal European cities and was commended to Napoleon by Ferdinando Paer. He was given a place in the emperor's private band, which he took up sometime before 1809. While in Paris, he played solo horn in the orchestra of the Théâtre Italien during the 1815–16 season. He appears to have moved to England under the patronage of the Duke of Wellington, making his pulic début in London in 1817. He was principal horn at the King's Theatre, the Philharmonic Society (1821–4) and the Concert of Ancient Music (1823–6), as well as at provincial festivals; he was also the first professor of horn at the Royal Academy of Music, where he played in the Royal Academic Concerts. He also organized a chamber music series in 1837, known as Classical Concerts for Wind Instruments. In 1826 Puzzi, who was also active as an impresario, travelled to Europe to engage singers for the King's Theatre and met the Italian soprano Giacinta Toso, whom he married. Toso was popular in aristocratic circles and influential within the hierarchy of the Italian Opera, though her few operatic appearances received mixed reviews. Puzzi also established and directed the opera buffa company at the Lyceum Theatre (1836–8).

Puzzi was considered the most celebrated horn virtuoso of his time, and enjoyed a virtual monopoly of private and benefit concerts for over 20 years. The large body of works composed and arranged by Puzzi formed the basis of his solo repertory, and reflects both the extreme popularity of the Italian Opera and the fascination for virtuoso performers that was then characteristic of London musical life. His works include a concerto, fantasias and numerous vocal arrangements with horn obbligato (MSS in *GB-Lbl*). These compositions, and those written for him by contemporaries, represent the apex of chromatic hand horn technique in the *cor-mixte* style. Of Puzzi's horns, two made by L.-J. Raoux, dated 1814 and 1821, are in the Horniman Museum and the RAM respectively; one made by M.-A. Raoux in about 1826 is in the Victoria and Albert Museum.

ELIZABETH BRADLEY STRAUCHEN

Pyamour [Piamor], **John** (*fl c*1418; *d* before March 1426). English composer. He is known solely for his setting of the Marian antiphon *Quam pulcra es*, for three voices preserved in *I-MOe* α.x.1,11 and in the second layer of *TRmp* 92 (no.1526, anon.). He became a clerk of Henry V's Chapel Royal between 1416 and 1420, when the king commissioned him to impress boy choristers and take them to him in France: in effect, if not title, he seems to have been the first Master of the Chapel Children. (The John Pyamour who was in the service of John, Duke of Bedford in 1427 was a different man; see A. Wathey, *ML*, lxvii, 1986, pp.1–30, esp. 5.) The style of his motet suggests that Pyamour was a contemporary of Dunstaple who died young: the antiphon chant is not used and the music is astonishingly free from dissonance. The melodic idiom, though intricate in phrasing, is exceptionally smoothly managed, with few leaps greater than a 3rd; there are subtle, indeed hidden, imitations. The piece has much in common with the more famous setting of the same words attributed to Dunstaple.

BRIAN TROWELL

Pyatnitsky, Mitrofan Efimovich (*b* Aleksandrovka, Bobrov district, 21 June/3 July 1864; *d* Moscow, 21 Jan 1927). Russian folksinger and collector of folksongs. From 1899 to 1903 he was a clerk in a Moscow hospital, and for some years took singing lessons from Camillo Everardi. In 1903 he was invited to join a commission on folk music set up by the Society of Friends of Natural Science, Anthropology and Ethnography, attached to Moscow University. He appeared in folk concerts organized by this commission in Moscow and elsewhere: he had a fine baritone voice and was particularly successful in his interpretations of the songs of the Voronezh government, which he had known since childhood. These concerts captured the interest of Russian audiences, and Pyatnitsky was encouraged to form an ensemble of singers and instrumentalists to give regular performances of folk music.

In 1910 Pyatnitsky founded a larger choir, whose programmes featured not only folksong arrangements but also choral dances, children's games and dramatized scenes of peasant life. He made more than 400 cylinder recordings of folksongs from the Voronezh government, and also formed an invaluable collection of folk instruments and peasant costumes.

After the 1917 Revolution Pyatnitsky's folk choir was given state support, and similar choirs were set up through the Soviet Union. In 1925 he was created Honoured Artist of the Republic. His choir continued to exist after his death; in 1940 it was renamed in his memory Russkiy Narodnïy Khor imeni Pyatnitskogo. He published *12 russkikh narodnïkh pesen: Voronezhskoy gubernii, Bobrovskogo uyezda* ('12 Russian folksongs from the Bobrov district in the Voronezh government', Moscow, 1904, 2/1912), and 'Starinnïye pesni Voronezhskoy gubernii v narodnoy garmonizatsii' ('Old songs of the Voronezh government in folk harmonization') in the book *O bïlinakh i pesnyakh velikoy Rusi* (1904). Several of the

songs from his phonograph collection were published in the anthology *Russkiye narodnïye pesni* ('Russian folk-songs', ed. I.K. Zdanovich, Moscow and Leningrad, 1950).

Pye. English record company. It was formed in 1956 following the takeover of Nixa by Pye Radio, Cambridge, and recorded both classical and popular music. It entered into reciprocal agreements with Mercury and Vanguard, although these were relatively short-lived. The first Pye/Mercury releases, of repertory recorded by Sir John Barbirolli and the Hallé Orchestra, and the single joint session between Vanguard and Pye, with Sir Adrian Boult and the LPO, were recorded in 1956. In 1958 the company gave the first demonstration of stereophonic discs using a playback system devised by John Mosely. In the early 1960s it moved to London. While the classical division built up a sizeable catalogue on its Golden Guinea and Virtuoso labels, the popular catalogue was equally successful and included a licensing agreement with the Reprise label. During the period of its activities, from 1956 to 1978, the company had a wide classical repertory; successes included recordings with Ralph Downes and Nicholas Danby and a series of Haydn symphonies with Leslie Jones and the Little Orchestra of London.

JOHN SNASHALL

Pye, Charlotte Alington. *See* BARNARD, CHARLOTTE ALINGTON.

Pygmy music. The term 'Pygmy' has been used by anthropologists (and more generally by speakers of European languages) to denote the indigenous hunter-gatherers of the Central African rainforest. However it is a problematic term in that it has often been used in a derogatory sense which reflects the socially oppressive circumstances under which some forest people still live. These people often refer to themselves in their own languages as 'forest people' or 'children of the forest'. They include the Baka of Cameroon, the Ba(Aka) of the Central African Republic and the Republic of the Congo, the Ba(Ngombe) of the Republic of the Congo, the Ba(Mbuti) of the Democratic Republic of the Congo, the (Ba)Gyeli of Gabon, and several sub-groups and peripheral groups, such as those referred to as 'Pygmoids' living in Rwanda and Burundi. They number in all about 170,000 (though census data collection among Pygmies is obviously difficult to conduct and more difficult to verify). Musical styles and lifestyles among these groups vary across regions and change over time. African Pygmies have traditionally lived in semi-nomadic hunting camps, exchanging forest goods with neighbouring farmers in patron-client relationships, and sometimes working on their neighbours' farms. Pygmies across equatorial Africa are increasingly farming their own plots in the forest, which in some ways allows them more independence.

Ex.1 Extract from chorus of (Ba)Ngombe women; transcr. H. MacDonald

The most striking features of Pygmy music include the often wordless yodelling that results in disjunct melodies, usually with descending contours (ex.1), and densely textured multi-part singing. The texture is built up from continuously varied repetition of a short cyclical pattern, with different voices entering informally and filling out the texture with parallel melodies, variations and ostinati. Pentatonic or sub-pentatonic forms are most common and harmonies are mainly based on 4ths and 5ths, with an occasional parallel 2nd. In many other styles of African music there is often a clear division of the melody between a leader and a chorus; however, in Pygmy singing this division is usually absent or obscured by the high degree of overlap between parts, by the passing around of central melodic figures from one person to another, and by a considerable freedom to improvise solo within the metrical and harmonic constraints of the pattern. Some observers see in this improvised yet structured song style a model for democratic, non-hierarchical social values. This has coincided with a tendency in both scholarly and popular literature to romanticize forest peoples and their musics, often described within 'Eden-like' narratives. Though the music of the African Pygmies is primarily vocal, many groups consistently use drums for dance music, along with voices. Drums are sometimes borrowed from non-Pygmy neighbours, for example in the Central African Republic, where some (Ba)Aka use drums of the Mbati during their dances. There are also several solo instruments that can be played during quiet times in the camp; among (Ba)Aka and Baka these can include the *ngombi*, a three-string harp (or a five-string version borrowed from villagers); the *mbiti*, a women's musical bow; and the *hundewhu*, a three-hole disposable bamboo flute.

PETER COOKE/MICHELLE KISLIUK

Pygott [Pygot], **Richard** (*b c*1485; *d* Oct or Nov 1549). English composer. His early career is obscure, but by 1517 he was Master of the Children in Thomas Wolsey's household chapel. In a series of letters written to Wolsey by the dean of the Chapel Royal in March and April 1518, the king is reported to have considered Wolsey's choir better than his own, and Pygott is praised for his training of a chorister recently transferred from Wolsey's choir to the king's. Pygott was among the cardinal's retinue during Wolsey's visit to Calais in 1521, and he may have been the 'Mastar Bigotte' named among those accompanying Wolsey to France in the late summer of 1527. It was presumably Wolsey who obtained for Pygott the pensions which he received from Bridlington Priory (granted 28 February 1526) and Whitby Abbey (1 May 1527).

It seems that Pygott remained in Wolsey's service until the cardinal's death (29 November 1530), and that shortly afterwards he became a Gentleman of the Chapel Royal. He first appears among the gentlemen in a wages list datable to 1533–4, but he may have joined the chapel some time before this: on 3 October 1532 he was granted a corrody in Coggeshall (Coxall) Priory surrendered by another gentleman, and on 24 April 1533 he was presented to a canonry in the collegiate church of Tamworth, the prebends of which were often used to reward royal servants, particularly members of the chapel. It was probably after joining the Chapel Royal that Pygott was granted property in East Greenwich previously occupied by William Cornysh, but the date of the grant is unknown. *Valor Ecclesiasticus* (ed. J. Caley and J. Hunter, London, 1810–34) records him as a prebendary of Wells Cathedral, but the date of his presentation to this benefice has not come to light.

There are signs that by 1545 Pygott's circumstances were changing, perhaps because he was contemplating retirement. In the autumn of that year the dean and chapter of Wells were instructed to allow him to reside upon his prebend there notwithstanding his laity; on 13 October he resigned and was immediately reappointed to his canonry of Tamworth (perhaps in order to alter the terms upon which he held it); and in December property in Greenwich previously in his tenure was granted to others. It seems, however, that he stayed in London. He was still listed as a member of the royal household in the lay subsidy roll of 1547, and in July 1549 he was described as the tenant of a property called 'the bulleshedde' in the parish of St Sepulchre's, Holborn. His will, which mentions his 'Chamber within Grenewiche', is dated 24 August 1549; he added a codicil on 2 October 1549 and the will (ed. in Sandon's edition of the *Missa 'Veni Sancte Spiritus'*) was proved on 12 November the same year. In *A Plaine and Easie Introduction to Practicall Musicke* (1597) Thomas Morley listed Pygott among the 'practicioners' whom he had consulted, and printed an extract from an unidentified composition by him. The payments to Richard Pigot(t) from the privy purse of Princess Elizabeth in December 1551 and January 1551–2 noticed by Ashbee evidently are either wrongly dated or refer to another man.

Pygott's music is technically polished and imaginative, if lacking something of Taverner's rhythmic drive and melodic cogency. Several of his works evince a fondness for passage-work in sprightly dotted rhythms. The *Missa 'Veni Sancte Spiritus'*, which is built on an 11-note cantus firmus, shows his ability to control and sustain large structures through a mixture of imitative writing, motivic interplay and well-timed contrast. The more seriously incomplete *Salve regina*, one of the longest of all votive antiphons, strongly resembles the Mass in style. *Gaude pastore*, an antiphon of St Thomas of Canterbury, was perhaps written as a compliment to his employer Thomas Wolsey. The burden and first verse of *Quid petis O fili* rely on imitative writing which is regularly spaced and set off by rests in the other voices; the other two verses, however, revert to a more haphazard, compressed and traditional style of imitation.

NICHOLAS SANDON

Pykini [Piquigny, Nicholas] (*fl c*1364–1389). French composer. He was probably the Nicholas Piquigny who served in the court chapel of Wenceslas I, Duke of Luxembourg and Brabant, as a chaplain and *cantor*, 1364–74, and *magister capelle*, 1374–82; he held a canonry at the collegiate church of Ste Gudule, Brussels, from 1374, and is last recorded in 1389. Pykini is known only for the four-voice virelai *Plasanche or tost/Or tost aeux* (ed. in CMM, xxxvi, 1966, CMM, liii/1, 1970, and PMFC, xix, 1982), a widely circulated song transmitted in two versions (in *F-CA* 1328, *F-CH* 564, *F-Pn* n.a.fr.6771 and in (veuve) Fernand Leclerq's private collection, Mons). Its verbal texts describe a nightingale and a parrot ('papegay') which 'jolyement et doucement escoutes sans desplaysance'. This work has been linked with the papal court at Avignon because of its supposed reference to a 'pape gay' but it more probably celebrates the parrot that was Duke Wenceslas's personal badge. Others formerly, but less plausibly, identified with Pykini include: Gerardus Piquigny, chaplain of the Cardinal Guy de Boulogne in 1335 and 1358; Jean de Piquigny, chaplain of Jean II, King of France before 1364, and Robert de Piquigny, chamberlain to Charles II, King of Navarre.

ANDREW WATHEY

Pylkkänen, Tauno (*b* Helsinki, 22 March 1918; *d* Helsinki, 13 March 1980). Finnish composer. He studied composition with Madetoja, Palmgren and Ranta at the Sibelius Academy, Helsinki (1937–40) and musicology at Helsinki University (MA 1941). Appointments followed with the music staff of the Finnish Broadcasting Company (1943–61), as music critic for the newspaper *Uusi Suomi* (1943–72) and as artistic director of the Finnish National Opera (1960–69). In 1967 he joined the Sibelius Academy as lecturer in the history of opera. He published *Oopperavaeltaja* ('The Opera Wanderer', Helsinki, 1953) and opera has been his chief interest as a composer. His style has been categorized as Nordic *verismo*, a description that applies both to his handling of dramatic situation and to his musical idiom, which reflects his adoration of the Italian bel canto. The success of his operas is largely due to his natural theatrical ability; *Varjo* ('The Shadow'), his most wholly satisfactory piece, has, for its thrilling dramatic effect, been compared with Menotti's *The Consul*. In 1950 he won the third Italia Prize for his radio opera *Sudenmorsian* ('The Wolf's Bride'). The best of his songs are to be found in the cycles *Kuoleman joutsen* ('The Swan of Death'), *Kuunsilta* ('Moon Bridge') and *Yötön yö* ('Nightless Night'). His instrumental music is of a Romantic, pastoral character.

WORKS
(*selective list*)

OPERAS

Batsheba Saarenmaalla [Bathsheba at Saarenmaa] (1, A. Kallas), op.10, 1940, rev. 1958
Mare ja hänen poikansa [Mare and her Son] (3, Kallas), op.22, 1943
Ikaros (3, P. Knudsen), op.33, 1953
Simo Hurtta (E. Leino), op.43, 1948
Sudenmorsian [The Wolf's Bride] (radio op, Kallas), op.47, 1950
Varjo [The Shadow] (1, H. Bergman), op.52, 1952
Opri ja Oleksi (3, K. Mäntylä), op.61, 1957
Vangit [The Prisoners] (1. A. Kivimaa), op.69, 1964
Tuntematon stilas [The Unknown Soldier] (V. Linna), op.73, 1967

ILKKA ORAMO

Pyllois [Pylois, Pyloys], **Johannes.** *See* PULLOIS, JOHANNES.

Pyne. English family of musicians. They were originally settled in Devon, afterwards migrating to Kent, and were descended from two brothers, James Kendrick (i) (?1785–

1857), a tenor, and George (?1790–1877), a countertenor. James Kendrick's son, (1) James Kendrick Pyne (ii), was the father of (3) James Kendrick Pyne (iii). Another child of James Kendrick (i), Louisa Aubert Pyne (later Willmore), was organist of St John's District Church, St Pancras, *c*1857 and composed songs and piano pieces. George Pyne had two daughters who were both sopranos, Susannah [Susan] Pyne (*d* 1886), who married the baritone Frank H. Standing, known as F.H. Celli, and (2) Louisa Pyne.

(1) James Kendrick Pyne (ii) (*b* London, 21 Aug 1810; *d* Manchester, 2 March 1893). Organist and composer. An early student at the RAM, where he studied under William Crotch, he was also a pupil of Samuel Wesley. In 1828 he was appointed organist of St Mark's, Clerkenwell, and from 1839 to 1892 was organist of Bath Abbey, where he became noted for his organ improvisations. He composed church services, anthems, including *Proclaim ye this among the gentiles*, which won the Gresham Prize in 1840, glees, songs and piano pieces.

(2) Louisa (Fanny) Pyne [Bodda Pyne] (*b* ?27 Aug 1832; *d* London, 20 March 1904). Soprano, daughter of (1) James Kendrich Pyne (ii). She studied singing with Sir George Smart and made her début when only ten at the Queen's Concert Rooms, Hanover Square, with her sister Susannah. In 1847 she went on a concert tour and in 1849 made her stage début as Amina in *La sonnambula* at Boulogne.

In autumn 1849 she sang Zerlina and Amina at the Princess's Theatre, London, and was the first Fanny in Macfarren's *Charles the Second*. Her success was such that she was dubbed the English Sontag. In 1851 she appeared in an English season at the Haymarket and was then called to the Royal Italian Opera, Covent Garden, to replace Anna Zerr as Queen of Night, where her performance 'in the difficult role quite eclipsed that of her predecessor'. Her voice was said to be beautiful and flexible.

In 1854 she appeared in New York as Amina and as Arline in *The Bohemian Girl*. In the same year, with the tenor WILLIAM HARRISON, she formed the Pyne-Harrison Opera Company, which then undertook a successful tour of eastern America. Returning to England for appearances at the Lyceum and Drury Lane in 1857, the company appeared at Covent Garden each winter from 1859 to 1864. During this period she sang the leading soprano roles in the first performances of Balfe's *Rose of Castille*, *Satanella*, *Bianca or The Bravo's Bride*, *The Puritan's Daughter* and *The Armourer of Nantes*, Wallace's *Lurline*, Benedict's *Lily of Killarney* and Glover's *Ruy Blas*. She was also a noted singer of oratorio.

In 1864 she dissolved her partnership with Harrison and in 1868 married the baritone Frank Bodda (*c*1823–92), thereafter devoting herself to teaching. She was granted a pension from the civil list in 1896.

(3) James Kendrick Pyne (iii) (*b* Bath, 5 Feb 1852; *d* Ilford, 3 Sept 1938). Organist, son of (1) James Kendrick Pyne (ii). At the age of 11 he was organist of All Saints', Bath. In 1864 he was articled as a pupil to S.S. Wesley at Winchester, continuing from 1865 at Gloucester, where he became assistant organist. His reminiscences of his teacher were published in *English Church Music*, v (1935). When Pyne's apprenticeship expired, he was made organist of St Mary's, Aylesbury, at the recommendation of F.A.G. Ouseley. In 1873, after spending a few months as organist at Christ Church, Clifton, Bristol, he was appointed organist of Chichester Cathedral. The following year he became organist of St Mark's, Philadelphia, where he organized the music on English cathedral lines, drawing the huge annual salary of £800. He returned to England in 1875 to succeed Frederick Bridge as organist at Manchester Cathedral, a position which he held until 1908. In 1877 he became organist of Manchester Town Hall, and he was a professor of organ at the Royal Manchester College of Music from its inception in 1893. In 1900 he received the Lambeth DMus. He lectured on church music at Manchester University from 1901 and was appointed dean of the Faculty of Music in 1908.

A friend of Alexandre Guilmant, Pyne had strong sympathies with French music, but was also an enthusiastic exponent of all effective new works for his instrument. He achieved an international reputation as a recitalist and was noted for his extemporisations and for his fine Bach playing. His own compositions include a Communion Service in A♭ and a set of Lancashire dialect songs to words by Edwin Waugh. His hobby was the collecting of old musical instruments, particularly keyboard instruments; his valuable collection was passed on to Henry Boddington.

Pyrison Cambio. *See* PERISSONE CAMBIO.

Pyrrhic (from Gk. *purrichios*, *purrichē*). One of several ancient Greek rhythmic patterns, by extension also applied to a war dance. In metric theory (e.g. Hephaestion, *Handbook*, 3; Aristides Quintilianus, *On Music*, i.22; etc.), the pyrrhic foot consists of two short syllables (⏑⏑) and is employed in such meters as iambic and ionic (Aristides Quintilianus, *On Music*, i.25, 27). The pyrrhic dance is commonly associated with the hyporcheme (*huporchēma*), but the distinction may depend on whether the dance is accompanied by song. Proclus (*Useful Knowledge*) regarded the pyrrhic and the hyporcheme as synonymous, while Athenaeus (*Sophists at Dinner*, xiv, 630d) distinguished among three types of dance: pyrrhic, hyporchematic and gymnopaidic. Athenaeus observed that a principal feature of the pyrrhic dance is speed, which certainly accords with the rhythmic pattern of the pyrrhic foot. On the authority of Aristoxenus, he stated that the pyrrhic (named for the Spartan Pyrrhicus) is a dance practised from the age of five by boys under arms as a preparation for war; other Greeks associated the

dance with Dionysus, replacing spears with the *thursos*. Plato (*Laws*, vii, 815a–b) described the dance as representing the types of defensive and offensive movements used in battle (cf Lucian, *On Dance*, 10, 16).

THOMAS J. MATHIESEN

Pysing [Pising(e)], **William** (*b* ?Canterbury, *c*1599; *d* Canterbury, 1 March 1684). English composer. The family to which he undoubtedly belonged was established in and around Canterbury by the early 17th century. The choirboy Pysing who sang in the cathedral choir during 1617 and 1618 may have been the composer. From 1629 onwards William is mentioned as a teacher of the choirboys, but whether his duties included their general as well as their musical education is not clear. He became one of the six 'substitutes' (men supplementing the lay clerks, but at a lower stipend) in 1631 and was promoted to a full lay clerk's place sometime between 1637 and 1640. In the meantime he had been appointed Master of the Choristers, but not organist, in 1635 or 1636. He held both this post and his lay clerk's place until his death, aged 85 according to his monument in the cloisters. He was buried in the cathedral on 6 March 1684. His son William (1641–1707) and Richard Pysing (1604–75), probably a relative, were also lay clerks there after the Restoration.

In 1640 Pysing was paid 20 shillings for copying new anthems, but only two of his own survive. They are archaic in style and lacking in technical facility. *The Lord hear thee in the day of trouble* (*GB-Och*), copied by Thomas Myriell before 1625, has verses and chorus for SSATB and an accompaniment for five viols. In *I will magnify thee* (*Lcm* and *Ob*) the verses are for two meanes with SAATB chorus and organ. A catch for two trebles and a bass by Pysing, *Come, follow me*, appeared in John Playford's 1685 edition of *Catch that Catch Can*.

ANDREW ASHBEE

Pythagoras (*fl* second half of the 6th century BCE). Greek philosopher and religious teacher. Born on Samos, he emigrated to Croton in 531 and later settled in Metapontum in southern Italy; both moves may have been caused by political or religious persecution. He believed in the transmigration of souls, established a *bios* (way of life), was probably a religious leader at Croton, and emphasized the numerical underpinnings of the natural world. An extreme version of Pythagorean doctrine holds that the physical world is a material working out (representation) of numerical truth, and that this truth is immediately and easily apprehended, albeit superficially, in elementary musical consonances.

Pythagoras's teachings, prominently publicized by PHILOLAUS (*fl* second half of the 5th century BCE) and further promulgated by ARCHYTAS OF TARENTUM (*fl* first half of the 4th century BCE), were well known to Plato and Aristotle, by whose time Pythagoras was already a legendary figure. During the 5th century the Pythagorean community split into a scientific branch (*mathēmatikoi*) and a more conservative and religious one (*akismatikoi*). In later antiquity Pythagoras's teachings were revived and mingled with those of Plato by Nicomachus, Iamblichus, Proclus and others. Fragments of writings on music by Philolaus and Archytas are preserved in the writings of later authors. More extended presentations of Pythagorean musical doctrine are found in the Euclidean *Division of the Canon* (*see* EUCLID), the *Manual of Harmonics* by NICOMACHUS OF GERASA and the *Harmonic Introduction* of GAUDENTIUS. Ancient commentaries on Pythagorean music theory, some of it critical, occurs in Ptolemy's *Harmonics* (*see* PTOLEMY, CLAUDIUS) and Porphyry's commentary on Ptolemy (*see* PORPHYRY), Theon of Smyrna's *On Mathematics Useful for the Understanding of Plato* (*see* THEON OF SMYRNA) and Aristides Quintilianus's *On Music* (*see* ARISTIDES QUINTILIANUS). Boethius (in *De institutione musica*) and other Latin writers translated Neopythagorean doctrine into Latin and transmitted it to the Western medieval world.

Certainly the most remarkable achievement attributed to Pythagoras is the discovery of the general geometric theorem that bears his name: that the square on the diagonal of a right-angle triangle equals the sum of the squares on the sides. Pythagoras's importance for music lies in his purported establishment of the numerical basis of acoustics. On passing a blacksmith's shop, he is said to have heard hammers of different weights striking consonant and dissonant intervals (Nicomachus, *Manual of Harmonics*, vi). He discovered that musical consonances were represented by the ratios that could be obtained from the musical tetractys: 1, 2, 3, 4. The ratios are relations of string lengths or frequencies. Thus 4:1 corresponds to the double octave; 3:1 to the octave plus the 5th; 2:1 (and 4:2) to the octave; 4:3 to the 4th; and 3:2 to the 5th. It follows that the interval of a whole tone – the difference between the 5th and 4th – is expressed by the ratio 9:8. A Pythagorean scale consists of 4ths subdivided into two tones plus the remainder or LIMMA (256:243). A 4th plus a 5th equals an octave. This scale is systematically presented in the Euclidean *Division of the Canon*, which may also contain a quotation from Pythagoras regarding the origin of sound. A necessary result of such a scale is that six whole-tone intervals exceed an octave by a small interval known as the Pythagorean comma (531,441:524,288).

Pythagorean music theory rests on the theory of numerical ratios presented in books 7–9 of Euclid's *Elements of Geometry* and given philosophical interpretation by Nicomachus in his *Introductio arithmetica*. The fundamental principle of consonance for the Pythagoreans, as set forth in the *Division of the Canon*, holds that notes are made up of parts; pitch is raised or lowered through the addition or subtraction of percussions. Things composed of parts are related by numerical ratios, which are either multiple (i.e. the greater term contains the lesser exactly a given number of times), superparticular (the greater term contains the lesser plus one part of the lesser), superpartient (the greater contains the lesser plus more

that one part of the lesser), multiple superparticular or multiple superpartient. Tacitly assuming the tetractys, the *Division* asserts that all consonant intervals are either multiple or superparticular.

Pythagorean doctrine also embraces theories of human harmony (between body and soul) and cosmic harmony. Book 3 of Ptolemy's *Harmonics* and book 3 of Aristides Quintilianus's *On Music* treat both human and cosmic harmony at length. According to the theory of the harmony of the spheres (*see* MUSIC OF THE SPHERES), the distances from the earth to the visible planets and sun, as well as the speeds with which the celestial bodies circle the earth, are in the same ratios as various musical intervals, especially those of the diatonic scale. Plato's *Timaeus* mentions the Pythagorean scale and contains (in chaps.xxxv–xxxvi) an early, vivid exposition of the theory of cosmic harmony, combining diatonic organization with the two fundamental celestial motions, same and other. The myth of Er, related at the end of Plato's *Republic* (x, 614–18) also reflects Pythagorean influence. The pairing of Greek note names with celestial bodies varies from author to author (compare, for example, Nicomachus, *Manual of Harmonics*, iii, with Ptolemy, *Harmonics*, iii.16). Johannes Kepler made a late, complex investigation of the harmony of the spheres in *Harmonices mundi* (1619). *See also* ARISTOXENUS and GREECE, §I, 6(i).

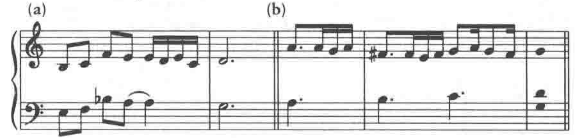
ANDRÉ BARBERA

Pythagorean intonation. A tuning of the scale in which all 5ths and 4ths are pure (untempered). Pythagorean tuning provides intonations of several types of scale. A series of five 5ths and 4ths includes the pitch classes of the most familiar kind of pentatonic scale; ascending from F♯ the series would comprise the five chromatic notes of the keyboard. A series of seven 5ths ascending from F yields a diatonic scale comprising the naturals on the keyboard; the 3rds and 6ths in this scale, however, differ from their justly intoned equivalents by a syntonic comma, and therefore do not meet medieval and Renaissance criteria of consonance implied by such terms as 'perfection' and 'unity'. When used as harmonic intervals these Pythagorean 3rds and 6ths are likely to be characterized, on an organ Diapason stop for example, by rather prominent BEATS; middle C–E or C–A beat more than 16 times per second at modern concert pitch. A series of 12 Pythagorean 5ths provides a fully chromatic scale that is bound to include, however, one sour WOLF 5th, smaller than pure by a Pythagorean comma.

Traditional Pythagorean theory is a matter of string-length ratios (on the MONOCHORD) between multiples of 2 and 3, but of no larger prime numbers. (For ancient, medieval and Renaissance theorists the larger number in each ratio normally represented the greater string length and thus the lower pitch.) The ratio for the octave is 2:1, and for the 5th 3:2. To find the ratio for the sum of two intervals their ratios are multiplied; to find the ratio for the intervallic difference, the ratios are divided. The ratio for the 4th is 4:3 (octave – 5th, hence 2:1 ÷ 3:2); for the whole tone, 9:8 (5th – 4th, hence 3:2 ÷ 4:3); for the major 6th, 27:16 (5th + whole tone, hence 3:2 × 9:8); for the minor 3rd, 32:27 (octave – major 6th, hence 2:1 ÷ 27:16, or 4th – whole tone, hence 4:3 ÷ 9:8); for the 'ditone' or major 3rd, 81:64 (whole tone + whole tone, hence 9:8 × 9:8); for the 'limma' or diatonic minor 2nd, 256:243 (4th – major 3rd, hence 4:3 ÷ 81:64); for the somewhat larger 'apotomē', 2187:2048 (whole tone – limma, hence 9:8 ÷ 256:243) and so on.

Among regular tuning systems Pythagorean intonation has the largest major 2nds and 3rds and smallest minor 2nds and 3rds. Melodically the large major 2nds are handsome and the incisiveness of the small minor 2nds is of potential expressive value. Hence Pythagorean intonation is well suited not only to parallel organum but also to late Gothic polyphonic compositions in which the role of harmonic major 6ths is somewhat analogous to that of dominant 7th chords in later triadic music, while the use of double leading-note cadences, as in ex.1, places a

Ex.1 Adam de la Halle: *Tant con je vivrai*



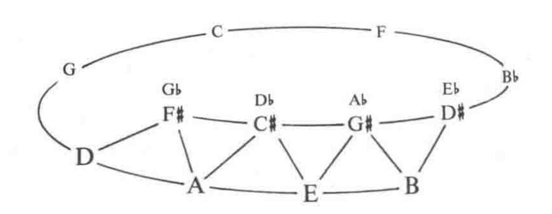
premium on the incisive melodic quality of the small semitones. Medieval theorists who discussed intervallic ratios nearly always did so in terms of Pythagorean intonation.

Of particular significance for the development of harmony in Western music was the use of Pythagorean intonation on early Renaissance keyboard instruments. The repertory of the Robertsbridge Codex (*GB-Lbl* Add.28550) shows that a fully chromatic keyboard was in use by about 1340, and passages like ex.2 suggest that

Ex.2 Robertsbridge Codex

(a) (b)

at that time the tuner would set the chromatic scale by adding pure 5ths at both ends of the chain of 5ths forming the chromatic scale, leaving the wolf 5th perhaps betwen G♯ and E♭. But by the time of the early 15th-century liturgical keyboard repertory of the Faenza Codex (*I-FZc* 117), the five chromatic notes seem to have been tuned to make a chain of pure 5ths among themselves, leaving the wolf 5th between B and F♯. It happens that what might be called a Pythagorean diminished 4th (e.g. the interval between the first and last members of the following chain of pure 5ths or 4ths: B–E–A–D–G–C–F–B♭–E♭) actually forms a much more nearly pure major 3rd than does the diatonic Pythagorean 3rd itself. Hence all the triangles in fig.1 would represent virtually pure triads, or at least particularly sonorous ones, if all the 5ths shown in the spiral were tuned pure (with special care to make none larger than pure). In this disposition of Pythagorean



Ex.3 Faenza Codex

Ex.4 Buxheim Organbook, no.196

Ex.5 Buxheim Organbook, no.144

intonation, which may be referred to conveniently as the F♯ × B disposition, each of the five chromatic degrees falls within the lower half of the diatonic whole tone. This disposition was prescribed or referred to by numerous 15th-century theorists, including Prosdocimus de Beldemandis, Ugolino of Orvieto, Johannes Keck, Henri Arnaut de Zwolle, a certain 'librum Baudeceti' cited by Arnaut, Johannes Gallicus, John Hothby (referring specifically to the organ), Nicolò Burzio, Franchinus Gaffurius (in his *Theorica musica* of 1492), and Heinrich Schreiber; its traces are also found in the 1476 portrayal of a clavichord in the ducal palace at Urbino (*see* CLAVICHORD, fig.3). There is corroborating musical evidence, mostly from the first half of the century: exx.3*a* and *b*, the conclusions of two organ verses, are typical of the evidence to be found in the liturgical Faenza Codex repertory. Exx.4 and 5 arefrom two settings in the Buxheim Organbook (*D-Mbs*

Virtually pure 3rds in Pythagorean intonation on a 12-note keyboard instrument with the wolf 5th between B and F♯

3725) of Binchois' *Adieu ma tres belle*; other pieces in the Buxheim repertory that exploit the especially resonant triads of the F♯ × B disposition of Pythagorean intonation include nos.19, 30–31, 126–8, 141, 153–5, 180 and 242. Most of these are keyboard settings of songs initially composed in the first half of the 15th century. (Most of the original keyboard compositions in the Buxheim Organbook, including all the *fundamenta*, seem to require some form of regular mean-tone temperament for their proper effect; *see* TEMPERAMENTS, §§2 and 3.) The cadence in ex.6, the opening of a Buxheim transcription of Du Fay's *Mille bon jours*, would not have, in the F♯ × B disposition, the high leading note cited above as a virtue of Pythagorean intonation in Gothic cadences; nonetheless the pure or nearly pure intonation of the quasi-dominant triad sounds very good in this and other such Dorian contexts. The F♯ × B disposition of Pythagorean intonation, in addition to having perhaps abetted the development of tonality by promoting what might anachronistically be called half-cadences in the Dorian mode, evidently whetted that Renaissance appetite for sonorous triads which only mean-tone temperaments could fully satisfy on keyboard instruments.

Ex.6 Buxheim Organbook, no.127

Although Gaffurius and other late 15th-century opponents of the theoretical innovations advanced by Ramis de Pareia cited the Pythagorean F♯ × B scheme as the proper alternative to Ramos's new monochord, Gaffurius in 1500 changed to an ostensibly Pythagorean monochord of 14 pitch classes forming a chain of 5ths ascending from A♭ to D♯. In 1496 Gaffurius had acknowledged, however, that organists tempered their 5ths when tuning the instrument. Pietro Aaron and G.M. Lanfranco, the first Italian writers to give tuning instructions for mean-tone temperaments (in 1523 and 1532 respectively), were, like Gaffurius, unabashed upholders of Pythagorean theory in contradiction to their own descriptions of practice. This dichotomy between 'speculative' and practical accounts of musical intervals became so pronounced during the 16th century that when Simon Stevin, the Dutch mathematician and engineer, worked out his precise calculations for equal temperament around 1600, he was familiar with

Pythagorean theory but only dimly aware of the existence of mean-tone temperaments, which were subsequently described to him by a musician friend, Abraham Verheyen.

MARK LINDLEY

Pythian Games. One of the four principal festivals of the ancient Greeks: the Olympia, Pythia, Isthmia and Nemea. Although the festivals were associated with harvest or funeral ceremonies in their earliest forms, the Olympian and Nemean games came to be held in honour of Zeus, the Pythian games in honour of APOLLO and the Isthmian games in honour of Poseidon. The Pythian Festival was held every eight years at Delphi until 582 BCE (or 586, as suggested by Pausanias's *Description of Greece*, x.7.3) when it was transformed into a Panhellenic festival as part of the Olympiad. In this system, the Olympian Festival was held in August every fourth year, and the other games fell at specific points within each Olympiad. The Pythia was held in August in the third year (i.e. two years after the preceding Olympia), while the Nemean and Isthmian festivals followed both the Olympian and the Pythian in the succeeding July and April.

The Pythian games centred on competitions in instrumental music, singing, drama and recitation; these were followed by athletic events and chariot and horse races. The Pythian games always included at least one PAEAN to Apollo. Auletic and kitharistic *nomoi* (*see* NOMOS) were introduced at the Pythian games in 582 and 558 BCE respectively; the earlier form of the auloedic *nomos* was apparently dropped from the Pythian games beginning with the second festival. A considerable number of compositions can be identified with specific festivals: PINDAR wrote his *Pythian* xii in honour of Midas of Acragas, the prize-winning aulete at the 24th and 25th Pythian festivals in 490 and 486 BCE; both his *Pythian* i and *Ode* iv of BACCHYLIDES were written for Hieron of Aetna, winner of the chariot race in the Pythian Festival of 470 BCE; and the two famous Delphic paeans (*see* HYMN, §I, 3) with musical notation most probably date from the festivals of 138 and 128 BCE.

THOMAS J. MATHIESEN

Q

Qabbānī, Abū Khalīl al- (*b* Damascus, 1842; *d* Damascus, 1903). Syrian musician, composer, playwright and pioneer of Arab musical theatre. Coming from a wealthy Damascus background, he learnt the art of MŪWASHSHAḤ songs as well as studying Arabic, Turkish and Persian literature. He travelled to Aleppo to learn its *mūwashshaḥ* and accompanying *samah* dance. In Damascus in 1880 he staged his first musical play, *Nāker al-jamīl* ('The Ungrateful'), for which he composed new music and used old *mūwashshaḥ* melodies, designing the décor and directing the play himself. Enraged, the conservatives of Damascus had his theatre burnt down. They objected to his use of young male actors for female parts, but they were also threatened because his theatre attracted young people and was a new medium of social expression.

In 1884 al-Qabbānī took his company, which included 32 musicians, actors and *samah* dancers, to Cairo. He established a theatre and in the space of 17 years presented 35 musical plays. Famous Egyptian singers joined his company, including 'ABDU AL-HAMULI and SALĀMA ḤIJĀZĪ (later pioneer of Egyptian musical theatre). Al-Qabbānī's student, Kamil Al-Khula'i, later became one of Egypt's best composers of *mūwashshaḥ* and musical plays. In 1901, while al-Qabbānī was touring outside Cairo, envious rivals took the opportunity to burn down his theatre. Heartbroken, he returned to Damascus where he died two years later.

Qanbūs [qabūs]. Short-necked lute of Yemen, widely disseminated with slightly varying terminology: *gabbūs* (Zanzibar), *gabbus* (Oman), *gabusi* or *gambusi* (the Comoros), GAMBUS (parts of Indonesia and Malaysia), *qabūs* (Saudi Arabia) and *kabôsy* (Madagascar). One of the earliest references to it is in Lane (1863–93): 'a sort of *tunbur* made by the people of al-Yaman now called *qabus* or the lute'. The term derives from the root 'q-n', often found in the musical vocabulary of Semitic languages. A comparison between the existing *'ūd* and the *qanbūs* points to reciprocal influences and continuous interaction: the shape of the latter is certainly close to that of the early Islamic *'ūd*. The myths surrounding their invention are largely the same, and the influence of the *'ūd* on the *qanbūs* is observed in the borrowing of the former term to describe the *qanbūs* in Sana'a, Yemen (the *'ūd* of Sana'a) and in the use of double courses; the *qanbūs* has three double courses and one single string, the *'ūd* four or five double courses and one single string.

The *qanbūs* is shaped from a single piece of fir. Its size is determined by the player, and measured in fists, fingers and spans. The soundboard (*jofra*), covered in skin, should measure one span, and the total length is determined on that individual basis. The *qanbūs* has a distinctly ovoid shape, with the body extended at the base by an external tailpiece to which the strings are attached. The tailpiece serves principally as a support, enabling the instrument to be held on the right arm (see illustration). The body is covered with green lambskin. The fingerboard, beginning at the rose, narrows towards the top and ends at the neck with a pegbox in the form of a backward 'S', the scroll tipped by a small mirror with magical significance. Eight pegs are divided between the two sides, but they hold only seven strings, which pass over the nut and are stretched across a bridge to the tailpiece. There are no frets. A crow's quill is used as a plectrum. The total length of the instrument varies between 90 and 100 cm, and it is about 25 cm wide and between 12 and 15 cm deep. At Sana'a it is tuned *c′–d′–g′– c″* (higher than the modern *'ūd*).

Rarely used alone, the *qanbūs* doubles a vocal line and is accompanied at Sana'a by the *mirwās* (a double-headed drum) and the *ṣaḥn nuḥāsī* (percussion idiophone in the form of a brass tray). In Hadramawt (Yemen) the instrument has been freed from the voice to develop its own instrumental repertory, particularly through the example at Sana'a of Qāsim al-Akhfash (*d* 1973). There exist two performing styles: *tafrīq*, a melodic style used for the *mutawwal*, a prominent genre in the Sana'a repertory; and *khalṭ* ('mixture'), a harmonic style.

The *qanbūs* fell into disrepute during the reign of the Imām Yaḥyā (1904–48). Religious extremism dealt a severe blow to the instrument and to the lute-makers of the Yemen, and the *qanbūs* had to compete with the Egyptian *'ūd*. By the end of the 20th century the *'ūd* had almost replaced the *qanbūs*.

CHRISTIAN POCHÉ

Qānūn [kanun, k'anon, kanonaki]. Plucked box zither or psaltery of the Middle East, North Africa and parts of Asia; it is trapeziform in shape, two of the sides forming a right angle. It is a classical instrument of the Arab world and Turkey (*kanun*), known in both oral and written traditions. The instrument's dispersal in the Arab world does not seem to go back beyond the 19th century. It was introduced in Algeria in 1835, in Morocco by 1916 and in Iran at the beginning of the 20th century. Turkish writers agree that the *qānūn* in its present form was introduced into their country during the reign of Mahmud II (1785–1839) by a Syrian immigrant, Ümer Effendi, from Cairo. It would thus seem that the instrument was diffused from the area of Egypt and Syria. Although it was known in Iraq, it was less popular there and supplanted by the *santūr*. There is no case, least of all organological, for a Tunisian (or Andalusian) origin. It is difficult to follow the evolution of the *qānūn*; probably it had gradually faded from use and was then revived and spread from Syria and Egypt, through Istanbul. The interactions are such that the Arab *qānūn* and the Turkish *kanun* cannot be considered separately.

The more recent history of the *qānūn* resumes at the time of the technical revolution that reached Istanbul in 1876. There is a gulf between the old *qānūn* and the new, the earliest examples of which were made by the Istanbul instrument maker Mahmut Usta. The older type did not immediately disappear, however; the Arab Music Congress at Cairo in 1932 noted the existence of two types, the newer marked by the use of small brass levers on the (player's) left of the case close to the pegbox. There are two to five for every three strings on the modern Arab *qānūn*, five to nine on those from Turkey and ten on those from Aleppo (Armenian models never have more than two). Intervals can be minutely adjusted by rotating the levers, which control the tension of the strings; this permits a full range of keys. On the older model, the tension controls the tuning. The introduction of the levers, with their characteristic noise when raised or lowered, encouraged the construction of larger instruments. A less obvious innovation in the Turkish models was the modification of the bridge. In earlier examples the bridge rested directly on the resonator. On the modern Arab *qānūn* manufactured in Egypt, it is supported at a height of about 5 cm by five feet placed at intervals across the width of the instrument; the Turkish *kanun* has only four feet.

The instrument consists of a flat box, 3 to 6 cm (or even 10 cm) thick, made of walnut or maple wood (formerly mahogany or plum). The Turkish *kanun* is made of walnut, plane, pine or ebony. The longer side varies in length between 75 and 100 cm (some models are as large as 120 cm); in the past, before the invention of levers, a length of 60 cm was known for the Turkish instrument. The short side is between 25 and 45 cm and the width ranges from 32 to 44 cm. The perpendicular section is always on the player's right. About one-fifth of the surface consists of a narrow section covered in skin (formerly fishskin, now sheepskin or more often an artificial fabric)

Modern Egyptian qānūn (from the player's viewpoint)

which runs the length of the instrument. On the left, the soundboard has a number of round soundholes and an Indian motif representing the 'leaf of life' (see illustration). In order to the left follow the levers, nut, pins and pegbox, which is affixed to the soundbox. The number of strings – once of gut, now of nylon – has always varied. Although courses are generally of three strings, some instruments have a single string at the bottom and then paired strings. Nowadays the number of strings has stabilized at about 78 strings for the Egyptian type of *qānūn* and 72 to 75 for the Turkish. For playing, the instrument is rested on the player's knees or on a table.

The strings are plucked by ring-shaped plectra placed on the index fingers. Arab performers play in octaves or double octaves. The right hand is notated in the treble clef and the left in the bass, as for the piano; in Turkey, however, the treble clef is exclusively used. There is a minute delay in attack between the two hands in playing unison passages, the elaboration of ornamental passages leading to a sense of space. The range of the *qānūn* varies between three and four octaves, those with the larger compass being the most recent models, especially those in Egypt. There are two different methods of tuning: one, the method of the late 19th century, followed in Turkey, proceeds by descending 4ths and rising octaves; the second, described in Syria, starts with the highest string and descends gradually, depending much on the player's auditory keenness. The method of adjusting the intervals is a matter of dispute among Arab musicians, but nowadays Western tempered tuning is more or less general.

The technique and playing style of the *qānūn* seem to be the product of continuous evolution over a long period. In the classical epoch, the term is first mentioned in the story of *A Thousand and One Nights*, under the title *qānūn* or *qānūn miṣrī*. Contemporary iconography confirms that the instrument was almost certainly held vertically. Two determining factors of the *qānūn* – a trapezium with a right angle and a horizontal position – are recent. Before the invention of the levers, the left hand could move the entire length of the string, in the style of the Japanese *koto*. This technique did not allow for any great virtuosity and precluded anything but monodic playing. The freeing of the left hand from this constraint at the end of the 19th century encouraged the development of virtuoso technique and also facilitated the application of harmonic and polyphonic textures.

These developments can be seen in the *qānūn* concerto (1944) by the Turkish composer Hasan Ferit Alnar (1906–78) and in the three *Suites folkloriques libanaises* for solo *qānūn* by Toufic Succar (*b* 1925). Concern for the renewal of tradition has brought several players of the instrument into prominence, including the Egyptian Sulaymān Gamīl and the Tunisian Ḥasan al-Gharbī. Among all the Arab instruments, the *qānūn* is the best suited to modernization. Nevertheless, those who passed on the older tradition should not be overlooked. In Egypt, these include Muḥammad al-'Aqqād (1850–1930), Muṣṭafā Riḍā (1890–*c*1952; author of the first method, *c*1934) and Ibrāhīm al-'Aryān (1898–1953; noted for his many compositions in the Ottoman style). Others of note are the Syrians Fawzī al-Qaltaqī and (more recently) Sajīm Sarwa, the Turks Haci Ârif Bey (1831–85) and Vecîhe Daryal (1908–70) and the Armenian Elia Pehlivanian. Although a soloist's instrument, the *qānūn* is rarely heard alone; it is a member of an ensemble, where its metallic sound is never masked. Increasing numbers of *qānūn* have been used in Egyptian groups since 1930, as in the ensemble of Muḥammad al-'Aqqād's son.

Outside the Arab countries, the *k'anon* is particularly important in Armenia, where it is used as a solo instrument or in ensembles; nowadays there are *k'anon* trios and quartets. The instrument has 24 triple courses of gut strings tuned to a diatonic scale of D major. The *kanun* is also popular as an accompanying instrument in the *čalgije* ensembles of Macedonia and Kosovo. It has 80 strings which are plucked by the fingers of both hands; metal or bone plectra are used. The instrument is found in Greece (*kanonaki*), in the populous parts of eastern Thrace, and is used to accompany table songs. In the 19th century, it was also played in India (*qanūn*).

CHRISTIAN POCHÉ

Qarna (Aramaic). Instrument mentioned in *Daniel*. *See* BIBLICAL INSTRUMENTS, §3(xiii).

Qaṣaba [qasaba, qaṣba, qaṣṣaba, qaṣṣāba]. A rim-blown flute used in the Maghrib. For discussion of structure and terminology *see* NEY. The *qaṣaba* was known among the Arabs by the 7th century, but it was supplanted in the 9th century by the Persian *ney*. It continued to be played in the Maghrib and Moorish Spain, and is now widely used in north-west Africa. In Yemen it is known as *qaṣba*.

In Syria, *qaṣaba* is a term for a duct flute.

Qāsem, Ustād (*b* Kabul, 1882; *d* Kabul, 1955). Afghan singer and composer. He was the son of Ustād Sattarju, a professional *sitār* player from Kashmir who had been brought to Afghanistan as a court musician during the reign of Abdur Rahmān Khān (1880–1901). Qāsem was the student of Ustād Qurbān Ali and Ustād Piāra Khān. He was the principal court singer during the reign of the progressive King Amanullāh Khān (1919–29) and became his close personal friend. Ustād Qāsem is often described as 'the father of Afghan music' because of his pivotal role as originator of a new kind of Afghan music, the Kabuli *ghazal* style which has remained the predominant form of Afghan vocal art music to the present day. He created this style by setting Persian and Pashto texts to music from North India. He also performed Afghan folksongs in a style that owed much to Hindustani music. He visited Delhi several times to make 78 r.p.m. records, many of which have survived and been reissued in compact disc format.

ABDUL-WAHAB MADADI (with JOHN BAILY)

Qaṣida (Arab.: 'ode'). Important verse form used in classical Arab music. *See* ARAB MUSIC, §II, 3(i); EGYPT, §II, 2(iv); IRAQ, §III, 3; LEBANON; and SYRIA, §2(ii)(b); *see also* BEDOUIN MUSIC, §3(ii).

Qatar. (Arab. Dawlat Qatar). Independent state on the south coast of the ARABIAN GULF.

Qavvālī. *See* INDIA, §VI, 2(ii).

Qawānīn (Arab.). Plural of QĀNŪN, the Arabic box zither.

Qayna (Arab.: 'female slave musician'). Most of the famous female musicians in the earlier history of Arab music belong to this category. The main providers of entertainment music for the wealthy already in pre-Islamic times, *qayna*s were later to become an indispensible part of court life. Those who showed aptitude would receive a broad education, not only in singing and instrumental performance, but also in literature and other essentials of refined culture; and those who had looks to match their abilities as singers and instrumentalists were highly prized, often becoming the concubines and even occasionally the wives of caliphs. The disruptive passions that they could provoke (and manipulate), and the lengths to which their admirers were prepared to go, are vividly portrayed in the *Risālat al-qiyān* ('Epistle on singing-girls') by the great 9th-century writer al-Jāḥiẓ.

Normally of non-Arab origin, the *qayna* was in al-Jāḥiẓ's day a marketable commodity from which considerable profits could be made. Her first teacher (and sometimes owner) would normally be a prominent male musician, although older *qayna*s could also take on a teaching role, and in Seville they were able at one stage to dominate the market. The greatest storehouse of information on the musical and social activities of the *qayna* is provided by AL-IṢFAHĀNĪ (897–967). Consequently it is for the heyday of the Abbasid caliphate in the late 9th and 10th centuries that we have the most extensive documentation, and detailed biographies can be constructed for the most celebrated *qayna*s, such as 'Arīb, who was fêted by several caliphs.

Information for later periods is scantier, but there is no indication that the role of the female slave musician diminished in significance (even if the word *qayna* itself fades from the scene), and there are obvious parallels between *qayna*s and the slave women of the Ottoman harem. (Further afield, there are also certain similarities to be noted with the institution of the Japanese geisha.)

For further details on *qayna*s in their historical context, *see* ARAB MUSIC, §I, 2(i–iii).

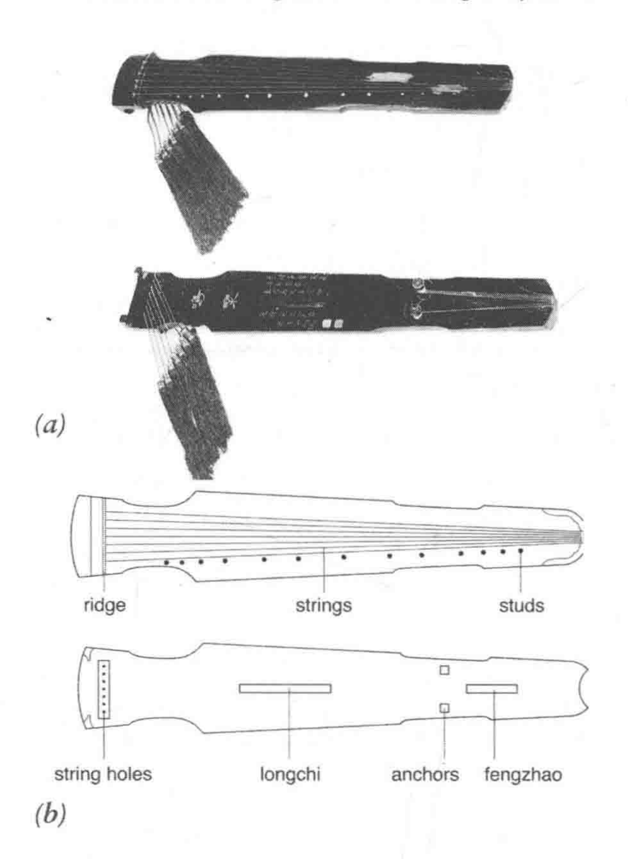
Qin. Seven-string plucked zither of China. Though indigenous to China, the *qin* (pron. 'chin', also known as *guqin*, 'ancient qin') belongs to the family of long zithers in East Asia. Discussed here are construction, tunings and notation; for history and performance traditions, see CHINA, §IV, 4(ii)(a).



The *qin* is essentially a shallow and oblong resonator that is constructed by gluing two wooden boards together, and examples of the instrument average approximately 130 cm long, 20 cm wide and 5 cm deep around the edges. The top and convex board, which also serves as a fretless fingerboard, is usually made of *wutong* wood (*Firmiana platanifolia*). Longitudinally inlaid on the side of this board further from the performer's body are 13 studs (*hui*) made of mother-of-pearl, jade or other hard material, to mark the points at which harmonics and stopped notes can be produced. The bottom and flat board, which is usually made of *zi* wood (*Catalpa kaempferi*), has two largish and rectangular sound openings. The whole body of the *qin* is covered with layers of lacquer that contains keratin and ground particles of metal and other substances.

The *qin* uses a set of pegs, two anchors and a ridge (*yueshan*) to secure the strings. On the right-hand side are seven free-standing pegs through each of which string-carrier loops are threaded. The loops are, in return, threaded through seven openings by the right-hand end of the instrument, and are used to hook the knotted right-hand ends of the strings. Thus hooked, the strings sit on the ridge and are suspended above the fingerboard. On the left and bottom side of the *qin* are two small fixed anchors or feet, around which the strings are wound and approximately tuned. In recent years a device similar to a Western peg-box has sometimes been mounted on the bottom of the instrument, avoiding the strenuous attachment of the strings to the two anchors. Fine-tuning of the individual strings is done by turning the free-standing pegs, which operate like screws. The strings are traditionally made of silk, but silk-wrapped metal strings have gained acceptance since the 1950s.

All *qin* are structurally similar, but their sizes may vary within a narrow range, and their shapes differ decoratively. This structural standardization results not only from musical and organological needs but also from cosmological and metaphysical ideals. Despite actual variations, a *qin* is traditionally said to measure a little over 3 *chi* (feet) and 6 *cun* (inches), a number that corresponds to the 365 days of the year. The two sound openings in the bottom board are called respectively *longchi* ('dragon pond') and *fengzhao* ('phoenix pond'), the two auspicious mythological animals representing *yang* and *yin* elements. The roundness and flatness of the two boards of the instrument symbolize Heaven and Earth. They are joined by man, the player, constituting a unity of the three most important beings in Chinese cosmology.

Traditionally, the *qin* is not only a musical instrument but also an objet d'art. Connoisseurs have long studied inscriptions and lacquer cracks on a *qin* to decide its age, origin, historical ownership and other distinctive features. It is said that with age the lacquer layers of a *qin* crack into patterns that render the instrument visually venerable and reveal its age. Inscriptions found on the exterior surface of the bottom board of a *qin* record its poetic name, comments on its tone and the identities of its successive owners. Inscriptions on the interior surface of the bottom board, which can be carved only during building or rebuilding, reveal the identity of the instruments makers and rebuilders.

The fundamental tuning of the seven strings of the *qin* is: *C–D–F–G–A–c–d*, derived from a succession of 4ths, 5ths and their octaves generated according to cycles of

1. (a) Front and back views of a Chinese qin (plucked zither), 18th century (private collection); (b) Line drawing; top and bottom views of a qin

fifths. When stopped at the points indicated by the 13 studs, the C string gives the following pitches: D, E♭, E, F, G, A, c, e, g, c′, g′, c″. When touched lightly at the studs, the string gives the following harmonics: c″, g′, e′, c′, g, e′, c, e′, g, c′, e′, g′, c″, which divide into two identical groups at the central seventh note. By tightening or loosening one or more strings of the fundamental tuning, four other tunings can be attained: C–E♭–F–G–B♭–c–e♭–C–D–F–G–B♭–c–d; C–E♭–F–G–B♭–c–d; C–D–E–G–A–B–d. There are about 30 other irregular tunings which are used in some unique, often ancient, pieces. Tuning and intonation are major concerns in *qin* theory because they are inseparable from modal usage and aesthetics.

The traditional notation for the *qin*, called *jianzipu* (simplified character notation), uses parts of Chinese characters to construct symbols that specify finger movements to produce individual musical tones (fig.2). The top portion indicates left-hand techniques and where they stop the strings; the bottom portion indicates right-hand techniques and the strings they pluck. For example, the fifth sign from the bottom in column 5 of fig.2 means stopping the second string at stud no.7 with the left-hand middle finger, while plucking the string with an inward (towards the body) movement of the right-hand middle finger. *Jianzipu* functions less as an authoritative notation than as an aid to memory. Some of its symbols, such as those for left-hand vibrato or portamento, can be interpreted differently. Though it does not specify rhythm precisely, interpretation may be aided by phrasing and durational markers, the rhythmic implications of some finger techniques and the programmatic nature of the piece. But the interpretation of *jianzipu* depends mainly

LIANG MING-YUEH/JOSEPH S.C. LAM

Qing. Lithophone employed in Han Chinese Confucian rituals. The name (pronounced 'ching') is onomatopoeic of its sound when struck; its written character is a pictograph of a stone suspended in a frame. Constructed of resonant limestone or marble, the instrument is suspended in a frame by a cord (through a hole near its apex) and struck at one end with a wooden beater. Single stones are generally known as *teqing* ('special' *qing*); sets of different-pitched stones are known as *bianqing* ('arranged' *qing*).

More than half a dozen ancient *proto-qing* have been unearthed in north China, dating to *c*2000 BCE or later. These are roughly chipped instruments of irregular shapes and between 40 and 100cm in length. Both single stones and sets of three (and five) have been found in late Shang sites (*c*1200 BCE), notably at Anyang in northern Henan province. Unlike the earlier crudely chipped instruments, these Shang stones are carefully crafted of polished marble slabs, rectangular or triangular in shape, some with beautifully stylized abstractions of tigers and fish inscribed on their surfaces (Liu, 1988, pp.14–15).

During the mid-Zhou dynasty (*c*5th century BCE) *qing* sets (*bianqing*) were enlarged and their shape became standardized, but their surfaces were not so commonly decorated. Largest among the Zhou sets unearthed is from the tomb of the Marquis Yi of the Zeng state (Zenghou Yi, Hubei province, *c*433 BCE), a set of 32 stones suspended in a two-tiered frame. These stones are L-shaped, five-sided, with the bottom edge concave in shape. Precise geometric proportions for this design were given in the *Zhouli* (*c*3rd century BCE) and in subsequent texts (Chuang, 1966, p.131). Zhou instruments (such as the Zenghou Yi set) were tuned chromatically by varying the size while maintaining uniform thickness (smaller stones resonating at a higher pitch). The *bianqing* employed within the ritual ensemble at the Taipei Confucian shrine are of this earlier design. By about the 12th century CE, *bianqing* sets were usually comprised of 16 stones of a uniform size but varying in thickness (thicker stones resonating at a higher pitch), with the standard of 16 chromatically-tuned stones in a set. The set sent to Korea during this period and sets employed in the Qing dynasty imperial court in Beijing (1644–1911) are of this design (Moule, 1908, p.31).

Related instruments are the Korean P'YŎN'GYŎNG and Vietnamese *biên khánh*. A more recent application of the name *qing* is to the resonating bowl-bell of bronze used in Buddhist temples; *see* CHINA, §III.

ALAN R. THRASHER

Qinqin. Chinese plucked lute. *See* YUEQIN.

Qobuz (i) [qobyz, kobuz]. Two-string fiddle of the Karakalpak, Kazakh and Kyrgyz peoples of Central Asia. It is approximately 70 cm long; its body is shaped like a deeply curved ladle and its belly is covered with camel skin. The strings are of horsehair and are tuned a 4th apart; the instrument is played with a bow of horsehair, producing a sound rich in overtones particularly in the lower register.

The *qobuz* is mentioned in the 10th-century document *Divani-l-Lughati-t-Turk* by Mahmud Kashgharyi. According to other sources the instrument originated in Samarkand and Bukhara. During the 15th and 16th centuries it was an instrument of court musical entertainment, as depicted in the miniature paintings of the Herat artist Kamal ad-Din Behzad. During the 19th century the *qobuz* was popular throughout Khorezm and Khiva and the fame of *qobuz* players spread throughout Turkestan; since then instruments such as the *sato* and the *tanbūr* have taken the place of the *qobuz* among the settled peoples of Turkestan, and the *qobuz* has become an instrument of nomadic life. In Uzbekistan it is played only by the semi-nomadic peoples of the Surkhandarya-Kashkadarya region. It is related to the Mongol *hiil* and was formerly associated with shamanism; shamans hung small bells on the *qobuz* and sang *saryny*.

RAZIA SULTANOVA

Qobuz (ii). Metal jew's harp of the Turkmen, Uzbek and Yakut peoples. In Uzbekistan it is also known as the *chang-qobuz* and is played by groups of women or children; among the Yakut peoples of Siberia it is played by male ensembles. In the past women's groups (consisting of 4–5 women) of the Surkharndarya-Kashkadarya region played the *chang-qobuz* for wedding ceremonies. Playing techniques include two ways of blowing using the syllables 'ye-ye' or 'ou-ou'.

RAZIA SULTANOVA

Qquepa. A Quechua term for a conch-shell trumpet of Peru. It was used from as early as the Chavín era (900–200 BCE). Because of the rarity of the conch in Peruvian waters, instrument makers of Mochica (200–700 CE) and Chimú (1000–1476 CE) used clay to create both imitations of the shell trumpet and vertical and coiled trumpets. The Quechua held the *qquepa* in high regard for its impressive sound and relative rarity; they played it in battle and for warrior initiation ceremonies. Cuzco regional authorities, who call the conch (*Strombus galeatus*) *pututo*, still sound it to gather townspeople in times of crisis or for communal tasks.

JOHN M. SCHECHTER

QRS. American manufacturer of piano rolls. The company was established in 1900 as an adjunct to the Melville Clark Piano Co. of Chicago. Clark's invention of the 'marking piano' in 1912 made possible the cutting of rolls that accurately captured specific performances,

although without expression. Involved at an early stage in the recording of ragtime, QRS soon also turned to jazz, especially after Max Kortlander joined its staff and it transferred its main recording activities to New York about 1920. Among the notable musicians who cut rolls for the company were James P. Johnson (1921–7) and Fats Waller (as 'Thomas Waller', 1923–31); in 1926 some 11 million rolls were cut. The company also established a record label of the same name, on which it put out three series of discs from the early 1920s until 1930; the second of these was most notable, with recordings supervised by Arthur E. Satherley. The third series appeared in 1929, shortly after QRS merged with a film company, the DeVry Corporation.

By this time the market for piano rolls had severely declined, and in 1931 Kortlander bought the company. For many years its existence was frequently precarious, and its employees often worked only part-time. The 'marking piano' was abandoned in favour of 'arranged' rolls, many of which were made by the stride pianist J. Lawrence Cook, some under the pseudonym Sid Laney. Cook's output over five decades included a remarkable series of Waller-like arrangements, and transcriptions of Art Tatum and Erroll Garner. By the 1950s production had dropped to around 200,000 rolls per year, although thereafter interest revived with the advent of new spinet player pianos. Kortlander died in 1961, and the company was acquired by Ramsi P. Tick, who moved production to Buffalo in 1966. Though 'arranged' rolls have remained the company's mainstay, new recordings on the restored 'marking piano' have been made by artists including Earl Hines, George Shearing, Marian McPartland, Peter Nero and Liberace.

In 1987 QRS was sold to Richard A. Dolan, who brought out a MIDI-based player system for installation in acoustic pianos. The meaning of the acronym is unknown; the only interpretation ever to appear in official company literature was the slogan 'Quality, Real Service', used in the late 1910s and early 1920s.

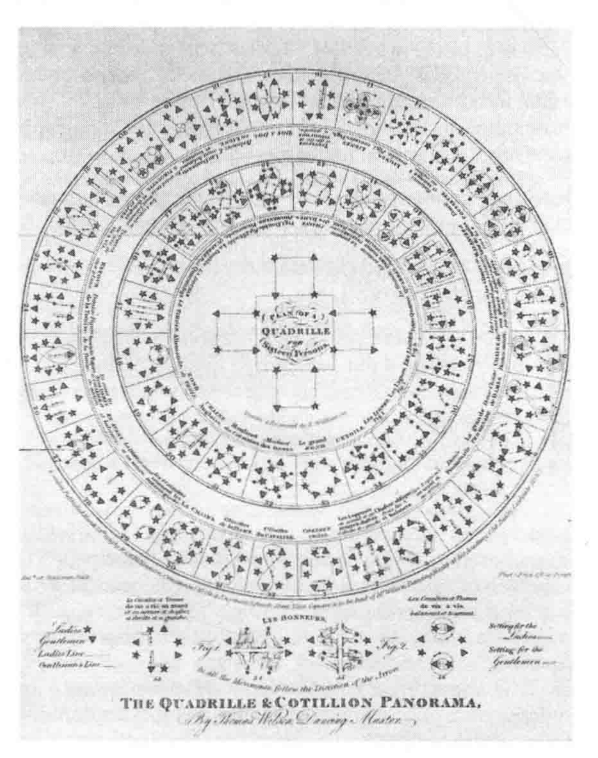
BOB BERKMAN

Quadran pavan. A 16th-century English term associated with the *passamezzo moderno*, one of the forms of the passamezzo pattern (*see* PASSAMEZZO). The term is probably derived from the Italian *passamezzo per B quadro*, and refers to the natural sign that distinguished the *passamezzo moderno* from the *passamezzo antico* or *passamezzo per B molle*. The terms 'quadropavan' and 'quadrant pavan' are also found.



□

Quadrat (Ger.). *See* NATURAL.

Quadrille (Fr.). One of the most popular ballroom dances of the 19th century, with an elaborate set of steps and danced by sets of four, six or eight couples. The name, derived from the Italian 'squadriglia' or Spanish 'cuadrilla', was originally applied to a small company of cavalry, subsequently to a group of dancers in a pageant and then to a troupe of dancers in the elaborate French ballets of the 18th century. The popularity of contredanses in ballets led in turn to the description of a set of contredanses in the ballroom as a 'quadrille de contredanses', later shortened to 'quadrille'. The dance was very popular in Paris during the First Empire and was introduced to London at Almack's Assembly Rooms in 1815 and to Berlin in 1821. Though known in Vienna around the same time, it did not become the rage there until the carnival of 1840.

The quadrille usually consisted of five distinct parts or figures, which, even when new music was provided, retained the names of the contredanses that originally made up the standard quadrille: *Le pantalon* (adapted from a song which began 'Le pantalon/De Madelon/N'a pas de fond'), *L'été* (a contredanse popular in 1800), *La poule* (1802), *La pastourelle* (based on a ballad by the cornet player Collinet) and a lively 'Finale'. *La pastourelle* was often replaced by a further figure, *La Trénis* (named after the dancer Trenitz), but in the Viennese quadrille both were danced, as fourth and fifth figures respectively in a total of six.

The music of the quadrille was made up of lively, rhythmic themes of rigid eight- or sixteen-bar lengths, the sections being much repeated within a figure. Except for *La poule* and sometimes *Le pantalon* or the Finale (in 6/8) the music was in 2/4, and was usually adapted from popular songs or stage works. Among prominent French

Plan of a quadrille from Thomas Wilson's 'The Quadrille and Cotillion Panorama' (London, 1819)

arrangers were Philippe Musard (1792–1859), Isaac Strauss (1806–88) and Olivier Métra (1830–89). In England the quadrilles of Jullien, such as the *British Army Quadrilles* and the *Grand Quadrille of All Nations* were prominent attractions at his concerts at the Surrey Gardens and Covent Garden. Elsewhere in Europe quadrilles were produced by the Strausses and all other major dance composers of the 19th century.

Hans von Bülow composed a quadrille on themes from Berlioz's *Benvenuto Cellini*, and during his years as conductor at the Powick Asylum (1879–84) Elgar wrote quadrilles which he raided for later works, notably the second *Wand of Youth* suite. The plundering of all sorts of musical sources for themes for new dances and the musical distortions that often had to be made to satisfy the restricted musical form of the quadrille made it a target and vehicle for musical jokes through the arrangement of themes from particularly incongruous sources, as in the *Macbeth Quadrilles* from music attributed to Matthew Locke, the *Bologna Quadrilles* on themes from Rossini's *Stabat mater*, Chabrier's *Souvenirs de Munich* (on themes from *Tristan und Isolde*), and *Souvenirs de Bayreuth* (on themes from *The Ring*) by Fauré and Messager.

ANDREW LAMB

Quadris, Johannes de. *See* JOHANNES DE QUADRIS.

Quadrupla (Lat.: 'quadruple'). In early music theory, the ratio 4:1. In the system of PROPORTIONAL NOTATION of the late Middle Ages and Renaissance, *proportio quadrupla* indicates a diminution in the relative value of each note shape in the ratio 4:1. In modern practice, quadruple time has four beats to the bar.

Quadruple counterpoint. Four-part INVERTIBLE COUNTERPOINT.

Quadruple croche (Fr.). *See* HEMIDEMISEMIQUAVER (64th-note). *See also* NOTE VALUES.

Quadruplet (Fr. *quartolet*; Ger. *Quartole*; It. *quartina*). A group of four equal notes occurring in place of three equal notes under a time signature where the regular units are divisible by three.

Quadruple time. In modern practice, four beats to the bar. *See* QUADRUPLA.

Quadruplum, quadruplex (Lat.: 'quadruple', 'fourfold'). Terms used in medieval theory to denote principally (1) four-voiced polyphony. In 13th-century theoretical writing both terms were used as nouns in this sense, or as adjectives in phrases such as 'organum quadruplum' and 'quadruplices conductus'.

(2) The fourth voice of a polyphonic composition – an independent voice composed against a tenor, duplum (or motetus) and triplum. The term 'quadruplum' was thus used in the 13th century with reference to organum and the motet. The English form, 'quadreble' or 'quatreble', was used in vernacular early 15th-century treatises on English discant.

(3) Diminution or augmentation by a factor of four ('quadrupla', 'proportio quadrupla') in mensural notation of the 14th century to the 16th.

IAN D. BENT

Quaglia, Giovanni Battista (*b* Bergamo, 1625; *d* Brescia, June 1700). Italian composer and organist. He was a student of Francesco Turini and from 1649 he served as organist of S Maria Maggiore, Bergamo. On the death of Ottavio Mazza he inherited the post of *vicemaestro di cappella* there on 2 June 1674 and on 15 May 1677 he was appointed *maestro*. As well as a son, Giovanni Francesco, Quaglia had three daughters who were nuns in Brescia, and it was in order to be near them that on 21 January 1690 he asked to be allowed to leave the service of S Maria Maggiore (after more than 40 years) so that he could take up the position of *maestro di cappella* at the cathedral in Brescia. Giovanni Francesco followed largely in his father's footsteps: he was appointed organist of S Maria Maggiore, Bergamo, on 12 January 1695 and *vicemaestro di capella* on 9 May 1712. However, in the competition for *maestro* on 29 December 1717 he lost out to Giacomo Gozzini.

Giovanni Battista was recognized as a very capable teacher, performer and composer. A large part of his output has undoubtedly been lost. Of his published music, only two collections of solo motets and an oratorio have survived. Other motets appear in collections by Federico Vigoni (1692), C.M. Fagnani (1695[1]) and Marino Silvani (1670[1]). In his dedication Quaglia classifies the *Motetti sacri* of 1668 as 'the first creation of the *Cicala d'Eunomio*' (the cricket of Eunomio). He composed the oratorio *La vittoria di David contro Golia*, dedicated to the 'Illustrissimo Signor Canonico Giacomo Pezzoli', for the Sunday following the feast of Maria Magdalene, to be sung in Bergamo Cathedral.

ROBIN BOWMAN/PAOLA PALERMO

Quagliati, Paolo (*b* Chioggia, *c*1555; *d* Rome, 16 Nov 1628). Italian composer and organist. He was born into a noble family of Chioggia and in about 1574 settled in Rome, where he remained until his death. During more than 50 years there he worked for wealthy patrician families, as well as for the church, as both musician and bureaucrat. He was *maestro di cappella* at S Maria Maggiore from 1591 to 1621 and seems to have held a similar position at S Marcello al Corso; he also worked as a musician at the Oratorio del Crocifisso on numerous occasions between 1595 and 1618. He became a Roman

citizen in 1594. In 1606 his *Il carro di Fedeltà d'Amore* was performed on a decorated cart in the streets of Rome during the pre-Lenten celebrations. Pietro della Valle, who wrote the text, declared later that it 'was the first dramatic action or representation in music that had ever been heard in that city', an exaggerated claim. Between about 1605 and 1608 Quagliati was in the service of Cardinal Odoardo Farnese, to whom he dedicated his madrigal volume of 1608. The title-page of this publication describes him as organist of S Maria Maggiore, a post he probably held until his death. He is also known to have played the organ at other Roman churches on special occasions. The respect in which he was held by his contemporaries is attested by the dedication to him of *Giardino musicale* (RISM 1621[15]), an anthology of songs and duets by eight Roman composers, Frescobaldi among them. During the last years of his life he was in the service of the Ludovisi family. When Cardinal Alessandro Ludovisi became Pope Gregory XV in 1621, he was appointed apostolic prothonotary, and private chamberlain to the pope. For the wedding in 1623 of the pope's nephew Nicolò Ludovisi to Isabella Gesualdo (daughter of the composer) he wrote the collection *La sfera armoniosa*, the print of which includes an engraved portrait of him by Ottario Maria Leoni (reproduced in *MGG1*, pl.102/i). When the pope died in that year Quagliati remained in the service of the Ludovisi family. He died a wealthy man and was buried in S Maria Maggiore.

Quagliati's first personal publications were of three-part canzonettas: he published a sacred anthology in 1585 and two secular volumes in 1588, showing himself an enthusiast for the lighter forms that proved to be so important texturally for the emerging Baroque style. He was never a serious madrigalist, so the transition to monody and the concerted madrigal was perhaps easy for him. His one madrigal publication (1608) nevertheless manifests the kind of stylistic uncertainty common in the early 17th century, and its contents are devised so that they can be performed either as concerted madrigals or as monodies; as he stated in the preface:

> Seeing that nowadays one group take pleasure in 'full' music with many voices, although it seems that the larger group desire and applaud 'empty' music for solo voices and instruments ... I have decided to cater to more than one taste.

He was not alone in his attempt to fuse the old and the new; witness, for example, P.M. Marsolo's practice in his second book of four-part madrigals (1614). *Il carro di Fedeltà d'Amore* is a brief festive work, consisting mainly of short solos and duets and ending with a five-part concerted madrigal; it should not be regarded as a miniature or proto-opera. The several other pieces following the *Carro* itself include four solo madrigals that are probably the first in Rome actually composed as such, though the solo versions of the 1608 works preceded them. Quagliati's most substantial secular work is *La sfera armoniosa*, which comprises 25 numbers, mostly solos and duets, with a concerted violin part; five madrigals are variously adapted from the 1608 collection. His *Ricercate e canzoni* (1601, not lost as stated by Kast) display conservative features often associated with the stricter contrapuntal forms. Curiously, the ricercares and canzonas are not differentiated in the body of the publication and cannot easily be distinguished from one another. Quagliati's sacred works, which range from monodies to a 12-part work, have been little studied.

In all his works Quagliati used clear, mostly diatonic harmony and adopted a conservative approach to the treatment of dissonance. He favoured modest concertato textures and his melodic style is simple and graceful.

WORKS

all except anthologies published in Rome

SACRED VOCAL

Motecta et psalmus Dixit Dominus, 8, 12vv (1612); 2 ed. J. Killing, *Kirchenmusikalische Schätze der Bibliothek des Abbate F. Santini* (Düsseldorf, 1910)
Affetti amorosi spirituali, 1–3vv (1617)
Motetti e dialogi, 2–4, 8vv (1620)
Motetti, 1, 2vv (1625), lost
Motetti e dialoghi concertati con doi bassi seguiti, libro secondo, 8vv, 2 org (1627)

4 motets; 1 psalm, 8vv, bc; 6 sacred works, 3, 8vv, some with bc: 1592[2], 1599[6], 1616[1], 1617[1], 1618[3], 1621[3], 1627[2], 1639[2]

SECULAR VOCAL

Canzonette per sonare et cantare, libro primo, 3vv (1588)
Canzonette per sonare et cantare, libro secondo, 3vv (1588[26])
Il primo libro de' madrigali, 4vv, bc (1608) [5 rev. in 1623 vol.]
Il carro di Fedeltà d'Amore con aggiunta di alcune arie dell'istesso autore, 1–5vv (1611); ed. in SCMA, xiii (1957); 1 ed. L. Landshoff, *Alte Meister des Bel Canto*, i–ii (Leipzig, 1912)
La sfera armoniosa, 1, 2vv, vn (1623) [incl. 5 from 1608 vol. and 2 by S. Landi]; ed. in SCMA, xiii (1957)

Madrigal, 5vv; 2 canzonettas, 4vv; 3 secular works: 1583[14]; 1589[7], 1589[11], 1591[12], 1621[14]; 2 ed. A. Wotquenne-Plattel, *Chansons italiennes* (Leipzig, n.d.)

INSTRUMENTAL

Ricercate e canzoni per sonare et cantare, a 4 (1601); ed. in IIM, xv (1994)
Toccata, kbd, 1593[9]; ed. in AMI, iii (n.d.)

LOST WORKS

Le delizie musicali, aria, Il plettro canoro, Poesie e madrigali, all mentioned in Pitoni

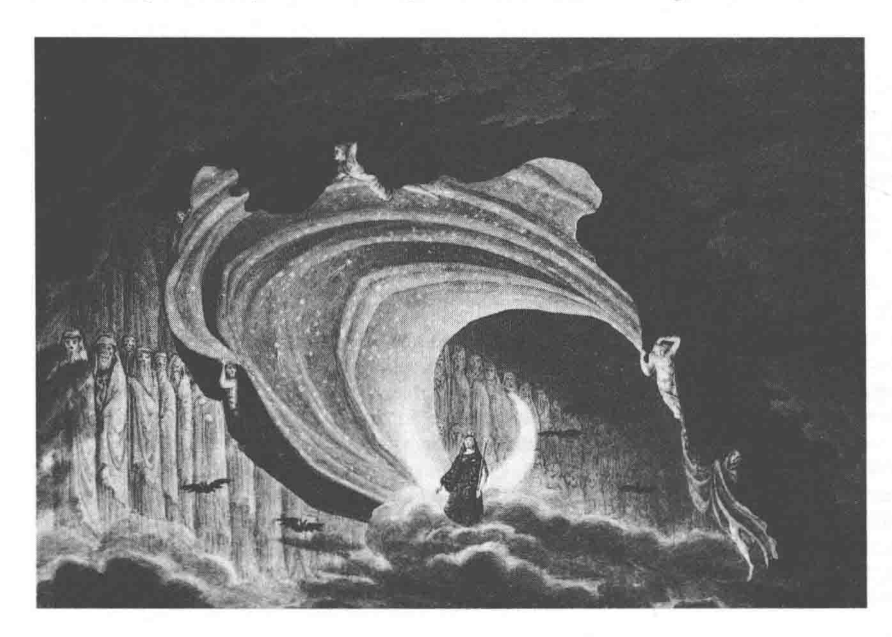
BRIAN MANN

Quaglio. Italian-German family of stage designers. Giovanni Maria Quaglio (i) (*b* Laino, Como, *c*1700; *d* Vienna, *c*1765) and Domenico Quaglio (i) (1708–73), a portrait and historical painter, were sons of the painter Giulio Quaglio (1668–1751); their descendants constitute two distinct branches of the family.

G.M. Quaglio studied in Rome and Milan and moved to Vienna, probably in the early 1730s, as an architect and stage designer. He was involved in the reconstruction of the Redoutensaal (1748–52) and designed sets for the Burgtheater and Kärntnertortheater in Vienna (1748–51), becoming the leading designer for both (1752–65). His

sets encompassed the Viennese repertory during the transition from courtly to middle-class theatre. He designed nearly all the sets for the reformers Durazzo, Calzabigi, Angiolini and Gluck (*Orfeo ed Euridice*, 1762; *Telemaco*, 1765). His art was rooted in the *opera seria* tradition of formalized illusionistic architecture painting, but he also developed staging as a means of expression, particularly in association with Gluck, through picturesque natural structures aiming at truth and universal appeal.



His son Lorenzo Quaglio (i) (*b* Laino, 23 July 1730; *d* Munich, 2 May 1805) was appointed theatre artist at the court of the Elector Palatine Carl Theodor in 1752. As court theatre architect from 1758 he was responsible for scenery at the Mannheim and Schwetzingen court theatres, and for enlarging the Mannheim Hofoper (1758) and reconstructing the Nationaltheater (1777). During that period he also worked at Reggio nell'Emilia, Frankfurt, Dresden and Zweibrücken (1775). He moved to Munich in 1778 with the court and retired in 1799. As designer for works of the Mannheim School, especially Holzbauer's operas and Cannabich's ballets, Quaglio gave a considerable impulse to German musical theatre. He followed his father in continuing to reconcile the courtly formalism of the Galli-Bibiena school with bourgeois intimacy and objectivity. Late 18th-century *opera seria* extravagances of perspective were replaced by clearly structured neo-classical architectural and landscape views. Carlo (*fl c*1761–78), son of G.M. Quaglio (i), was assistant and second theatre engineer (1762–5) to his father in Vienna; in 1761 he designed the stage of the palace theatre in Eisenstadt, where Haydn worked, and from 1765 to about 1778 he was stage designer in Warsaw. A third brother, Martin (*fl c*1764–73), was assistant to Lorenzo (i) in Mannheim in 1764–8 and then became stage designer in Kassel, where he was still active in 1773. Lorenzo's son Giovanni Maria (ii) (1772–1813) was court theatre painter in Munich (1795–9 and 1802–3) and in Mannheim (1800–02).

The family's other line of influential stage designers was founded by Giuseppe (or Joseph) Quaglio (*b* Laino, 2 Dec 1747; *d* Munich, 2 March 1828), son of Domenico (i) and nephew of G.M. Quaglio (i), with his brother Giulio. Their work was closely connected with Romantic musical theatre and the rise of historical stage design in Germany. Giuseppe went to Mannheim about 1770 as a theatre painter and followed his cousin Lorenzo (i) to Munich in 1779; until 1823 he was stage designer there, from 1801 court theatre architect. He completed the transition to a pictorially composed scene begun by the older members of the family, especially as regards historical milieu: his sets, using the devices of Romantic landscape painting, exploited mood and local colour and achieved striking expressive variety.

His brother Giulio (or Julius) Quaglio (*b* Laino, 1764; *d* Munich, 21 Jan 1801) was a theatre artist in Munich (*c*1781–5), Mannheim (1785–98) and Dessau (1798) before succeeding his cousin Lorenzo (i) as Munich court theatre architect in 1799. His designs, particularly those created after 1785 for the Mannheim Nationaltheater, followed essentially the principles of his brother, but he made less use of historical scenery. His setting of *Die Zauberflöte* (1794, Mannheim), partly composed of older sets from the theatre's stock, showed a multiplicity of different stylistic elements, notably exotic motifs including a 'Chinese' hall, a 'Gothic' temple and an 'Egyptian' vault.

Giuseppe's son Angelo Quaglio (i) (*b* Munich, 13 Aug 1784; *d* Munich, 2 April 1815) was an artist at the Munich Hoftheater from 1801 and also at the Isartortheater after 1812. Like his brothers Domenico (ii) (1787–1837), only very briefly a stage designer, and Lorenzo (ii) (1793–1869), Angelo made a considerable contribution to the popularization of the Gothic style. His work for the stage, which has survived mainly through his illustrated inventory of the court theatre (1803–10), inclined not only to the Gothic period but also to other historical epochs – classical antiquity in particular was glorified in the idealized landscapes and architecture of heroic opera (Salieri's *Palmira*, 1814).

A fourth son of Giuseppe, Simon (Joseph) Quaglio (*b* Munich, 23 Oct 1795; *d* Munich, 8 March 1878), was an assistant from 1812 and from 1814 a permanent stage designer at the Munich court theatre, where he supervised

Design by Simon Quaglio for the arrival of the Queen of Night (Act 1 scene vi) in Mozart's 'Die Zauberflöte', Hof- und Nationaltheater, Munich, 1818: pen and ink with watercolour (Theatermuseum, Cologne)

the scenery from 1824 up to his retirement in 1877. After his classical early works he devoted himself to Romantic stage painting with mystical characteristics (*Die Zauberflöte*, 1818, Hof- und Nationaltheater, see illustration; *Der Freischütz*, 1822). Influenced by grand opera, which dominated the Munich repertory, he later developed a more solemn historical style (*La Juive*, 1844). His son Angelo (ii) (*b* Munich, 13 Dec 1829; *d* Munich, 5 Jan 1890) worked from 1850 at the court theatre and managed a commercial scenic studio which supplied theatres in Dresden, Berlin, Stuttgart, St Petersburg and elsewhere. His designs remained within his father's illusionistic historical style. Closely connected with the aesthetic ideas of Ludwig II of Bavaria, Quaglio was one of the principal designers for the Munich Wagner premières, from *Tannhäuser* (1855) to *Die Walküre* (1870) and for Ludwig's private performances (including *Aida*, 1877, and *Oberon*, 1881). He worked with his father and others. His son Eugen (*b* Munich, 3 April 1857; *d* Berlin, 25 Sept 1942) worked in his father's studio from about 1877, later (1891) becoming court theatre painter in Berlin, a post he held until 1923. He carried on the family tradition of historical stage designs, above all in Wagner productions. Although he was influenced by naturalism and *verismo*, his romanticizing productions were basically historical idylls (D'Albert's *Der Improvisator*, 1902; Strauss's *Feuersnot*, 1902).

MANFRED BOETZKES/R

Quallenberg [Qualemberg, Qualenberg], **Johann Michael** (*b* ?Bohemia, *c*1726; bur. Brühl, nr Schwetzingen, 16 April 1786). German clarinettist. He learnt the clarinet in Vienna and from 1758 to 1765 was first clarinettist in the Mannheim court orchestra. Hiller noted him as being in the orchestra again in 1767 (*Wöchentliche Nachrichten*, 30 November), and from 1770 his name reappears on the court calendar in this capacity. Gerber states that he was also a court councillor. From 1757 or 1758 he practised forestry and managed an inn near Schwetzingen. When the Mannheim orchestra transferred to Munich in 1778 he remained behind in Brühl, at full salary. He is mentioned in the calendars of the Bavarian and Palatinate court until 1786, although he apparently had no further official duties in Mannheim.

Quallenberg was one of the first orchestral performers on the clarinet, which until then had been largely confined to military bands and outdoor concerts, and as such played a role in the early development of the symphony orchestra at Mannheim (Mozart remarked in particular on the 'glorious effect' of symphonies with flutes, oboes and clarinets in a letter of 3 December 1778). The virtuoso clarinet part in Ignaz Fränzl's Third Symphony (*c*1767) was probably written for him. Quallenberg himself composed a four-act comedy *Die Schöne am Rhein* (Brühl, 1777, *D-Mbs*) and published his 'Wahre Geschichte einer Geige des berühmten Jakob Stainer' in the *Musikalische Korrespondenz der teutschen Filarmonischen Gesellschaft* (1 June 1791, cols. 169–72).

ROLAND WÜRTZ/EUGENE K. WOLF

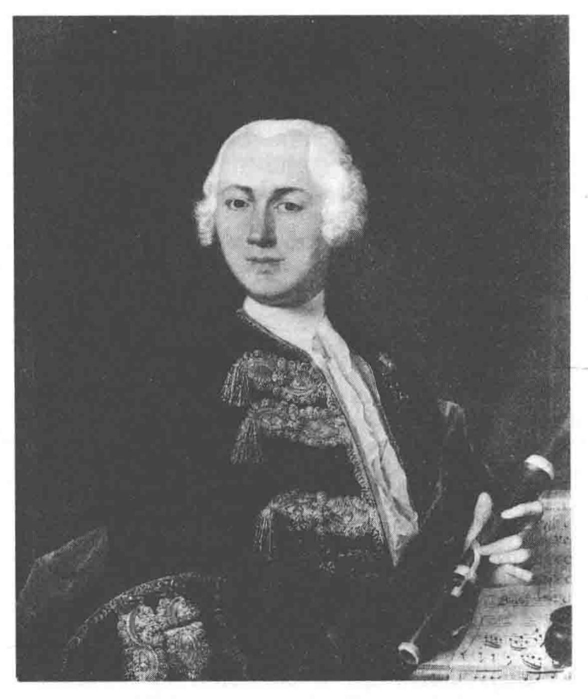
Quantz, Johann Joachim (*b* Oberscheden, Hanover, 30 Jan 1697; *d* Potsdam, 12 July 1773). German flautist, composer, writer on music and flute maker.

1. Life. 2. Works. 3. Writings.

1. Life. Quantz's autobiography, published in F.W. Marpurg's *Historisch-kritische Beyträge*, i (1754–5), is the principal source of information on the composer's life, centring on his activities in Dresden (1716–41) and at the court of Frederick the Great in Berlin and Potsdam (from 1741).

The son of a blacksmith, he began his musical training in 1708 with his uncle, Justus Quantz, a town musician in Merseburg. After Justus's death three months later, Quantz continued his apprenticeship with his uncle's successor and son-in-law, J.A. Fleischhack, whom he served as a journeyman after the completion of the apprenticeship in 1713. During his apprenticeship, Quantz achieved proficiency on most of the principal string instruments, the oboe and the trumpet. Taking advantage of a period of mourning for the reigning duke's brother in 1714, he visited Pirna where he came across some of Vivaldi's violin concertos, which were to have a decisive influence on his artistic development. In March 1716 he accepted an invitation by Gottfried Heyne to join the Dresden town band.

Always eager to improve his musical skills, Quantz spent part of 1717 in Vienna studying counterpoint with Fux's pupil J.D. Zelenka. In 1718 he became oboist in the Polish chapel of Augustus II, Elector of Saxony and King of Poland, accompanying him on official visits to Warsaw but remaining in Dresden for substantial periods. Because Quantz found little opportunity for advancement as an oboist, he turned to the transverse flute in 1719, studying briefly with the noted French player P.G. Buffardin, an advocate of the French taste. However, he credited J.G. Pisendel, the leading violinist and representative of the 'mixed taste' (French and Italian), with the greatest



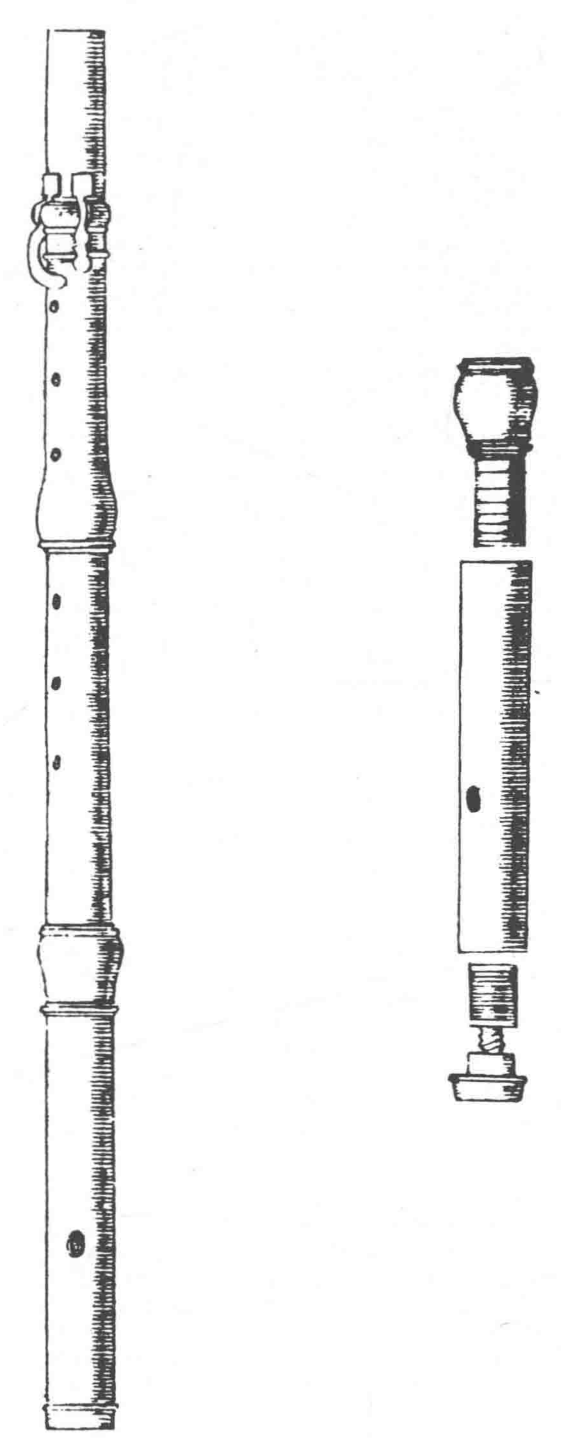
influence on his development as a performer and composer. His interest in composition, particularly in works for the flute, continued to grow, stimulated by a wide range of Italian and French works then performed in Dresden. In the Saxon court's repertory, however, influenced by *opera seria* and the instrumental compositions of Corelli, Torelli and Vivaldi, the Italian musical style gradually superseded the French.

Between 1724 and 1727 Quantz completed his training with a period of study in Italy and shorter stays in France and England. He studied counterpoint with Francesco Gasparini in Rome, impressed Alessandro Scarlatti favourably and met, among many others, the future Dresden Kapellmeister J.A. Hasse, who was then studying with Scarlatti. From August 1726 to March 1727 he visited Paris, and although he found the French vocal style disagreeable, he enjoyed the performances of many instrumentalists, among them the flautist Michel Blavet. While in Paris he for the first time had a second key added to his flutes to improve their intonation (*see* FLUTE, §II, 4(ii)). After a ten-week stay in England, where he met Handel, Quantz returned to Dresden in July 1727. The three-year tour established his reputation outside Germany, paving the way for the future international dissemination of his music. In March 1728 he was promoted to a member of the regular Dresden court chapel, where he was no longer required to double on the oboe. With this promotion he had finally won recognition as one of the outstanding performers in Dresden.

In May 1728 Quantz, Pisendel, Buffardin and others accompanied Augustus II on a state visit to Berlin. Quantz made a particularly deep impression on Prince Frederick, and returned to the Prussian court twice a year to teach him the flute. When Augustus II died in 1733, Quantz was not allowed to transfer to Berlin; but his autobiography suggests that he would not have wanted to give up the active musical life at the Saxon court for a tenuous one under Prince Frederick (fig.1). Instead he continued to serve under Augustus III, dedicating to him the op.1 *Sei sonate* for flute and continuo (1734).

When Frederick became King of Prussia in 1740 he could offer Quantz 2000 thalers a year (compared to the 800 paid by Augustus III), exemption from duties in the opera orchestra and an agreement to take orders only from him. In December 1741 Quantz moved to Berlin, and for the remainder of his career his duties centred on the supervision of the king's private evening concerts, for which he wrote new works and at which he alone had the privilege of criticizing Frederick's playing. For new compositions and the manufacturing of flutes, an activity he had pursued since 1739, he received additional payments. Once in Frederick's service, he declined any concert tours or court invitations. Only a few compositions were printed during the Berlin period, most importantly the *Sei duetti a due flauti traversi*, op.2 (1759). The *Versuch einer Anweisung die Flöte traversiere zu spielen* (1752), on the other hand, was published within one year both in German and in a French translation. It has remained his most significant contribution to music literature.

2. WORKS. The majority of Quantz's output awaits publication and exact dating. Most of the trio sonatas seem to date from the Dresden period, and for the works listed in Frederick's catalogues, low numbers probably indicate an early date of composition. Although Quantz never carried stylistic simplification as far as his younger contemporaries, his works reflect the transition from a late Baroque to an early Classical idiom. In spite of their uneven quality and frequent reliance on clichés, they display excellent craftsmanship, and writers have drawn attention to several compositions that contribute to an understanding of works by J.S. Bach (Rampe, 1993; Swack, 1995).



1. Johann Joachim Quantz: portrait by Johann Friedrich Gerhard, 1735 (Neues Schloss, Bayreuth)

The concertos suggest a debt to Vivaldi; they usually follow the three-movement fast–slow–fast form and adapt string figurations to the limited range and flexibility of the flute. The later concertos introduce stronger rhythmic contrasts between the motifs of the ritornellos, from which the solo material is increasingly derived.

The majority of the trio sonatas and the early solo sonatas follow the four-movement plan of the *sonata da chiesa*, but incorporate French dance types characteristic of Quantz's 'mixed taste'. Most of the trio-sonata movements make use of contrapuntal devices, confirming Quantz's technical proficiency. In accordance with contemporary developments, however, he tended to conceal his contrapuntal learning. In the solo sonatas he had by 1734 adopted the slow–fast–fast pattern that characterizes most of the Berlin sonatas. In formal organization the sonata movements tend towards the expansion of binary designs to include in the second part an increased return from the first. With their emphasis on simple melodic writing and on thematic variety, their renunciation of contrapuntal complexities while still maintaining a melodic bass line and their frequent use of appoggiaturas and trills, these works show Quantz's mastery of the *galant* style.

3. WRITINGS. Quantz's autobiography and other writings are of considerable interest, but his most significant contribution to music literature is unquestionably his *Versuch* (1752). Only five of its 18 chapters exclusively

2. *Two-keyed flute with head joint in two sections, designed by Johann Joachim Quantz: engraving from the 'Supplément', iii, to Diderot's 'Encyclopédie' (Paris, 1777)*

concern flautists; the others address general issues of interest to amateur instrumentalists in a way that is not only more comprehensive but also more concrete than ever before. Of the treatise's three main parts, the first has attracted the most attention. It is devoted to performance on an individual instrument and includes aspects of ornamentation that Quantz divides into two principal types: essential graces (*wesentliche Manieren*), such as appoggiaturas and turns largely reflecting French influence, and arbitrary variation (*willkürliche Veränderungen*), reflecting the Italian practice of embellishing a melody, applicable only to certain types of *adagio* movements. It also includes the only almost contemporary account of the modifications made to the flute in the late 17th century and refers to Quantz's own inventions regarding flute construction: the second key and the division of the head joint into two sections to create a tuning slide (fig.2).

The second part reviews the responsibilities of the accompanying instruments and their leader, with discussion of orchestral seating plans, bowing and tempo. Quantz relates a pulse of about 80 beats per minute to specific note values in four basic tempo indications from allegro assai (one pulse beat per minim) to adagio assai (two pulse beats per quaver), making it clear, however, that the rule needs to be refined by other parameters and that it primarily applies to instrumental music.

The last part of the *Versuch* surveys the characteristics of Italian, French and German styles, and provides the reader with the foundation to evaluate both performers and compositions. Quantz's approach of focussing on taste allows him a certain degree of theoretical freedom, which leads to an emphasis on thematic quality and organization rather than on harmony, texture and overall form. His discussion of national styles makes it clear that he believed German music included the best French and Italian elements, a combination he hoped would soon lead to a universal idiom.

The *Versuch* had a considerable influence on later German writers from C.P.E. Bach to D.G. Türk. While Quantz's views cannot be considered absolute guides for the performance of late Baroque music, they certainly reflect many practices of the period from about 1725 to 1755 as cultivated in Dresden, then one of the finest musical establishments in Europe, and subsequently in Berlin.

Pastoralle, prelude to J.F. Agricola's Die Hirten bei der Krippe zu Bethlehem, 2 fl, 2 ob, 2 vn, va, org obbl, *D-LEm*

11 caprices, 6 fantasias, and 43 variations, suite movts and other movts, solo fl/fl, bc, *DK-Kk*, ed. W. Michel and H. Teske (Winterthur, 1980), some doubtful

Solfeggi , solo fl, *MSS*, formerly *D-Bsb* lost; some survive in *DK-Kk*, ed. W. Michel and H. Teske (Winterthur, 1978), some in *Das Flötenbuch Friedrichs des Grossen* (Leipzig, 1934)

Over 235 sonatas, fl, bc, mainly *Bsb*, *c*35 pubd in 18th-century edns, of which only 6 sonate a flauto traversiere solo, op.1 (Dresden, 1734) authorized by Quantz, for further MS sources see Vester

Variations on Ich schlief da träumte mir, fl, bc, *Bim*

6 Sonatas or Duets, 2 Ger. fl/2 vn, op.5 (London, 1750)

6 duetti, 2 fl, op.2 (Berlin, 1759/*R*)

Duet, 2 fl, *DK-Kk*

Minuet, 2 fl, Select Aires or Duets (London, 1737)
7 duets, 2 fl, lost, listed in Breitkopf catalogue (Leipzig, 1763)
*c*55 trio sonatas (2 fl, bc)/(fl, vn/ob/ob d'amore/va d'amore/rec, bc), mainly *D-Dl*, some with duple attribs., 9 pubd in 18th-century edns, for further MS sources see Vester
Qts, lost, mentioned by Vester
4 sonatas, 3 fl: 3 in *DK-Kk* (1 with duple attrib.); 1 pubd by G. Billaudot (see Vester)
Arioso ma un poco Andante, fl, 2 vn, va, *D-Dl*
Divertimento a 5, fl, other insts, lost, fl pt partially quoted in Solfeggi

VOCAL

Padre perdonna, aria, S, str, bc, *Dl*; Sembra che il ruscelletto, aria for 'Sigra. Astrua' in Serenata fatta per l'arrivo della Regina Madre a Charlottenburgo, 1747, *Bim*
6 songs, v, bc: Ach ich verschmachte – Schenket ein; Holde Phyllis, die Göttinnen; Welche Gottheit soll auch mir einen Wunsch gewähren; Wenn ich mir ein Mädchen wähle, all in *Oden mit Melodien I. Theil* (Berlin, 1753); Kleine Schöne, küsse mich!, in *Neue Lieder zum Singen beym Clavier* (Berlin, 1756); Gewiss! der ist beklagenswerth, in *Berlinische Oden und Lieder I. Theil* (Leipzig, 1756)
22 hymns, with bc, in *Neue Kirchen-Melodien zu denen geistlichen Liedern des Herrn Professor Gellerts* (Berlin, 1760)
For fuller details on MSS, 18th-century and modern edns, see Reilly (1971)

EDWARD R. REILLY/ANDREAS GIGER

Quarenghi, Guglielmo (*b* Casalmaggiore, 22 Oct 1826; *d* Milan, 3 Feb 1882). Italian cellist and composer. He studied with Vincenzo Merighi at the Milan Conservatory from 1839 to 1842. He became principal cellist at La Scala in 1850, and a professor at the conservatory in 1851. During 1860–61 Quarenghi was associated with Rossi and Mazzucato in the formation of the Società di S Cecilia, Milan. He succeeded Boucheron as *maestro di cappella* of Milan Cathedral in 1879, but ill-health forced him to resign in 1881.

Quarenghi's only opera, *Il dì di San Michele*, was produced in Milan in 1863, and in the same year he published a mass and other church music. His *Metodo di violoncello* (Milan, 1876) has an interesting preface, comparing the earliest bowed instruments, and their evolution, with folk instruments from many countries. He also composed six caprices for solo cello, several original pieces and transcriptions for cello and piano, and some chamber music.

LYNDA MACGREGOR

Quarles, Charles (i) (bur. Cambridge, 23 June 1717). English organist and organ builder. He was appointed organist to Trinity College, Cambridge, on 26 December 1688, and proceeded to the MusB in 1698. No entry for him has been found in Admission Books, which would have shown father's name and place of residence. It is likely that both Charles (i) and (ii) were born during the Interregnum, before Registers of Baptism returned to regular use after 1660. Attributed to Charles Quarles (i) are a pleasing two-movement Lesson in F minor for

Harpsichord published by Goodison in 1788, and a Minuet 'in the Ancient Style' heavily arranged by Vincent Novello in 1840 for his *Select Organ Pieces*. He is believed first to have come to notice as an organ builder in 1681, cleaning the instrument at Long Sutton, Lincolnshire. In Cambridge he did much maintenance work on several university organs. He was contracted to move the organ of Pembroke College to Framlingham, a College living, where, sensitively restored and slightly enlarged, it is still in use. He was also to 'make/sett upp compleate perfect and finish' a replacement organ as specified for £210 10s. (6 December 1707.) An organ inaugurated on 14 April 1705 at Christ's College was 'provided' by Quarles at a cost of £140. A new organ at Emmanuel College, given in about 1684 by 'Mr. Hothersall and his lady, Joice' at a cost of £120 or £140, has no College documentation. E.J. Hopkins and E.F. Rimbault (*The Organ: its History and Construction*, 1855) wrongly ascribed these three organs to Bernard Smith. However, H.J. Norman of the firm of Norman & Beard, which rebuilt all three, said that they were inferior to Smith's usual work, though he confirmed that they were all by the same builder: the pipework in them was of mixed origin, some attributable to Smith and others quite different in shape, size and material. The cases, too, are of varied origin, but, apart from the Chayre at Emmanuel, have a family likeness and a local flavour. These facts and the comparatively low prices, indicate that Quarles made use of second-hand organ materials (several Colleges were replacing organs at that period, providing a ready source of supply). Quarles also supplied the organ at Wisbech Parish Church, also formerly attributed to Smith even though it was built after his death.

From August 1709 Quarles shared the organ duties at Trinity 'for six months in the year alternately' with John Bowman, who was to be Quarles's successor.

BERNARD B. EDMONDS

Quarles, Charles (ii) (*d* York, *c*1727). English organist; his relationship to Charles Quarles (i), with whom he is often confused is unknown. He is unlikely to have been his son: the baptism register of (Old) All Saints, Cambridge, in which parish Trinity College stood, recorded only three children of Charles and Elizabeth Quarles, none named Charles, and in any case all too young to be relevant. Charles (ii) was appointed organist of York Minster on 30 June 1722. His successor, Edward Salisbury, was appointed in February 1728, but it is not known for certain whether Quarles was by that time dead. In the *Cathedral Magazine* (iii, 1775) an anthem, *Out of the deep*, is ascribed to 'Mr Charles late Organist at York': it is probable that Quarles may have been meant. More interesting is a technical study compounded of scales and arpeggios divided between the hands, entitled 'Mr Quarles's way of fingering in Gamut Natural', which occurs in a manuscript (*GB-Ge* R.d.39, f.37*v*) in the hand of Edward Finch, himself of York, and so presumably relates to Quarles of York. In the study free use is made of the thumb and all fingers in the modern way. This evidently struck Finch as sufficiently novel and noteworthy to justify transcription.

WATKINS SHAW/BERNARD B. EDMONDS

Quarta (It.). *See* FOURTH.

Quartal harmony. (1) Term denoting a harmonic system based on the interval of a 4th (as in early two-part organum, and some 20th-century music), as opposed to the 'tertiary harmony' of the major–minor tonal system.

(2) The opposite of NON-QUARTAL HARMONY, hence a harmonic system like that of 15th-century faburden or fauxbourdon (and tonal music) in which vertical perfect 4ths are permitted as consonances so long as they do not involve the lowest-sounding part.

Quart de soupir (Fr.). A semiquaver REST.

Quart de ton (Fr.). *See* QUARTER-TONE.

Quarte (Fr., Ger.). *See* FOURTH.

Quarte de nasard (Fr.). *See under* ORGAN STOP.

Quarter-note. American term for CROTCHET. *See also* NOTE VALUES.

Quarter-tone (Fr. *quart de ton*; Ger. *Viertelton*; It. *quarto di tono*). An interval half the size of a semitone. The term was used by some 17th- and 18th-century theorists to denote the distance between a sharp and enharmonically distinct flat in mean-tone temperaments (e.g. D♯–E♭). In most contexts, however, it refers to an interval of $\frac{1}{24}$ of an octave, or 50 cents.

Quarter-tones form part of the enharmonic genus of ancient Greek music theory (*see* GREECE, §I, and DIESIS (ii)); they have also been discussed in the context of medieval plainsong (see Gmelch), and were considered by Hothby in the late 15th century (see Reaney) and by Coprario in the early 17th (see Field). Interest in them increased steadily during the 19th and 20th centuries. The 'Aphorismen' of Heinrich Richter, published in 1823 under the pseudonym 'Amadeus Autodidactos', ventured to propogate quarter-tone music, and Johanna Kinkel urged the emancipation of the interval in her essay of 1853. The Russian futurist painter Mikhail Matyushin (1861–1934) experimented with quarter-tones and wrote a related treatise; Julián Carrillo wrote quarter-tone music in the 1890s; and Andrzej Milaszewski (1861–1940) patented a quarter-tone piano in Vienna in 1912. The Czech composer Alois Hába taught courses on quarter-tone (and sixth-tone) music at the Prague Conservatory from 1924 to 1951. Bartók used quarter-tones in the last movement of the original version of his Sonata for solo violin (1944; see Nordwall). Other composers who have written quarter-tone music include Ivan Vïshnegradsky, Valentino Bucchi and Charles Ives, as well as Boulez and many other composers of the second half of the 20th century.

The theory and practice of quarter-tones are at least as widespread beyond western Europe as within it. The early 10th-century Islamic theorist al-Fārābī described the ostensible use of approximate quarter-tones in the fretting of a long-necked lute, *tunbūr baghdādi*, which he deemed pre-Islamic, and quarter-tones have remained a feature of much ARAB MUSIC. The concept of quarter-tones was a

prominent feature in the analysis of scales by 19th- and 20th-century Islamic theorists, most notably Mikhā'īl Mushāqa (1800–88). Many Hindu theorists have considered the octave to de divided into 22 *sruti* which, though seldom regarded as uniform in size, must average about 55 cents (*see* INDIA, §III, 1(ii)(a)).

JULIAN RUSHTON

Quartet (Fr. *quatuor*, *quartette*; Ger. *Quartett*; It. *quartetto*). A composition or part of a composition for four voices or instruments, or a group that performs such a composition. Many chansons, madrigals and polyphonic lieder of the 16th century and glees of the 17th century are vocal quartets. Partsongs, sometimes (like Pearsall's madrigals) imitating an earlier form, continue the tradition of writing for such combinations through the Classical and Romantic periods. Vocal quartets, like duets and trios, figured prominently in 19th-century domestic music, sometimes in an accompanied form, as in Brahms's two sets of *Liebeslieder* waltzes with piano duet or his *Zigeunerlieder* and Schumann's *Spanisches Liederspiel* with piano solo. Accompanied quartet cycles like Liza Lehmann's once popular *In a Persian Garden* and Stanford's *The Princess* were part of a sizable literature now almost totally neglected. Quartets for unaccompanied male voices were also common (e.g. by Schumann, Brahms and Niels Gade).

Vocal quartets accompanied by orchestra are frequent in opera and oratorio from the 18th century onwards. Handel's 'Why dost thou untimely grieve?' in *Semele* is an early example of a form that was subsequently developed as a dramatic confrontation of characters. Independent lines of thought and action on the part of four characters were skilfully portrayed in the music both in ensembles forming an independent number like Mozart's 'Andrò, ramingo e solo' in *Idomeneo* and 'Non ti fidar, o misera' in *Don Giovanni* and Beethoven's 'Mir ist so wunderbar' in *Fidelio*, and in those that are an integral part of a scene such as the quartets in Verdi's *Rigoletto* and *Otello*. Settings of the mass in the Classical period, particularly in Austria, frequently make use of a quartet of solo voices. In his Ninth Symphony Beethoven transferred the device to symphonic music. (For the history of the vocal quartet, see G. Rienäcker, 'Quartett', *MGG2*.)

The most important chamber music forms are the STRING QUARTET (two violins, viola, cello) and the PIANO QUARTET (piano, violin, viola, cello); these repertories are discussed in separate entries. Closely related to the early string quartet are the many 18th-century works in which one of the violins of the string quartet was replaced by a wind instrument, notably the oboe and flute quartets of J.C. Bach, Vanhal and Mozart or the clarinet quartets of Carl Stamitz and J.N. Hummel. In many of these compositions the wind instrument is treated in a more soloistic manner than would be usual in a string quartet, more in fact in the manner of the *quatuor brillant* (with a virtuoso first violin part). Sometimes both violins were replaced, as in J.C. Bach's quartets for two flutes, viola and cello.

Wind instruments tend to combine with the piano less well than with strings, but there is a handful of quartets for piano and wind, including works by Franz Berwald (with clarinet, horn and bassoon) and Florent Schmitt (with oboe, clarinet and bassoon). For keyboard with mixed ensemble there are various significant 20th-century works such as Hindemith's quartet for piano, clarinet, violin and cello (1938), Messiaen's *Quatuor pour le fin du temps* for the same combination, and Webern's op.22 for tenor saxophone, clarinet, violin and piano.

The repertory of quartets for wind instruments alone is similarly varied in instrumentation. In their divertimentos and cassations Haydn and his contemporaries tended to combine pairs of instruments – two flutes and two horns or two clarinets with two horns, for instance. Rossini's quartets for flute, clarinet, bassoon and horn are mostly arrangements. There are 20th-century works for four different wind instruments by Frank Bridge, Jean Françaix, Egon Wellesz, H.E. Apostel and Henk Badings.

MICHAEL TILMOUTH/R

Quartetto Beethoven. Italian piano quartet formed in 1968 by FELIX AYO.

Quartetto d'archi [di cordi] (It.). *See* STRING QUARTET.

Quartetto Italiano. Italian string quartet. It was founded by Paolo Borciani, Elisa Pegreffi, Lionello Forzanti and Franco Rossi. They met in 1942, at a summer school in Siena organized by the Accademia Musicale Chigiana, and in their spare time, encouraged by the cellist and chamber music coach Arturo Bonucci, prepared Debussy's Quartet. In the summer of 1945 they formed a permanent ensemble, calling themselves the Nuovo Quartetto Italiano, learning all their repertory by heart and giving their first concerts in Carpi and Milan that November. In 1946 they won competitions organized by the Accademia di S Cecilia and the Filarmonica Romana and made the first of three recordings of the Debussy Quartet. The following year Piero Farulli replaced Forzanti as viola player and they began their European tours. The first of 11 North American tours came in 1951, when the group dropped the 'Nuovo' from its name. At that stage it played with exquisite but fairly light tone, almost like an italianate variant of the Franco-Belgian school. Its ensemble was

impeccable, but its Achilles heel was its rhythmic control, which could not match that of its main European rivals, the Amadeus, Borodin and Smetana quartets. Under the influence of Furtwängler, whom the quartet met at Salzburg in 1949, through the 1950s it deepened its interpretations – playing from the printed music after 1955 – and cultivated a more massive style, of which the apotheosis was its almost orchestral reading of Schubert's G major Quartet. The group's many recordings, including Mozart and Beethoven cycles, the mature Schubert works, the quartets by Debussy and Ravel and a programme of Webern, won wide acclaim. Its superb interpretations of selected works by Stravinsky, Prokofiev, Malipiero and Milhaud were also recorded. Works were written for the group by Bucchi and Ghedini and it excelled in earlier Italian music by such composers as Boccherini, Cambini, Galuppi and Verdi. The quartet also taught, the two violinists in Milan and the others in Florence. The Quartetto Italiano was unusual in concentrating almost exclusively on quartet music; Mozart's Clarinet Quintet (with Antoine de Bavier), Brahms's Piano Quintet (with Maurizio Pollini), Schoenberg's Second Quartet (with Marguerite Kalmus) and Martinů's Concerto were its only collaborations. Plans to perform Schubert's C major Quintet with Pierre Fournier and Mozart's quintets with Dino Asciolla were shelved in 1977 when Farulli fell ill. His replacement by Asciolla, initially a temporary measure, led to a chain of misunderstandings; and by the time Asciolla quit the group suddenly in 1980, Farulli was alienated from the others. Borciani and Pegreffi, who had married in 1952, worked with two students on performances of Bach's *Art of Fugue* and Borciani's death in 1985 ended any speculation that the Quartetto Italiano might be revived. In 1983 Farulli organized the outstanding Nuovo Quartetto but it foundered after only a few years. He and Rossi – who has played in other ensembles, notably the Bartholdy Piano Quartet – have continued to be influential teachers and the healthy state of string quartet playing in Italy at the beginning of the 21st century is testament to the influence of the Quartetto Italiano.

TULLY POTTER

Quartfagott. As mentioned by Praetorius, a large dulcian pitched a 4th below the standard dulcian; similarly, a quintfagott was pitched a 5th below. In the 18th century these terms also referred to larger versions of the BASSOON.

Quartgeige (Ger.). A small violin, or VIOLINO PICCOLO, tuned a 4th higher than the violin.

Quartieri [Quartiero], **Pietro Paolo** (*b* Rome, *c*1560; *d* ?after 1601). Italian composer. He was probably associated with Terracina Cathedral, near Rome. Cerreto, in *Della prattica musica vocale et strumentale* (1601), cited him as an outstanding musician. He wrote sacred music for the cathedral, including psalm settings and motets (formerly in *D-KN* Sammlung Heyer, now lost). His sole publication is *Il primo libro de madrigali a cinque voci* (Rome, 1592; one madrigal was reprinted in RISM 1606[5]). Because of his apparent preoccupation with problems of harmony, tonality and form, he often avoided verbal imagery in his madrigals; his interpretation of the texts is reflected in the variation of cadences, textures and metrical changes, and all the pieces demonstrate his mastery of contrapuntal devices.

RUTH T. WATANABE

Quartina (It.). *See* QUADRUPLET.

Quarto di tono (It.). *See* QUARTER-TONE.

Quartole (Ger.). *See* QUADRUPLET.

Quartposaune (Ger.). In the strict sense, a trombone pitched a 4th below the ordinary (*gemeine*) trombone. (Similarly the *Quintposaune* is pitched a 5th below.) 'Quartposaune' is mentioned by the maker Georg Neuschel in letters (1545). In the 17th and 18th centuries, from which there survive examples of both *Quart* and *Quint* instruments, 'Quartposaune' might signify whichever of these was available for the occasion. The word 'Quartposaune' came to be used commonly as an equivalent to 'Bassposaune', which was on the whole a rare term before the 19th century. In the early 19th century 'Quartposaune' was still occasionally used (e.g. by Nemetz, *Neueste Posaun-Schule*, Vienna, *c*1827). The pitches of a *Quart-* and *Quintposaune* during the Baroque period were respectively E and D at the old high pitch (Chorton); the ordinary trombone was then in A. By the beginning of the 19th century the pitch of the *Quartposaune* had come to be reckoned as F (with the tenor at B♭) at the concert pitch of the time.

Also mentioned, mainly in inventories of instruments from 1580 to 1610, are the *Terz-* and *Secundposaune*, pitched a 3rd and a 2nd below the ordinary trombone. Their purpose was probably to aid transposition of music downwards, though for this an ordinary trombone could be made to serve as *Secund*, *Terz* or even *Quart* by the addition of crooks, as described in the 1589 inventory of the Stuttgart Hofkapelle (Bossert, *Württembergische Vierteljahrshefte für Landesgeschichte*, new ser., xxi, 1912). 'Terzposaune' in Nemetz refers to a bass trombone in G (the traditional pitch for the bass trombone in England until the second half of the twentieth century).

Quartzug (Ger.). *See under* ZUG (i).

Quasi (It.: 'almost', 'approximately', 'like', 'as though'). A word used both in tempo designations – *andante quasi allegretto*, *allegretto quasi vivace*, etc. – and in piece descriptions – *sonata quasi una fantasia*, 'sonata in the manner of a fantasy'. A curious observation in Koch's *Musikalisches Lexikon* (1802) is that the word 'quasi' scarcely ever appears in music.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

□

Quassus (Lat.: 'shaken'). In Western chant notations, an adjective used to describe a neume whose first element is an ORISCUS. For instance, a VIRGA (single note of relatively higher pitch) preceded by an *oriscus* forms two notes in ascending order, a *pes quassus*. As with all neumes that include the *oriscus*, there is doubt as to the exact significance of the *quassus* type. A peculiarity of execution or an ambiguity of pitch may be involved. *See* NOTATION, §III, 1(ii).

DAVID HILEY

Quasthoff, Thomas (*b* Hildesheim, 1959). German bass-baritone. He studied with Charlotte Lehmann in Hanover, and in 1986 won first prize at an international competition at Munich. Prevented from appearing on the opera stage due to a physical disability, he quickly made his name as a recital artist and concert singer in Europe and in the USA (début, at the Oregon Bach Festival in 1995). His highly regarded London début at the Wigmore Hall came in 1996, and in 1998 he gained further recognition for his *Winterreise* at the same venue. Among his most notable achievements in the choral repertory have been *Die Schöpfung* with Rattle and the Berlin PO in 1997 and, the same year, Britten's *War Requiem* with Rostropovich in Tokyo and with Runnicles at the Edinburgh Festival. He has also performed *Des Knaben Wunderhorn* with Colin Davis in New York, *Das Lied von der Erde* with Ozawa in Boston and Brahms's *German Requiem* with Barenboim in Chicago. Quasthoff's dark-grained, flexible voice and his inborn musicality are to be heard in several recordings of Bach's cantatas, Haydn's *L'anima del filosofo*, a disc of Mozart arias for bass and a sombre, finely wrought interpretation of *Winterreise*.

ALAN BLYTH

Quaternaria (Lat.). A *ligatura quaternaria* or ligature comprising four notes. *See* LIGATURE (i).

Quatreble (Middle Eng.: 'quadruple'; from Lat. *quadruplus* or *quadruplex*, modified by analogy with 'treble' from Fr. *triple*). A voice or part pitched somewhat higher than the treble, occasionally designated *quatriplex* in polyphonic sources such as the Eton Choirbook (*GB-WRec* 178). Here the usage is clearly related to the Latin *quadruplum* in its sense of a fourth voice, above the *triplum*, in a motet (Franco of Cologne: 'Qui autem quadruplum vel quintuplum facere voluit'). In the 'quatrebil syghte' of improvised discant, as taught in Leonel Power's *Tretis … upon the Gamme*, the child was to sing an octave higher than the notes he imagined on the staff carrying the plainsong; other theorists of the time, however, make this a 12th higher, i.e. a 5th above the treble. For further information see M. Bukofzer: *Geschichte des englischen Diskants* (Strasbourg, 1936/*R*).

JOHN CALDWELL

Quatremère de Quincy [Quatremère], **Antoine-Chrysostome** (*b* Paris, 25 Oct 1755; *d* Paris, 28 Dec 1849). French politician, archaeologist, art historian and writer on music. After preparing for a career in law he studied art and history at the College of Louis-Le-Grand. From 1776 he made several long sojourns in Italy where he was soon drawn towards archaeology and the arts of antiquity. He established himself in 1786 in Paris as an aesthetician and art critic, and his authority was soon widespread, both with the public and among artists. His important article 'De la nature des opéras bouffons italiens' (*Mercure de France*, 1789) marked his entrance into the world of musicography, and together with his *Dissertation* that same year led to the recall of the disbanded *Bouffonistes*. He began his political career at the time of the Revolution, persevering for freedom of the theatres and for literary, dramatic and artistic copyright. In 1791 he was elected as a deputy to the Legislative Assembly, where he continued his activities on behalf of the arts. He was imprisoned for two years during the Terror, narrowly escaping the guillotine, and again escaped a death sentence in 1795. In 1797 he was appointed to the Council of the Five Hundred. He was made a member of the Académie des Inscriptions et Belles Lettres in 1804 and of the Légion d'honneur in 1808. With the restoration of the Bourbons his honours increased, and in 1816 he was appointed permanent secretary of the Institut de France. In this capacity he delivered funeral orations and biographical notices of deceased members of the academy, including the major French composers of the time. His writings for these occasions were printed separately and later collected in two volumes; based on first-hand documentation and contemporary opinion, they have since become valuable sources for the study of music history.

WRITINGS

'De la nature des opéras bouffons italiens et de l'union de la comédie et de la musique dans ces poëmes', *Mercure de France* (March 1789), 124

Dissertation sur les opéras bouffons italiens (Paris, 1789) [also in *Archives littéraires de l'Europe*, xvi (1807), 1–39]

Discours … sur la liberté des théâtres (Paris, 1790) [also in *Le moniteur* (22 Feb 1790)], given on 2 April 1790

Rapport … sur les réclamations des directeurs de théâtres et la propriété des auteurs dramatiques (Paris, 1792)

Dissertation … sur le système imitatif des arts et le génie poétique (Paris, *c*1804), read on 29 Sept 1804

Institut royal de France … Funérailles de Paisiello (Paris, 1817); *de M. de Monsigny* (Paris, 1817); *de M. Méhul* (Paris, 1817); *de M. Gossec* (Paris, 1829); *de M. Catel* (Paris, 1830); *de M. Boieldieu* (Paris, 1834)

De l'invention et de l'innovation dans les ouvrages des beaux-arts (Paris, *c*1828)

Recueil des notices historiques lues dans les séances publiques de l'Académie royale des beaux-arts à l'Institut (Paris, 1834) [incl. notices on Paisiello, Monsigny and Méhul, already pubd separately]; *Suite du Recueil* (Paris, 1837) [incl. notices on Gossec, Catel, Boieldieu, already pubd separately]

ROGER COTTE

Quatricinium. A term, analogous to BICINIUM and TRICINIUM, applied to a four-part piece, often for wind instruments (e.g. Gottfried Reiche's *Vier und zwantzig neue Quatricinia*, 1696). It was also used for didactic compositions, frequently in a contrapuntal style, in treatises of the late 16th century and the 17th and 18th centuries (e.g. Friedrich Beurhaus's *Musicae rudimenta*, 1581).

□

Quatris, Johannes de. *See* JOHANNES DE QUADRIS.

Quattrini, Jan Ludwik (*b* Brescia, 13 May 1822; *d* Warsaw, 10 April 1893). Italian flautist, singer and teacher, who worked in Poland. He studied with Basili at the Milan Conservatory. From 1839 he was band-master at Mantua, and later at Genoa, Turin, Milan, Venice and Berlin. He moved to Warsaw in 1843 with Rocca's Italian touring opera company and from 1845 to 1891 ran a singing school there, using his own teaching methods, and in 1846 published a *Méthode simplifiée de chant*. From 1845 he was joint conductor of the Warsaw Opera with N.T. Nidecki; after Nidecki's death he became sole conductor and held the title of director of opera, shared simultaneously by a number of other conductors, including Moniuszko. He introduced to Warsaw the operas of Meyerbeer (*Les Huguenots, Le prophète, Robert le diable, L'Africaine*), Halévy (*La Juive*), Gounod (*Faust*), Verdi

(*Jérusalem*, *Ernani*, *Aida*, *Don Carlos*), Bizet (*Carmen*) and others. Although Italian by birth, he was a champion of Polish music: he conducted the premières of 21 Polish operas, including 14 by Moniuszko, among them *Loteria* on 12 September 1846 and *Halka* on 1 January 1858, as well as works by Minchejmer, Kolberg (*Król pasterzy*) and Dobrzyński (*Monbar*). He taught more than 80 distinguished singers, but in 1891 resigned from the opera and became music director of the Piarists' church. He edited collections of Italian airs, composed songs and exercises for singers, and transcribed Chopin's Funeral March for chorus, soloists and orchestra (performed in 1856). In 1851 or 1852 he married Kornelia Pion, one of his students, who performed at the Warsaw Opera until 1864.

IRENA PONIATOWSKA

Quatuor (Fr.). *See* QUARTET.

Quatuor à cordes (Fr.). *See* STRING QUARTET.

Quatuor concertant (Fr.). A title used in the late 18th century, especially in France, for a kind of composition for four solo instruments, usually two violins, viola and cello (occasionally a flute, oboe or clarinet replaced the first violin). In this context 'concertant' referred to a piece in which all four instruments were essential to the musical discourse, not primarily, as is sometimes thought, to one which was 'brilliant' and 'showy'. As a title, 'Quatuor concertant' was assigned rather loosely – perhaps by the composer, more likely by the publisher – to distinguish this genre from quartets in which the first violin dominated the main melodic action and from quartets in which several instruments might play a single part, perhaps with continuo, in the manner of a chamber sinfonia. The *quatuor concertant* appears to have had one of the first explicitly prescribed scorings in the history of instrumental ensemble music.

Several thousand *quatuors concertants*, by no fewer than 200 composers, appeared on the Parisian musical market (in sets of printed parts) between *c*1770 and 1800; fewer works were so titled in the first decades of the 19th century. Although Paris was the publication capital and also a centre for their composition and performance, many of the same works were published elsewhere, but not always with the designation 'concertant' on their title-pages. Composers of these quartets included E.-B.-J. Barrière, G.M. Cambini, N.-M. Dalayrac, J.-B. Davaux, Federigo Fiorillo, L.E. Jadin, I. Pleyel, Pierre Vachon and G.B. Viotti.

Quatuors concertants, which appealed to amateurs, were normally in two or three movements, the first usually in sonata form. Changes of texture were decisive for formal structure and, particularly in sonata forms, assumed a syntax of their own. The most characteristic texture was that of dialogue in which players exchanged roles, each with his solo moment. Contemporary critics praised such works for being 'bien dialogués'. Conventional treatment of familiar forms accommodated an almost theatrical succession of rapidly contrasting affective gestures – clichés from opera, concerto and other popular sources. A varied palette of sound and a brilliance and elegance of individual moments created structures which at times seem episodic or even narrative.

JANET M. LEVY

Quaver (Fr. *croche*; Ger. *Achtel-Note*; It. *croma*, *semicroma*; Lat. *fusa*; Sp. *corchea*). In Western notation the note that is half the value of a crotchet and twice that of a semiquaver. In American usage it is called an eighth-note. It is the equivalent of the old *fusa* first found in 15th-century music. The *fusa* took the form of a minim with two flags, or else of a coloured minim (red in black notation, black in the more recent void notation) with a flag. Some sources use the alternative term *croma*, while in Spanish writings a *fusa* is a demisemiquaver (32nd-note). The quaver is still in regular use, although in common with other notes it now has a round note head.

Ex.1

(a) (b) (c) (d) (e) (f) or

Its various forms and the quaver rest are shown in ex.1*a*–*e*; the *fusa* rest is shown in ex.1*f*.

JOHN MOREHEN/RICHARD RASTALL

Quebec (Fr. Québec). City in Canada. It is the capital of Quebec province and the principal French-speaking city in Canada. It was founded in 1608; under French rule (1608–1763) the missionary communities played a leading part in the development of music teaching and musical life. Music was taught at these institutions, including the Collège des Récollets from 1620. According to the *Relations des Jésuites* of 1635, Father Paul Le Jeune (1591–1664) taught the rudiments of Gregorian chant and its notation to young Amerindian and French boys, and plainchant was a compulsory subject at the Séminaire de Québec in 1666. A legal document of 1657 mentions the existence of an organ in Quebec parish church; it was replaced by an instrument brought from France in 1663 by Monseigneur de Laval and inaugurated in 1664. The serpent was also used there. The *Relations des Jésuites* mention an organ in the Jesuit chapel in 1661. Among outstanding musicians were Martin Boutet (*c*1617–*c*1686), who settled in Quebec in 1645 and was *maître de chapelle* of the parish church, and two of his pupils: Louis Jolliet (1645–1700), an organist and the first Canadian known to have gone to Europe to complete his musical studies, and Charles-Amador Martin (1648–1711), thought to have written the oldest extant Canadian composition, the plainchant *prosa Sacrae familiae*.

In spite of bans imposed by the clergy, balls were held at the intendant's residence and dances given by the prominent citizens; in 1636 the *Relations des Jésuites*

mention a fiddle being played at evening entertainments. According to *Les Annales de l'Hôtel-Dieu* of 1710, the intendant, Jacques Raudot, regularly held vocal and instrumental concerts. The first colonists brought with them French folksongs, of which there is an inventory at Laval University.

Canada and its dependencies were ceded to England by the Treaty of Paris in 1763. The *Gazette de Québec*, published from 1764, mentions many musical activities, including theatrical performances with music, assemblies for dancing and concerts. Public concerts began in 1765 and the Gentlemen's Subscription Concerts by 1770. Subscription concerts were the most usual kind from 1790 to 1794, the period of Prince Edward Augustus's visit to Quebec and the arrival of the band of the Royal Fusiliers of the 7th Regiment, celebrated by the first Canadian military marches, the *March de Normandie* and the *Royal Fusiliers' Arrival at Quebec, 1791*. Operas by Dibdin and Shield were given in the Quebec theatres. Concert programmes featured as many works by earlier composers (Arne, Avison, Corelli and Handel) as by modern ones (Devienne, Grétry, Pleyel, Gyrowetz, Mozart and Haydn). British military bands figured prominently during the late 18th century, playing not only for military and on official occasions but at assemblies, balls, theatrical performances and masonic ceremonies. The first professional musicians in Quebec, Frederick Glackemeyer (1759–1836) and Francis Vogeler (1746/7–1821), were of German origin and were in the army before turning to music teaching and dealing in musical instruments.

The 19th century saw the formation of the first local ensembles, often conducted by regimental musicians: the Société Harmonique de Québec (probably founded by Glackemeyer in 1819), the Military Band of the Quebec Artillery (1831), the first Canadian militia corps, the Musique des Elèves du Séminaire de Québec (1833–8), Charles Sauvageau's Quadrille Band (1833–49) and the Septett Club (1857–68) which was founded by the French organist and composer Antoine Dessane (1826–73). The Septuor Haydn, founded in 1871, merged in 1903 with the Société Symphonique de Québec, whose first director, Joseph Vézina (1849–1924), composed three *opéras comiques*. The Canadian national anthem *O Canada!* was composed by Calixa Lavallée (1842–91) and was first performed, under Vézina, on 24 June 1880.

On 26 June 1834 Stephen Codman organized a concert of sacred music with 174 performers in the Anglican cathedral. The popularity of the European choral repertory – masses, oratorios and operettas – led to the creation of the Union Musicale de Québec in 1866 and of the Société Musicale Ste-Cécile in 1869.

In 1800 the *Graduel romain*, the first musical work to be printed in Canada, was published. The *Processional romain* (1801) and the *Vespéral romain* (1802) were followed by many collections of songs and music theory treatises.

The first season of the Société Symphonique de Québec was inaugurated in September 1903 in the new hall of the Auditorium de Québec. Vézina conducted the orchestra until 1924. It merged in 1942 with the Cercle Philharmonique de Québec to become the Orchestre Symphonique de Québec. The orchestra, which was considerably expanded under Françoys Bernier (1927–93) during the 1960s, had a policy of commissioning new works and gave premières of music by several Quebec composers, including Roger Matton's *Te Deum* (1967). Other influential ensembles have been the Orchestre de Chambre de la Société Radio-Canada (originally Les Petits Concerts, renamed in 1964 and disbanded in 1988), recording up to 40 broadcasts a year, and the chamber orchestra Les Violons du Roy, founded in 1984 and conducted by Bernard Labadie (*b* 1963); it specializes in the Baroque and Classical repertory and since 1988 has performed in Belgium, Spain, Germany, Morocco and the USA.

Quebec had to wait some time for an opera company. The Théâtre Lyrique de Nouvelle-France was founded in 1961; it was renamed the Théâtre Lyrique du Québec in 1966 and was disbanded in 1970. The Société Lyrique d'Aubigny was founded in 1968. Since 1984 a permanent company, the Opéra de Québec, has given an average of two productions a year. Guy Bélanger (*b* 1946) was its first artistic and musical director. Performances are at the Grand Théâtre de Québec, where the symphony orchestra also performs.

Until around the 1850s music instruction was chiefly the province of private teachers, including Theodore Frederic Molt (1795–1856), the author of the first works on musical education. In 1868 the Académie de Musique de Québec was set up to promote and standardize music education programmes; since 1911 it has awarded its Prix d'Europe to a performer or a composer. In 1922 the Ecole de Musique of Laval University was founded; its prestige grew considerably in the late 1960s and the early 1970s, when Lucien Brochu (*b* 1920) was its director. In 1944 the university set up its Archives de Folklore; Ernest Gagnon's *Chansons populaires du Canada* (published in 1865), inspired research by Luc Lacourcière (1910–89), Conrad Laforte (*b* 1921) and Roger Matton (*b* 1929). The Quebec Conservatoire opened in 1944 under Wilfrid Pelletier (1896–1982). Composers associated with the university and the Conservatoire include Denys Bouliane (*b* 1955), Denis Dion (*b* 1957), Alain Gagnon (*b* 1938), Jacques Hétu (*b* 1938), Pierick Houdy (*b* 1929), François Morel (*b* 1926), Alain Perron (*b* 1959) and Armando Santiago (*b* 1932).

Archival collections at the Hôpital Général, the Hôtel-Dieu, the Monastère des Ursulines, the Séminaire de Québec and Laval University contain manuscript and printed music from the period of French rule (in particular liturgical compositions and theoretical treatises) as well as documents dating from after the 1760 conquest.

CAROLE GRÉGOIRE

Quebedo, Bartolomé de. *See* QUEVEDO, BARTOLOMÉ DE.

Queen. English rock group. The group was formed in 1970 by Freddie Mercury (Frederick Bulsara; *b* Zanzibar, 5 Sept 1946; *d* London, 24 Nov 1991; lead vocals), Brian May (*b* Hampton, Middlesex, 19 July 1947; guitar), John Deacon (*b* Leicester, 19 Aug 1951; bass-guitar) and Roger Meddows-Taylor (*b* Kings Lynn, 26 July 1949; drums). Their early work was in the glam rock mode but they soon developed a more individual style through Mercury's camp stage moves and witty lyrics. This was evident on *Bohemian Rhapsody* (1975), a six-minute song that was accompanied by a spectacular video which inaugurated the modern era of music video. Later hits included *We are the champions* (1977), which became a sports event anthem, the disco-inflected *Another one bites the dust* (1980), *Under Pressure* (1981), which featured guest vocals by David Bowie, and *Radio Ga-Ga* (1984). Their last album with Mercury, who died of AIDS-related illnesses, was *Innuendo* (1991) whose title referred to rumours of the singer's ill health. The group subsequently disbanded although Mercury, May and Taylor had already undertaken several solo recording projects such as Mercury's duets with Montserrat Caballé and Taylor's work with the group the Cross.

DAVE LAING

Queen Elizabeth Hall. London concert hall on the South Bank, opened in 1967; *see* LONDON (i), §VII, 3.

Queen Latifah [Owens, Dana] (*b* East Orange, NJ, 18 March 1970). American rapper. She took her stage name from the Arabic word for 'delicate' on joining the female hip hop group, Ladies Fresh, essentially as their human beatbox. She next went solo, mixing soul and reggae influences with hip hop. A first single, *Wrath of My Madness* (1988), brought her to public attention and was followed by an acclaimed collaboration with De La Soul, *Mama Gave Birth to the Soul Children*. Her début album, *All Hail the Queen* (Tommy Boy, 1989), aimed to introduce women and feminist issues to rap in a positive light, not least with the single 'Ladies First'. Her third album, *Black Reign* (Motown, 1993) spawned the single 'U.N.I.T.Y.' and won a Grammy award. By then she had an equally important career as an actress, progressing from television (in the US sitcom 'Living Single') to films (*House Party 2*, *Juice*, *Living Out Loud* and Spike Lee's *Jungle Fever*). She returned to recording, releasing the successful album *Order in the Court* (Motown, 1998) which was issued alongside a special version due to explicit lyrics.

IAN PEEL

Queen's Hall. London concert hall, opened in 1893; *see* LONDON (i), §VI, 2. The Queen's Hall Orchestra was formed in 1895 and renamed the New Queen's Hall Orchestra in 1915; *see* LONDON (i), §VI, 2(ii).

Queensland Symphony Orchestra. Orchestra based in BRISBANE, formed in 1947.

Queen's Theatre. (1) The name occasionally used for the Dorset Garden Theatre, London. *See* LONDON (i), §V, 1.

(2) The name of the King's Theatre, London, during Queen Anne's reign. *See* LONDON (i), §V, 1.

Queen's University. The university of BELFAST; it has had a chair of music since 1947.

Queffélec, Anne (*b* Paris, 17 Jan 1948). French pianist. She studied the piano from the age of five in Paris with Blanche Bascourret de Guéraldi, and in 1964 entered the Paris Conservatoire to study with Lélia Gousseau; a year later she won a *premier prix* for piano. Her other teachers included Jean Hubeau, Alfred Brendel and Paul Badura-Skoda. In 1968 she was awarded first prize at the Munich International Festival. Her even temperament and light, brilliant style of playing have attracted special praise, notably in performances of French music and the keyboard works of Bach, Scarlatti and Mozart. Equally persuasive in Schubert, Queffélec is also a compelling advocate of much 20th-century music, from Satie, Debussy and Ravel (whose complete piano music she has recorded) to Shostakovich, Poulenc and Dutilleux. Her recordings reflect the catholicity of her tastes. In 1990 she was awarded the Victoire de la Musique for her recording of Satie, and she has also garnered praise for her collaborations with Imogen Cooper (with whom she has recorded the four-hand works of Mozart and Schubert) and Régis Pasquier. Queffélec has appeared in concertos with many of the world's leading conductors and orchestras and is an experienced and stylish performer of chamber music.

DOMINIC GILL/JEREMY SIEPMANN

Queldryk [Qweldryk] (*fl c*1400). English composer. He may have been associated with an estate of Fountains Abbey of this name (= Wheldrake, near York). He may possibly be identifiable with a Richard Queldryk who was named as the donor of a book 'cum cantico Venite' in a Lichfield Cathedral inventory of 1450/51. The inventory includes polyphony and other, older material (A. Wathey, *RMARC*, no.21, 1988, pp.1–19, esp. 6). His name is attached to a Gloria and a Credo in the Old Hall Manuscript (ed. in CMM, xlvi, 1969–73; nos.30 and 88); there is no other source for his music. The four-part isorhythmic Gloria (troped *Spiritus et alme*) is in duple time throughout and divides the text between the two upper parts in alternation with melisma. The three-part isorhythmic Credo has a similar alternation of text and likewise has no identifiable cantus firmus. In both pieces, the color is repeated in halved values and each color has two taleae.

For bibliography *see* OLD HALL MANUSCRIPT.

MARGARET BENT

Queler, Eve (*b* New York, 1 Jan 1936). American conductor. She studied the piano and conducting at Mannes College and, on a Martha Baird Rockefeller Fund grant, conducting with Joseph Rosenstock and accompaniment with Paul Ulanowsky and Paul Berl; her later teachers were Walter Susskind and Leonard Slatkin in St Louis and Igor Markevich and Herbert Blomstedt in Europe. After working as music assistant to the New

York City Opera and the Metropolitan Opera, she formed in 1968 the Opera Orchestra of New York (OONY), with herself as music director. Based from 1971 at Carnegie Hall, the OONY has since become America's leading exponent of forgotten opera, a forum for new singers and a vehicle for Queler's talents as conductor, entrepreneur and mentor. OONY presents opera in concert only, and has offered some 60 rare works. Many major singers, including June Anderson, Carlo Bergonzi, Montserrat Caballé, Placido Domingo, Jane Eaglen, Renée Fleming and Renata Scotto, have appeared with her. Queler has also made a career as a guest conductor, appearing at the New York City Opera, the Kirov Mariinsky Opera, Australian Opera, the Hamburg Staatsoper, Prague National Theatre, Frankfurt Opera and elsewhere. She occasionally works with symphony orchestras, and has appeared with the Philadelphia Orchestra, Montreal SO, Cleveland Orchestra, Edmonton Orchestra and Honolulu SO. Queler has also written a number of journal articles and supervised critical editions of three Donizetti operas. She has made studio recordings of *Jenůfa*, Strauss's *Guntram* and Boito's *Nerone*.

ELIZABETH WOOD/CHARLES BARBER

Quemar [Fulgenzi, Beltrami; Beltramo di Fulgenzio], **Vincenzo** (*b* ?Paris, *c*1541; *d* Orvieto, before 1612). Franco-Flemish organ builder active in Italy from the mid-16th century onwards. He married Bartolomea, daughter of the organ builder Benedetto Schiaminosse, in Recanati on 4 July 1568. The marriage certificate indicates that he came from Paris. In 1580 he began the construction of an important two-manual organ in S Pietro, Gubbio, which was much praised by Banchieri. According to the contract Quemar was required to build *unum organum bonum . . . altitudinis quatuordecim pedum et con quatuordecim registris, ultra tamburum, tremolum et rosignolum* ('a good 14′ organ, with 14 stops, plus Drum, Tremulant and Nightingales'). Quemar's workshop was one of the best equipped of his time and he had ten assistants, including Luca and Stefano Biagi. While building the Gubbio organ, Quemar began many other instruments in the Umbria and Marche regions (including organs for the cathedral of Città di Castello and the Collegiata of S Maria, Matelica, near Ancona). The Gubbio organ was eventually completed by a certain Cristoforo *tedesco* ('Christopher the German') between 1594 and 1596; only its beautiful case survives. In 1591 Quemar moved to Orvieto, where he rebuilt the cathedral organ. He enlarged the *ripieno* chorus by three stops, in addition to repairing the existing nine, and supplied a further 14 stops (*see* ORGAN, §V, 10). He also built two new keyboards (which could either be played by two organists together or controlled by one player), three wind-chests and the entire tracker. After Quemar's reconstruction the instrument became one of the most famous of its time, especially on account of its new and unusual sonorities. Only the superb case is preserved; it now houses a recent electro-pneumatic organ.

The exact date of Quemar's death is not known, but the parish church register for 1611 gives his son Gabriello as the head of the family for the first time. The workshop was carried on by Quemar's sons Gabriello, Girolamo and Guidobaldo after his death.

UMBERTO PINESCHI

Quempas (from Lat. *Quem pastores laudavere*: 'He whom the shepherds praised'). The abbreviated title of a Christmas song popular in Germany in the 16th century, used as a generic term for Christmas songs. The custom, performed by the students of Lateinschulen, of earning alms by singing carols from house to house was known as *Quempas singen*. A *Quempasheft* was a collection of Christmas songs that each student copied for his own use.

□

Quem queritis. (Lat.). The opening words of the celebrated trope to the introit of the Mass of Easter. Around this trope and other similar ones (e.g. its imitation in the third Mass of Christmas) arose a tradition of church drama from at least the 10th century onwards, known rather loosely as 'liturgical drama' (*see* MEDIEVAL DRAMA, §II, and fig.1). The basic dialogue is as follows (Young, i, p.210):

ANGELS: Quem queritis in sepulcro, o Christicole?
MARYS: Ihesum Nazarenum crucifixum, o celicole.
ANGELS: Non est hic, surrexit sicut ipse dixit; ite, nunciate quia surrexit.

(Whom are you looking for in the tomb, you followers of Christ? Jesus of Nazareth who was crucified, O dwellers in Heaven. He is not here, he has arisen as he himself foretold; go and make it known that he has arisen.)

Various sources have been suggested from time to time for the words of the dialogue (the Gospel narratives, the antiphons and responsories of Easter) and to account for the fact of dialogue itself (the singing of the Passion in Holy Week); but no single source accounts for all its features. The music is similarly a free traditional composition – that is to say, newly composed in the traditional 'neumatic' style of Gregorian chant, using the same tonalities and melodic formulae. In addition to the standard melody found all over Europe, another melody appears in German sources from about 1200 (see Smoldon, 1946, with music example).

Some 14 manuscripts of the 'Quem queritis' can be dated as 10th-century; and of these probably the two oldest are those of St Martial of Limoges (*F-Pn* lat.1240, dated 923–34) and of St Gallen (*CH-SGs* 484, *c*950). These and other early sources are written in unheighted neumes but the pitches of the notes can often be deduced from later manuscripts (facsimiles of several versions are reproduced in Smoldon, 1969). Of the two versions just named, the later manuscript presents the simpler. Moreover, they are close in date to a famous description of an Easter ceremony which can with justification be called a *Visitatio sepulchri* play and which embodies the 'Quem queritis' dialogue: this is to be found in the REGULARIS CONCORDIA, the customary drawn up at Winchester in about 970. The co-existence of these three documents in the earliest period of its history argues conclusively against a simple chronological, or elaborate evolutionary, view of the 'development' of the 'Quem queritis' from liturgical trope to representational drama. The term 'variants'

is indeed safer than 'developments'. Both straightforward and highly complex forms of the dialogue are found throughout the period 900–1300. In some sources prefatory sung sentences (e.g. 'Psallite regi magno, deuicto mortis imperio!') and sentences to ease the transition to the introit 'Resurrexi' (e.g. the antiphon 'Hodie resurrexit leo fortis') are introduced. The sources also vary in the degree to which they rubricate the dialogue, and in the degree to which the rubrics indicate dramatic singing (i.e. by the assignment of singers to roles). In general, so long as the dialogue remains attached to the introit the variants are expressive of 'liturgical rejoicing rather than a sense of drama' (Young, i, p.213).

The elaborate ceremony prescribed in the *Regularis concordia* leads into the singing of the *Te Deum* and the ringing of bells ('una pulsantur omnia signa'). This indicates that the 'play' was part of Matins (it followed the third lesson) and did not in this case precede the introit of the Mass. This and other considerations led Hardison (1965) to suggest that the 'Quem queritis' dialogue began its career as a Resurrection ceremony associated with the Vigil Mass, rather than as a trope – i.e. that it is a separate and independent 'representational ceremony'. This conjecture, put forward on literary and liturgical grounds, was rebutted by Smoldon (1968), who brought forward evidence both palaeographical and musical to confirm the close connection between the dialogue and the Mass introit (see also Smoldon, 1980).

The Easter 'Quem queritis' is paralleled by a Christmas version (Young, ii, p.4, from *F-Pn* lat.887, 11th century):

MIDWIVES: Quem queritis in presepe, pastores, dicite?
SHEPHERDS: Salvatorem Christum Dominum, infantem pannis involutum, secundum sermonem angelicum.

(Shepherds, tell us whom you are looking for in the manger. Our Saviour, Christ the Lord, a babe wrapped in swaddling clothes, as the angels told us.)

There are fewer extant examples of and less variety among the Christmas than among the Easter dialogues. The Christmas dialogue is a trope ending with the direction *Psalmus* 'Puer natus est' – the first three words of the introit for the third Mass of Christmas Day. The music, which differs decisively from that of the Easter trope, nevertheless displays some of the same motifs: the rising triad *f–a–c′* on 'in se-pul[cro]' and on 'Nazare[num]' recurs on 'in pre-se[pe]' and 'Chris-tum Do [mi-num]'. (The music of *F-Pn* lat.887 is transcribed in *NOHM*, ii, p.196; that of *F-Pn* lat.1118 in Smoldon, 1980, p.105.)

Both the Easter and the Christmas tropes, in their transferred position as part of Matins, underwent expansion and variation. At Easter the result was a group of para-liturgical plays, known collectively as VISITATIO SEPULCHRI; at Christmas the group is entitled the Officium Pastorum. Tropes in the 'Quem queritis' genre are found for the feasts of the Ascension and St John the Baptist; and one for the Assumption of the Blessed Virgin was dramatized at Santa Maria del Estany, in Spain, in the 14th century (Donovan).

For bibliography *see* MEDIEVAL DRAMA, esp. Young (1933), Smoldon (1946, 1968, 1969, 1980), Rankin (1990), Hiley (1993) and Hardison (1965).

JOHN STEVENS

Quenes [Quennon] **de Béthune.** *See* CONON DE BÉTHUNE.

Quentin [Cantin], **Bertin** [*l'aîné*] (*d* ?1767). French violinist and composer, the elder brother of JEAN-BAPTISTE QUENTIN. He is first heard of in 1706 when he joined the orchestra of the Paris Opéra as a violinist. He is listed as a member of the 'grand choeur' in 1713, and by 1718 he ranked just behind Lalande in the first violin section. On the resignation of Jacques Buret in 1720, Quentin was appointed as cellist to the 24 Violons du Roy, from which he retired in 1749. Having received a *privilège général* in 1730, he published in Paris one set of works, ten sonatas for violin or flute and continuo. In 1764 he retired to Ermont, north of Paris. His name disappears from the list of pensioners of the Académie Royale de Musique in April 1767, and it seems probable that he died early that year.

For bibliography *see* QUENTIN, JEAN-BAPTISTE.

LAUREL FAY

Quentin [Cantin], **Jean-Baptiste** [*le jeune*] (*fl* Paris, 1718–*c*1750). French violinist and composer, the younger brother of BERTIN QUENTIN. He was a violinist at the Paris Opéra in 1718, and in 1738 he played the viola in the 'grand choeur'. References to him indicate that he was a violinist of high reputation.

As a composer he was prolific. His solo violin sonatas generally consist of four or five alternating slow and fast movements. The trio sonatas are mostly in three or four movements; the later ones have solo indications, suggesting the possibility of orchestral performance. Both genres are characterized by a systematic use of *doubles*. There are some particularly distinctive dance movements in lively triple time, labelled 'Allemande' or 'Contredanse', which appear to be the ancestors of the modern waltz. In fast movements Quentin showed a penchant for da capo markings, which produce ternary structures. Technically, his sonatas are moderately difficult, with varied and precisely indicated bowing, and triple and quadruple stops as well as fluid passages in double stops. His use of dynamic markings is careful, and the term 'tendrement' is often appended to arias and gavottes. Despite a certain rhythmic monotony, Quentin's music shows melodic inventiveness and unusually rich harmonies.

WORKS

all published in Paris

Sonates, vn, bc, 3 bks: 10 each in opp.1–3 (1724–8)
[6] Sonates, vn, rec, bc, op.14 (after 1729)
Sonates en trio, 2 vn, fls, bc, 14 bks: opp.4–7 (1729 and after); opp.8–12, also with sonatas à 4 parties (after 1729); op.13 (after 1729); op.15, with viol, also with sonatas à 4 parties (after 1729); opp.16, 18–19 (*c*1740)
[3] Sonates et Simphonies en trio et à 4 parties, op.17 (*c*1740)

LAUREL FAY

Queralt, Francisco (*b* Borjas Blancas, 1740; *d* Barcelona, 28 Feb 1825). Spanish composer. He was *maestro de capilla* at Barcelona Cathedral for many years until his death. He was a noted teacher, and his students, of whom Saldoni was the most important, came to occupy posts in various Spanish cathedrals. Queralt's works were all religious in character, often for two or three choirs, and displayed the influence of late 18th-century Italian opera in their use of homophony and vocal ornamentation. Four oratorios – one to S Ana, two to S Tomás (1762 and 1779) and another (1785) – survive (*E-C*), as does a *Beatus vir (E)*. A further 20 oratorios – *O quam grata* (1776), *La arca del testamento* (1778), *El juicio de*

Salomón (1804), *La conversión de Agustino* (1804), one to S Ana (1778), two to S Eulalia (one dated 1786), one to S Lutgarda (1795), one to 'La casta Susana' (1798), one to S Felipe Neri (1802) and 10 untitled works (1775–96) – a *Magnificat* setting, motets and psalms, a solo aria *Donzella triunfante* and 11 oratorio librettos also survive (*Bc*).

ELEANOR RUSSELL/M. MONTSERRAT SÁNCHEZ SISCART

Quercu, Simon de [a] [Eijcken, Simon van; Eyken, Simon van] (*b* ?Brabant; *fl* early 16th century). Netherlandish music theorist. He was a singer in the chapel of the Duke of Milan, and in 1508 went as tutor to the imperial court in Vienna with Duke Lodovico Sforza's two sons. Quercu wrote a treatise on music, *Opusculum musices* (Vienna, 1509); several copies of each of the four editions survive. It was probably used in the musical education of the duke's sons. The first part, 'Musica plana', deals with the modes, intervals, note names, solmization and solmization syllables, and mutation. The second part, 'Musica mensuralis', deals with note lengths, rests, ligatures, mensuration signs, alteration, imperfection and mensural proportions. The third part, 'Contrapunctus', considers consonances, dissonances and polyphonic writing. His teaching is illustrated with many music examples, though no authorities are named. Quercu also published a book of prayers and monodic liturgical songs of the Paduan rite, *Vigiliae cum vesperis et exequiis mortuorum annexis canticis* (Vienna, 1513).

HEINRICH HÜSCHEN/R

Querelle des Bouffons. A musical and literary dispute waged in Paris between 1752 and 1754 over the respective merits of French and Italian opera. The performance at the Opéra, on 1 August 1752, of Pergolesi's intermezzo *La serva padrona* by an Italian troupe under the direction of Eustachio Bambini is commonly believed to have instigated this controversy, but the seeds of the crisis had been sown months before the Italians' arrival in Paris. The subsequent quarrel, which engaged many leading philosophical figures of the time and resulted in the publication of over 60 letters and pamphlets, used Bambini's troupe, which was popularly known as the 'Bouffons', as a cover for voicing ideas of a profound political significance.

By the middle of the 18th century the Opéra had lost much of its former glory. Far more old works than new held the repertory together, and substantial debts had accrued. In 1749 Louis XV handed the privilege of the Opéra to the city of Paris, a political move intended to ease the pressure on the royal purse-strings. Alterations to the repertory, designed to restore public support and fight off insolvency, were introduced, and it is against this background of change that the arrival of the Bouffons may in part be explained.

In May 1752 Bambini's comedians had been engaged to perform for several months in Rouen. The Opéra administrators, wishing to revoke this agreement, summoned the troupe to Paris, probably to dampen the pretensions of provincial theatres and ensure that their own privilege was not infringed. However, more complicated motives may have underlain this decision: either the *inspecteurs-généraux* of the Opéra felt the need to introduce an element of much-needed novelty into their repertory, particularly in the wake of the public exchange of letters between Grimm (*Lettre de M. Grimm sur Omphale*) and Rousseau (*Lettre à M. Grimm au sujet des remarques ajoutées à sa Lettre sur Omphale*) in the early months of 1752, questioning the substance of French opera; or, by deliberately inviting an unknown band of Italian comedians to present a limited repertory of short, farcical pieces in the dignified setting of the Opéra, they may have hoped to quell the popular support for Italian music that had been gathering throughout the first half of the 18th century. Whatever their motives, the Bouffons were certainly not an overnight success. The *Mercure de France* (September 1752) noted that for the first performance the troupe was clearly unaccustomed to its spacious surroundings and lacked vivacity. The review also criticized the recitative and some of the *ariettes*, which were apparently to the taste only of 'un petit nombre de connoisseurs'. Cuts were implemented before the second performance, which met with greater public approval. Thereafter the troupe gradually won over Parisian audiences, although the *Mercure* still voiced some reservations: 'il est à souhaiter cependant qu'ils n'excédent pas dans la charge'.

Masson has identified Grimm's *Lettre ... sur Omphale* as a continuation of the earlier controversy between Lullistes and Ramistes rather than as the opening salvo in the Querelle des Bouffons. The first exchange of pamphlets in this new debate did not take place until January 1753, with the publication of Grimm's *Le petit prophète de Boehmischbroda*. (D'Holbach's *Lettre à une dame d'un certain age*, published in November 1752, had elicited no rejoinders.) The Bouffons had, by this time, spent nearly six months in Paris without inspiring the *littérateurs* to take up their pens. Why the literary dispute should have erupted at this point is, therefore, a complex matter. Certainly, one impetus for the pamphlet war was the success, at the Opéra in January 1753, of Mondonville's *pastorale héroïque Titon et Aurore*, deliberately engineered by the supporters of French opera (see Pougin). But of more significance was the severe constitutional crisis that shook France at exactly the same time.

Since the early years of the 18th century, Jansenists and Jesuits had been arguing over the controversial papal bull, *Unigenitus* (1713). Matters came to a head around 1750 when a radical group within the episcopacy began to refuse sacraments to those opposed to the bull. (Appellants were often, although not always, Jansenists.) The Parlement de Paris, whose Jansenist sympathies dated back to the Fronde, began to intervene, only to have their

judgments continually annulled by the king's council, which comprised many Jesuit supporters. By August 1752 the two sides had begun a fierce exchange of pamphlets; in December the Parlement attempted to bring the Archbishop of Paris to trial. In February 1753 the king expressly forbade the *parlementaires* to continue with their legal proceedings; they ignored his edict and, in May 1753, were sent into exile.

The stance of the *parlementaires* challenged the very foundations of royal authority. Leaders of the Enlightenment realized that the same line of attack was available to them if disguised as a musical dispute, for opera, since its inception in France, had been a public celebration of absolutism. Support for Italian music, rather than French, could symbolize individual freedom of thought and weakening of the monarch's influence. Consequently, musical, political and religious analogies operate throughout the texts of the quarrel. Grimm's *Le petit prophète*, for example, is couched in a mock-biblical style, his hapless 'prophet' identified as an impecunious Jesuit, while the *Lettre écrit de l'autre monde* (probably by Suard) portrays the Bouffons and their supporters as wild, dangerous heretics. The ridiculous scenarios created in the fascinating *Lettre au public* (whose subtitle suggests 'le Roi de Prusse' as the author, although this is certainly not the case) satirize courtly circles and point to the growing plight of the Bourbon monarchy. Other texts mirror the characteristics of political pampleteering through their titles and use of language, a prime example (again of unknown authorship) being the *Arrêt rendu à l'amphithéâtre*.

Grimm's *Le petit prophète* elicited 25 known responses and these comprised the first stage of the dispute. The second, inspired by Rousseau's vitriolic *Lettre sur la musique française* (November 1753), prompted over 30 further replies and led the dispute to new ground. Arguments centred around vindications or condemnations of Rousseau's strong personal views; opinions of the Bouffons and comparisons of French and Italian operatic styles took second place to the defence or attack of French language and prosody. Supporters of the national style, aptly named the *coin du roi*, were quick to assert the dramatic power of the *tragédie lyrique*, the nobility of its declamatory recitative and its close matching of music and poetry. The *coin de la reine* preferred the graceful charm and clear harmonic structure of Italian cantilena. Laying aside the political implications of the quarrel, its participants argued largely along the lines of whether opera should be regarded as a primarily musical, or primarily literary, phenomenon. Few, however, seem to have realized the futility of comparing two vastly different genres: the one light and comic, the other noble and tragic.

The exchange of pamphlets ceased one month before the Bouffons left Paris in March 1754, suggesting that literary polemics were not directly accountable for the troupe's departure. The Italians did not leave in a blaze of glory, because their last production, Leo's *I viaggiatori*, proved unsuccessful with Parisian audiences; but they had spent some 20 months in France and given over 150 performances of 13 different *intermezzi* and *opere buffe*. What they thought of their eventful stay in Paris remains unknown because they took no active part in the literary dispute; but they certainly owed the highpoint of their careers to a chance combination of factors. Crises at the Opéra, major political upheavals and philosophical agitation by the Encyclopedists brought them success where previous Italian troupes in 1729 and 1746 had failed.

The position of the Opéra vis-à-vis the Bouffons was delicate. On the one hand, the Italians usurped the prowess of the native *tragédie lyrique*, while on the other, it brought valuable revenue to an establishment in considerable financial straits. The Opéra may have emerged as the temporary victor in the Querelle des Bouffons since the *tragédie lyrique* continued to dominate its repertory for a further two decades; but the Bouffons proved highly influential in shaping a native style of comic opera in France, and by the late 1750s the first generation of *opéra comique* composers – Egidio Duni, Pierre-Alexandre Monsigny and François-André Danican Philidor – were making their mark. This new genre was eventually to rival the established *tragédie lyrique* in popularity and success, for which, as Rousseau observed in *Les confessions* (1782), the Querelle des Bouffons was entirely responsible: 'Quelque temps avant qu'on donnât *Le devin du village*, il était arrivé à Paris des Bouffons italiens, qu'on fit jouer sur le théâtre de l'Opéra sans prévoir l'effet qu'ils y allaient faire ... elles ne laissèrent pas de faire à l'opéra français un tort qu'il n'a jamais réparé'.

Querflöte (i) (Ger.). A term for the transverse flute, used to distinguish it from the end-blown RECORDER. *See* FLUTE, §II.

Querflöte (ii) (Ger.). *See under* ORGAN STOP.

Querflügel (Ger.). *See* SPINET. *See also* TRANSVERSE GRAND PIANOFORTE.

Querhammerflügel (Ger.). *See* TRANSVERSE GRAND PIANOFORTE.

Querol Gavaldá, Miguel (*b* Ulldecona, 22 April 1912). Spanish musicologist and composer. He studied humanities, philosophy, theology and music at the Benedictine monastery at Montserrat (1926–36) and counterpoint and composition with Juan Lamote de Grignon in Barcelona (1937–8). After further studies at Zaragoza University (1943) he took the BA at Barcelona University (1944–5) and the doctorate at the University of Madrid in 1948 with a dissertation on contemporary Catalan aesthetic theory. He has held appointments as secretary (1946–52), deputy director (1952–69) and director of the Spanish Institute of Musicology (from 1970), assistant (1953), research fellow (1959) and research professor (1971) at the Consejo Superior de Investigaciones Científicas, professor of music history at Barcelona University (1957–70) and adviser to the music department of the Ministry of Education and Science (from 1969). In 1959 he became a member of the Real Academia de S Fernando, and in 1973 president of the Societat Catalana de Musicologia. In 1986 he was awarded a national music prize in recognition of his work and achievements.

Querol's musicological development was guided by Anglès, though he was never formally his student. His main interest has been the relationship between words and music, and he has specialized in Renaissance and Baroque Spanish music, especially the songbooks (cancioneros). He has also written a book and several studies on music in the works of Cervantes. Through the Institute of Musicology he has fulfilled an important role in Spanish musicology and participated extensively in international conferences. His compositions, mostly unpublished, include orchestral, choral, chamber and piano music; many are arrangements of folksongs.

JOSÉ LÓPEZ-CALO

Querpfeife (Ger.). *See* FIFE.

Querpianoforte (Ger.). *See* TRANSVERSE GRAND PIANOFORTE.

Quesada (Aguilar), Marco Antonio (*b* San José, 5 Jan 1964). Costa Rican composer. From an early age he followed the general music course at the University of Costa Rica. He took a degree in music at the same

institution, with special emphasis in composition, taught by Gutierrez Sáenz, Zeller Flores and Herra Rodríguez. In 1984 he took part in the seminar on composition and electro-acoustic music given in San José by Steiger. He also studied conducting with Agustín Cullell and Herra. He has worked as a teacher with the youth programme of the National SO and at the School of Musical Arts of the University of Costa Rica.

He is a founder member and secretary of the Centre for Contemporary Music in San José. In 1988 he obtained the Aquileo J. Echevarría National Music Prize for his Brass Quintet. He was invited to participate in the Second and Sixth Caribbean Composers' Forums, held in Costa Rica. His works include a number of chamber pieces, band music and symphonic works; he has also composed music for theatrical productions. In April of 1992 the National SO gave a first performance at the National Theatre of his *Negro* from the suite *Arco iris*. He is also well known among Costa Rican pianists for his popular piece *Rock-do*.

JORGE LUIS ACEVEDO VARGAS

Quesnel, (Louis) Joseph (Marie) (*b* Saint Malo, 15 Nov 1746; *d* Montreal, 3 July 1809). Canadian composer, playwright and poet of French birth. After visiting several exotic countries as a young sailor, Quesnel came to Canada unintentionally in 1779 when the ship *L'espoir*, carrying supplies to the USA, was captured by the British off Nova Scotia. Owing to personal connections, he was allowed to settle in Montreal and later moved to nearby Boucherville. He travelled to the Great Lakes and upper Mississippi and to France, trading in furs and wine. Quesnel was a well-educated amateur anxious to promote music and theatre in a pioneer society. He was a co-founder of Montreal's Théâtre de Société in 1789. On 14 January 1790 this company first performed the 'comédie en prose, mêlée d'ariettes' *Colas et Colinette* with music and words by Quesnel, the first Canadian (and possibly the first North American) opera. After revivals in Quebec in 1805 and 1807 the text was published there in 1808 but the music printing did not continue beyond the first few pages of proof. Only the vocal and second violin parts survive in manuscript (in *CDN-Qsl*); the accompaniment was reconstructed by Godfrey Ridout for a modern revival in 1963, and published at Toronto in 1974. Quesnel also wrote the words and music for the comic opera *Lucas et Cécile*, of which only the vocal parts survive (*CDN-Qsl*). An accompaniment for small orchestra was supplied by John Beckwith in 1991 and a piano-vocal score published in 1992. The opera received its première in the Beckwith version in Toronto in 1994. (A performance announced in 1808 never took place.) Both works, relying on late 18th-century French models, reveal a gifted melodist and a resourceful harmonist. Excerpts are included in *Canadian Musical Heritage*, x (1991).

Quesnel's church and instrumental music has been lost. His literary works include the comedy *L'anglomanie* (1802) and the autobiographical poem *Epitre à Mr. Labadie*, a locus classicus for the complaints of the unrecognized Canadian artist.

HELMUT KALLMANN

Quevedo [Quebedo], **Bartolomé de** (*b* Sahagún, León province *c*1510; *d* 31 Aug 1569). Spanish theorist and composer. He was *maestro* to the Spanish Infanta Juana in Arévalo from 1549 until 11 January 1552, and was elected *maestro de capilla* of Toledo Cathedral on 5 December 1553, having been spared a competition with Morales by the latter's death. Although the treasurer of the cathedral challenged his appointment claiming a defect in Quevedo's ancestry, the chapter confirmed him in his post, and he remained at Toledo until dismissed for serious infractions on 27 October 1562. Although he fought to remain, he was demoted to honorary *maestro de capilla*. His valuable library passed to the university at Alcalá de Henares via his nephew, who studied there.

Quevedo subsequently wrote a commentary in Latin on the portion of Pope John XXII's *De vita et honestate clericorum* devoted to music and musicians. He criticized the modern expansion of the range of polyphonic music to three octaves on the grounds that it obscured the distinction between authentic and plagal modes; he objected to the proliferation of instruments in Spanish cathedrals and to the increased use of chromaticism. Quevedo's only surviving works are an *Asperges* for four and five voices (in *E-Tc* choirbook 9), *Victimae paschali laudes* and an incomplete *Ave verum corpus* for four voices (*Tc* choirbook 12). A lavish volume of his compositions belonged to the estate of Juana.

ROBERT STEVENSON

Quickstep. A fast version of the FOXTROT.

Quiebro (Sp.). A type of ornament, variously a trill or a mordent. *See* ORNAMENTS, §2.

Quijada. A Latin American RATTLE.

Quilico, Gino (*b* New York, 29 April 1955). Canadian baritone, son of LOUIS QUILICO. He studied music at the University of Toronto and continued vocal studies with his parents, making his début in 1978 as Mr Gobineau in a television performance of *The Medium*. After engagements in Canada and the USA, in 1980 he made his European début in Paris as Gounod's Mercutio, which brought him a three-year contract at the Opéra. He made his British début as Puccini's Lescaut with Scottish Opera at the 1982 Edinburgh Festival, followed by Valentin at Covent Garden the next year and Escamillo in 1991.

Besides many roles in the French, Italian and Russian repertory and in Mozart, he has sung in the premières of *L'héritière* (Damase) and *Montségur* (Landowski). He made his Metropolitan début in 1987 as Massenet's Lescaut, returning as Valentin (1990) and Figaro in the première of Corigliano's *The Ghosts of Versailles* (1991). He has sung on several occasions with his father in the same opera, notably at the Metropolitan in *Il barbiere* and *Manon*. His high baritone voice, full-toned and pungent in character, is combined with an elegant presence. He has made several video recordings, and his CD recordings include Lescaut, Marcello, Mercutio, Orpheus (Monteverdi), Raimbaud (*Le comte Ory*), Coroebus (*Les Troyens*) and the title role in Chausson's *Le roi Arthus*. He was awarded the Order of Canada in 1992.

NOËL GOODWIN

Quilico, Louis (*b* Montreal, 14 Jan 1925; *d* Toronto, 15 July 2000). Canadian baritone. He studied at the Conservatoire de Musique, Montréal, with Martial Singher, the Accademia di S Cecilia, Rome, and the Mannes College, New York. His principal teacher was the pianist Lina Pizzolongo, whom he married in 1949. She died in 1991. After winning several major Canadian competitions he won the Metropolitan Opera Auditions of the Air in 1955 and the same year made his New York début with the New York City Opera. He first sang at the Metropolitan in 1972 and became one of its leading baritones. He performed such roles as Rigoletto, Giorgio Germont, Rodrigo (*Don Carlos*), Iago, Amonasro, Scarpia, Tonio, Golaud and Falstaff at leading houses throughout the world, including Covent Garden, the Vienna Staatsoper, the Teatro Colón, the Rome Opera, the Bol'shoy, San Francisco and the Opéra de Montréal. He was also principal baritone of the Canadian Opera Company. Quilico sang in the premières of Milhaud's *Pacem in terris* (1963), a work he recorded, and *La mère coupable* (1966) and Jolivet's *Les coeurs de la matière* (1965); in 1991 he played the title role of Tony in Frank Loesser's *The Most Happy Fella* at the New York City Opera. His many recordings include operas ranging from Monteverdi to Verdi, Puccini and Massenet. Quilico had a clear and ringing dramatic voice, particularly well suited to Verdi. He taught at the University of Toronto (1970–87) and at McGill University (1987–90), and gave masterclasses with young professional singers. He was awarded the Companion of the Order of Canada in 1974. In 1993 he married the Canadian pianist Christina Petrowska, who wrote his biography *Mr. Rigoletto* (Toronto, 1996).

EZRA SCHABAS

Quilisma (from Gk. *kyliō*: 'I roll', *kylisma*: 'a rolling'). In Western chant notations a special neume, usually between two notes a 3rd apart. It is usually written joined to the succeeding (higher) note (usually a VIRGA). Aurelian of Réôme (*fl* ?840–50) spoke of it as a trembling and rising sound (*GerbertS*, i, 47), and most modern writers have not ventured beyond this. Tack suggested that it concerns a method of voice production no longer practised. Other studies (Wiesli, Cardine) have concentrated on the degrees of the scale on which it is most commonly found, suggesting that it may have been used for tonal orientation. (For illustration *see* NOTATION, Table 1.)

DAVID HILEY

Quill (Fr. *plume*; Ger. *Feder*, *Kiel*; It. *penna*). A stiff feather shaft used as PLECTRUM material, especially in the past. Quills cut in a manner similar to that of writing pens have served as plectra for psalteries and lutes. The rachis (that portion of the stem between the barbs, rather than the calamus, the tubelike tip implanted in the skin of the bird) of the primary flight feathers of the crow family long provided the principal material for harpsichord plectra. After the barbs and pithy underside were cut away, a point formed from the hard, slightly convex outer surface was pushed from behind through the mortise in the tongue of the jack. It was then cut to size and its strength was adjusted by scraping its underside. Some sources recommended treating the quill with olive oil as a lubricant and preservative. In the present day harpsichord plectra made of plastic continue to be called 'quills'.

JOHN KOSTER

Quilt canzona. A term adopted by Manfred Bukofzer (*Music in the Baroque Era*, 1947, p.50) as an English equivalent to the German 'Flickkanzone' (literally 'patch canzona') coined by Hugo Riemann (*Handbuch der Musikgeschichte*, ii/2, ed. A. Einstein, 1912) to describe canzonas of several short sections in contrasting styles. Bukofzer, whose choice of word comes from 'patchwork quilt', applied it to the sectional canzonas of Frescobaldi and his contemporaries, and the term's currency seems to follow his usage. Perhaps the clearest and most extreme example of the kind of piece 'Flickkanzone' was meant to denote is the first canzona in Schein's *Venus Kräntzlein* (1609; ed. in *Sämtliche Werke*, i, 41): in 125 bars, there are seven changes of metre and at least 14 significant changes in style, figuration or texture. *See also* CANZONA.

Quilter, Roger (Cuthbert) (*b* Hove, 1 Nov 1877; *d* London, 21 Sept 1953). English composer, best known for his songs. Quilter came from a wealthy family and was educated at Eton (which he hated), and at the Hoch conservatory, Frankfurt (*c*1897–*c*1901). He studied the piano there with Ernst Engesser, and, privately, composition with Ivan Knorr, who also taught Balfour Gardiner, Percy Grainger, Norman O'Neill and Cyril Scott. Though not there at the same time, these became known as the Frankfurt Group; as a group they were not influential, but individually they each made a distinctive contribution to contemporary musical life.

In March 1901, Quilter came to prominence as a songwriter, when Denham Price sang the *Four Songs of*

the Sea at the Crystal Palace. For many years, major singers of the day took up his songs: Harry Plunket Greene, Ada Crossley, John Coates, and especially Gervase Elwes, who in 1905 gave the first performance of the song cycle *To Julia*, with Quilter accompanying. A founder member and benefactor of the Musicians' Benevolent Fund, set up in memory of Elwes' death in 1921, Quilter served on its committee until his death. Elwes ensured popularity for Quilter's songs; consequently, little other than songs was expected of him, and he seldom wrote for any other medium. A notable exception was the incidental music for the children's fairy play *Where the Rainbow Ends*, revived regularly at Christmas-time after its première in 1911. *A Children's Overture* (based on Walter Crane's illustrated book, *A Baby's Opera*) was originally intended as its prelude, and after revision was first performed at the Proms in 1919. Its felicitous weaving of skilfully orchestrated nursery rhymes made it very popular, and the BBC included it in its first broadcast concert, on 23 December 1922.

In 1934, Quilter made recordings of 17 of his songs with Mark Raphael. A light opera, *The Blue Boar*, was broadcast by the BBC in 1933 and another, *Julia* (a substantial reworking), was produced at Covent Garden in 1936. Neither was a success, although a memorable tune emerged in the waltz song *Love Calls Through the Summer Night*, fully in the tradition of British light music.

Quilter was frequently ill, and he found composition difficult, despite the polished grace and ease of the finished works. His wide circle of artistic friends included poets and painters, and he was close to Robert Allerton, the American millionaire philanthropist, before World War I. Diffident, well-travelled and cultured, his musical tastes ranged from Bach to Sullivan and Stravinsky. In later life he had severe psychological illness, and it is alleged that he was blackmailed for his homosexuality. He gave discreet financial help to young musicians, and in the 1930s further used his wealth to sponsor Jews fleeing Austria.

Despite his German training, Quilter's style was indisputably English, and his wistful lyricism was characterized by chromatic harmonies and highly vocal melodic lines. His songs rise well above the banality of the Edwardian ballad; they were extremely well known over a long period, and were regularly broadcast for 30 years, though most of the best were written before 1923. Many of his works were arranged for various popular combinations, both by himself and others. He excelled in small musical forms. Quilter's music has a lyrical charm, and Warlock acknowledged a debt to him more than once.

WORKS

songs complete, remainder selective

SONGS

for solo voice and piano unless otherwise stated

op.	
—	Should one of us Remember (C. Rosetti), 1897, unpubd
—	Two songs (R. Quinton [Quilter]) (1897): Come Spring! Sweet Spring!, The Reign of the Stars
1	Four Songs of the Sea (Quilter) (1901): I have a Friend, The Sea-Bird, Moonlight, By the Sea; rev. as 3 Songs of the Sea (1911), omitting 1st song
2	Four Songs of Mirza Schaffy (F. Bodenstedt, trans. W. Creighton) (1903): Neig' schöne Knospe dich zu mir, Und was die Sonne glüht, Ich fühle deinen Odem, Die helle Sonne leuchtet; rev. with trans. by R.H. Elkin (1911)
—	Two Songs (1903): Come Back, A Secret (Quilter), 1898
—	The Answer (L. Binyon) (1904)
—	At Close of Day (Binyon) (1904)
—	A London Spring Song ([Quilter]), 1904, unpubd
3	Three songs: Love's Philosophy (P.B. Shelley) (1905), Now sleeps the crimson petal (A. Tennyson), 1897 (1904), Fill a glass with golden wine (W.E. Henley) (1905); all orchd, no.2 also with strings
—	June (N. Hopper) (1905), orchd
5	Four Child Songs (R.L. Stevenson) (1914): A Good Child, The Lamplighter, Where go the boats?, Foreign Children; nos.1 and 3 rev. 1945
6	Three Shakespeare Songs (set 1) (1905): Come away, Death, O Mistress Mine, Blow, blow, thou winter wind, 1905; no.1 orchd and with pf qt, no.2 orchd and with str, pf ad lib (1944), no.3 with strings and pf ad lib (1945) and orchd
8	To Julia (R. Herrick), 1905 (1906): Prelude, 1 The Bracelet, 2 The Maiden Blush, 3 To Daisies, 4 The Night Piece, 5 Julia's Hair, Interlude, 6 Cherry Ripe; nos.3 and 4 orchd, the set with pf qnt
10	Songs of Sorrow (E. Dowson) (1908): A Coronal, 1907; Passing Dreams, 1904; A Land of Silence, 1907; In Spring, 1907
12	Seven Elizabethan Lyrics (1908): Weep you no more (anon.), My Life's Delight (T. Campion), Damask Roses (anon.), The Faithless Shepherdess (anon.), Brown is my love (anon.), By a Fountainside (B. Jonson), Fair House of Joy (anon.); nos.1 and 4 orchd, no.1 also with str
14	Four Songs (1910): Autumn Evening (A. Maquarie), April (W. Watson), A Last Year's Rose (Henley), Song of the Blackbird (Henley)
15	Three Songs: Cuckoo Song (A. Williams) (1913), Amaryllis at the Fountain (16th century) (1914), Blossom Time (N. Hopper) (1914), no.3 also pubd as duet (1934)
18/1–3	Three Songs, Bar/T (1920): To Wine and Beauty (Earl of Rochester) (1914), Where be you going? (J. Keats) (1914), The Jocund Dance (W. Blake) (1914)
18/4	Spring is at the Door (Hopper) (1914)
18/5–6	Two September Songs (M. Coleridge) (1916): Through the sunny garden, The Valley and the Hill
20	Three Songs of William Blake (1917): Dream Valley, 1916, The Wild Flower's Song, Daybreak; no.1 orchd
22	Three Pastoral Songs (J. Campbell), 1v, pf trio, 1920 (1921): I will go with my father a-ploughing, Cherry Valley, I wish and I wish; arr. 1v, pf
23	Five Shakespeare Songs (set 2) (1921): Fear no more the heat o' the sun, Under the greenwood tree, It was a lover and his lass, Take, O take those lips away, Hey, ho, the wind and the rain, 1919; no.2 pubd singly (1919), no.3 orig. pubd as duet (1919), no.4 also with pf qt
—	Fairy Lullaby (Quilter) (1921)
24	Five English Love Lyrics: There be none of Beauty's daughters (Byron) (1922), Morning Song (T. Heywood) (1922), Go, lovely Rose (E. Waller), 1922 (1923), O, the month of May (T. Dekker), 1926 (1928), The Time of Roses (T. Hood) (1928)
25	Six Songs: Song of the Stream (A. Williams), 1921 (1922), The Fuchsia Tree (Manx ballad) (1923), An Old Carol (15th century), 1923 (1924), Arab Love Song (P.B. Shelley) (1927), Music, when soft voices die (Shelley), 1926 (1927), In the bud of the morning-O (J. Stephens), 1926 (1927)
26	Two Songs (1922): In the highlands, Over the land is April (Stevenson)
28	Five Jacobean Lyrics (1926): The Jealous Lover (Rochester), Why so pale and wan? (J. Suckling), 1925, I dare not ask a kiss (Herrick), 1925, To Althea from Prison (R. Lovelace), 1925, The Constant Lover (Suckling), 1925; no.1 pubd singly (1923), no.3 also with pf qt
29	I arise from dreams of thee (Shelley), serenade, T, orch, 1929, unpubd; arr. 1v, pf (1931)
30	Four Shakespeare Songs (set 3) (1933): Who is Silvia?, 1926, When daffodils begin to peer, How should I your true love know?, Sigh no more, ladies; no.1 pubd singly (1927)
—	The Passing Bell (W. Tasker), 2vv, pf, 1933, unpubd
—	Music and Moonlight (Shelley), 1935 (1948), arr. as duet; Spring Voices (R. Marsh [Quilter]) (1936); Wind from the South (J. Irvine) (1936); Come Lady-Day (M. Pemberton)

(1953) [arr. from partsong]; Wild Cherry (O.M. Denson) (1938); Windy Nights (Stevenson), 2vv, pf (1938); Summer Sunset (R. Marsh [Quilter]), 2vv, pf (1938)

32 Two Shakespeare Songs (set 4) (1939): Orpheus with his lute, 1938, When icicles hang by the wall, 1938

— Trollie Lollie Laughter (V.B. Neuburg) (1939); Freedom (R. Bennett) (1941) [arr. from choral work]; Drooping Wings (E. Sterling-Levis), 1944 (1945); The Cradle in Bethlehem (Bennett), 1945 (1949); Hark, hark the lark (W. Shakespeare) (1946); One word is too often profaned (Shelley), 1946 (1947); Tulips (Herrick) (1947) [arr. from partsong]; Music (P.B. Shelley), 1947 (1948); Come unto these yellow sands (Shakespeare) (1951); Tell me, where is fancy bred? (Shakespeare) (1951); Daisies after Rain (J. Bickle) (1951); The Walled-In Garden (A. Heald) (1952); April Love (Quilter) (1952); A Song at Parting (C. Rossetti) (1952); My heart adorned with thee (M. Schaffy, trans. Quilter), 1951 (1953), also for Mez and Bar (1953); Mond, du bist glücklicher als ich (anon.), unpubd; Far, far away (Shelley), unpubd; Full fathom five (Shakespeare), unpubd; If thou would'st ease thine heart (T.L. Beddoes), unpubd; Love is a bable (anon.), unpubd; Where the bee sucks (Shakespeare), unpubd

STAGE

— Where the Rainbow Ends (children's fairy play, [Mrs] C. Mills, J. Ramsay [R. Owen]), London, Savoy, 21 Dec 1911; suites: pf (1912), orch (1920); pubd extracts, incl. Slumber Song, 1v, pf (1911); Moonlight on the Lake, pf (1912); Rosamund, vn, pf (1918); Water Nymphs, pf, str (1922); Fairy Frolic, pf trio (1929); later arrs. for other inst combinations

21 As you Like it (incid music, W. Shakespeare), London, Old Vic, 17 Oct 1921; pf suite (1920); orch suite (1921)

— The Rake, ballet [for C.B. Cochran's revue On with the Dance], Manchester, Palace, 17 March 1925; orch suite (1925); pf suite (1925)

— The Blue Boar (light op, R. Bennett), BBC, 23 Oct 1933; rev. as Julia, London, Covent Garden, 3 Dec 1936; rev. again as Love at the Inn (1940); probably rev. also as Rosmé, Love and the Countess and The Beggar Prince; pubd extracts, incl. Here's a chapter almost ended (Bennett), SSATBB (1944); Love calls through the summer night, 2vv (1940); Concert Waltz, orch (1941); In Georgian Days, Gavotte, pf, str (1941); Youth and Beauty, 6vv (1941); Island of Dreams, Venetian Serenade (Quilter), 1v, pf (1946); If love should pass me by, 1v, pf (1948)

31 Titania, ballet

CHORAL

Verses from the Rubaïyat of Omar Khayam (trans. Johnson), ATTBB, 1902, unpubd; 2 Partsongs (R. Herrick), SATB: To Daffodils, To the Virgins (1904); 5 Lyrics of Robert Herrick, op.7, SATB (1905): Cupid, A Dirge, Morning Song, To Electra, To Violets; Lead us, Heavenly Father (J. Edmeston), T, chorus, orch, 1908 (1924); An Old Carol, unison vv (1924); What shall he have that killed the deer? (W. Shakespeare), TBarBB (1924); Non nobis, Domine (R. Kipling), SATB, orch (1934), arr. SSA/2-pt male chorus, str/orch; Blossom-Time (N. Hopper), 2-pt chorus (1935) [arr. from solo song]; Fairy Lullaby (Quilter), 3-pt female vv (1939) [arr. from solo song]; Madrigal in Satin (R. Bennett), TTBB (1939); Weep you no more, 2-pt female vv (1939) [arr. from solo song]; 5 Partsongs, SA: The Starlings (C. Kingsley) (1939), To a Harebell by a Graveside (Darley) (1938), Come, Lady-Day (M. Pemberton) (1938), Daisies after Rain (J. Bickle) (1952), Tulips (Herrick); Freedom (Bennett), unison vv, SATB, pf/orch (1941), arr. SSA (1942) [orig. titled A Song of Freedom]; The Sailor and his Lass (Bennett), S, Bar, SATB, orch, 1943 (1948); Hymn for Victory (A.P. Herbert), unison vv/1v (1945), arr. 4vv (1945); Farewell to Shan-Avon (Song of the Forlorn Warriors) (G. Darley), TTBB (1946); The pretty birds do sing (Nashe), chorus (1946); Tulips (Herrick), SATB (1946); Windy Nights (R.L. Stevenson), SA (1949); Summer Sunset (R. Marsh [R. Quilter]), SA (1949); The Cradle in Bethlehem (Bennett), unison vv/2-pt vv, str (1950) [arr. from solo song]; Dancing on the Green (Quilter), SATB (1954)

INSTRUMENTAL

3 Studies, op.4, pf, 1901 (no.1), 1909 (1910); To Julia, op.8, incl.: no.3 To Daisies, vc, pf (1919), no.5 Julia's Hair, vn/vc, pf (1919), no.6 Cherry Ripe, vn, pf (1919); Serenade, op.9, orch, perf. 1907, unpubd; 3 English Dances, op.11, small orch, perf. 1910, arr. pf (1910), arr. 2 pf (1910); 3 Pieces, op.16 (1916): Dance in the Twilight, 1909–15, Summer Evening, 1915, At a Country Fair, 1916; A Children's Ov., op.17, orch, perf. 1919 (1920), arr. pf (1920), arr. popular orch (1921); 2 Impressions, op.19, pf (1920): In a Gondola, 1914, Lanterns, 1919; 3 Songs of William Blake, op.20, incl.: no.1 Dream Valley, arr. vn, pf (1917); Country Pieces, op.27, pf (1923): Shepherd Song, Goblins, Forest Lullaby, Pipe and Tabor; Fanfare for Children, 4 tpt, 4 trbn, timp, cymbal, *c*1930, unpubd; Gypsy Life Fantasy Qnt, pf qnt, db (1935); Ding Dong Bell, suite, str, 1951, unpubd; Valse, orch, unpubd; Tudor March, orch

VALERIE LANGFIELD

Quinault, Jean-Baptiste-Maurice [l'aîné] (*b* Verdun, 9 Sept 1687; *d* Gien, 30 Aug 1745). French composer, singer and actor. Son of the actor Jean Quinault (1656–1728) and brother of the singer and actress MARIE-ANNE-CATHERINE QUINAULT, he was the eldest of five children, all active in the theatre. Quinault began his acting career at the Comédie Française as Hippolytus in Racine's *Phèdre* on 6 May 1712. He retired on 22 March 1733 with a pension, but returned for three performances the following year. Although Voltaire chose him for leading roles in his tragedies, he was most applauded for comic roles. It was not uncommon for him to act and sing in a work for which he had composed the music. His gift for comic characterization is seen in the laughing recitative, 'Enthousiasme de folie', in M.A. Legrand's *Impromptu de la folie* (1725). He was elevated to the nobility by the regent, Philip d'Orléans.

Quinault composed at least 24 divertissements and *intermèdes* for the French theatre, 1714–32. They include incidental music for plays by Louis Fuzelier, Le Grand, P.-C. Roy, S.-J. Pellegrin and Molière (*Le bourgeois gentilhomme*, 1716, and *La princesse d'Elide*, 1722). His divertissements for Roy's comedy *Les captifs* (1714) were described as 'extraordinary, beautiful and well characterized' (*Mercure galant*, October 1714). His only work for the Paris Opéra is the *ballet héroïque Les amours des*

déesses (libretto by Fuzelier). At its first performance it consisted of a prologue and three entrées ('Vénus et Adonis', 'Diane et Endimion' and 'Melpomène et Linus'); a fourth entrée, 'L'Aurore et Céphale', was added for the performance on 25 August 1729.

For a complete list of Quinault's works for the French theatre see *DEUMM* and *LaMusicaD*.

JAMES R. ANTHONY

Quinault, Marie-Anne-Catherine (*b* Strasbourg, 26 Aug 1695; *d* Paris, 1791). French singer, sister of JEAN-BAPTISTE-MAURICE QUINAULT. Mlle Quinault (known as 'l'aînée') made her début at the Paris Opéra in 1709 in Lully's *Bellérophon* and remained there until 1713. From 1714 to 1722 she acted and sang at the Comédie-Française. According to F.-J. Fétis (*Biographie universelle*), she composed several motets for the royal chapel at Versailles, one of which won for her the decoration of the order of St Michel, never before given to a woman.

JAMES R. ANTHONY

Quinault, Philippe (*b* Paris, bap. 5 June 1635; *d* Paris, 26 Nov 1688). French dramatist, librettist and poet. Son of a master baker, he received an excellent literary education from the poet Tristan l'Hermite, through whom he was introduced to Parisian *salons précieux*. He was only 18 when his first comedy, *Les rivales*, was performed at the Hôtel de Bourgogne. He became a jurist at about the same time, having, according to Charles Perrault (*Parallèle ... des anciens et des modernes*, Paris, 1688–97), studied law for only two or three years. After Tristan's death in 1655, Quinault became private secretary to the Duc de Guise, and on 29 April 1660 marriage to a wealthy widow, Louise Goujon (née Bouvet), brought him a degree of economic independence. In 1668 he composed verses for a court divertissement, *La grotte de Versailles*, thereby joining the select group of poets chosen to pay continual homage to Louis XIV. In 1670 he was made a member of the Académie Française and in 1674 of the Académie des Inscriptions et Belles-Lettres. In 1671, with Molière and Corneille, he was asked to write the text for Lully to set to music in the spectacular court divertissement, *Psyché*. Thus was inaugurated a 15-year collaboration with Lully in the composition of 11 *tragédies en musique* and two large-scale ballets (*Le triomphe de l'Amour* and *Le temple de la paix*). The gap of three years between *Isis* and *Proserpine* is explained by the temporary eclipse of Quinault at court after Juno in *Isis* had been interpreted as an unflattering caricature of Mme de Montespan.

By both temperament and artistic inclination, Quinault was ideally suited to collaborate with Lully. His *livrets*, for each of which he received 4000 livres, were judged first as dramatic poetry, although Quinault was actually a lyric poet. Despite the general agreement that the unities might be overlooked in opera, Quinault was expected to observe unity of action. Sacrificed to this demand were the comic scenes found in *Cadmus*, *Alceste* and *Thésée*, as well as the subplots usually involving persons of lower rank who mirrored the action of the main plot.

Quinault's subject matter was derived from classical mythology (in his first eight operas) and the familiar legends of chivalry (in the final three). It remains fairly constant: a pair of lovers, a powerful rival and the mingling of gods and goddesses in the affairs of mortals. Although the librettos occasionally treat the Corneillean theme of conflict between 'glory and duty' (*Roland* and *Armide*), the amorous intrigues of gods and men are generally more *galant* than heroic and tragic. In fact, with regard to the former, Rosow has observed that both Roland and Renaud are flawed heroes: Roland is so blinded by love that a *dea ex machina* must point out his duty, and in *Armide* Renaud's need to choose between love and duty disappears as soon as his enchantment is broken. Of all Quinault's *livrets*, only *Atys* may be considered genuinely tragic.

Quinault was attacked for his limited vocabulary, especially when contrasted with Racine. There was little understanding of the fact that in opera words must be easily understood when given a musical setting. Perrault came to Quinault's defence in his *Parallèle ... des anciens et des modernes*, where he stated that the words in a *livret* must be 'very natural, very well known and very much in common use'.

Quinault skilfully varied the length of his lines from two to 12 syllables. To avoid monotony he rarely used more than three alexandrines (the standard line of French tragedy) in a row, reserving their use, rather, for simple recitative or for moments of serious import. He preferred shorter lines and lines with an odd number of syllables for airs and more lyrical passages (see Norman, 1989, p.185).

The *galant* tone of many of Quinault's lyrics earned him the enmity of the clergy and of the conservative professors of the Sorbonne (Bossuet referred to 'corruption reduced to maxims'). Quinault, himself in bad health, may have partly succumbed to the repressive moral climate. After *Armide* he retired from the stage and wrote a long poem on the extinction of heresy which begins:

> Je n'ai que trop chanté les Jeux & les Amours,
> Sur un ton plus sublime, il faut me faire entendu:
> Je vous dis adieu, Muse tendre,
> Je vous dis adieu, pour toujours.

Besides his opera librettos and the 17 tragedies, tragicomedies and comedies that he wrote between 1653 and 1671, Quinault left several poems and epigrams and over 60 verses set to music by Lully, Le Camus, Bacilly, Lambert, Charles Mouton and others, all found in collections of *airs* issued between 1662 and 1700.

WRITINGS

tragédies en musique unless otherwise stated; all first settings by Lully

La grotte de Versailles (eclogue), 1668; *Psyché* (tragédie-ballet, with Molière and P. Corneille), 1671; *Les fêtes de l'Amour et de Bacchus* (pastorale, with I. de Benserade and the Président de Périgny), 1672; *Cadmus et Hermione*, 1673; *Alceste*, 1674; *Thésée*, 1675 (Strungk, 1683; Mondonville, 1765); *Atys*, 1676; *Isis*, 1677; *Proserpine*, 1680 (Paisiello, 1803); *Le triomphe de l'Amour* (ballet), 1681 (Campra, 1705); *Persée*, 1682; *Phaëton*, 1683; *Amadis*, 1684 (La Borde, 1771; J.C. Bach, 1779); *Le temple de la paix* (ballet), 1685; *Roland*, 1685; *Armide*, 1686 (Gluck, 1777)

JAMES R. ANTHONY

Quinet, Fernand (*b* Charleroi, 29 Jan 1898; *d* Liège, 24 Oct 1971). Belgian composer, conductor and cellist. He showed musical talent at an early age and studied the cello and theory at the Brussels Conservatory (1913–15), completing his studies with d'Indy; in 1921 he won the Belgian Prix de Rome for the cantata *La guerre*. He played in the Pro Arte Quartet from 1916, but gave up his career as a cellist in 1923. He was director of the Charleroi Conservatoire (1924–38), professor of harmony at the Brussels Conservatory (1927–38) and director of the Liège Conservatoire (1938–63). As a conductor, he had an international reputation in French music; in Belgium he conducted numerous first performances, most of them with the Liège PO, which he founded in 1948 and directed until 1965. He was elected a member of the Belgian Royal Academy in 1954. Throughout his career Quinet gave progressively less attention to composition. One of the first Belgian composers to reject the Franck tradition, he was most indebted to Fauré in achieving his concise art. The harmony of such a piece as the *Trois mouvements symphoniques* suggests an Impressionist origin, and Quinet's ironic spirit led to some surprising chord progressions, as well as a lightness of touch and lively, incisive rhythms, as in *L'école buissonnière* for string quartet. These qualities are also found in his vocal music, which avoids extreme lyricism.

HENRI VANHULST

Quinet, Marcel (Alfred) (*b* Binche, Hainaut, 6 July 1915; *d* Woluwe-Saint-Lambert, 16 Dec 1986). Belgian composer and pianist. He began studies at the Mons Conservatory and then transferred to the Brussels Conservatory, where he obtained a *premier prix* for harmony (1936), a *second prix* for counterpoint (1937, under R. Moulaert), a *premier prix* for fugue (1938, under L. Jongen) and a higher piano diploma (1943). Then he studied composition with Absil, and won the Belgian Prix de Rome in 1945 for his cantata *La vague et le sillon*; in 1946 his orchestral Divertissement was awarded the Agniez Prize. He was put in charge of the piano courses at the Brussels Conservatory in 1943, and he also taught harmony (1948) and fugue (1959) there; in 1956 he was appointed professor at the Chapelle Musicale Reine Elisabeth. Awarded second prize in the 1957 Queen Elisabeth Composition Competition, his Piano Concerto no.1 was used as a test piece in the 1964 session of the same contest. In 1976 he was elected a member of the Royal Academy of Belgium.

Quinet's music is distinguished by formal clarity and the absence of lyrical effusion; his objective art has affinities with that of Hindemith. At first influenced by Absil, he began, with the Three Orchestral Pieces (1951), to evolve a more individual style that shows his closeness to French music (particularly Ravel) and his admiration for Bartók's orchestration. He has generally turned to established models, such as the passacaglia or old dance forms: the orchestral Variations are cast as a Baroque suite, and the ballet *La nef des fous* is built as a symphony with a rapid principal theme alternating with slow, expressive passages. Evolving from polytonality to atonality, his music has remained clear in timbre and texture.

HENRI VANHULST

Quinible (Middle Eng.: 'fivefold'; from Lat. *quin[que]* and 'ible'). A voice or part apparently pitched even higher than QUATREBLE. But the 15th-century English treatises which refer to the quatreble do not mention the quinible; and although *quintuplum* can mean the fifth voice of a motet, or the five-part motet itself (Franco of Cologne: 'Qui autem quadruplum vel quintuplum facere voluit'), the English word seems to be used only in the general sense of a high-pitched song or voice (Chaucer, *The Miller's Tale*, line 146: 'Ther to he song som tym a loud quynyble'; Skelton, *The Image of Ypocrisy*, iii, line 78: 'They finger ther fidles, And cry in quinibles').

JOHN CALDWELL

Quint (i). The 4th partial tone of a bell when it is tuned a 5th above the strike note (*see* BELL (i), §2).

Quint (ii). When prefixed to the name of an instrument, as in 'Quintfagott' or 'Quintposaune', an indication that the instrument in question plays a 5th lower than the normal type.

Quint (iii). An organ pipe that is sometimes used to produce, when sounded with another pipe tuned at the 5th below, a difference tone imitating the sound of a pipe an octave below the lower one. *See also* ORGAN STOP.

Quinta (i) (Lat.: 'fifth'). A term occasionally used in medieval writings instead of 'diapente' for the interval of a 5th; it has become the standard term in Italian.

Quinta (ii). [quinta vox, quintus]. A part (*see* PART (ii)) in 16th-century polyphony for five or more voices.

Quintadecima (It.). *See under* ORGAN STOP.

Quintadena (Ger.). *See under* ORGAN STOP.

Quintanar, Héctor (*b* Mexico City, 15 April 1936). Mexican composer and conductor. He studied at the Escuela Superior Nocturna de Música (1950–56) and played the horn in the Banda de Música del Estado Mayor for eight years. In 1959 he entered the Mexico City Conservatory, where he studied harmony and analysis with Rodolfo Halffter, counterpoint with Blas Galindo and composition with Jiménez Mabarak; he also studied with Chávez (1960–64) and in 1963 served as Chávez's assistant in the composition workshop, which from 1965 to 1972 he directed. A state grant enabled him to study electronic music at Columbia University, New York, with Andrés Lewin Richter (1964), and he studied *musique concrète* with Jean Etienne-Marie in Paris (1967) and Mexico City (1968). He was head of the Secretaría Técnica of the Instituto Nacional de Bellas Artes music department (1965—70), within which he organized major festivals of contemporary music. Founder (1970) and director of the Mexico City Conservatory electronic music studio, he was also sub-director of the Mexico City Opera Orchestra. Other appointments as chief conductor include the National University SO (1975–80), the Michoacán SO (1986–7) and, since 1992, the University of Guanajuato SO, with whom he has recorded for the first time many works by Mexican composers. His conscientious activity as a promoter of new music has included giving concerts in unorthodox locations and, through his group Proa, bringing contemporary music to the church. His works from *Aclamaciones* (1967) have been concerned with non-linear sequences of contrasting materials, such as tape loops of natural sounds (*Ostinato*) and improvisatory or aleatory elements (*Sideral III*). He was the first Mexican to compose an electronic film score, that for *Una vez un hombre*.

Quintatön (Ger.). *See under* ORGAN STOP (*Quintadena*).

Quintavalle, Antonio (*fl* 1688–?1724). Italian composer and organist. In 1703 and perhaps earlier he was chamber organist at the Mantuan court. He wrote music for three operas produced there, one in collaboration with the *maestro di cappella* Caldara. According to Lunelli, Quintavalle was *maestro di cappella* of Trent Cathedral from 1712 to 1724. An Antonio Quintavalle, chaplain at Torcello, near Venice, died on 28 January 1721 at the age of 45.

□

Quinte (Fr. and Ger.: 'fifth'). The French and German term for the interval of a 5th. It was also used for the fifth part of 17th-century French orchestral music and of music in the French style by contemporary German composers, applied by extension to the players assigned to that part in French court orchestras. Mersenne (*Harmonie universelle*, 1636–7) used '*quinte*' or '*cinquième*' to describe the highest inner part of the 24 Violins du Roi, played by the first of the three viola parts, but in lists of the group and in musical sources the terms denote the lowest inner part, and is therefore equivalent to quintus, the standard name for the fifth part of 16th- and early 17th-century vocal and instrumental polyphony. The term dropped out of use in the early 18th century, when four-part orchestral writing became the norm in France, although J.-B. de La Borde still referred to the 'Viola (alto) ou Quinte' in his *Essai sur la musique* (1780).

PETER HOLMAN

Quinte de hautbois (Fr.). A basset oboe in D. *See* OBOE, §III, 2(iii).

Quintenzirkel (Ger.). *See* CIRCLE OF FIFTHS.

Quinterne [quintern]. One of the many terms for the medieval GITTERN; the term was later used for a small guitar. From at least the 13th century the small, lute-like, treble plucked instrument was known as the *quitaire*, *quinterne* or *guisterne* in French, the gyterne (later gittern) in English, the *quintern(e)* in German, the *guitarra* in Spanish, and the *chitarra* or *chitarino* in Italian. It was not until well into the 16th century that these terms began to be applied to various small guitars. Under the name MANDORE the instrument survived in France into the early 18th century, while under the names *mandola* and *mandolino* (*see* MANDOLIN) it survived in Italy into the 20th.

JAMES TYLER

Quinteros, Abelardo (*b* Valparaiso, 10 Dec 1923). Chilean composer. He studied industrial design at the Universidad S Maria, Valparaiso (1936–41) and composition in Santiago with Allende (1942–8) and Focke (1949–51). A scholarship from the Austrian Embassy in Chile enabled him to study serial techniques with Steinbauer and voice with Kern at the Steinbauer Academy in Vienna (1954–6). On returning to Chile he began to take a place among the leading composers of his generation; *Horizon carré*, *Cantos al espejo* and the Piano Studies received awards at successive Chilean Music Festivals. His lyrical and expressive music has its basis in 12-note thinking.

JUAN A. ORREGO-SALAS/LUIS MERINO

Quintet (Fr. *quintette*, *quintuor*; Ger. *Quintett*; It. *quintetto*). A composition or part of a composition for five voices or instruments, or a group that performs such a composition. Vocal quintets include many madrigals, ballettos and other chamber music for voices of the 16th century when there was a certain preference for five-part writing. With the development of dramatic ensemble writing in opera during the 18th century accompanied quintets became frequent and there are several examples in Mozart's mature operas, notably Act 1 of *Così fan tutte*. The most celebrated operatic quintet, however, is 'Selig, wie die Sonne meines Glückes lacht' from Act 3 of Wagner's *Die Meistersinger*.

The most important chamber music forms are the STRING QUINTET (normally for a string quartet of two violins, viola and cello with an additional viola or cello), the PIANO QUINTET (usually for piano and string quartet) and the WIND QUINTET (flute, oboe, clarinet, bassoon and horn); these repertories are discussed in separate entries (*see also* BRASS QUINTET). Among works for less regular combinations, Mozart's great quintet for piano and wind K452 (oboe, clarinet, bassoon and horn) set a standard, which has not been surpassed, for the euphonious combination of five diverse timbres, though Beethoven imitated it in his op.16 and Danzi, Spohr and Rimsky-Korsakov wrote for similar combinations. A number of works add a wind instrument to the normal string quartet. For example, there are clarinet quintets by Mozart, Reicha, Weber, Reger, Brahms, Hindemith and Bliss, and a horn quintet (with two violas) by Mozart. Quintets formed from various mixed combinations abound especially in the 18th century. It is known that Mozart greatly admired J.C. Bach's six quintets of op.11 for flute, oboe, violin, viola and bass which indulge in charming antiphonal effects between the two wind instruments and bass as against the two strings and bass. The same composer's Quintet in F for oboe, violin, viola, cello and harpsichord, the last sometimes continuo in function, sometimes obbligato, is similarly adept in layout. Mozart's ability to make almost any combination effective is shown in his quintet for flute, oboe, viola, cello and glass harmonica. Some of this ability apparently passed to his pupil Süssmayr whose quintet for oboe, english horn, violin, cello and guitar is another engaging contribution to the vast miscellany of such works from the 18th century. Of 20th-century mixed quintets Milhaud's *Les rêves de Jacob*, Nielsen's *Serenata in vano* and Prokofiev's attractive op.39 for oboe, clarinet, violin, viola and double bass may also be mentioned.

MICHAEL TILMOUTH/R

Quintiani [Quinziani], **Giulio Cesare** (*b* Piacenza, *c*1550; *d* after 1599). Italian composer. The title-page of his sole publication, *Sesto Himeneo Ingemmato* (Venice, 1600, inc.) calls him *maestro di cappella* at Piacenza Cathedral. His tenure there most likely fell between the death of Luigi Roince, in 1597, and the appointment of Tiburzio Massaino, in 1605. Quintiani belonged to the artistic circle around Ranuccio I Farnese; the *Himeneo*, a book of madrigals, was dedicated to Ranuccio and to his wife, Margherita Aldobrandini, and written for performance at the duke's wedding in May, 1600.

FRANCESCO BUSSI/MARCO GAIO

Quintiani [Quinziani], **Lucrezio** (*b* Cremona, *c*1550–60; *d* after 1595). Italian composer. A member of the Cistercian order, he served at the monasteries of S Maria delle Cave and S Benedetto in Cremona and S Ambrogio in Milan. According to Lucchini he was *maestro di cappella* at Cremona Cathedral. The music of his *Primo libro de madrigali* shows the influence of Ingegneri and the young Monteverdi. Quintiani's double-choir church music is largely homophonic in texture; madrigal-like procedures are used at times to emphasize aspects of the words.

Quinticlave. An alto OPHICLEIDE.

Quintilian [Marcus Fabius Quintilianus] (*b* Calagurris, Spain, 30–35 CE; *d* Rome, after *c*94 CE). Roman orator and writer on rhetoric. He may have begun his studies in Spain; he completed them at Rome and there went on to gain both fame and wealth. In recognition of his remarkable skill at teaching rhetoric, he received a regular income from the imperial treasury, the first of his profession to be granted this honour. The literary testimonial to his gifts is the *Institutio oratoria* (completed *c*95 CE), a treatise in 12 books on the training of the ideal orator from earliest childhood to maturity. In this one surviving work the references to music form an unusual commentary, since they are based on wide reading and sympathetic interest rather than deep knowledge.

The recognition of a relationship between music and rhetoric goes back to earlier Roman writers such as CICERO, and beyond them to ARISTOTLE himself. Quintilian, accordingly, felt himself to be on firm ground. He did not hesitate to include music, admittedly as a counsel of perfection, among the arts which boys should study before beginning rhetoric (i.10.1–4). The extended eulogy of music that follows (i.10.9–33) seeks to demonstrate its antiquity, importance and power through a large number of examples, most of them familiar. The latinized term *musice* used here includes dancing but otherwise conveys much the same meaning as 'music' in modern usage; there is nothing of the broad sense (practically 'culture') that *mousikē* had for Hellenic writers.

Quintilian seldom mentioned details of instrumental technique or construction. The occasional references bespeak close observation of external details, as in the account of a kitharode's movements (i.12.3) with its rare evidence for deadening the strings of the lyre. At such times, however, understanding may go no further than the comprehension of outward appearances or elementary facts of performance. Thus a maladroit lyre player supposedly might find it necessary to 'take the measure' of individual strings (*demensis singulis*, v.10.124) in order to match them with vocal pitches – an apparently meaningless supposition. Also found is the unsupported statement that musicians considered the lyre to have five basic notes (xii.10.68).

Although he reserved the term 'ethos' for a wholly non-musical context (vi.2.18–20), Quintilian clearly assented to a doctrine of musical ethos. He even stated his wish to possess a knowledge of its fundamental principles (*cognitionem rationis*, i.10.31). A spirited passage (ix.4.10–13) deals with Man's natural affinity for musical sounds and devotes special attention to the *tacita vis*, the secret power of rhythm and melody that gives instrumental music affective power even apart from the voice (so also i.10.25; cf xi.3.66, on dancing). Quintilian nevertheless considered it a power that reaches the height of effectiveness in rhetorical eloquence, not in musical performance.

This assessment seems typical. Music has almost no importance in the *Institutio oratoria* save as a propaideutic. Despite express adherence to a belief in musical ethos, Quintilian showed an overriding concern with the spoken word when he dealt with ethical problems. Unquestionably an advocate of *musice*, he viewed it as the handmaiden of *rhetorice*, and his comments reveal a limited understanding of its secrets.

Quintilian's *Institutio oratoria* was known (generally in incomplete form) but not much favoured in the Middle Ages. Renaissance humanism, however, responded to its central tenet that the purpose of a rhetorical education was to produce a man of good character and cultivation. The treatise was known to Petrarch (1304–74) only in an imperfect form, but in 1416 Poggio Bracciolini (1380–1459) discovered a complete copy at St Gallen. First printed in 1470, the treatise was widely and generally read, becoming highly influential in the music theory of the 16th–18th centuries.

Quintina (It.; Ger. *Quintole*; Fr. *quintolet*). *See* QUINTUPLET.

Quinton. Small, five-string French viol with violin-like features, also referred to as *pardessus de viole* (high descant viol), used *c*1730–89. It was tuned *g*–*d′*–*a′*–*d″*–*g″*

(the lower strings like a violin, the upper ones like a viol) and had a violin-like body, sloping shoulders and a wide neck with seven gut frets. It appeared about 1730, when viols with violin-like features began to be made in France in response to the prestige of Italian violin music. The sound of the quinton is distinctive, combining the resonance of the viol's upper register with the solidity of the violin's lower register. It was played like a viol: on the lap, with an underhand bow grip. Around the time of the quinton's invention, the viol-shaped six-string pardessus dropped a string and adopted the quinton's tuning. As a result, two distinct forms of five-string pardessus (high-treble) co-existed, sharing the same name, technique, literature and musical function. The word quinton, however, referred solely to the violin-like form and was never used to designate the viol-shaped pardessus. Favoured by women, the quinton became fashionable; it was played in salons and at the Concert Spirituel, and instruments were built all over France, in England and in Germany, Bohemia and Sweden. In the hands of makers such as Jacques Boquay, Claude Boivin, Augustin Chappuy, Jean Colin, François Gavinies, Paul-François Grosset, Louis Guersan, François Le Jeune, Jean-Baptiste Salomon and the great head-carver La Fille, its peculiar construction achieved a high degree of workmanship and high prices on the market. The years 1750 to 1755 were the golden age of the quinton; after 1760 its popularity diminished and it suffered a loss of character, with the removal of the top string, the adoption of violin tuning and a change in the bow-grip. After its demise with the French Revolution, a cloud of mystery gradually surrounded the quinton; the instrument's hybrid nature combined with the ambiguity of French nomenclature and the imprecision of historical sources led to conflicts in the 20th-century literature on the instrument.

On the music of the quinton, *see* PARDESSUS.

MYRNA HERZOG, ROBERT A. GREEN

Quintón, José I(gnacio) (*b* Caguas, Puerto Rico, 1 Feb 1881; *d* Coamo, Puerto Rico, 19 Dec 1925). Puerto Rican composer and pianist. He received lessons in harmony, counterpoint, composition and piano from his father, who was a graduate of the Paris Conservatoire and a church organist. He was also influenced by the Spanish pianist Ernesto del Castillo and the Puerto Rican composer Angel Mislán but was to some extent self-educated. From the age of 12 until his death he lived in Coamo; he became a teacher of instrumental music at the Coamo Municipal Academy of Music and also organized several musical groups as well as the municipal band. As a composer Quintón appropriated Classical forms and a Romantic idiom while searching constantly for sonorities that he called 'music of the future' (as a pianist he was one of the first to perform Debussy, Ravel and Schoenberg in Puerto Rico). He took a historic step in elevating the *danza* to the level of concert music. His several chamber works, including the String Quartet in D (1913), are Brahmsian in style.

GUSTAVO BATISTA

Quintposaune (Ger.). A trombone pitched a 5th below the ordinary trombone. *See* QUARTPOSAUNE.

Quintteiler. *See under* DIVIDER.

Quintuor (Fr.). *See* QUINTET.

Quintuplet (Fr. *quintolet*; Ger. *Quintole*; It. *quintina*; Sp. *quíntuplo*). A group of five equal notes occurring irregularly, occupying the space of a note or notes of regular metric duration.

Quintuple time. A metre of five beats to the bar. Its irregularity has made it an oddity in Western music. It cannot be divided into equal half-bars, and the common division into alternate groups of two and three beats seems as psychologically disturbing as a succession of five unaccented beats. Regular two-bar phrases (as in the Tchaikovsky example mentioned below) tend to mitigate this effect. Quintuple time has been used in a demonstration of technical skill (Tye, Correa de Arauxo, Reicha) or for atmospheric effect (Rachmaninoff, Holst), and it occurs momentarily to suggest unease or unusual excitement (Handel, Wagner). Its common occurrence in folk music (especially east European) was responsible for its more frequent appearance in the works of early 20th-century composers who drew on elements of folk music style. The decline of the use of regular metre has made the occurrence of bars of quintuple time unremarkable in later music.

Passages in five-beat groupings could be written from the 14th century to the 16th by using minor or reversed coloration, and examples of these first occur in 'mannered' notation of the post-Machaut period (see W. Apel: *The Notation of Polyphonic Music 900–1600*, 1942, rev. 5/1961, p.400; for five-beat notes see pp.356, 434; *see also* NOTATION, §III, 3), and, more continuously, in the 'Qui tollis' section of Obrecht's *Missa 'Je ne demande'* and the Sanctus of Isaac's *Missa Paschalis* (see J. Wolf: *Handbuch der Notationskunde*, i, 1913, p.420). The first complete quintuple-time pieces in Western music appear to be seven villancicos in the Cancionero Musical de Palacio (*E-Mp* 2.1.5, *olim* 1335; written 1516–20; ed. in MME, v, 1947, and x, 1951); these are: Pedro de Escobar's *Las mis penas madre* (f.43; time signature 5/2), Juan del Encina's *Amor con fortuna* (f.63; 5/2), the

anonymous *Pensad ora'n al* (f.87*v*; C 5/2), Juan de Anchieta's *Dos ánades, madre* (f.107; O 5/1), Diego Fernández's *De ser mal casada* (f.119; 5/2), Anchieta's *Con amores, la mi madre* (f.231; O 5/1) and Encina's *Tan buen ganadico* (f.280; $3^2/5^2$). The first of these is given as ex.1 (note values reduced). In his *De musica* (Salamanca, 1577/*R*), Francisco de Salinas interpreted several ancient Greek metres in quintuple time (p.231); three are found in the above villancicos: bacchic (– –./– –./etc.), palimbacchic (.– –/ .– –/etc.) and cretic metre (–.–/–.–/etc.).

Both the first half of a keyboard setting of the offertory *Felix namque* of about 1530 (in *GB-Lbl* Roy.App.56, f.1*v*; ed. in EECM, x, 1969, p.54) and Christopher Tye's five-part In Nomine *Trust* (?*c*1540, *Lbl* 31390; facs. in RRMR, iii, 1967) deploy each note of the original plainchant as breve + minim (in ¢ mensuration). Spanish keyboard music provides an early 17th-century example, a section of no.41 of Francisco Correa de Arauxo's *Libro de tientos* (1626; ed. in MME, xii, 1952, p.31).

Quintuple time is used fleetingly in the 'mad scene' in Handel's *Orlando* (1732). In Act 2 scene xi the crazed hero believes himself to have entered Charon's boat on the River Styx and sings the words 'Già solco l'onde' ('Already I am cleaving the waves') to five rising quavers, in unison with the strings, which immediately repeat the figure twice in descending sequence, thus giving three bars of 5/8 time; the figure recurs two bars later. This is within a long accompanied recitative.

Adolfati's opera *Arianna* (Genoa, 1750) contains an aria written in quintuple time, 'Se la sorte mi condanna'. Examples of quintuple time proliferate in the 19th century: it occurs in the ballad *Prinz Eugen* by Carl Loewe, Reicha's 36 Fugues for piano, the air 'Viens, gentille dame' from Boieldieu's *La dame blanche* (1825), Chopin's Sonata in C minor op.4 (1828), and Ferdinand Hiller's Piano Trio op.64 (?1855) and *Rhythmische Studien* for piano. As Tristan awaits Isolde's disembarkation at the beginning of Act 3 scene ii of Wagner's *Tristan und Isolde* (1859) his excitement is expressed through seven bars in 5/4 time. Other notable examples of quintuple time are Anton Rubinstein's *Tower of Babel* (1870), the waltz-like second movement of Tchaikovsky's Symphony no.6 (1893), Rachmaninoff's *The Isle of the Dead* (1909) and the first movement of Holst's suite *The Planets* (1914–16).

DAVID HILEY

Quintus (Lat.: 'fifth'). A fifth part in vocal or instrumental polyphony, particularly in the era when such music was published in PARTBOOKS. The term was used quite regularly by the 1540s and continued into the second decade of the 17th century. For parts that were additional to the 'standard' four, composers usually preferred designations that indicated ranges or functions: for example 'primus discantus' and 'secundus discantus', or 'contratenor 1' and 'contratenor 2'. In printed partbooks these additional parts, which often differed from piece to piece within a collection, were placed together in a single volume under the general title 'quintus', 'quinto' or 'quinta pars'. Where a sixth voice was involved quintus and sextus were often printed on pages facing one another to permit two musicians to read from the same book.

Quire. An archaic spelling of the word 'choir' (*see* CHOIR (ii)).

Quiros [Quiroz], **Manuel José** [Joseph] **de** (*d* Guatemala, 1765). Guatemalan composer, teacher and collector. He was appointed *maestro de capilla* of Guatemala City Cathedral on 7 March 1738, and served there until his death. His 28 extant compositions, which survive only in the Archivo Histórico Arquidiocesano 'Francisco de Paula García Peláez', Guatemala City, are mainly Spanish villancicos which reveal his interest in local colour and ethnic texts. There are also a few compositions in Latin, including a double-choir motet, *Parce mihi, Domine*. Most works are for two or four voices, some for as many as seven; all have instrumental accompaniment.

Quiros was also active as a teacher and collector of music. His pupils included his nephew Rafael Antonio Castellanos, who succeeded him as *maestro de capilla* in Guatemala. His interest in Italian music was encouraged by the Italian-born *maestro de capilla* of Mexico City, Ignacio Jerusalem, and he acquired works by several Italian composers of the period, including Galuppi, Leo, Pergolesi, Porpora and Vinci. He also collected music by contemporary Spanish composers such as Sebastián Durón, José Nebra and José de Torres y Martínez Bravo, and by composers from elsewhere in the New World, for example Manuel de Zumaya. Through his efforts, copies were made of 16th-century polyphonic music by Iberian composers such as Gaspar Fernandes and Pedro Bermúdez, and also of works by Palestrina and Victoria. The music collected and copied remains in the Archivo Histórico Arquidiocesano.

Quiros's brother, Francisco de Quiros, was also a composer. Works by him survive in the Archivo Histórico Arquidiocesano.

ALFRED E. LEMMON

Quirsfeld, Johann (*b* Dresden, 22 July 1642; *d* Pirna, 18 June 1686). German composer, writer on music and clergyman. After taking the master's degree at the University of Wittenberg, he worked as Kantor of St Marien, the principal church at Pirna (near Dresden), from 1670 until his death. In 1679 he became, as deacon, a member of the clergy, and was subsequently made archdeacon. His first publication, *Breviarium musicum* (Pirna, 1675), is an elementary singing manual for school use; solmization is still dealt with, but Quirsfeld also accepted the use of letter names for notes as advocated by Ambrosius Profe in his *Compendium musicum* (1641). For the second edition (1683) Quirsfeld added 12 two-part canons to the musical appendix, which originally consisted of 12 fugues in the 12 modes. The book was reissued several times until at least 1717. Cornelis a Beughem (*Biblioteca mathematica*, Amsterdam, 1688, p.108) mentioned another treatise by Quirsfeld, *Aurifodina mathematica de sono* (Leipzig, 1675), which seems to be lost. A collection of Quirsfeld's musical works,

Geistliche Hochzeit des Lammes aus vierzehn Kernsprüchen der Heiligen Schrift (Leipzig, 1677), contains 14 songs for solo voice and continuo (two melodies in *ZahnM*) on the subject of Christ as bridegroom. The dedicatees were four daughters of a patrician Leipzig family. Quirsfeld's *Geistlicher Harffen-Klang* (Leipzig, 1679) is a large hymnal containing 1003 texts with 263 melodies (four in *ZahnM*). Hymns for the festivals and on the Catechism, psalms, the liturgical year, the cross, repentance, thanksgiving, death and resurrection are included in its ten sections. Quirsfeld's preface refers to the triad as representing the Trinity and praises music as a God-given comfort for troubled souls. He contributed only three of the tunes himself; about half are from 16th-century collections and most of the rest from Johannes Crüger, who also provided the model for the setting for solo voice and bass. The hymnal, which includes many Pietistic texts, was still in use around the turn of the century.

DOROTHEA SCHRÖDER

Quitaire [quitarre] (Fr.). *See* GITTERN. *See also* QUINTERNE.

Quitin, José(-François) (*b* Liège, 28 March 1915). Belgian musicologist. He studied music at the Liège Academy of Music and took a degree in education (1938; 1952, with dissertation) at the University of Liège. He was director of the academy (1945–52) and professor of music history at the Liège Conservatoire Royal (1946–79). He was also lecturer at the Catholic University of Louvain-la-Neuve (1979–82) and was for some time lecturer in music education at the Liège teachers' training college. He has a lively interest in Walloon music and has organized concerts and written disc notes for the music of unknown Liège and other Walloon composers of the 16th–19th centuries. Through his enterprise the Société Liégeoise de Musicologie (originally founded in 1909) was re-formed in 1972, with some notable musicological articles and musical transcriptions appearing in the society's quarterly bulletin that he founded. He has written on the teaching of music and on the history of music and musicians in Liège, particularly its church music of the 16th–18th centuries and its famous school of violinists of the 19th and 20th centuries. His works are the result of long teaching experience and painstaking research in ecclesiastical and other archives, and are well demonstrated in his transcriptions and performances of unpublished music.

GODELIEVE SPIESSENS/SYLVIE JANSSENS

Quito. Capital of Ecuador. Before the Spanish conquest (1533) Quito was the northernmost outpost of the Inca Empire. As the favourite retreat of Huayna Capac (reigned 1493–1525) it shared the best traditions of Inca court music, panpipes being then as now favourite native ensemble instruments.

The first teachers of European music at Quito, the Flemish Franciscans Josse de Rycke of Mechelen and Pierre Gosseal of Leuven, who arrived in 1534, taught the Indians to read music and play European instruments. At the Colegio de S Andrés (founded 1555) such difficult music as Guerrero's 1570 collection of motets was sung before 1581. In the 17th century the Quito Franciscan church obtained a 600-pipe organ (completed 1638) and by 1651 boasted a musical culture equal to any in Europe, according to Diego de Córdova Salinas's chronicle published that year at Lima.

The most important 16th-century mestizo musician trained by the Franciscans was Diego Lobato (*c*1538–*c*1610); the Quito Cathedral authorities paid him 110 pesos a year from 1562 to 1568 for singing 'polyphonic music at the choirbook stand when appropriate' and also asked him to double as organist from 1563. On 3 April 1574 the Quito chapter appointed him *maestro de capilla*, commissioning him to compose new 'motetes y chanzonetas' for all the principal annual feasts. The splendour of cathedral music was further enhanced by a deed of 29 July 1580 stipulating that the *Salve regina* be sung polyphonically with organ every Saturday. Lobato continued as *maestro de capilla* until his death, except for a two-year period (1588–90) when Gutierre Fernández Hidalgo, the greatest South American musician of the epoch, occupied the post.

In colonial Quito, as elsewhere in the Americas, royal commemorations were celebrated with great pomp. Francisco Coronel conducted the polyphony sung at Felipe III's commemoration on 30 September 1621. For 70 years from 1653 Quito cathedral music was dominated by the Ortuño de Larrea family, except from 1682 to 1695 when the Hieronymite composer Manuel Blasco was imported from Bogotá to break the family monopoly.

Blasco, the most eminent composer in Quito annals after Fernández Hidalgo, left a respectable body of music in the cathedral archive at Bogotá, including some notable versos for two shawms and organ and at least two villancicos at Quito, currently in private possession.

The declining interest in *prima pratica* polyphony from 1708 onwards can be traced in the inventories of polyphonic choirbooks; the number declined from 35 to 20 by 1754, and after the disastrous earthquakes of 1755 and 1757 apparently dwindled to none. Bright instrumental ensembles became the rule at cathedral festivals and in local churches. These ensembles, according to the *Compendiosa Relación de la Cristiandad de Quito* by the knowledgeable Bernardo Recio (1714–91), included 'flutes, oboes, trumpets, vihuelas, guitars, harps, harpsichords, violins and other bowed strings' supported by organs. According to Recio, Quito abounded in bell-casters, and rivalled 'any similarly sized European capital in the number of harmonious bells rung at all hours'. Samuel Fritz (1656–1725), a Bohemian from Trautenau (now Trutnov), first popularized violin playing at Quito.

After independence (1822) the same taste for glitter (especially that of opera) that marked the rest of Latin America touched Quito. After seven years of construction the Teatro Sucre opened with a concert of operatic selections on 25 November 1886; this was followed by a zarzuela season given by the Ludgardo Gómez touring company and the Compañia Jarques. Although from this time until 1904 touring troupes visiting Quito en route to other South American capitals never presented entire operas, but only excerpts accompanied by a piano and four or five instruments, the Quito public heard such great stars as Tamberlik and Carlotta Patti. A programme by these and supporting performers, accompanied by a pianist and a chamber group, was announced in *El Nacional* on 25 May 1888 (xii/418, p.1786); it included excerpts from *Die Zauberflöte*, *Rigoletto* and *Les contes d'Hoffmann*. Such programmes generally had 20 numbers, half of them operatic selections, half lighter music such as solo songs in Spanish, comedy skits on the *sainete* pattern, and a few short pieces exhibiting the prowess of local virtuosos.

After various earlier private conservatories had closed, President Gabriel García Moreno (1821–75) decreed the foundation of the Conservatorio Nacional de Música on 28 February 1870, with the Corsican-born Antonio Neumane (1818–71), composer of the Ecuadorian national anthem, as its first director. It has subsequently been directed by musicians of German, Italian and local origin. Pedro Pablo Traversari Salazar (1874–1956), who administered the conservatory for two periods between 1916 and 1941, left a superb collection of European and Andean instruments sold to the Casa de la Cultura Ecuatoriana on 1 May 1951; this now forms the nucleus of the Quito Museo de Instrumentos Musicales. Among the conservatory's other directors, Humberto Salgado (1903–77) was a prolific composer. The leading theory texts published in the early years of the Quito Conservatory by its teachers were Juan Agustin Guerrero's *Nociones de Instrumentación* and *Teoría musical* (both 1873), and Nicolás Abelardo Guerra's *Gramática Musical* (1911, 3/1929). The leading Ecuadorian 20th-century music historian, Luis Segundo Moreno (*b* Cotacachi, Imbabura, 3 Aug 1882; *d* Quito, 18 Nov 1973), was associated with the conservatory in various capacities, first as copyist (1909), then as theory professor (1911–13).

The Sociedad Filarmónica de Quito, organized on 11 June 1952 with the critic Francisco Alexander (1910–88) as president, sponsored the founding of the Orquesta Sinfónica Nacional on 2 May 1956. During the first eight years this orchestra gave 120 concerts under its titular conductors Ernesto Xancó (May 1956 – August 1958), Georges Gallandres (October 1958 – August 1959), Viktor Bürger (July 1960 – March 1963) and Paul Capolongo (September 1963 – April 1964), all of European extraction. Of the 70 composers represented at these concerts, six were native Ecuadorians – Néstor Cueva, Corsino Durán, Enrique Espín Yépez, Mercedes Silva Echanique, Carlos Bonilla and Claudio Aizaga. In the same eight years Radio Quito encouraged local talent with premières of the early compositions of Mesias Maiguashca (*b* 1938) and Gerardo Guevara Viteri (*b* 1930). After an absence in Paris (1969–71) financed by a UNESCO grant Guevara Viteri became conductor of the National SO in July 1972. While Maiguashca and Guevara Viteri have drawn on European styles, one local composer, the Franciscan organist and ethnomusicologist Carlos Alberto Coba (*b* 1937), writes colourful works inspired by South Amerindian music.

In the 20th century the chief concerts in Quito have usually been given at the Teatro Sucre (new building completed 1903, cap. 1500), including those of the pioneer Quinteto Beethoven (reviewed in *El Comercio* 2 and 6 August 1912) and the Cuarteto Teran (10 August 1925), the début of the Quito-born pianist Leslie Wright (16 July 1953), the concert of the Colombia SO (4 December 1953), celebrating the fourth centenary of the founding of Quito. Improved air travel has subsequently brought such international celebrities as Segovia, Rubinstein and Bernstein to the city.

ROBERT STEVENSON

Quitschreiber, Georg (*b* Kranichfeld, nr Weimar, 30 Dec 1569; bur. Magdala, nr Jena, the day before Whitsunday 1638). German composer and theorist. He studied with Nicolaus Rosthius, though it is not known when and where. In 1588 he was a student of theology at Jena University. In 1594 Count Albrecht von Schwarzburg-Rudolstadt appointed him court and civic Kantor at

Rudolstadt. He married Sybille Wendel on 20 June 1596. He became Kantor and fourth schoolmaster in Jena in 1598 and pastor of the villages of Hainichen and Stiebritz, not far away, in 1614; from 1629 until his death he was pastor of Magdala, Ottstedt and Maina. A bitter dispute with his relative Konrad Berger, schoolmaster of Ottstedt, and the agitation it caused Quitschreiber are said to have led to his death.

Friedrich Taubmann, professor of poetry at Wittenberg, called Quitschreiber 'the Thuringian nightingale'. His compositions, printed almost exclusively in Jena, are in what is probably an intentionally simple style similar to that of Lucas Osiander and Cyriacus Schneegass. His music is easy to perform: there is little movement in the middle voices and the bass proceeds mostly in leaps of 4ths and 5ths. Only the multi-voice motets, some of which bear indications of combined vocal and instrumental performance, display a more varied style of part-writing. The 35 *a cappella* settings in his *Kirchengesänge* of 1608, which were principally intended 'to be practised and sung by our dear young people', are four-part compositions for the time from Advent to the beginning of Lent. Similar collections were published around the same time by Melchior Vulpius.

Quitschreiber's compositional output is yet to be fully assessed. He composed occasional works for funerals, weddings, and birthday and school festivities, and even after taking orders he regularly continued to compose festive music for such university occasions at Jena as jubilees, the installation of rectors and doctoral degree ceremonies held in the Jena civic church. He was a poet as well, writing the words for much of his own music (many of which incorporate acrostics), and a number of printed funeral sermons contain his Latin and German poems.

Quitschreiber is also the author of theoretical writings, some of which went into several editions. The *Musikbüchlein für die Jugend*, which is an important introduction to vocal polyphony, was quoted extensively by Michael Praetorius in his *Syntagma Musicum*. Much of the book's content is of a practical nature. The author recommended a moderate tempo and appropriate alternation between instruments and the voice. He was against restriction to the ten-line system, and extended the range to three octaves and a 6th – presumably a concession to the instrumental music then developing. He explored the problem of the seventh degree in solmization extensively, but in an uncomplicated manner. In addition, there are instructions for finding the starting pitch in the performance of vocal music and examples of transpositions of up to a 5th 'as desired or in case of need'. His *De canendi elegantia* is also practical in aim: its 18 rules are largely based on the publications of Andreas Ornitoparchus (1517).

The brief apologia, *De Parodia*, treats the concept of parody in its widest sense. Here he showed how certain compositions by Josquin, Lassus, Lupi, Marenzio, Hieronymous Praetorius, Rodio, Striggi, Vecchi and Victoria underwent crucial modification by the reduction or expansion of the number of voices, the adoption of themes or the use of new texts. Quitschreiber's references to classical writings on education from Aristides Quintilianus to Joseph Scaliger place him in the late humanist intellectual tradition. His remarkable treatise *Voces quaedam animalium diversorum* (1612) studied the concepts and words employed for the vocal utterances of animals by Greek and Latin authors and the Bible.

WORKS

SACRED VOCAL

Individual works: Acclamatio musicalis gratulatoria, 8vv, 1615; Allhier liegen christlich begrabn, 4vv, MS, 1605; Brautlied, Psalm 128, 8vv, 1604; Brautlied, Psalm 128, 5vv, 1609; Christ, unser Schulfürst, 4vv, 1625; Dictum nuptiale, canon, 8vv, 1614; Die Krone unsers Häupts, 6vv, 1606; Est vobis praesens Dominus, canon, 12vv, 1618; Frölich muss ich aus Herzen Grund, 5vv, 1628; Gaudia magna jubent, 8vv, 1616; Gerhardus, rector musis, canon, 4vv, 1629; Herr Christe, segne die, canon, 1612; Herr Jesu Christ, mein Heiland bist, 6vv, 1611; Ich bin die Auferstehung, 6vv, MS, 1605; Ich hab durch Gott mein Lauf vollendt, 5vv, 1613; Immisit Dominus, 12vv, 1620; In Gottes Nam mit Fried und Freud, 4vv, 1613; Laudate salvatorum nostrum, canon, 4vv, MS, 1610; Mein Hoffnung in der argen Welt, 4vv, 1605; Misericordia et veritas obviaverunt sibi, canon, 2vv, 1599; Nunc dimittis, 4vv, 1605; O grosser Gott, 5vv, 1635; O Herre Gott, 6vv, 1605; Pater noster, 8vv, 1609; Quam pulchra es amica mea, 8vv, 1606; Rectorem Gherhardus agit, canon, 4vv, 1617; Schau, wer ist die, 4vv, 1628; Seraphim clamabant, 11vv, 1620; Surge propera amica mea, 6vv, 1607; Tui cruce triumphamus Domine, canon, 2vv, 1599; Votum tetraphonicum in homophonia, canon, 4vv, 1612; Weil mein Stündlein jetzt dommen ist, 6vv, 1606; Wenn mein Gott will, 4vv, 1629; Wo der Herr nicht das Haus bauet, 8vv, 1615; Wohl dem, der Gott wie David lehret, 8vv, 1604

EBERHARD MÖLLER

Quittard, Henri (*b* Clermont-Ferrand, 13 May 1864; *d* Paris, 21 July 1919). French music historian. After taking the licence ès lettres when he was 24, he went to Paris and, following the advice of Chabrier, studied music with Franck. He soon devoted himself to the history of music, and his first studies appeared in 1898. His special domain was the French musicians of the 16th and 17th centuries. The lutenists of France were of great interest to him; with Michel Brenet he was one of the first to demonstrate their importance. Quittard was lecturer at the Ecole des Hautes Etudes Sociales, archivist at the Opéra from 1912 until his death and music critic to *Le Matin* and from 1909 to *Le Figaro*.

He left unfinished an edition of harpsichord pieces by Louis Couperin. His private collection of lute music, transcriptions, etc., was bequeathed to the Conservatoire library.

MARIE LOUISE PEREYRA/R

Quodlibet (Lat.: 'what you please'). A composition in which well-known melodies and texts appear in successive or simultaneous combinations. Generally the quodlibet serves no higher purpose than that of humour or technical virtuosity, and may thus be distinguished from more serious works in which pre-existing material has a constructive or symbolic function.

Wolfgang Schmeltzl first used the term with specific reference to music (*Guter seltzamer und künstreicher teutscher Gesang, sonderlich etliche künstliche Quodlibèt*, Nuremberg, 1544), taking it from the name of an improvised oral examination in German universities, the *disputatio de quolibet*. Originally the disputation was a serious scholastic exercise at the Sorbonne in Paris during the Middle Ages, but in Germany it became a humorous parody featuring ridiculous lists of items loosely combined under an absurd theme (e.g. objects forgotten by women fleeing from a harem). This general concept was widely accepted in 16th-century German literature, and comical 'catalogue' poems of all kinds (such as *Priamel*) flourished, prompting such definitions of the quodlibet as 'durcheinandermischmäsch' (S. Roth, 1571). Fischart (*Geschichtsklitterung*, 1575) noted the common element of haphazard combination found in the disputation and the musical quodlibet, probably with reference to Schmeltzl, who followed both academic and literary fashion in stressing nonsensical catalogues in his musical quodlibets.

In France 'quolibet' referred to witty riddles, and 'avoir de quolibet' still means the ability to verbalize quickly a clever, spirited repartee. In this period catalogue poetry was less popular in France than Germany, but lists of 'fools' prefaced theatrical *sotties*, and the lists of dishes and songs in Rabelais' *Pantagruel* were notorious. The citation of chansons and hymn lines (Chesnaye, Molinet, Rabelais) prompted appropriate musical references when such poetry was set to music, and both lighthearted inanity and serious or religious symbolism were explored as Renaissance composers sought musical parallels to poetic centonization. Theorists often included quodlibets to illustrate matters such as mensuration, modes and cantus firmus treatment (Tinctoris, *Proportionale musices*, c1473–4; Glarean, *Dodecachordon*, 1547; Zarlino, *Le istitutioni harmoniche*, 1558; Zacconi, *Prattica di musica*, 1622); but it was Praetorius in book 3 of *Syntagma musicum* (1618) who provided the first systematic definition of the musical quodlibet as a mixture of diverse elements quoted from sacred and secular compositions. He presented three categories which he differentiated on the basis of text treatment. A combination of his sometimes abstruse explanation with analysis of his music examples gives the following types: every voice is a completely different *cantus prius factus*; every voice is a different patchwork of quoted fragments; one voice is a patchwork of quotations whose text is shared by the other voices.

Parallel types of quodlibet in the Renaissance were the FRICASSÉE (France), MISTICANZA or *messanza* (Italy), ENSALADA (Spain) and MEDLEY (England). INCATENATURA is a term used by modern scholars to refer to the Italian quodlibet; cento, which survives from classical antiquity, refers specifically to poetry made up entirely of lines quoted from other works, or more generally to any artistic technique that relies on patchwork construction, citations, borrowings, formulae etc. (*see* CENTONIZATION). There are also some isolated terms used from the 17th century to the present that are more or less closely related to the quodlibet, such as *farrago*, *rôtibouilli*, *salatade*, fantasia, capriccio, pasticcio, potpourri and miscellany; but this article will discuss only works that fall into one of the three types of quodlibet proper, based on 16th-century German practice: catalogue, successive and simultaneous.

The catalogue quodlibet consists of a freely composed setting of catalogue poetry. Such pieces were rare in the medieval motet, but there is one well-known example, *Moriuntur, oriuntur* (*I-Fl* Plut.29.1), in which a list of nonsense syllables serves as a drinking-song. Polytextual motets of the 13th century nevertheless rely heavily on the allegorical or parodistic effects obtained by juxtaposing musical and literary materials drawn from a wide range of genres and registers – sacred and secular alike. A good many of these pieces not only allude to pre-existing tenor melodies from plainchant and chansons, but combine them in ways related to the procedures heard in late examples of the quodlibet. Clearly such works were intended for listeners and readers with a wide range of musical repertories and highly sophisticated skills of interpretation that allowed them to understand the meanings latent in the bricolage of seemingly unrelated materials. The onomatopoeic word-play in the 14th-century Italian caccia also prefigured certain aspects of quodlibet hilarity. The closest early parallel, however, is the monophonic setting of *Mon seul plaisir* from the late 15th century (*F-Pn* fr.12744), which is a catalogue of 19 famous chanson refrains (e.g. *Comme femme*, *J'ay pris amours*, *Ma bouche rit*). The melody, which does not quote musical material, appeared in a polyphonic arrangement by Ninot le Petit.

Of the 25 quodlibets in Schmeltzl's publication (see above), 15 belong to this category (e.g. *Ein Quodlibet von Eyren* by Matthias Greiter and *Ein Quodlibet von Nasen* by J. Puxstaller; the latter text was also set by Lassus). In 1540 Georg Forster printed two catalogue quodlibets on the theme of Martin's goose, and series of proverbs were also popular, as in Paul Rivander's *Nun höret an* (1615). Both Jacob Reiner's *Venite exultemus* (1581) and Nikolaus Zangius's *Er setzt das Gläslein an den Mund* (1620) set lists of comical drinking-proverbs, and another catalogue of noses was included in J.M. Gletle's *Musica genialis* (1675–84). The simplicity of the musical settings suggests that such pieces were written versions of improvised musical entertainment. In the 17th century many German collections of entertainment music included verbal catalogue quodlibets (e.g. those of J.M.

Caesar, Gletle and Daniel Speer), and the tradition culminated in the 'quodlibeticae' of the *Augsburger Tafelkonfekt* (1733–46).

In the successive quodlibet one voice consists of a patchwork or cento of short musical and textual quotations while the others form a homophonic accompaniment, which is either without a text or else shares that of the patchwork voice. The most striking medieval parallel to this kind of Renaissance quodlibet is provided by the quotation of chanson lines in the refrain motet and *motet enté*. At least one out of every 25 motets contains a patchwork of refrains in one voice (e.g. *Cele m'a mort/Alleluia* and *La bele m'ocit/In seculum*). From the 13th century onwards STREET CRIES were also frequently included among the borrowed material. In the earliest Renaissance quodlibet, *Wer ich eyn Falck*, which appears in the Breslauer Codex (late 15th century), the tenor consists of a cento of fragments from German songs, while the remaining three voices have no text. Another anonymous quodlibet with song quotations in the tenor was published in Forster's second volume of German lieder (1540).

Schmeltzl's collection of 25 quodlibets contains six homophonic centos in which a patchwork in the tenor is surrounded by free voices; but the highpoint of the German type was reached in the works of Melchior Franck. Nine of his ten quodlibets (published in the *Musikalischer Grillenvertreiber*, 1622) are homophonic centos and are more modern in style than earlier examples: the patchwork voice is in the upper part and the quotations are mainly from folksongs. Only two other 17th-century homophonic centos are known, Johann Groh's *Bettler Mantel* (1612) and Johannes Brassicanus's *Was wölln wir aber heben an?* In his *Musica genialis* Gletle included a quodlibet citing popular texts, which may also contain musical quotations. Cento technique continued to provide humorous social entertainment, however, as in the quodlibets of Johann Christenius, Georg Engelmann (i) and Johann Theile, and in the street-cry quodlibets of Daniel Friderici, Jakob Banwart, Kindermann and G.J. Werner. Out of the 21 'quodlibeticae' in the *Augsburger Tafelkonfekt* two are musical centos: *Quodlibeticum curiosum* and *Salvete hospices*. Among the best-known examples from the 18th century are the *Hochzeitsquodlibet*, in which J.S. Bach collaborated, and Mozart's *Gallimathias musicum*.

The simultaneous quodlibet consists basically of the polyphonic cento, in which two or more patchwork voices are combined polyphonically, and the cantus firmus quodlibet, in which each voice is a different *cantus prius factus*. A third subtype, in which a cantus firmus voice is combined with one or more patchwork voices ('cantus firmus cento'), is less common; there are only four cantus firmus centos in German secular music, three of which are in the Glogauer Liederbuch (*c*1480; the fourth is a bicinium by Paul Rebhuhn published in 1545[7]). These three are among the first examples of the quodlibet proper in Germany; they combine a voice from *O rosa bella* by Dunstaple or Bedyngham with a patchwork of German songs (see HAM, nos.80 and 82).

The polyphonic cento involves a more complex technique than the homophonic, since several different patchworks of successive quotations must be combined polyphonically – the more centos the more complicated the combination. Schmeltzl included only three such works and they all bear the inscription 'Fürt ein jede stymm jr eygen text'; one of these pieces, *Ein Guckuck*, was reworked by Johannes Eccard (1578). This type of quodlibet corresponds to Praetorius's second category, which he illustrated by referring to a work of Zangius (probably *Ich will zu land ausreiten*, published in Paul Kauffmann's *Musikalischer Zeitvertreiber*, 1609). Zangius also wrote two other polyphonic centos: *Bistu der Hänsel Schüze* (1620) and *Ich ging einmal spazieren* (1613). Franck's *Kessel, multer bilden*, originally published as *Farrago* (1602), brings together many popular songs in masterful six-voice counterpoint.

Juxtaposing several pre-existing melodies, as in the cantus firmus quodlibet, represented in Renaissance thought the ultimate in contrapuntal mastery. Clearly this was the didactic intent that Tinctoris had in mind in his *Proportionale*, which included a work that used *O rosa bella* as a cantus, *L'homme armé* as a tenor and *Et Robinet* as a bassus. The kind of technical virtuosity required is evident in Greiter's *Elselein liebstes Elselein*, which appeared in Schmeltzl's collection as an example of a quodlibet composed entirely of quoted melodies; but it may also be seen in contemporary works that quote from two to four simultaneous cantus firmi. Among these are several particularly fine works of Senfl (e.g. *Ach Elselein/Es taget*), and works by such composers as Jobst vom Brandt, Matthias Eckel, Caspar Othmayr and Matthaeus Le Maistre. Humour is obvious in Othmayr's drinking-songs and technical virtuosity for its own sake in Greiter's, but Senfl's works exude a tender melancholy and represent perhaps a more subtle kind of symbolism than is normally associated with the quodlibet. In such pieces, as in the much larger and older repertory of sacred works using borrowed material for symbolic or purely constructive purposes, the proper boundaries of the quodlibet are difficult to maintain with precision or consistency. In any case, Praetorius limited the category of the cantus firmus quodlibet to works in which every voice is a separate *cantus prius factus*, citing as an example a motet of Göldel that combines five different chorales; Christenius's *Kirchenquodlibet* continued this tradition. The most famous cantus firmus quodlibet of all is the final variation of Bach's Goldberg Variations, in which two popular German songs (*Kraut und Rüben* and *Ich bin so lang nicht bei dir g'west*) are joined with the harmonic framework of the theme.

In a rather different guise the quodlibet took on a new lease of life in the German (and especially the Viennese) theatre of the first half of the 19th century. The term was used in four distinct senses: for the amalgam of (often non-theatrical) items assembled in book form; for a theatrical entertainment in which a popular artist or artists appeared in a series of excerpts from favourite roles; for a pasticcio in which pre-existing musical numbers were grafted on to a libretto for which they were not originally intended (*Rochus Pumpernickel*, 1809, text by M. Stegmayer, music arranged by Ignaz von Seyfried and Jakob Haibel, is the most famous example); and lastly, for the potpourri or musical switch. This kind of quodlibet, very popular in Viennese farces and Singspiele between the early 1800s and the 1850s, and probably derived from the same German tradition that enlivened Bach family gatherings and produced J.V. Rathgeber's and G.J. Werner's mid-18th-century examples, consisted of between half a dozen and 50 or more consecutive

quotations, usually with altered text; the frequent incongruity of words and music in an unexpected context proved a potent source of parody and entertainment.

Examples of quodlibet-like compositions are not hard to find in 20th-century music. There are a number of works by Ives, for example, in which well-known melodies are combined simultaneously as well as successively (e.g. the last movement of his Symphony no.2); but here, as in 15th- and 16th-century cantus firmus compositions, the dividing line between the serious or symbolic use of borrowed materials and the purely humorous is difficult to draw. There can be little doubt, however, that the essential spirit and form of the genre survives in works such as the *Quodlibet* of Peter Schickele.

Quotation. The incorporation of a relatively brief segment of existing music in another work, in a manner akin to quotation in speech or literature, or a segment of existing music so incorporated in a later work. Quotation usually means melodic quotation, although the whole musical texture may be incorporated, and solely rhythmic quotation is possible, if rare. Quotation is distinct from other forms of BORROWING in that the borrowed material is presented exactly or nearly so, unlike an ALLUSION or PARAPHRASE, but is not part of the main substance of the work, as it would be if used as a CANTUS FIRMUS, REFRAIN, fugue subject or theme in VARIATIONS or other forms, or if presented complete in a CONTRAFACTUM, setting (*see* SETTING (ii)), INTABULATION, transcription, MEDLEY or POTPOURRI. Quotation plays a role in other forms of borrowing, such as QUODLIBET, COLLAGE and many instances of MODELLING. Musical scholarship has not always observed these distinctions, and 'quotation' and its German counterpart *Zitat* have been used to refer to a variety of borrowing practices.

A quotation in speech or literature may be attributed or unattributed, familiar or unfamiliar to the listener, set off from the surrounding context by punctuation or tone of voice or so integrated with its context that only the most observant notice that it is a quotation. A similar range is possible in music. Some 20th-century scores identify quotations with footnotes, and quotations of text with music provide almost as explicit an identification, but most quotations appear without attribution. Quotations are often prominent and brief, suggesting that the composer or improviser expects those familiar with the quoted work to recognize it from a short excerpt. It is also possible for listeners to hear a 'quotation' where none was intended, based on a coincidental similarity. In

most cases, quoting existing music is an act that conveys meaning through the text or associations carried by the quoted music and the implications aroused by the way the quoted material is presented or manipulated. Like a synecdoche in literature, the quotation can stand for the entire work from which it is extracted and thus for its composer, its genre, its historical period, its region of origin or the musical tradition from which it comes. Quotation has also been used to create humour through surprise or incongruous juxtapositions and, in 20th-century music, to comment on the distance between the present and the past.

The practice of musical quotation, as distinct from older forms of borrowing such as centonization, contrafactum, use of a model and polyphonic elaboration of chant, may have begun in medieval secular songs in tandem with quotation of text. Both words and melody from Machaut's ballade *Phyton, le mervilleus serpent* are quoted in *Phiton, Phiton* by Magister Franciscus, which replies to Machaut, and Ciconia's *Sus une fontayne* quotes text and music from the beginnings of three ballades by Philippus de Caserta, apparently in a gesture of homage. The practice can also be found in the Renaissance. Josquin's motet *Tu solus, qui facis mirabilia* quotes text and music from the opening of Ockeghem's chanson *D'ung aultre amer*, joining the French and Latin texts to read 'To love another [than Christ] would be deception'. It has also been suggested that melodic resemblances between some Renaissance works represent quotations or allusions meant to recall the words of the quoted work and enrich the meaning of the words being sung (Reynolds, 1992). This is surely true in the first recitative in Bach's 'Peasant' Cantata (1742) when the strings quote the song *Mit dir und mir ins Federbett* ('With you and me in the feather-bed') to suggest that Mieke's lover wants more than the kiss he requests.

In dramatic or programmatic works, quotations can depict a performance of the music being quoted or suggest activities or groups of people through music associated with them. Early examples include Biber's representation in *Battalia* (1673) of soldiers encamped before a battle through the folksongs they sing, and the supper scene in Mozart's *Don Giovanni* (1787), in which an onstage band plays tunes from operas by Soler and Salieri and from his own *Le nozze di Figaro*. The quotations of patriotic songs in battle-pieces from James Hewitt's *The Battle of Trenton* (1797) to Tchaikovsky's *1812* Overture (1880) represent the opposing armies through the music of their bands. Quotation of *Ein' feste Burg* in Meyerbeer's *Les Huguenots* (1836) represents a performance of the chorale, but its appearance in Mendelssohn's Reformation Symphony (1832) more abstractly represents the Reformation in general.

Quotation of vocal music in instrumental works can be interpreted as a reference to the original text, which can suggest meanings and invite programmatic interpretations, as in Brahms's and Mahler's quotations from their own songs or the quotations from Zemlinsky's *Lyrische Symphonie* in Berg's Lyric Suite (1925–6). An exact quotation may also signal another, less obvious relationship between two works; in Ives's song *West London* (1921), the appearance in the piano postlude of the opening phrase of the hymn *There is a Fountain Filled with Blood* makes overt the source from which almost the entire vocal line has been paraphrased (Burkholder, 1985). Quotations can have humorous or satirical intent, like the reference to Wagner's *Tristan und Isolde* in Debussy's 'Golliwogg's Cakewalk' from *Children's Corner* (1906–8) and the quotation of Chopin's funeral march in Satie's *Embryons desséchés* (1913). Tin Pan Alley songwriters in the late 19th and early 20th centuries often quoted well-known tunes near the end of the chorus, as in George M. Cohan's *The Story of the Wedding March* (1901, with Mendelssohn's wedding march), or used quotation to suggest a scene or activity, as in James Thornton's *Streets of Cairo* (1895), which evokes exotic dancing by borrowing the tune that accompanied the 'hoochy-koochy' dance performed at the 1893 Chicago World's Fair. Jazz improvisers often quote popular tunes, classical music or other jazz artists in their solos, with aims that vary from homage to private jokes. Quotations can convey meanings remarkably quickly through the associations carried by the quoted material; this is often exploited in music for films and television.

Composers since World War II have used quotation to suggest the gulf between present and past by juxtaposing current and past musical idioms; in 'Dream Images (Love-Death Music)' from Crumb's *Makrokosmos I* for amplified piano (1972), the middle section of Chopin's *Fantaisie-Impromptu* appears 'as if emerging from silence' amidst Crumb's own sweetly dissonant modern sounds, 'like the gentle caress of a faintly remembered music'. The many and varied uses of borrowed material in 20th-century music have often all been described as 'quotation', which obscures important distinctions (*see* BORROWING, §§12–14).

J. PETER BURKHOLDER

Qu'ran reading. A recitation (*qirā'a*) or chanting (*titāwa*) of the Qu'ran in Arabic, moving between a kind of stylized speech and singing. It is read by the clergy or Qu'ran readers as part of the liturgy and on other occasions, in all Islamic countries. *See* ISLAMIC RELIGIOUS MUSIC, §I, 3; *see also* INDIA, §§I, 3(iii)(c) and VI; IRAN, §III, 2; and MALAYSIA, §II, 2.

Qureshi, Regula B(urckhardt) (*b* Basle, 13 July 1939). Canadian ethnomusicologist and anthropologist. She studied the cello at the Curtis Institute of Music (1958–60), and took the MA in German at the University of Pennsylvania in 1962. After moving to Edmonton, she completed the MM (1973) and the PhD in anthropology and ethnomusicology (1981) at the University of Alberta. From 1983 to 1988 she was a McTaggart Fellow at the music department of the university, where she was appointed professor (1991) and founded the Centre for Ethnomusicology (1992); she was also made an adjunct professor of the departments of anthropology (1991) and religious studies (1992), and was associate dean of graduate studies (1994–6). Her work concentrates on music in Muslim cultures of India and Pakistan, and ranges from Urdu-language poetry, both chanted (*tarannum*) and sung (*ghazal*), to forms of vocal religious music, paticularly that of the Sufi ritual assembly (*qawwālī*). She has gained new insights into the performance models used in musical analysis through her visual documentation of creativity, function and meaning in the ritual process and through her examination of historicity in orally transmitted traditions. She has also studied the players of the bowed-lute *sāraṅgī* in relation to issues of musical tradition and change in contemporary North Indian culture and she has published non-musicological writings on South Asian immigrants in Canada.

BONNIE C. WADE

Quṭb al-Dīn [Maḥmūd ibn Mas'ūd al-Shīrāzī] (*b* Shiraz, 1236; *d* Tabriz, 1311). Persian physician and scientist. The most outstanding pupil of the mathematician Naṣīr al-Dīn Ṭūsī, he is particularly known for his work in medicine, optics and astronomy. His encyclopedia, *Durrat al-tāj* ('Pearl of the crown') demonstrates his mastery of the whole range of traditional medieval scholarship, and contains within its treatment of the mathematical sciences (quadrivium) a lengthy section on music. This is mainly a restatement of the musical theory developed by ṢAFĪ AL-DĪN, but is important for its attention to musical practice, particularly in its codification and description of modes and rhythmic cycles. In both areas it points to the existence of a wider range of structures than is apparent from the works of Ṣafī al-Dīn; its treatment of the modes in particular is far fuller, and is less restricted by purely theoretical concerns. It ends with the most extended, complex and precise example of notation to be found in the works of the medieval Arab and Persian theorists, a unique document which allows some insight into the nature of the compositional practice of the period with

regard not only to formal, modal and rhythmic strategies but also to techniques of text setting.

OWEN WRIGHT

Qu Wei [Ch'ü Wei] (*b* Changzhou, Jiangsu province, 9 May 1917). Chinese composer. Known until 1945 as Qu Shixiong, he trained initially as a music and art teacher. Joining Mao Zedong's Communist leadership at Yan'an in 1940, he gained a post at the Lu Xun College of the Arts, where he worked with many of the leading revolutionary Chinese composers of the period. He composed for government propaganda films and taught until 1955, when he went to Moscow to study at the Tchaikovsky Conservatory. This allowed him to formalize his compositional style as a fusion of Chinese melodic and rhythmic motifs with a post-Romantic but essentially tonal language. On his return to China in 1959 he became composer-in-residence of the Shanghai SO. Other than film and orchestral music, Qu has composed mass songs, opera and piano music. His style might be described as socialist realist, in the sense that his pieces are intended both to reflect the lives of the masses and to lead them through the revolutionary process. He has published *Qu Wei wen xuan* ('Selected articles by Qu', Guangzhou, 1996).

JONATHAN P.J. STOCK

Qu Xiao-song (*b* Guizhou, 6 Sept 1952). Chinese composer. A self-taught violinist and violist, he played with a Beijing opera company in his home town. His work as a farmer during the Cultural Revolution is reflected in his compositions, which demonstrate a concern for nature and a respect for Chinese folklore and folk music. After graduating from the Central Conservatory in Beijing (1983), he became a member of the composition faculty. In 1989 he was invited to the USA as a visiting scholar at Columbia University.

Many of Qu's early works were inspired by the spirit of nature in rural southern China. *Mong Dong* (1984) is a sonic manifestation of the indigenous art of the *Wa* people in Yunnan province; in this work, as in many others, Qu blends an expressive human voice with instruments. His cantata *Cleaving the Coffin* (1987) synthesizes traditional Sichuan opera with Western techniques. Two operas based on the Oedipus story, *Oedipus* (1992–3) and *The Death of Oedipus* (1993–4), demonstrate his ideal of returning to the essence of music through an economic use of sound and silence. The chamber music series *Ji* ('Silence', from 1990) uses concise and refined sounds to allude to the peaceful infinity of time and space. He has received numerous commissions from festivals and organizations internationally.

Raab, Franz de Paula (*b* Pausram [now Puzdřany], 8 Feb 1764; *d* Seitenstetten, 21 May 1804). Austrian composer. The son of a peasant, he was at first an apprentice musician (*Thurnergeselle*) in Purgstall, Lower Austria, and around 1780 obtained a position as a bass singer in the Benedictine abbey of Seitenstetten, where in 1788 he succeeded the organist and composer Christian Widmann. In 1794 he had composition lessons from Albrechtsberger in Vienna. In his sacred music he closely followed the style of Michael Haydn, carefully observing liturgical considerations. His secular compositions consist of patriotic works from the time of the wars with France and functional music for use in the monastery. His music was performed in Seitenstetten until 1875.

WORKS

all in MS in A-GÖ, KR, M, SEI, SF, Wgm, WIL, D-Bsb

Sacred, 4vv, org, most with other insts: Requiem, e, 1796; 4 Vespers de Dominica, 1800; Vesper de Beata, 1800; Vesper de Dominica, 1800, completed by J.A. Pfeiffer; 16 introits, 1795–6; 12 grads, 1794–1804; 4 offs, 1796; Tu fons, origo omnium, 1795

Secular: 16 fugues, pf, org, 1794, lost; 7 variations, hpd/pf; 5 patriotic choruses; 2 occasional cants., 1795–7; 3 arias; composition exercises with corrections by Albrechtsberger, 1794; frags.

BENEDIKT WAGNER

Raabe, Christoph. *See* RAB, CHRISTOPH.

Raabe, Peter (*b* Frankfurt an der Oder, 27 Nov 1872; *d* Weimar, 12 April 1945). German scholar and conductor. He studied at the Berlin Hochschule für Musik with Woldemar Bargiel and afterwards worked as a conductor in various towns in Germany and the Netherlands. In 1907 he was appointed court conductor in Weimar, where he became the curator of the Liszt Museum and chief editor of the Breitkopf Collected Edition of Liszt's works, to which he contributed several volumes. In 1916 he received the PhD from Jena University with a dissertation on the genesis of Liszt's orchestral music. In 1920 he was appointed general music director of the Aachen Städtisches Orchester, and in 1924 he was made honorary professor of music at Aachen Technische Hochschule. In 1935 he became chairman of the Allgemeiner Deutscher Musikverein and succeeded Richard Strauss as the president of the Reichsmusikkammer, a post which he held until his death. In 1936 he received an honorary doctorate from Königsberg University. Although he conducted a large number of works by contemporary German and foreign composers, most have not survived into the present-day repertory, apart from those pieces by Strauss. He was a follower of Adolf Hitler from the 1930s onwards, and actively supported the artistic policies of National Socialism. He is best remembered for his two-volume study of Franz Liszt. This work, reissued in 1968 in a revised edition by his son Felix, shows considerable scholarship and is a valuable source for research, for as curator of the Liszt Museum, Raabe had access to a large number of unpublished manuscripts. Raabe also wrote songs and piano pieces.

HUMPHREY SEARLE/DENNIS HUTCHISON

Raaben, Lev Nikolayevich (*b* Grozniÿ, 1 Jan 1913). Russian musicologist. He graduated from Yuly Il'ich Ėydlin's violin class at the Leningrad Conservatory in 1940, and completed his postgraduate studies in 1945. He continued to study at the Conservatory with B.A. Struve, conducting research on the history and theory of string playing. He took the *Kanditat* in 1948 with a dissertation on problems of violin-playing in 19th-century Russia, and was awarded an honorary doctorate in 1966. He taught classes on the history and theory of performance in the string department of the Leningrad Conservatory from 1946 to 1978, becoming assistant professor in 1952 and professor in 1971. From 1949 he also worked in conjunction with the Institute for the Theatre, Music and Cinematography in Leningrad; he headed its music section between 1969 and 1985, and was the editor of its annual research publication, *Voprosï teorii i ėstetiki muzïki*, from 1962 to 1975. Since 1991 he has taught a music history class at the Russian Herzen State Teaching University. He became a member of the Union of Composers in 1960.

Raaben's academic interests are broad and varied, covering issues of string performance and methods of training performing musicians, questions of interpretation and musical aesthetics, music history and historiography. He has made a particularly valuable contribution to research into chamber music and the history of instrumental performance.

MARINA MOISEYEVNA MAZUR

Raaff [Raff], **Anton** (*b* Gelsdorf, nr Bonn, bap. 6 May 1714; *d* Munich, 28 May 1797). German tenor. Originally educated for the priesthood, he sang in several dramas at the Jesuit college in Bonn while still a boy. After being appointed to the service of Clement Augustus, Elector of Cologne, Raaff was sent in 1736 to Munich, where he studied with Ferrandini and sang in his *Adriano in Siria* (1737). The following year he studied with Bernacchi in Bologna, remaining in Italy until 1741–2, when he returned to electoral service in Bonn. In 1749 he left for Vienna where he sang in several operas composed and directed by Jommelli. He was in Italy in 1751–2, when he was called to the court of Lisbon; from there he went in 1755 to Madrid and, in 1759, he travelled with Farinelli to Naples.

For the next decade Raaff was the principal tenor on the Neapolitan and Florentine stages, appearing in operas by Hasse, Majo and J.C. Bach, as well as Sacchini, Piccinni and Mysliveček. In August 1770 he arrived at Mannheim, Carl Theodor's seat, where he sang the title roles in Piccinni's *Catone in Utica* (1770) and Bach's *Temistocle* (1772) and *Lucio Silla* (1775). Mozart was severely critical of his singing and acting in the title role of Holzbauer's *Günther von Schwarzburg* (1777), but was more sympathetic after hearing him sing Bach's 'Non so d'onde viene' from *Alessandro nell'Indie* at the Concert Spirituel in Paris during June 1778; Mozart tried to win his favour by composing a setting of one of the tenor's favourite texts, 'Se al labbro mio' (K295). Raaff's last role was the title part in *Idomeneo* (1781), composed for Munich where Carl Theodor had transferred his court. Though Raaff's voice was praised by Schubart as having an unusually large range from bass to alto, with flexible coloratura throughout, Mozart found it small in range and limited in technique. Yet Raaff sang well enough in 1787 to impress Michael Kelly, who wrote that 'he still retained his fine *voce di petto* and sostenuto notes, and pure style of singing'. He was one of the last and greatest representatives of the legato technique and portamento, brought to perfection by Bernacchi and his school.

DANIEL HEARTZ (with PAUL CORNEILSON)

Raaijmakers, Dick [Bernardus Franciscus] (*b* Maastricht, 1 Sept 1930). Dutch composer. Following his piano studies at the Hague Conservatory, he worked at Philips in Eindhoven (1954–60), first as an unskilled worker and then in the Natural Sciences Laboratory as an assistant to Badings and Ton de Leeuw among others. This was the beginning of a very wide-ranging career in acoustics, electronic music and later electrical music theatre. Raaijmakers was involved with the setting-up of the later Sonologie-studio in Utrecht (1961), the electronic studio (1965) and training course in recording engineering (1983) of the Hague Conservatory and the Amsterdam Studio voor Elektro-instrumental Muziek (1967), which continues to set the trend. From 1966 to 1995 he lectured in electronic music at the Hague Conservatory.

Raaijmakers is one of the most important pioneers in the field of electronic music in the Netherlands. At first he wrote for tape (e.g. *Vijf canons*), but soon developed in the genre of performance art. A characteristic piece is *De grafische methode fiets*, a performance for cyclist, bicycle, slow-motion tracking system, heart audio sensors, respiration and physical exertion, based on a 'chronophotography' from 1891 by the photographer Etienne-Jules Marey. Raaijmakers's work is highly conceptual in nature. He trenchantly exposes the complexity of everyday phenomena (for example, electricity in *Volta*) by divesting these of any self-evident qualities, or he comments on generally recognized authorities (e.g. Boulez or the Dutch writer Willem Frederik Hermans). The impact is often confrontational, sometimes morbid, sometimes humorous. Because the realization of an idea is to the fore in his work, Raaijmakers is active not only in music but also in theatre, visual art, film and literature. He has written numerous essays, including *De val van Mussolini* (1984), which formed the basis of a music-theatre piece of the same name. The triple meaning of 'fall' is characteristic of the way in which he thinks: mechanical motion, the stumbling of Stan Laurel and Oliver Hardy and the figurative fall of a heavyweight personality like Benito Mussolini. His versatility is shown by the fact that he has not only twice won the Matthijs Vermeulen Prize but also the 1992 Oeuvre Prize for the visual arts and the 1995 Ouburg Prize for his contribution to the development of the visual arts. Raaijmakers has played an influential role as a lecturer in Electrical Music Theatre at the Hague Conservatory, the attainments of electronic music and new media being applied to music-theatre forms. A number of his major pieces of music theatre have been performed as part of the Holland Festival. In 1984 he was the featured composer, with six theatrical pieces, and in 1995 with *De val van Mussolini*.

WORKS
(*selective list*)

Music-theatre pieces: The Art of Opening, 1966; Dépons der Fall, 1992; Die glückliche Hand geöffnet, 1993; Der Fall Dépons, 1993; De val van Mussolini, 1995; Herman's hand (Pro memoriam), 1995

Sound installations: Radio-project, 1966; Drie ideofonen, 1971; Acht labielen [Eight Unstable Ones], 1985; Tombeau de Glenn Gould, 1989; Fortklank, 1993

Tape: Tweeklank, 1959; Pianoforte,1960; 5 canons, 1963; Flux, 1967; Plumes, 1967

Perf. art: Kwartet, 1967–71; Extase, 1984; Intona, 1991; Volta, 1995; De grafische methode fiets [The Graphic Cycle Method], cyclist, bicycle, slow-motion towing system, heart audio sensors

Principal recording company: Donemus/NEAR

JACQUELINE OSKAMP

Rääts, Jaan (*b* Tartu, 15 Oct 1932). Estonian composer. He studied at the Tartu Music School and the Tallinn Conservatory (graduated 1957), where his composition teachers included Mart Saar and Heino Eller. From 1955 to 1966 he was a recording director for Estonian Radio, and from 1966 to 1974 the music director for Estonian Television. In 1974 he was appointed to a post at the Estonian Academy of Music, where he became professor in 1990. He has also served as chair of the Estonian Composers' Union (1974–93) and has been active as a politician. His honours include several state prizes.

One of the reformers of Estonian music around 1960, Rääts abandoned the traditional musical language and embraced a neo-classical style characterized by active motor rhythms. His Concerto for Chamber Orchestra (1961) achieved international success. Often made up of contrasting sections, his compositions are each dominated by a prominent figure or type of rhythmic movement. Although most of his works have generic titles, they do not exhibit traditional sonata form or thematic development. Instead, archetypal oppositions of tension and resolution, activity and repose, and energy and lyricism invite a comparison with Classical schemes. Among his most successful works are several series of miniatures for one and two pianos.

URVE LIPPUS

Rab [Raabe, Rabe], **Christoph** [Corvinus, Christopher] (*b* Zürich, 1552; *d* Herborn, 19 Jan 1620). German printer and publisher. After studying at the universities of Heidelberg, Wittenberg and Vienna (1567–74) he worked in the press of his father Georg Rab (*d* 1580); later he worked with the Frankfurt publisher Sigmund Feyerabend and the printers Johann Wechel and Paul Rab (1581–5). In 1585 he moved to Herborn, where Count Johann VI the elder of Nassau-Siegen helped him to establish and expand an efficient printing firm. Rab mainly printed works for the new University of Herborn (founded 1584), moving with it to Siegen (1595–9) and then following it back to Herborn. His publications include many Calvinist psalm books, including George Buchanan's in Latin, Ambrosius Lobwasser's in German and at least one Hungarian version, as well as several editions of hymn-books and works by Meiland, Melchior Schramm and other composers.

THEODOR WOHNHAAS

Rab [Rabe, Corvus, Corvinus], **Valentin** [Valentinus] (*b* probably Lössnitz, *c*1522; *d* Marienberg, 17 April 1596). German composer. After a time as Kantor in Schneeberg around 1540 he began studies in Wittenberg in June 1542: there he may have attended lectures by Dietrich (1544) and Coclico (1545–6) as well as by Luther, Melanchthon and others. He seems to have remained in Wittenberg until about 1550. From 1554 until his death he was Kantor at the Lyceum Mariaemontanum, Marienberg. With David Köler and Johannes Reusch, Rab was one of the important figures in the Upper Saxon circle of composers, which followed Thomas Stoltzer. From 1546 this circle extensively developed the German psalm motet (using Luther's texts), beginning a tradition that still continues. 31 works by Rab are known (mostly in *D-Dlb, Z* and *H-BA*), some only as fragments, others only from archival references, while an unknown number of hymn settings have been lost (for full work-list see Dehnhard). His style shows the influence of Josquin's late works. From a technical point of view the German motets do not rise above the average, but the settings of texts with political or Lutheran convictions reach a relatively high level of expressive intensity through heightened word declamation and rhetorical devices. The psalm motets composed between 1547 and 1550 reflect Rab's attitude to the Schmalkalden war (1547), the Augsburg and Leipzig Interims (1548–52) and internal Protestant disputes; they were certainly not conceived as liturgical music and their use as such is limited.

WOLFRAM STEUDE

Rabāb [rubāb, rubob, rebab, rabob, robāb, ribāb, rbab, rabāba etc.]. A term for various chordophones, particularly lutes (mainly with skin soundtable), both bowed and plucked, and lyres, found mainly in North Africa, the Middle East, Iran, Central Asia, South Asia and South-east Asia, but also in many other regions influenced by Islam: from China to the Democratic Republic of the Congo, Indonesia to Spain (and thence to Latin America). For a discussion of the term as applied to lyres, *see* RABĀBA. The term may be related to the European REBEC.

1. Terminology and distribution. 2. Spike fiddles: (i) Arab and Turkish (ii) South-east Asia. 3. Short-necked fiddles. 4. Long-necked, barbed lutes: (i) Iran (ii) South Asia (iii) Central Asia. 5. Double-chested lutes: (i) Afghanistan (ii) South Asia.

1. TERMINOLOGY AND DISTRIBUTION. The etymology and origin of the term 'rabāb' to denote chordophones is not known with certainty. It is first reported in the early medieval Arabic texts (9th–10th centuries) of Al-Jāḥiẓ, Ibn Khurdadhbih and Al-Fārābī. Al-Jāḥiẓ merely names it; Ibn Khurdadhbih claims it is similar to the *lūrā* (*lyra*) of the Byzantines; and Al-Fārābī, in what appears to be the first reference to bowed chordophones (as noted by H.G. Farmer), states that it is played 'by strings drawn on other strings'.

Farmer (1931, pp.103ff) distinguished, on medieval textual grounds, between *rabāb*, denoting bowed instruments ('viols' or fiddles), and *rubāb* (possibly of Persian origin), denoting plucked chordophones ('lutes'), while admitting that the first short vowel is not, as is usual in Arabic script, written in the earlier texts. This distinction between bowed and plucked instruments is thus not entirely clear in the early literature; neither can it be maintained with reference to the later distribution of the instrument (and its various forms) from Morocco to Java. *Rabāb* is the commonest orthography, though the short neutral first vowel may be written variously in different languages (e.g. Malay–Indonesian *rebab*). Since the Middle Ages there has been a difference of usage between West and East. In Western Islam (North Africa and the Arab countries), the name *rabāb* denotes primarily spike fiddles (but also the short-necked fiddle of classical Andalusian Moroccan music) and this type was also distributed through the Arab maritime spice routes in South-East Asia. In Iran, Central Asia and South Asia, the term denotes mainly plucked lutes, either barbed and long-necked, or double-chested (*see also* KAMĀNCHEH and GHIDJAK).

2. SPIKE FIDDLES.

(i) Arab and Turkish. Spike fiddles seem to have had the name *rabāb* since medieval times. Some, like the quadrangular *rabāba*, appear to have evolved from frame drums. The body consists of a wooden frame with both the belly and the back of sheepskin. The first evidence of the quadrangular body is not to be attributed to Arab writers but to accounts by European travellers from the late 16th century onwards. The only reference in an Iranian text to

1. Rabāba (fiddle), Baalbek, Lebanon

a quadrangular fiddle is by Ibn Ghaibī (*d* 1435), but the instrument is called *yakta*, not *rabāb*. The 16th-century Egyptian lawyer Ibn Ḥajar al-Haythamī mentioned both the *rabāb* and *rabāba* without giving any other explanation than 'string instrument'.

The distinction made by Villoteau in the 19th century (and after him by Lane) between the single-string, quadrangular *rabāb al-shā'ir* ('poet's fiddle') and the two-string *rabāb al-mughannī* ('singer's fiddle'), tuned in 5ths, no longer exists in Egypt. The quadrangular shape has since disappeared from there (except in Sinai) and its epic repertory has been transferred to the hemispherical two-string spike fiddle, now called simply *rabāba*.

The quadrangular single-string *rabāba* (also *rabāb*, *rabābah*) or *rabāba al-shā'ir* is still used from Saudi Arabia in the south to Syria in the north, and from Iraq in the east to the Mediterranean coast in the west. It is considered the main instrument of the nomads (Arab and non-Arab) and rural populations. It accompanies a singer and the compass does not exceed a 5th. The instrument is known in two shapes: a rectangular form (for illustration *see* LUTE, fig.2*b*) of the Bedouin in Iraq and Jordan, and a type with concavely curving sides, nowadays more widespread (fig.1). In Syria, the use of petrol cans as soundboxes has been introduced by the Nawar (Gypsy) people. A trapezoidal form documented in the 19th century does not exist.

A second type of spike fiddle has a hemispherical body of carved wood, gourd or coconut covered with a skin belly; it has a wide distribution, from North Africa to South-East and East Asia (see §(ii) below). In some of these types, such as the Sous or Soussi *rabāb* (*ribāb*) of the Berbers of southern Morocco, the string runs not above the neck but at an angle by its left side from a lateral peg near its top (fig.2); it is stopped by being touched by the fingers.

Another type of *rabāb* with a hemispherical gourd resonator covered by skin is the Libyan *rabāba* which, like several related instruments of the African Sahel (such as the Tuareg *imzad*, the Niger *goge* or the Mali *n'jarka*), is a single-string fiddle with a high bridge and a curved neck which does not pierce the soundbox itself but passes under the skin over the rim of the gourd (the instrument might thus not be strictly regarded as a spike fiddle). In Mauritania the *rbab* is a single-string fiddle with a straight neck and a half-calabash resonator through which the handle projects.

In Turkey, the *rebâb* is a spike fiddle of hemispherical or three-quarters spherical shape, akin to the Persian *kamānche*. The instrument is now largely obsolete, superseded by the *kemençe*; in surviving instruments the original pegboxes have often been replaced by sections adapted from Western guitars. The instrument was formerly played with the soundbox turned face inwards, and the bow diagonally applied, grazing the soundbox (a characteristically Persian technique). There were three strings or courses. A similar instrument with a coconut resonator (the *jūza*) is found in Iraq. Also related is the two-string Egyptian *rabāba*. All these models have tuning-pegs arranged laterally along the neck. Spike fiddles of

2. Soussi ribāb (single-string fiddle) player, Marrakesh, Morocco

the *rabāb* type are generally played on the knees with the bow held from underneath.

(ii) South-east Asia. The *rebab* has a prominent role in both the folk and classical traditions of Indonesia and Malaysia. The instrument, a spike fiddle, may have two or three strings. It is distinguished, however, not so much by the number of strings, but by the construction, shape and function, which vary from region to region.

In Sumatra and Malaysia the two-string *rebab*, generally used to accompany epic singing and in ensembles, is closely related to its Middle Eastern counterpart. The three-string *rebab*, which has a longer shaft and is less squat and more common than the two-string version, is similar to the comparatively sophisticated *sǫ sām sāi* of Thailand, the *tror che* (*see* TROR) of Cambodia and the two-string *rebab* used in gamelan music in Java and Bali.

In Central Java the *rebab* is about 100 cm tall. It has a heart-shaped or triangular body usually made from a single piece of wood or half a coconut shell. The back of the body is often pierced with a rosette of small holes; the front is covered with parchment of buffalo intestine or bladder. The bridge, made of teak and placed fairly high up on the parchment soundbox, is narrow at the top, broadening towards its base. A small folded piece of banana leaf is usually placed immediately underneath the bridge, between the two sections of the single brass-wire string which is trained around a peg underneath the box resonator and attached to two tuning pegs near the top of the neck. The presence of the leaf is thought to reduce the sharpness of the tone; this is often enhanced by placing a folded handkerchief between the string and the soundtable.

The neck of the *rebab* is made of ivory, ivory and buffalo horn, or wood. There is no fingerboard. The instrument is bowed just above the body with a loose horsehair bow held under the thumb and first finger and supported by the middle finger; the other fingers are used to keep the hair taut. The body is often clothed in an embroidered velvet jacket and when not played is placed on an ornate wooden stand. The larger court orchestras have a pair of *rebab*, one for each tuning system.

In Central Java the *rebab* is often used in gamelan ensembles. In soft-style pieces the *rebab* player leads the ensemble, often beginning with a short solo introduction. The instrument's primary role is melodic. It anticipates the main notes of the melody, if not as freely as the voice or the *suling* (flute). It remains silent in loud pieces.

In West Java, the *rebab* is made from jackfruit or similar wood and is slightly taller (about 115 cm) than in Central Java. The instruments are similar in construction and bowing technique but there is a marked difference in Sundanese and Javanese musical styles.

In Bali, the body of the *rebab* is made of carved wood or occasionally half a coconut shell. The soundbox is covered with parchment of buffalo intestine or bladder. A bridge supports two wire strings, tightened by tuning-pegs. It is played with a loose, rosined horsehair bow held between the thumb and first finger. The other fingers keep the hair taut, so that there is little distinguishable difference between the pushed and drawn bow. The former practice of including the *rebab* in large Balinese gamelan ensembles has almost died out, but it still has a place in the *gamelan gambuh*, where it plays in unison with a group of *suling*.

3. Rabab pasisieh (three-string fiddle), West Sumatra

The *rebab tiga tali* of West Malaysia has three strings (*tiga*: 'three'; *tali*: 'strings'; for illustration *see* LUTE, fig.2*d*). It is similar in construction to the Javanese *rebab*. The heart-shaped soundbox may be made of almost any wood (jackfruit or *keranji* wood are common). The soundtable is usually made from the stomach of a cow or a buffalo's bladder. The size of the soundbox is typically about 25 cm long, 17 cm at the widest part and 5 cm deep. The player holds the back of the instrument towards him. On the upper left-hand side of the soundbox there is a nodule made from the sticky substance secreted by a bee, with a tiny silver cap (Kelantan Malays refer to this as a mute). On the back of the soundbox strands of wool and strings of beads hang as decoration; originally human hair was used. Through the soundbox passes a slender wooden shaft, usually of *leban* wood and 108 cm long, the longer section above the soundbox (about 71 cm) forming the instrument's neck. This is usually decorated with bands of metal and painted patterns and ornamented with an elaborately carved head which often resembles a Khmer or Thai crown. Below the soundbox the shaft becomes a wooden peg or foot (11·5 cm long) to support the instrument on the ground (like the spike of the cello). From a tailpiece on the foot three strings pass over a bridge of *sena* wood, high on the soundboard and then through a rectangular opening about three-quarters of the way up, to be attached to the tuning-pegs. The strings, usually of metal (originally twisted cotton), are normally tuned in 4ths or a combination of 4ths and 5ths, but there is no fixed pitch. There is no fingerboard; the pitch can be modified by the position of the player's fingers on the strings and by the pressure exerted. The strings are bowed

by a fragile but elaborately carved arched bow, nearly 80 cm long, strung with a variety of materials – strands of rattan, coconut fibres, threads from pineapple leaves, fishing line, even plastic string. The thumb and index finger control the bow and the third and fourth fingers hold the strands taut. The player sits on the floor with his legs crossed and holds the instrument upright. It may be used to accompany a singer and is a member of the instrumental ensembles for a variety of dance and theatre performances and the healing ceremony *main puteri*.

The *rebab dua tali* (*dua*: 'two': *tali*: 'strings') of West Malaysia is less highly decorated. Its soundbox, made of wood, is roughly rectangular, with rounded shoulders and base, and is slightly longer and broader than that of the *rebab tiga tali*. The shaft, up to 90 cm long, passes through the soundbox and ends in a foot. The two strings are attached to a tailpiece on the foot, pass over the bridge high on the soundbox and up the shaft to near the head, where they are attached to lateral pegs. There is no fingerboard. The bow is similar in shape to that of the *rebab tiga tali*, but heavier and less decorated. The instrument is chiefly used in the ensemble for the *wayang kulit Melayu* (shadow puppet play) but is now rare.

The *rabab* (*rebab*) is also found in Minangkabau, West Sumatra. The *rabab darat* of the upland region is about 90 cm tall and sometimes rests on a small silver peg. It has a hemispherical soundbox made of coconut or wood about 20 cm in diameter and 10 cm deep, covered with translucent cow- or buffalo-heart skin; there is a hole at the back. The body is attached to a carved and decorated wooden neck, about 70 cm long, which is bent backwards in a curve; jackfruit wood is often used. The wooden or rattan frame of the bow is about 75 cm long, with about 50 cm of horsehair stretched across the curved top end and a wooden protrusion near the other end. The player tautens the hair with his hand. There are two strings, made of thick cotton strands or metal, which are stretched from a metal tongue at the front base of the instrument, through holes at the neck, to wooden pegs at the top. A wooden bridge is placed at the top of the soundbox. The fiddle is played in an upright position, either solo or to accompany singing, especially of *kaba* (long epic poems).

The *rabab pasisieh* (*rabab Pariaman*), a three-string bowed fiddle, is found in the coastal (*pasisieh*) areas of West Sumatra, including Pariaman (fig.3). It is similar in shape, construction and use to the *rabab darat*, with a soundbox made from half a coconut shell, covered with skin from the heart or stomach of a buffalo or cow. Its neck is about 50 cm long and its total height about 70 cm; the bow length is 60 cm.

3. Short-necked fiddles. The predominant *rabāb* or *rebab* of North Africa is a boat-shaped two-string fiddle without frets. The instrument is called the Maghribi *rabāb* by easterners and the Moorish *rebab* by westerners. The dialect forms *rebab*, *rebeb*, *rbeb* and *rbab* bear witness to oral transmission; the classical term *rabāb* is not mentioned in current North African writings. The instrument was probably brought from Andalusia and found a home in urban centres that welcomed people from Spain: Tanger, Tetouan, Fez and Chechaouen in Morocco, Tlemcen and Constantine in Algeria and Testour in Tunisia. The instrument must have spread from these places to other cities. The *rebab* is shown with the *'ūd* in French engravings of the late 19th century; it was played in cafés in Algiers. It is also mentioned with the *'ūd* in an early reference, by the 17th-century writer, 'Abd al-Raḥmān al-Fāsī, who describes it as having two strings tuned in 5ths (H.G. Farmer: 'An Old Moorish Tutor', *Journal of the Royal Asiatic Society*, 1932, p.366). The possibility of the derivation of the *rebab* from the *'ūd* cannot be discounted: we find the same pegbox, more or less at a right angle, the same green membrane covering the soundbox and the same style of rosette.

The *rebab* is made of two joined sections, the body and the pegbox. The body is made up of two parts of equal length, the soundbox (8 cm in depth, made of walnut or cedar and covered with skin) and its extension, which is pierced with soundholes. The body length varies from 48 to 53 cm (in Algeria and Tunisia up to 60 cm), its width from 9 to 12 cm. The pegbox is almost 12 cm long and has two large pegs. The instrument may be pear-shaped (Algeria, Tunisia) or boat-shaped (Morocco). The body has two concave curves which the Moroccans describe as like the back of a hare. The second section (*ṣadr*: 'chest') is covered with a thin copper plate (Algeria, Tunisia) forming a finely worked grille made up of a series of increasingly small rosettes (two in Morocco, three in Algeria and Tunisia). The rim is raised above the copper plate and calls for meticulous care in construction. In Morocco and Algeria, this rim is set with obliquely placed mother-of-pearl and ivory inlay work, suggesting plaited hair; in Tunisia, the rim is less elaborate. The neck terminates in a nut, made of bone. Two gut strings, very tightly strung, join at the base of the tailpiece and pass over an oblique bridge made of a half-cylinder of reed. The two strings, where they leave the nut, are some centimetres away from the rosettes, so there is no question of their being pressed down to the fingerboard as in playing the violin; here there is no fingerboard. The bow is made of metal strung with horsehair and is about 38 cm long (in Tunisia much larger). The instrument is tuned in 5ths, usually with the lower string to *G* and the higher to *d*; but the relationship may be inverted, and there are various methods of tuning according to the dimensions of the instrument (for example to *d* and *a*). Sachs (*Reallexikon der Musikinstrumente*, 1913) mentions types of *rebab* up to 75 cm long, which would give them a completely different register.

The uniqueness of the *rebab* lies in the method of activating its strings. The bow touches the lower one only occasionally. In Morocco, the player grasps the neck with the thumb and forefinger of his left hand level with the nut. In Algeria and Tunisia, where the instrument is larger, the thumb rests on its back and the forefinger pulls laterally at the highest string, rather in the manner of the Indian *sitār* (a technique not found elsewhere in the Arab world). Because of the size of the soundbox, which broadens out from the nut (less narrow in Morocco than Algeria), the performer usually plays in the first position; shifts are rare. The *rebab* is held across the player's body, with the pegbox against the left shoulder and the tailpiece on the right knee. In Tunisia, it is held almost vertically, firmly wedged between the player's legs. It is used to accompany the voice and has a strange timbre, rich in upper partials, producing a kind of nostalgic humming sound. There is no strictly instrumental repertory, since the *rebab* is always used to enhance the performer's voice; the singing is never solo, the *rebab* being part of the so-called Andalusian ensemble (*'ūd*, *rebab*, *kamanjā*, *ṭār* and *darbukka*) and considered its pivot.

The instrument now survives only among the older generation. While the instrumental groups of which it is a part have been increasing their size to 20 to 30 players, the *rebab* remains a single instrument; it is thus drowned by its companion instruments. It is however recognized as pre-eminent as leader of the *nawbāt* repertory. Past champions of the instrument include the legendary Algerian Ḥājj al-ʻArbī Binṣarī (1883–1965) and the Moroccans al-Faqīh Lemṭrī (*d* 1946), ʻUmar Jaʻydī (*d* 1952) and Moulāy Aḥmad al-Wazzānī (1876–1965).

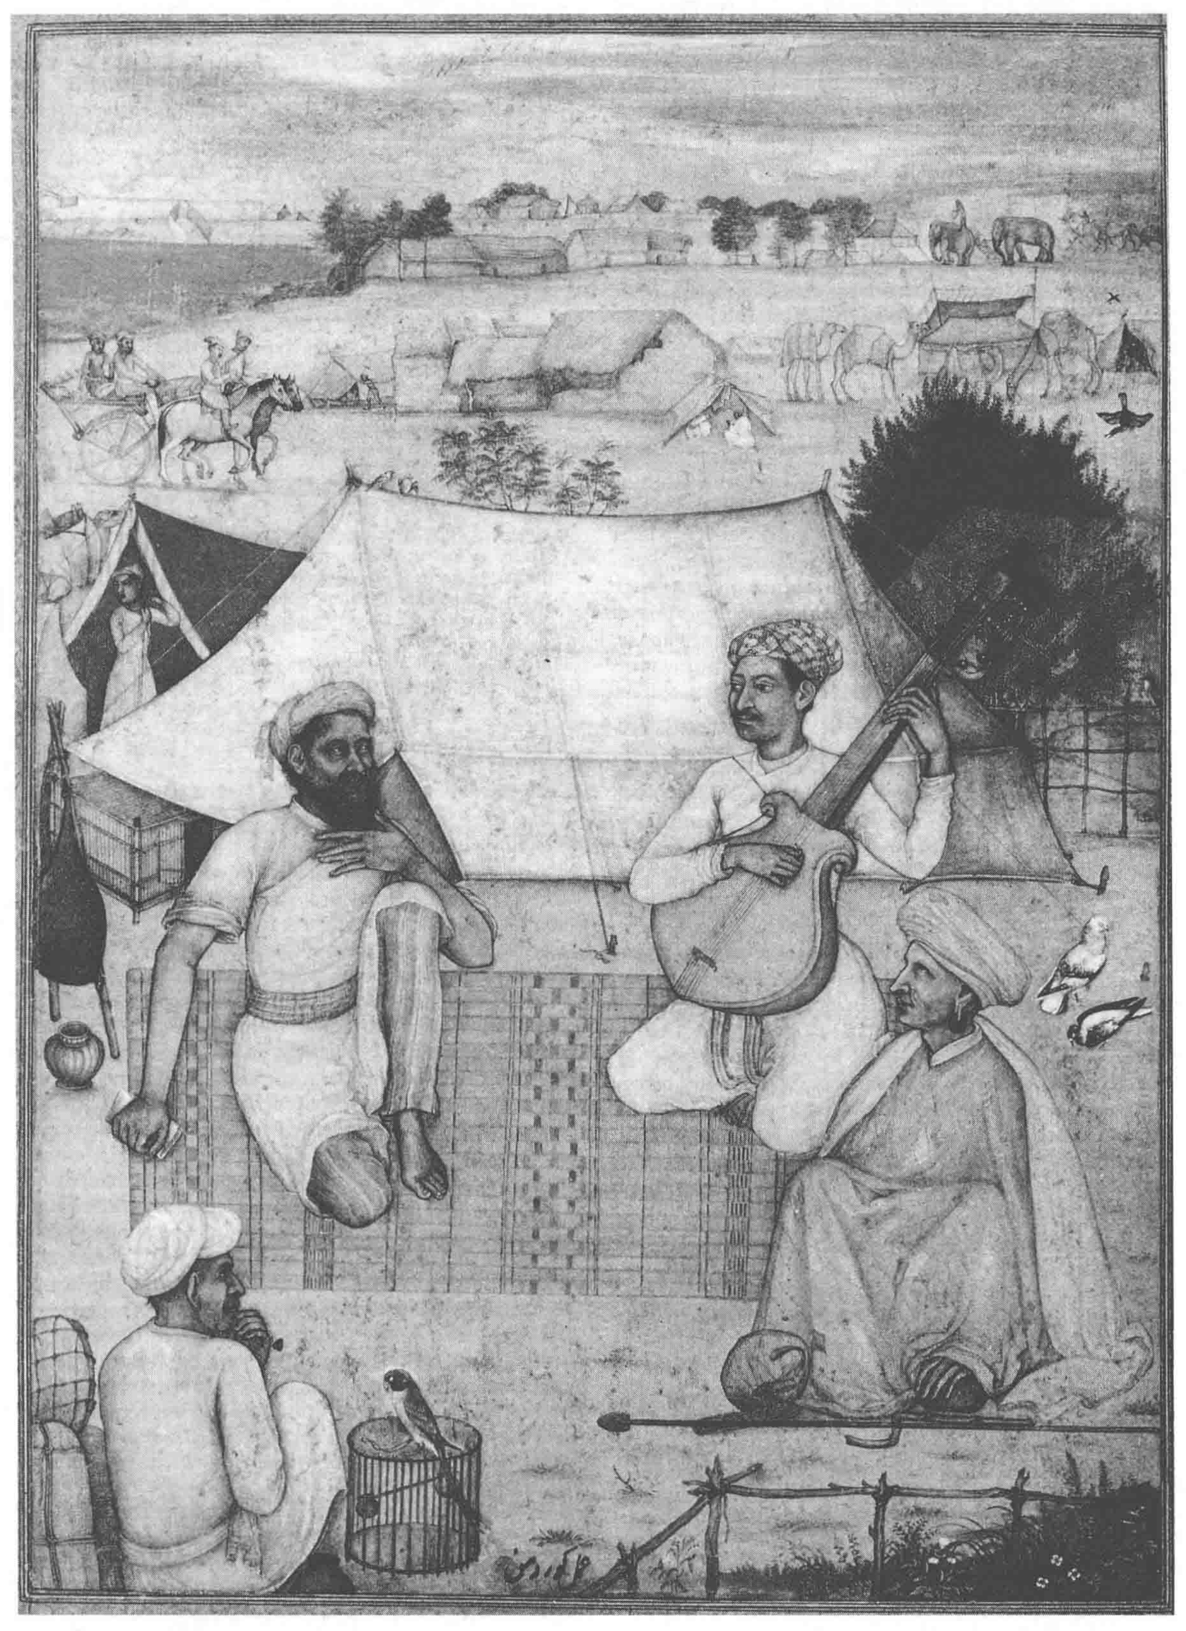
4. Long-necked, barbed lutes.

(i) Iran. The Persian or Iranian *rabāb*, a lute with a parchment belly, dates back at least to the 10th century (in ancient texts the term stood for a *kamanchē*, a fiddle with two horsehair strings). It disappeared from Iranian art music in favour of the *tār* but instruments of the same type survive further east, notably in South Asia, but also in the Pamir (*tanbūr* and *rubāb*), Turkestan and the Himalayan region (for example the *sgra-snyan* and *dotārā*).

Recently the Afghani/Baluchi *rabāb* has been deprived of its sympathetic strings, slightly modified and integrated into some of the classical Tehran orchestras, but it is never used as a solo instrument; its role seems to be decorative.

(ii) South Asia. The *rabāb* is mentioned in court records throughout the Delhi Sultanate (from the 13th century to the early 16th), and by the end of that period had become sufficiently naturalized for the early Mughal chronicler Abul Fazl to include it in his list of native instruments; he includes Brahman religious song-leaders and low-caste entertainers among its players. He also records its role in the *akhārā* (the aristocratic chamber music of the time) and terms it the 'Dekhani' (i.e. south-central Indian) *rabāb*. In Mughal times it was, with the *bīṇ*, one of the two main instruments of northern court *rāga* music, and remained so until the 19th century when it began to die out. It is now obsolete. The 'male' branch of the Seniya family were known as *rabābiyā* ('*rabāb* players') – as opposed to the 'female' line, the *bīṇkār* – and this *rabāb* was closely associated with them.

In Mughal painting two varieties are seen: one is similar to the medieval *rabāb* of Iran, with a rounded, skin-covered shell, somewhat elongated and surmounted by very marked barbs; a small, narrow bridge near the base of the shell; and a pegbox, straight and 'sawn-off', which continues the slightly tapering line of the neck (see e.g. A.H. Fox Strangways, *The Music of Hindostan*, Oxford, 1914/*R*1965, pl.1); in the other (fig.4), doubtless the 'south-central Indian' type of Abul Fazl, the barbs are much reduced, the shell is more ovoid, the bridge (the deep Indian type) is nearer the centre and the pegbox is a semicircular bulge at the back, with an upper, non-functional, bent-back scroll. This is probably a development of the late Sultanate Deccan Muslim states, and it survives today in bowed form as the Rajasthani *kamāicā* and its influence can be seen on the Karnatak *vīṇā*. In the 19th-century classical *rabāb* the straight-necked type is usual, with the barbed shell reduced to a vestigial figure of eight; in others the neck flares down to the upper part of the shell, with slight waisting. The shell (*khol*) and neck (*ḍāḍ* etc) are typically carved in one piece, the shell being covered with thin iguana- or goatskin (*khāl*), and a bilateral peg arrangement is characteristic. The strings are of gut and they usually number six, tuned, according to Tagore (*Yantra-koś*, 1875), *pa–ri–sa–pa–ga–sa*. They are played with 'very fixed' positional fingerings (Tagore).



The *rabāb* was plucked with a triangular wooden plectrum (*javā*), always in an outward direction, and the instrument was held vertically, resting on the left shoulder. It played mostly *ālāp* and *joṛ* of the *rāga* repertory, but also *jhārā* and *tārparan* with *pakhāvaj* (barrel drum) accompaniment.

(iii) Central Asia. The *rabāb* (*rubāb*, *robab*) is used among Tajik, Uzbek and Uighur groups. In the Pamir mountains of Tajikistan, its body and neck are carved from a single block of mulberry wood; the tapered neck, of moderate length, is hollow and constitutes an upper sound chamber covered by a broad, unfretted fingerboard and pierced by a number of small holes. Five gut strings are attached to a curved pegbox, and another to a peg in the side of the neck; they are plucked with a small thick wooden plectrum. This instrument is sometimes called the 'Pamir *robab*'. A similar instrument, known as the 'Dulan *robab*', having sympathetic strings with pegs along the neck, and a semi-circular, curved pegbox, is played by the Dulan people of Tajikistan (Slobin, 1976, p.240ff). The 'Kashgar *rubab*', found in Sinkiang (China) and among the Uighurs (China and Central Asia), is a long-necked barbed lute with a single, small bowl-shaped soundbox covered with a skin belly; curved barbs project laterally at the junction with the solid neck. Its strings, usually five, are attached to lateral tuning-pegs in the curved pegbox; there are two double courses and a single course, and sometimes sympathetic strings. It is played with a plectrum.

5. Double-chested lutes.

(i) Afghanistan. The Afghan *rubāb* (or *rabāb*) is a short-necked waisted lute (*see* Afghanistan, fig.3). The body and neck are carved from a single block of mulberry wood, often highly decorated with mother-of-pearl and horn inlay. The lower chamber has a goatskin belly and the upper a wooden lid which projects to become the fingerboard of the short, hollow neck. The skin belly and lower end of the fingerboard are pierced by a number of small soundholes. The curved pegbox is joined to the neck. The modern Afghan *rubāb* has three main strings of gut or nylon (formerly three double courses), usually tuned in 4ths; in addition there are two, three or four drone strings and up to 15 sympathetic strings attached to pegs in the side of the upper chamber and tuned to the scale of the mode played. These metal drone and sympathetic strings are attached proximally to two bone posts inserted in the bottom of the instrument while the first and second main strings are tied to a leather string holder fastened to the two bone posts, which covers the metal strings and protects the wrist from them. The third main string is tied direct to one of the two bone posts. The neck has four frets positioned to give a chromatic scale; the compass can be extended to a 12th or more by using the unfretted part of the fingerboard. The strings are plucked with a small wooden plectrum.

The *rubāb*, regarded by the people of Afghanistan as their national instrument, is used in art, popular and regional music, both as a solo instrument and as part of the small ensemble that accompanies vocal music. It is played by male musicians, from great interpreters to dedicated amateurs. The art of *rubāb* playing resides in

4. Rabāb (long-necked barbed lute) of the old Iranian and Indian type: detail from 'Music in Camp', miniature by Govardhan, 1620–25 (IRL-Dcb Royal Albums 7, 11)

the right hand and employs a variety of stroke patterns, some using the sympathetic strings in techniques reminiscent of the *jhala* of *sarod* or sitar. To facilitate such techniques an innovation was made in the 1940s or 50s, when the shortest sympathetic string was raised by a protuberance on the bridge so that it could be struck in isolation.

The instrument is made in many sizes, the smaller ones being used for Pashtun regional music and the larger for art music. A small but distinctive repertory of instrumental pieces for the *rubāb* was probably composed by musicians at the Afghan court in the late 19th and early 20th centuries. The Afghan type of *rubāb* is found also in Tajikistan (*rubob*), south-east Iran (Sistan and Baluchistan) and in South Asia.

(ii) South Asia. The Afghan type of instrument is found predominantly in the upper Indus area and in Kashmir (*rebāb*), where it is used in folk music, and in Pakistan (*rabāb*), where it is to some extent used in classical music. It was probably disseminated by the 18th-century Afghan rule in this area; however, in the north-western province of Gandhāra short lutes, barbed or double-chested, were depicted two millennia ago. Though it is usually described as short-necked, it should be noted that the fingerboard covers the upper resonator, so that its appearance at the front is similar to that of the long-necked *rabāb*. It was of secondary importance in Indian art music (except at Rampur, an Afghan court) and by the 19th century was already beginning to be called *sarod* or *sarodā*, even though it evolved into that instrument somewhat later. The *rabāb* of mid-19th-century North India (described for West India by Meadows Taylor (1864) as *sarodā* – both plucked and bowed – and for Bengal by Tagore (1875) as *sarod*) has the wooden fingerboard and gut strings (but not the gut frets) of the north-western instruments. The six-string tuning given by Tagore, with the first two pairs in double courses, is *má/mà–sà/sà–pa–pa*. These instruments, like the long-necked *rabāb*, are also played with a wooden *javā*, but with a downward and upward movement (notated *dā-rā* etc.) similar to that of the *sarod*.

The double-chested *rabāb*, with four to six main strings and often several sympathetic strings, is important in accompanying folksong and dance in the Pakistani North-West Frontier Province and in Baluchistan; in Kashmir, where it is heard with folkdances, it has four gut, three metal and 11 sympathetic strings.

Rabāba [rababah, rapapa]. Bowl lyre with five (occasionally six) strings, used in Eritrea (Ethiopia) and the Sudan, where the term is a generic one for the lyre. The instrument is also known in Zaïre and Uganda as *rababah* or *rapapa*, mostly with five strings, with or without bridge and with very small soundholes recalling those of the Ethiopian *krar*; some instruments have eight strings, no bridge and a single soundhole. The *rababa* is played by the Bari people of Zaïre and the same instrument is called *tum* by the Bari of the Sudan. At Omdurman (Sudan), the six-string *rabāba* lyre is central to what is called *ṭambūra* worship.

The *rabāba* has a hemispherical soundbox covered with cow-, antelope-, lamb- or (in Zaïre) lizard-hide; two arms extend from this and fit exactly on a cross-bar on to which the strings are wound, with or without strips of material. In the Zaïre models the soundbox may be oval or even rectangular. The tuning is anhemipentatonic.

The *rabāba* is used in songs in praise of the cattle among pastoral people such as the Beni Amer of Sudan or Eritrea; in this it is linked with the five-string *goala* lyre of the Hamar in south Ethiopia. It is also used in the secular repertory, for entertainment, serenades or in mockery, for example in war songs where its tuning is followed by collective shouts of combat.

In Sudan the instrument was identified at the beginning of the century among the Bija under the name *masonqo* or *basamkob*; it is now called *rabāba*, which is the Arabic term. The five ways of tuning the Bija *rabāba* reflect the ethnic division of this society whose castes are recognized by the instrument. The six-string *rabāba* is used with percussion in *zār* spirit ceremonies; mainly at Omdurman,

an elaborate symbolic ritual is enacted which is known as *ṭambūra* worship. There are also anthropomorphic considerations: the instrument is given a name, and its soundholes represent the eyes of a person which express themselves by means of strings. Although this is basically a feminine ritual, the *rabāba* is played by a male musician.

CHRISTIAN POCHÉ

Rabanus Maurus. *See* HRABANUS MAURUS.

Rabassa, Pedro [Pere] (bap. Barcelona, 21 Sept 1683; *d* Seville, 12 Dec 1767). Spanish composer and music theorist. He came from a family of musicians, and was educated at Barcelona Cathedral. At the turn of the 18th century he was a singer there and was taught by Francisco Valls. During this time the young Rabassa must have been influenced by the Austrian and Italian musicians employed at the court of Archduke Carlos III, which had temporarily settled in Barcelona during the War of the Spanish Succession (1701–14). On 10 March 1713 Rabassa was appointed *maestro de capilla* at Vich Cathedral, but on 24 May the following year he moved to Valencia Cathedral as *maestro*. On 9 June 1724 he finally became *maestro* at Seville Cathedral, where Philip V's court settled from 1729 to 1733. Rabassa remained there until his retirement in 1757, although he continued to compose music for the cathedral until his death.

Rabassa belongs to the first generation of Spanish composers to adopt elements of the Italian style in their music (e.g. the introduction of recitatives and arias in vernacular music). His numerous compositions are widely distributed among many sources. Like his teacher Valls, Rabassa made an outstanding contribution to the history of music theory with his manuscript treatise *Guía para los principiantes*.

MIGUEL-ÁNGEL MARÍN

Rabaud, Henri (*b* Paris, 10 Nov 1873; *d* Paris, 11 Sept 1949). French composer and conductor. He was born into a musical family: his grandfather Louis Dorus was a celebrated flautist, his great-aunt was the soprano Julie Dorus-Gras, who created several roles in the operas of Meyerbeer and Halévy, and his father Hippolyte Rabaud was a leading cellist. Rabaud showed prodigious talent and a conservative spirit: 'modernism is the enemy' was

his watchword. At the Paris Conservatoire (1893–4) he studied harmony with Taudon and composition with Massenet and Gédalge. Finding Massenet's teaching superficial, he gained more from his studies of the Viennese Classics. Although he claimed that the music of Wagner, Franck and Debussy left him indifferent, his music was categorized as displaying 'an evolved Wagnerism' while being 'indubitably French'. In 1894 his cantata *Daphne* won him the Prix de Rome, and his sojourn at the Villa Medici opened his mind to newer music; he came to admire Verdi, Mascagni and Puccini. His mystical oratorio *Job* (1900) enjoyed immense success. Among his operas *Mârouf, savetier du Caire* (1914) was particularly popular. Here, Rabaud welded together Wagnerian form and oriental pastiche. *L'appel de la mer* (1924), after *Riders to the Sea* by the Irish writer John Millington Synge, is a realistic tale set in Galway. During this period Rabaud was a frequent conductor at the Opéra-Comique and at the Opéra, directing the latter house from 1914 to 1918, in which year he was admitted to the Institut de France. He was also interested in film music. Rabaud succeeded Fauré as director of the Conservatoire in 1922, retiring in 1941.

WORKS

OPERAS

La fille de Roland (4, P. Ferrari, after H. de Bornier), Paris, OC (Favart), 16 March 1904

Rabé (Sp.). *See* REBEC.

Rabe, Christoph. *See* RAB, CHRISTOPH.

Rabe, Folke (Alvar Harald Reinhold) (*b* Stockholm, 28 Oct 1935). Swedish composer and trombonist. Active as a jazz trombonist from 1950, he studied at the Stockholm Musikhögskolan with Blomdahl, Wallner and Ligeti (1957–64), and remained there as an assistant teacher (1964–8). He spent some time in San Francisco in 1965, associating with Dewey, Riley, Subotnick and others. He became engaged in work for the Swedish National Concerts in 1968, and for the schools' concerts organization in 1972. He was their programme director from 1977 to 1980, at which time he was employed by Swedish Radio.

In 1963 Rabe co-founded the Kulturkvartetten (from 1983 the Nya Kulturkvartetten), a group of four trombonists who have appeared throughout Europe in performances exclusively of their own compositions, many of them theatrical. The piece *Bolos* (1962), composed in collaboration with Jan Bark, occupies a legendary position in the history of new Swedish music on account of its ingenious mixture of new performing techniques and funny theatrical effects. It was an international success and was followed by similar works: *Polonaise*, written for the Warsaw Autumn, *Pipelines*, *No Hambones on the Moon* and, with Nya Kulturkvartetten, *Narrskeppet* ('The Fool's Ship'). Rabe has also introduced new techniques as a composer of choral music, whether speech effects (in *Pièce*) or subtle and surprising timbres (in the often performed *Rondes* and *Joe's Harp*). One aim of his music, and of his teaching material *Ljudverkstad* ('Sound workshop'), has been to sharpen awareness of the most subtle variations of sound.

WORKS

(*selective list*)

Vocal: Notturno (E. Södergran), Mez, 3 ww, 1959; Pièce, speaking chorus, 1961, collab. L. O'Månsson; Rondes, mixed chorus, male chorus, 1964; Joe's Harp, chorus, 1970; 2 Stanzas (G. Sonnevi), SATB, 1980; To Love (e.e. cummings), SATB, 1984; Bland bergen bortom bergen (L. Hellsing), 3 vv, tambourine

ROLF HAGLUND

Rabe, Valentin. *See* RAB, VALENTIN.

Rabel (Sp.). *See* REBEC.

Rabelais, François (*b* nr Chinon, 1494; *d* nr Paris [?St Maur], 1553 or 1554). French novelist and physician. During the 1520s he was in turn a member of Franciscan and Benedictine orders in Poitou. He studied Greek with the encouragement of Budé and acquired a reputation as a scholarly humanist. Having abandoned monastic life, he graduated in medicine at Montpellier University in 1530, receiving the doctorate there in 1537. He had settled in Lyons by 1532 when he was appointed physician at the municipal hospital and edited medical studies by Hippocrates and Manardi. The humanist Cardinal Jean Du Bellay took Rabelais to Rome as his personal physician in 1534 and 1535–6, and between 1540 and 1543 Rabelais attended the cardinal's brother, Guillaume Du Bellay, governor of Piedmont.

Rabelais published *Pantagruel*, the first of his novels, in 1532 and the second, *Gargantua*, followed two years later in 1534. The third book of the saga was published in 1546 and part of the fourth two years later; like their predecessors these were censured by the Sorbonne, but the author avoided persecution by fleeing to Metz, rejoining Jean Du Bellay in Rome in 1549. Rabelais spent his last years near Paris, probably at the abbey of St Maur-les-Fossés, where he had held a canonry since 1536. The fourth book was completed by 1552, but the fifth book (1562–4) was probably expanded posthumously from a rough draft.

Rabelais' five novels abound in musical description and imagery used for rhetorical effect and witty characterization. Innumerable instruments are mentioned: the bagpipe, shawm, flute, organ and drum are used as physical and often erotic symbols; the strings (lute, harp, spinet, viol) characterize nobility, while trumpets, fifes and drums relate to military and important events. The fifth book includes a list of incipits from 175 dance-songs, 159 of them in the collection of 184 entitled *S'ensuyvent plusieurs basses dances tant communes que incommunes* published in Lyons in the 1530s. Vocal music also figures prominently, with refrains and quotations from noëls and popular chansons used in contemporary theatre, made familiar through polyphonic versions published by Petrucci, Antico, Attaingnant and Moderne.

In the 'Nouveau prologue' to the fourth book Rabelais listed 58 of the most distinguished composers of his time. These he divided into two generations, the first of which included Ockeghem, Obrecht, Josquin, Agricola, Brumel, Mouton, Compère, Févin, Richafort, Conseil, Festa and Berchem, and the second of which included Willaert, Gombert, Janequin, Arcadelt, Sermisy, Certon, Manchicourt, Villiers, Sandrin, Sohier, Hesdin, Morales, Passereau, Jacotin, Verdelot and Carpentras. The first of these groups sings 'melodiously' a lascivious *épigramme* by Mellin de Saint-Gelais, 'Grand Tibault se voulant coucher', which was already known through a four-voice setting by Janequin published in 1543. The younger group sings 'daintily' a much shorter but equally ribald *épigramme*, 'S'il est ainsi que coignée sans manche', of which a four-voice setting by Vassal appeared in the same 1543 volume. It is clear that the author was familiar with other chansons by Janequin, since he cited or punned from several, including *La Guerre*, as well as making similar references to songs by Josquin, Compère and Le Heurteur.

Rabelais' musical knowledge is clear from his description of Gargantua's musical education; his theoretical knowledge is also demonstrated in his many puns on the gamut as well as in his descriptions of the 'Chessboard Ballet' and the 'Minim Friars' (book 5, chapters 24–7). However, whereas Carpenter (1954) claimed that the ubiquity of musical reference and the particular satirical references to plainchant and polyphony were a reaction to Rabelais' unpleasant experiences as a choirboy and monk, McMasters interpreted his imagery as the embodiment of the carnivalesque and the quest for a 'humanist utopia'.

Rabin, Michael (*b* New York, 2 May 1936; *d* New York, 19 Jan 1972). American violinist. After early lessons with his mother, a pianist, and his father, a violinist with the New York PO, he studied solely with Ivan Galamian. In 1950 he made his début, playing Wieniawski's First Violin Concerto in Cuba with the Havana PO under Rodziński, and his New York recital début at Carnegie Hall. When he was 15 he appeared with the New York PO under Mitropoulos at Carnegie Hall, playing Paganini's First Violin Concerto. From the beginning of his career his musical gifts were evident; he combined technical mastery with a maturity of interpretation that belied his years. Though he gave the premières of the violin concertos of Mohaupt (1954) and Creston (1960), he is best remembered for his interpretations of the Romantic repertory. He performed with major orchestras in tours of the USA, Canada, South America, Europe, Australia and Israel. Rabin's recordings, which include works by Bach, Paganini, Wieniawski, Glazunov and Bruch, testify to his exceptional talent. After his death his 1736 Guarneri was renamed 'the Rabin'.

JUDITH ROSEN

Rabinovich, Aleksandr (*b* Baku, 30 March 1945). Russian composer and pianist. He studied at the Moscow Conservatory from 1963 to 1967 under Kabalevsky and Aleksandr Pirumov (composition) and N. Fischman (piano). He gave the first performances in Russia of works by Messiaen, Stockhausen and Ives, while his own unorthodox music remained unperformed and unpublished. In 1974 he emigrated to France and from 1980 lived in Geneva and Brussels. Although he is an outstanding pianist who often performs duos with Martha Argerich, his work as a composer takes preference.

Initially influenced by Shostakovich and later the Western avant garde, Rabinovich's style and method have

become highly individual. His universalistic approach reflects a denial of historical stylistic progression; his music reveals a non-linear, cyclic concept of time. This explains the non-traditional logic of his compositions in which the frequent stopping of inner time concentrates the listener on one particular repeated pattern, with its almost hermetic but expressive implicit existence. His style could be defined as a kind of repetitive minimalism with provocative mingling of Romantic vocabulary (often using semantically loaded phrases recalling anything from Schubert to pop music) with esoteric organization based on symbolic numeric proportions derived from kabbalistic and gnostic traditions. An architectural mosaic is created with rhythmically vital repetitions of stereotypical incantatory patterns (mainly of a late Romantic provenance) which become almost ritualistic and metamorphose the listener's perception, with any banality being superseded by a more primal message. The use of Romantic cliché emphasizes a post-modern, non-Romantic stylistic tolerance; he fuses the Renaissance ideals of formal proportions with numeric methods in his attempt to create a *Harmonia mundi* despite the essential imperfection of his subject.

YURY GABAY

Rabl, Walter (*b* Vienna, 30 Nov 1873; *d* St Kanzian am Klopeiner See, Kärnten, 11 July 1940). Austrian composer and conductor. A gifted pianist from early childhood, Rabl studied theory and composition in Salzburg with the Mozarteum director J.F. Hummel, and graduated from the Staatsgymnasium in 1892. He then studied theory in Vienna with Karl Nawrátil and completed a doctorate at the German University of Prague under the guidance of Guido Adler. Rabl also worked on the Denkmäler der Tonkunst in Österreich series, of which Adler was the general editor.

In 1896 Rabl was awarded first prize in a competition of the Wiener Tonkünstlerverein for his Quartet op.1 for violin, clarinet, cello and piano, which is notable for its unusual scoring and skilful melodic writing. Brahms, who had subsidized the prize, paid for a public performance of the quartet and persuaded Simrock to publish Rabl's works. His other works include chamber music, lieder and a symphony, which are harmonically conservative and in the tradition of Brahms. The influence of Wagner is apparent in Rabl's opera *Liane*, not only in its form and structure but also in its use of leitmotifs. The opera, which was critically acclaimed following its première in Strasbourg in 1903, was his last published work.

Between 1903 and 1924 Rabl held a series of conducting posts in Düsseldorf, Essen, Dortmund, Breslau and Magdeburg, during which time he championed the works of such progressive composers as Schreker, Korngold and Richard Strauss. In 1905 he married Hermine von Kriesten, a soprano who sang Elektra at the Vienna Hofoper in 1910–11. Rabl was also a frequent guest conductor at the Teatro Real in Madrid (1907–24), where he conducted Wagner's *Ring* as well as Strauss's *Salome*, with his wife in the title role. After his retirement he remained in Magdeburg, where he taught and also acted as accompanist to singers such as Lauritz Melchior and Heinrich Schlusnus.

JOHN F. STRAUSS/VIRGINIA F. STRAUSS

Racek, Fritz (*b* Znaim [now Znojmo, Czech Republic], 15 Feb 1911; *d* Vienna, 14 Aug 1975). Austrian musicologist and composer. He studied conducting at the Vienna Music Academy (1929–35) and musicology at Vienna University with Orel, Lach and Haas (1931–6), where he took the doctorate in 1939 with a thesis on the modal notation of the Notre Dame School (*Die Clauseln des Wolfenbüttler Codex I*). After working as a répétiteur and organist, he became director of the music department of the Vienna City Library in 1945. He also ran the music committee of the Wiener Festwochen (1951–4) and was the head of the Österreichische Gesellschaft für Zeitgenössische Musik (1952–6).

Between 1949 and 1964 Racek wrote hundreds of programme notes for the concerts of the Gesellschaft der Musikfreunde. He also curated numerous exhibitions on Vienna's musicians (Johann Strauss, 1949; Schubert and Wolf, 1953; Berg, 1960; Beethoven, 1970), and musical life. In 1967 Racek became general editor of the complete works of Johann Strauss. He was personally responsible for five volumes including those containing the operettas *Eine Nacht in Venedig* and *Die Fledermaus*.

Racek's output as a composer included theatre music, songs to his own texts, symphonic and chamber works, and choral music. He adapted Hauer's opera *Die schwarze Spinne* and Schubert's *Sakuntala* for performance in Wiener Festwochen (1966 and 1971 respectively).

EDITIONS

1970); i/20: *Instrumentalwerke opp.317–329* (Vienna, 1971); ii/3: *Die Fledermaus* (Vienna, 1974)

RUDOLF KLEIN

Racek, Jan (*b* Bučovice, Moravia, 1 June 1905; *d* Brno, 5 Dec 1979). Czech musicologist. He studied under Helfert at Brno University (1924–8) and took the doctorate in 1929 with a dissertation on the concept of the nation in Smetana's music. He was director of the music archives of the Moravian Regional Museum (1930–48) and assistant to Helfert at Brno University, where he was appointed lecturer in 1939; in 1948 he became professor and director of the Brno department of ethnography and folk music of the Czech Academy of Sciences; he retired in 1970. Though he obtained the DSc degree in 1957 with a work on Beethoven, his chief interests were stylistic and historical questions of the Baroque era, Czech music of the 17th and 18th centuries, the music of Smetana and Janáček, and Moravian music. He was general editor of a number of publications initiated by Helfert, including the journal *Musikologie* and the series Musica Antiqua Bohemica.

JIŘÍ VYSLOUŽIL

Race record. A term applied between 1921 and 1942 to phonograph recordings made in the USA especially for black listeners. It was coined by Ralph Peer of Okeh, the first company to have a 'Race Series'; he adapted the generic term 'the Race', which was employed at that time in the black press. Okeh commenced its 8000 series in 1921; other race series followed from Paramount (1922), Columbia (1923), Vocalion (1926) and Victor (1927). Many smaller companies had race series, and by 1927 some 500 race records were being issued each year. Sales declined with the Depression and many concerns closed. But in 1933 Victor's Bluebird subsidiary commenced issuing race records to compete with the issues of the American Record Corporation labels, and the English Decca company started its successful American Decca 7000 race series in 1934.

Although instrumental jazz recordings were, and are, often loosely categorized in the race series proper as race records, vocal recordings predominated. Between 1921 and 1925 these were mainly by professional 'classic' blues singers and spiritual and gospel quartets. Self-accompanied blues singers became popular in 1926, and recordings by preachers sold well, but were less popular after 1930. By that time performances by 'classic' blues singers and vocal duets were also losing their popularity. After World War II the term 'race records' was dropped and RHYTHM-AND-BLUES used in its stead, until the latter assumed a more specific stylistic meaning. To collectors, 'race record' is applied generally to 78 r.p.m. discs intended for the African-American market; with their increasing rarity many such records are highly prized.

PAUL OLIVER

Rachmaninoff [Rakhmaninov], **Serge** [Sergey] **(Vasil'yevich)** (*b* Oneg, 20 March/1 April 1873; *d* Beverly Hills, CA, 28 March 1943). Russian composer, pianist and conductor. He was one of the finest pianists of his day and, as a composer, the last great representative of Russian late Romanticism. The influences of Tchaikovsky, Rimsky-Korsakov and other Russian composers soon gave way to a thoroughly personal idiom, with a pronounced lyrical quality, expressive breadth, structural ingenuity and a palette of rich, distinctive orchestral colours.

1. 1873–92. 2. 1892–1901. 3. 1901–17. 4. 1918–43. 5. Rachmaninoff as a performer. 6. Works.

1. 1873–92. There remains some debate about the exact place of Rachmaninoff's birth. A case has been made for

Semyonovo (Bryantseva, 1969), but Rachmaninoff himself always thought he was born at Oneg in the Novgorod region, and other evidence indicates that that was probably the case. According to the Old Style calendar, he was born on 20 March 1873, yielding 1 April as the New Style date; but after emigrating from Russia in 1917, Rachmaninoff habitually celebrated his birthday using the 20th-century conversion principle of adding 13 days to the Old Style date. The plaque on his tomb thus bears the birthdate 2 April 1873.

Rachmaninoff's improvident father squandered the family fortune, and the family was rapidly reduced from having several homes to occupying the one estate at Oneg. It was here that Rachmaninoff had his earliest piano lessons, first from his mother, then from Anna Ornatskaya, a graduate of the St Petersburg Conservatory. In 1882 even Oneg had to be sold to settle debts, and the family moved to St Petersburg, where Rachmaninoff attended the conservatory, receiving a general education and studying the piano with Vladimir Demyansky and harmony with Aleksandr Rubets. But soon the family was again in turmoil: during an epidemic of diphtheria Rachmaninoff's sister Sofiya died, and, to make matters worse, relations between his parents became so strained that they decided to separate. This emotional upheaval had a decisive effect on Rachmaninoff's future career. With her increased domestic responsibilities, his mother was unable adequately to supervise his homework, and as a result he failed all his general subjects at the end-of-term examinations in 1885. The conservatory hinted that his scholarship might be withdrawn and so, on the recommendation of his cousin Aleksandr Ziloti, Rachmaninoff was sent to the Moscow Conservatory to study with the disciplinarian Nikolay Zverev. Living at Zverev's flat together with two other young pupils, Maksimov and Presman, he was subjected to rigorous tuition, beginning practice at 6 a.m., acquiring a basic knowledge of music from four-hand arrangements of symphonies, and attending concerts in the city. It was also at Zverev's, during his Sunday afternoon gatherings, that Rachmaninoff first encountered many of the prominent musicians of the day: namely Anton Rubinstein, Taneyev, Arensky, Safonov and, the most influential figure of his formative years, Tchaikovsky.

In spring 1888 Rachmaninoff transferred to the senior department of the conservatory to study the piano with Ziloti, while still living with Zverev; in the autumn he began to study counterpoint with Taneyev and harmony with Arensky. Zverev, who was concerned solely with the development of Rachmaninoff's piano technique, had never encouraged him to compose, though it was at Zverev's that Rachmaninoff wrote his earliest works, a Mendelssohnian orchestral scherzo (1888), some piano pieces (1887–8) and sketches for an opera *Esmeralda* (1888). But his creative instincts finally led to a breach with Zverev in 1889. In the single workroom at the flat Rachmaninoff found it impossible to concentrate on composition while the others were practising; but Zverev met his request for more privacy with peremptory dismissal from the household, refusing even to speak to him for three years.

Rejecting his mother's idea that he should return to St Petersburg to study with Rimsky-Korsakov, Rachmaninoff remained in Moscow, living for a while with a conservatory colleague, Mikhail Slonov, then with his relatives, the Satins. Here he sketched some ideas for a piano concerto (which came to nothing) and completed two movements of a string quartet (dedicated to Ziloti); and in spring 1890 he composed the six-part motet *Deus meus* and his earliest songs. During the summer he stayed at Ivanovka, the Satins's country estate, where he met the three Skalon sisters, distant cousins by marriage, conceiving a calf-love for the youngest, Vera, and dedicating to her his new cello *Lied*. It was also for the Skalon sisters that he composed a six-hand piano Waltz (1890) and Romance (1891). This first visit to Ivanovka, deep in the Russian countryside in the Tambov region about 600 kilometres to the south east of Moscow, had a profound and lasting significance over and above any transitory amatory dalliance, for it was here, in years to come, where Rachmaninoff would do almost all his composition. The spacious, isolated estate offered him the peace and quiet he needed to collect his creative thoughts. His love of nature, which had been engendered during his Novgorod childhood, grew even further at Ivanovka, and roughly 85% of his music was conceived and developed there. Although his correspondence rarely reveals any information about progress on his works, many of his autograph manuscripts bear an Ivanovka inscription; and, with a knowledge of the dates during which he was at Ivanovka, it is possible to infer that other works had their origins there. Immediately after the 1890 Ivanovka summer, Rachmaninoff returned to the Satins's home in Moscow. He taught for a while in a class for choir trainers, and sketched at least two movements of an orchestral piece, *Manfred*, possibly inspired by the Tchaikovsky symphony, which he had transcribed for piano duet in 1886.

In spring 1891 Ziloti resigned from the conservatory because of constant disagreements with the director, Safonov. Rather than transfer to another teacher for the remaining year of his course, Rachmaninoff was allowed to take his piano finals a year early, and he graduated with honours on 24 May/5 June. During the summer, again at Ivanovka, he completed his First Piano Concerto (begun in 1890), and back in Moscow in December he set to work on his first symphonic poem, *Knyaz' Rostislav* ('Prince Rostislav'), which he dedicated to Arensky. Early in 1892 he gave the première of his first *Trio élégiaque* with Anatoly Brandukov and David Krein, and also played the first movement of his concerto at a conservatory concert on 17/29 March. Shortly afterwards he began to prepare for his finals in composition, which, like his piano examinations, he was taking a year early. The main exercise was to be a one-act opera *Aleko*, based on Pushkin's poem *Tsïganï* ('The Gypsies'). For his work Rachmaninoff was awarded the highest possible mark, and he graduated from the conservatory with the Great Gold Medal, previously awarded only to Koreshchenko and Taneyev.

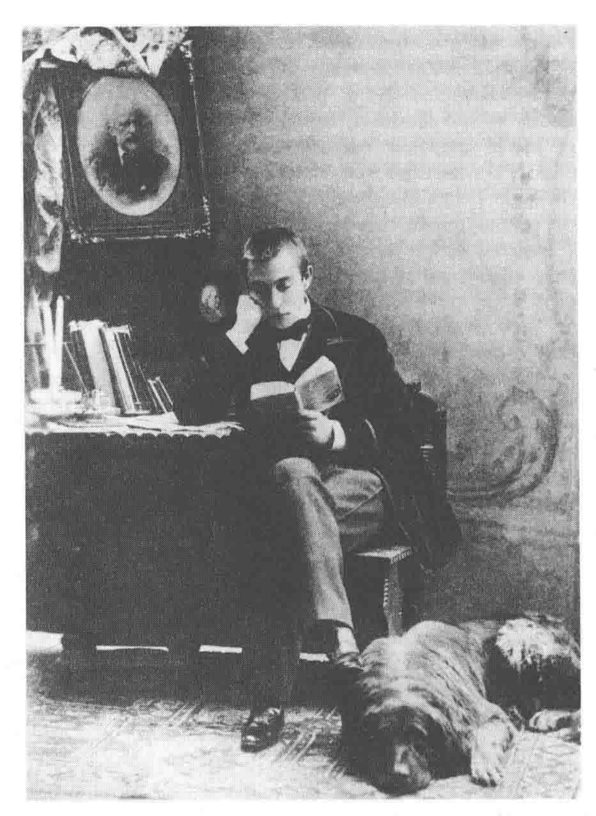
2. 1892–1901. After his graduation Rachmaninoff signed a publishing contract with Gutheil, and in the autumn composed what was quickly to become his best-known composition, the piano prelude in C♯ minor, a work to which Rachmaninoff owed much of his early popularity but which became for him a tiresome encore at most of his concerts. In view of its phenomenal success, he later had cause to regret that Gutheil had not secured international copyright on it, Russia not then being a signatory to the 1886 Berne Convention. He was soon to take the precaution of having his work registered both in

Russia and in Germany. In Spring 1893 *Aleko* was given its première at the Bol'shoy. Tchaikovsky, who attended the rehearsals and the performance, was enthusiastic about it, and Kashkin, in his perceptive, not uncritical review in the *Moskovskiye vedomosti* (29 April/11 May 1893), commented that 'of course there are faults, but they are far outweighed by merits, which lead one to expect much from this young composer in the future'.

Spurred by his success, Rachmaninoff composed with ease during the summer and autumn: he completed his op.4 and op.8 songs, the two-piano *Fantaisie-tableaux* op.5, a sacred choral piece *V molitvakh neusïpayushchuyu bogoroditsu* ('In our Prayers, Ever-Vigilant Mother of God'), the two op.6 violin pieces and the orchestral fantasy *Utyos* ('The Rock'), which bears a quotation from Lermontov's poem but was in fact inspired by Chekhov's short story *Na puti* ('On the Road'). Tchaikovsky wanted to conduct the piece during the following season; but in November he died, and Rachmaninoff immediately devoted himself to writing a second *Trio élégiaque* to his memory, clearly revealing the sincerity of his grief in the music's overwhelming aura of gloom.

In January 1895 he began work on his first substantial piece, the Symphony no.1 in D minor (which has no connection with a D minor symphonic movement written in 1891). The symphony occupied him until September, and during 1896 Belyayev agreed to include it in one of his Russian Symphony Concerts. The performance, conducted by Glazunov, was on 15/27 March 1897, and was a disaster: Cui likened the work to 'a programme symphony on the Seven Plagues of Egypt', though other critics acknowledged that its poor reception was due as much to the performance as to the piece itself. Rachmaninoff commented (in a letter of 6/18 May): 'I am amazed how such a highly talented man as Glazunov can conduct so badly. I am not speaking now of his conducting technique (one can't ask that of him) but about his musicianship. He feels nothing when he conducts. It's as if he understands nothing'. Years later Rachmaninoff's wife remarked that Glazunov was drunk at the time. While this assertion cannot be verified, it is not entirely without plausibility in a man who, as we know from his pupil Shostakovich, secreted a bottle of alcohol behind his desk and sucked it up through a tube during lessons at the St Petersburg Conservatory. Whatever the cause of the failure, it plunged Rachmaninoff into the depths of despondency, and was followed by a three-year period completely devoid of any significant composition: sketches for another symphony were abandoned; ideas for an opera, *Francesca da Rimini*, lay fallow for several years. But just then, thanks to the wealthy industrialist Savva Mamontov, Rachmaninoff was launched on his third career, as conductor, when he was engaged by the Moscow Private Russian Opera for the 1897–8 season. Here he acquired a sound knowledge of Russian and Western opera, conducting in quick succession Glinka's *A Life for the Tsar*, Saint-Saëns's *Samson et Dalila*, Dargomïzhsky's *Rusalka*, Bizet's *Carmen*, Gluck's *Orfeo ed Euridice*, Serov's *Rogneda* and *The Power of the Fiend*, Verstovksy's *Askold's Grave*, Rimsky-Korsakov's *May Night* and Tchaikovsky's *The Queen of Spades*. The conductor Nikolay Mal'ko, hearing Rachmaninoff conduct *The Queen of Spades* at the Mariinsky Theatre in St Petersburg in 1912, described it as 'astonishingly fresh. All kinds of clichés were erased, and the opera came across to the listener in a new, lively way, as if it had just been "washed".' At Mamontov's theatre Rachmaninoff also formed a close friendship with Chaliapin (who sang with the company), and during a summer holiday in 1898 they made intensive studies together of the operas of Rimsky-Korsakov and Musorgsky, particularly *Boris Godunov*.

Rachmaninoff made his London début at Queen's Hall on 19 April 1899. This was his first significant appearance outside Russia. The Philharmonic Society had invited him in the hope that he would play his Second Piano Concerto (on which he had not yet even started work). Rachmaninoff refused to play his First Concerto, dismissing it as a student piece, and instead agreed to conduct his orchestral fantasy *The Rock* and to play the Prelude in C♯ minor and the *Elégie* from his op.3 set of piano pieces. The visit attracted wide coverage in the London press. Considering that critical opinion in general tended to regard Russian music with suspicion – deeming it a fad – Rachmaninoff's reception was fairly warm. His conducting technique was praised: as *The Times* wrote, 'his command was supreme; his method, quietness idealized'. His piano playing, while reckoned to be highly cultivated, was not yet seen to be on par with that of Mr Leonard Borwick, the British pianist who is said to have been a match for even the most illustrious foreign names. *The Musical Times* lighted on the orchestral effects of *The Rock*, describing them as 'amazingly clever, some quite new, others charming or startling, occasionally impressive as mere combinations of timbre, and the whole dazzling like the flashes from a brilliant gem'. Others ridiculed the poetic inspiration of



1. Serge Rachmaninoff (second left) with his teacher Zverev and fellow pupils Presman and Maksimov

The Rock, with *The Pall Mall Gazette* offering a quasi-scientific analysis as to whether a cloud might evaporate yet still leave moisture (the teardrops of the poem) on the rock's surface. This generated a lengthy, often indignant correspondence. Amid it all, Rachmaninoff himself had largely been forgotten, but, stripping away all the nonsense and the pro-British rhetoric, Rachmaninoff could consider himself to have been favourably received. Returning to Russia, he attended the St Petersburg première of *Aleko*, with Chaliapin in the title role. Despite these successes, actual composition remained a problem. He was not really in the right frame of mind to complete anything of consequence. Friends wanted him to recover the drive that had fired him to write the First Symphony. One of them arranged for him to meet Lev Tolstoy, who, as Rachmaninoff recalled, stroked his knees and told him to work; after he had played one of his own pieces to Tolstoy, the only comment he received was 'tell me, does anybody need music like that?' (quoted in Swan 1944). More helpfully, Rachmaninoff went to see Dr Nikolay Dahl, who had, as it happens, been specializing in hypnosis techniques. Based on this fact, a great deal of wild speculation has been disseminated about the nature of Dahl's meetings with Rachmaninoff. Rachmaninoff, far from being clinically depressed, was merely (and understandably) low after the First Symphony débâcle, and it is most likely that Dahl, as a gifted amateur musician and a man of culture, simply conversed with him on subjects of music and art and, together with the friends Rachmaninoff had mixed with on holiday and in Moscow, gradually rebuilt his confidence. At any rate, as Sofiya Satina has recorded in her reminiscences, Rachmaninoff was restored to 'cheerfulness of spirit, energy, a desire to work, and confidence in his abilities'. In the summer, staying in Italy with Chaliapin, Rachmaninoff composed the bulk of the love duet for *Francesca da Rimini*. Even more important, he began to compose his most enduringly popular work, the Second Piano Concerto. Ideas were put in order on his return to Russia in August, and he performed the second and third movements on 2/15 December 1900. Success was such that he was encouraged to add the first movement, and he gave the first performance of the complete concerto on 27 October/9 November 1901.

3. 1901–17. Finally reassured of his powers to compose, Rachmaninoff completed his Cello Sonata in December, giving also the first performance (with Ziloti) of a recently composed Second Suite for two pianos. Early the following year he worked at his first important choral piece, *Vesna* ('Spring'), a cantata based on Nekrasov's poem *Zelyonïy shum* ('The Verdant Noise'), and shortly after completing it announced his engagement to his cousin Natal'ya Satina. The difficulties of such a marriage were considerable: Rachmaninoff was not a devout, nor even practising member of the Russian Orthodox Church, and in any case the church forbids first cousins to marry. But one of Rachmaninoff's aunts had connections at the Cathedral of the Archangel Michael in the Kremlin; she made the necessary arrangements, and the wedding took place at an army chapel on the outskirts of Moscow on 29 April/12 May. As a wedding present, Rachmaninoff and Natal'ya were given the smaller of the two houses on the Ivanovka estate.

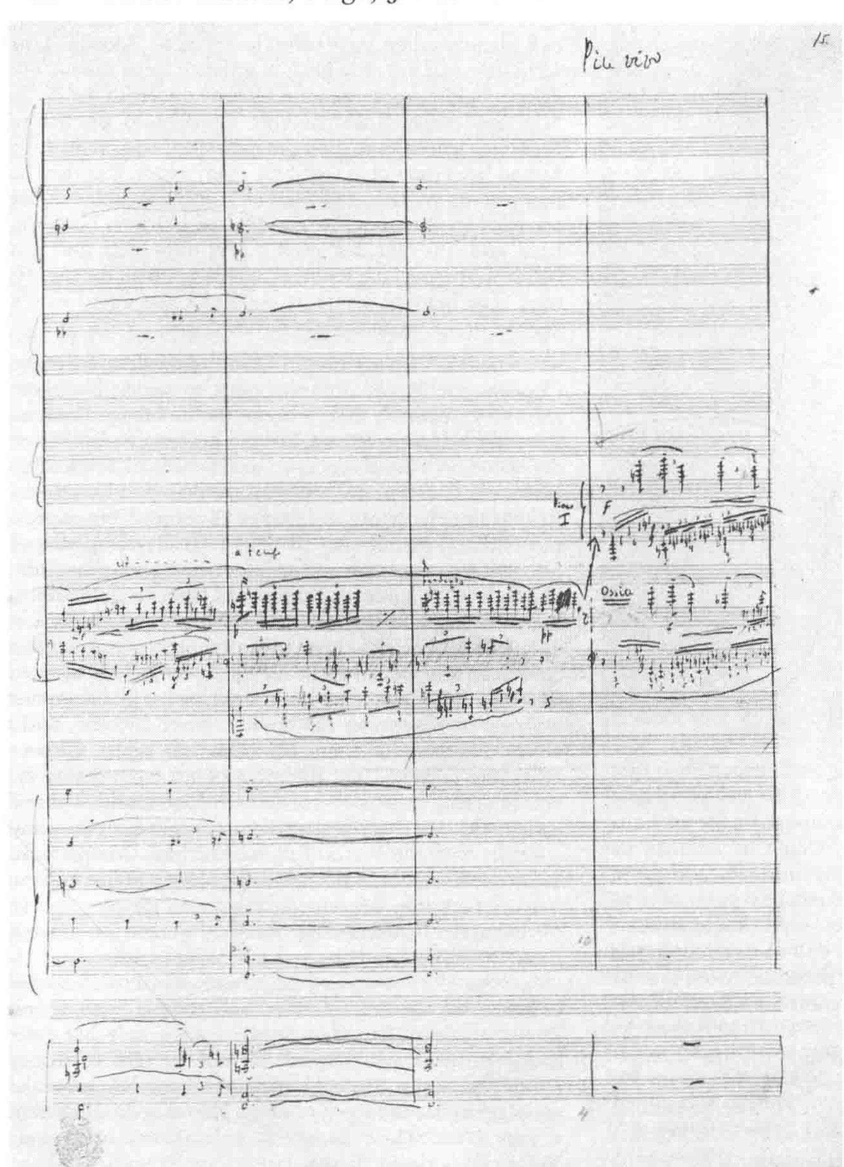
After a long honeymoon in western Europe, the Rachmaninoffs returned to Moscow, where in May 1903

2. *Serge Rachmaninoff, 1900*

Natal'ya gave birth to their first daughter, Irina. During a summer holiday at Ivanovka, Rachmaninoff turned once more to composition, working on his opera *Skupoy rïtsar'* ('The Miserly Knight'); the piano score was ready by the following spring, when he again took up the threads of his other long-contemplated opera *Francesca da Rimini*. At the same time he agreed to conduct at the Bol'shoy for two seasons (beginning in September 1904), and he spent the summer in frantic efforts to complete *Francesca* in the hope that both it and *The Miserly Knight* could be staged in December. Largely because of difficulties with the librettist, Modest Tchaikovsky, he managed to complete only the piano score of *Francesca* by August, when he had to devote all his time to learning the operas he was to conduct at the Bol'shoy. His experience with Mamontov's company stood him in good stead for his début in Dargomïzhsky's *Rusalka*; again Kashkin was complimentary, remarking in *Russkiy listok* (5/18 September 1904) that 'the first appearance this season of the young Kapellmeister justified the hopes placed upon him ... even in the first bars of the overture the audience began to feel a freshness and cheerfulness, clearly revealing the rich and lively temperament of the conductor'.

At Ivanovka in the summer Rachmaninoff worked on the orchestration of *Francesca* and *The Miserly Knight*. Both operas were complete by August, when he again had to prepare for the Bol'shoy; this time his programme included the Moscow première of Rimsky-Korsakov's *Pan Voyevoda*, an interpretation much admired by the composer, who attended the rehearsals and the performance. Rachmaninoff also conducted the premières of *The Miserly Knight* and *Francesca* in January 1906, but in February, because of the increasing political unrest in

Russia, he resigned from the Bol′shoy, leaving almost at once for Italy. Staying near Pisa, he contemplated, but abandoned, another opera, *Salammbô*. He then had to return to Russia with his daughter, who from birth had rarely enjoyed good health and had again become ill. She recovered, but the atmosphere in Russia was still not conducive to work, and in the autumn the family decided to leave Russia for a while and take a house in Dresden.



Living there in seclusion for a few months in each of the next few years, Rachmaninoff completed his Second Symphony (1906–7), his First Piano Sonata (1907), his symphonic poem *Ostrov myortvïkh* ('The Isle of the Dead', 1909) and part of an opera *Monna Vanna*. This last was a project Rachmaninoff particularly cherished: the completed piano score of Act 1 (dated Dresden, 15 August 1907) and sketches for Act 2 were among the few items he took with him when he emigrated from Russia in 1917. He had, however, encountered an insurmountable obstacle, in that the play's author, Maeterlinck, had already assigned the exclusive opera rights to the French composer Henry Février, whose version was performed at the Paris Opéra in 1909. The torso of Rachmaninoff's opera, therefore, remained as it was, though it has since been orchestrated (and recorded) by the conductor Igor Buketoff. In May 1907 Rachmaninoff took part in Diaghilev's Saison Russe in Paris, then returned to Ivanovka to join Natal′ya, who in July gave birth to their second daughter, Tat′yana.

In November 1909 Rachmaninoff began his first American tour, the programmes for which included a new work, the Third Piano Concerto, composed in the previous summer. At the end of the tour, which he loathed, he declined offers of further American contracts, and again he spent the summer at Ivanovka, recently made over to his wife and brother-in-law, but with Rachmaninoff himself effectively in charge ot its day-to-day running. It was here, during the next two or three summers, that he found the necessary relaxation to compose several important works: the 13 Preludes op.32 (1910), a setting of the *Liturgy of St John Chrysostom* (1910), the *Etudes-tableaux* op.33 (1911), the 14 Songs op.34 (1910–12) and the Second Piano Sonata (1913). The remaining months of the year were generally taken up with a taxing schedule of performing engagements; indeed, during the 1912–13 season he undertook so many concerts and become so tired that he cancelled his final appearance and took the family off to Switzerland. From there they went to Rome, where Rachmaninoff began his choral symphony *Kolokola* ('The Bells'). Work on the piece was interrupted when Tat′yana and Irina contracted typhoid; but, after they had recovered sufficiently in a Berlin hospital, the family returned to Ivanovka, where Rachmaninoff completed the score, conducting the first performance in December.

During autumn 1914 Rachmaninoff toured southern Russia with Koussevitzky, giving concerts for the war effort. Although he composed little after the outbreak of World War I, he did manage to write his finest unaccompanied choral work, the *Vsenoshchnoye bdeniye* ('All-Night Vigil'), in January and February 1915. By the end of 1916 Russia's internal affairs were in chaos: the country was gripped by strikes, and successive governments seemed able only to augment the popular discontent with the tsar. Rachmaninoff made one final visit to Ivanovka in April 1917, only to find that looting and vandalism had already taken their toll. He wrote to Ziloti in June 1917 asking if he could get him a visa to leave Russia. But Ziloti could do nothing, and after a concert in Yal′ta on 5/18 September Rachmaninoff returned to his flat in Moscow, where he revised the First Concerto, something he had been intending to do for many years. Just then he received an invitation to play in Stockholm and at once travelled to Petrograd to arrange the journey. Natal′ya, Irina and Tat′yana followed a few days later and just before Christmas the whole family left Russia for the last time. The beloved estate at Ivanovka was razed to the ground in the revolutionary ferment.

4. 1918–43. Living first in Stockholm, then settling in Copenhagen, Rachmaninoff began to widen his piano repertory, realizing that, without the money and possessions left behind in Russia, his and his family's livelihood depended on a steady income; and he was more likely to achieve that as a concert performer than as a composer. At that time he wrote to London about possible engagements there, mentioning that his repertory consisted of his own first three concertos (No.1 in the new version), Liszt's first, Tchaikovsky's first and Rubenstein's fourth. But these negotiations came to nothing. Towards the end of 1918 he received three offers of lucrative American contracts, and, although he declined them all, he decided that the USA might offer a solution to his financial worries. In November the family arrived in New York, where Rachmaninoff quickly chose an agent, Charles Ellis, and accepted the gift of a piano from Steinway, before giving nearly 40 concerts in four months; at the end of the 1919–20 season he also signed a recording contract with the Victor Talking Machine Company. In 1921 the Rachmaninoffs decided to buy a house in New York, where they consciously re-created the atmosphere of Ivanovka, entertaining Russian guests, employing Russian servants and observing Russian customs.

For the 1923–4 season Rachmaninoff cut his number of American concerts to allow more time in Europe; and it was while at Dresden in the spring that his elder daughter, Irina, announced her engagement to Prince Pyotr Volkonsky. The wedding was in September, but the marriage ended in tragedy when Volkonsky died less than a year later. Their daughter, Sofiya, was born after Volkonsky's death. It was largely for the benefit of the widowed Irina and for Tat′yana that Rachmaninoff founded in Paris a publishing firm, TAIR (derived from his daughters' names), to publish works by Russian composers, particularly himself. Deciding also to limit his American engagements even further and to sell his American property, he found himself with nine months free of all commitments at the end of 1925. His mind turned immediately to composition, for he had long wanted to add another concerto to his repertory; in fact it seems likely that he had been contemplating a fourth concerto as early as 1914. Renting a flat in New York, he worked at the concerto and completed it at Dresden during the summer. Realizing that the piece was too long (he joked to Medtner that it would have to be 'performed on successive nights, like the *Ring*'), he made a number of cuts before giving the first performance at Philadelphia on 18 March 1927. The highly critical notices made him take another look at the score, and before its publication by TAIR he made many more alterations and cuts. But it still failed to impress audiences, and he withdrew it from his programmes until he could examine the faults in detail.

3. Autograph MS from the second movement of Rachmaninoff's Piano Concerto no.3 in D minor, composed 1909 (private collection); in the printed score the final bar of the piano part is that marked 'Piano I'

In 1931 Rachmaninoff made a rare venture into politics: he had usually avoided comment on the Russian regime, but in January, together with Ivan Ostromislensky and Count Il'ya Tolstoy, he sent a letter to *The New York Times* (12 January 1931) criticizing various Soviet policies. This was countered by a bitter attack in the Moscow newspaper *Vechernyaya Moskva* (9 March 1931) and a ban on the performance and study of his works in Russia (the ban lasted for only two years, and his music was restored to favour in 1933). During summer 1931 he revised his Second Sonata and also composed his last solo piano work, the Variations on a Theme of Corelli, performing them at Montreal on 12 October. During the early 1930s, on a visit to Switzerland, Rachmaninoff decided to build for himself a villa at Hertenstein, on the shores of Lake Lucerne. He called it Senar, from the names *Ser*gey and *Na*tal'ya *R*achmaninoff. Even before this, when the family rented a holiday villa at Clairefontaine in the French countryside, one of their friends remarked that 'the whole arrangement was very much like that of an old Russian estate'. The same atmosphere enveloped Senar. It would not have occurred to Rachmaninoff to attempt a replica of Ivanovka on Swiss soil, for, hand-in-hand with tradition, he loved things that were new: he owned the first car in his rural part of Russia; on Lake Lucerne he commanded a crack speedboat; in New York he relished faddish ice-cream sodas. Senar was therefore a structure of its period, an impressively austere Bauhaus-style design. But its seclusion, its broad views over the lake and its silence save for the sounds of nature established for him the ideal, Ivanovka-like circumstances in which to compose. However cosmopolitan he had had to become during his years in exile, his outlook remained quintessentially Russian: Russian was always his main language, and at Senar, as in New York, the family observed Russian customs, entertained Russian visitors and employed Russian servants. In the following summers he wrote the Rhapsody on a Theme of Paganini (1934) and the Third Symphony (1935–6, revised 1938); and in 1937 Fokine approached

4. Serge Rachmaninoff

Rachmaninoff with the idea of a ballet based on the Paganini legend, using Rachmaninoff's music. The ballet was first given at Covent Garden on 30 June 1939, a performance that the composer could not attend as he had slipped at his home and was lame. In fact he was never again to be in England; he had given his last concert on 11 March 1939, and during the summer the family decided that, in view of the threat of war, it would be safer to leave Europe and return to the USA. There, in the autumn of 1940, he completed his last work, the Symphonic Dances; and in the following year he revised the Fourth Concerto.

Rachmaninoff decided that his 1942–3 season would have to be his last: every year since his arrival in the USA he had undertaken exhausting tours, and recently had been suffering from lumbago, arthritis and extreme fatigue. By January 1943, while on tour, he was clearly unwell. The doctor diagnosed pleurisy, but Rachmaninoff insisted that the tour should continue. On 17 February he gave what was to be his last concert, at Knoxville, becoming so ill afterwards that the family had to return to Los Angeles. There, at his house in Beverly Hills, it became evident that he was suffering from cancer, and he died early on the morning of 28 March. Requiem Mass was celebrated that night at the Los Angeles Russian Orthodox Church. Another was held the next day, and a Funeral Mass took place on 30 March. Rachmaninoff had hoped to be buried at Senar, but in these war years it was not possible to transport his body back to Switzerland,

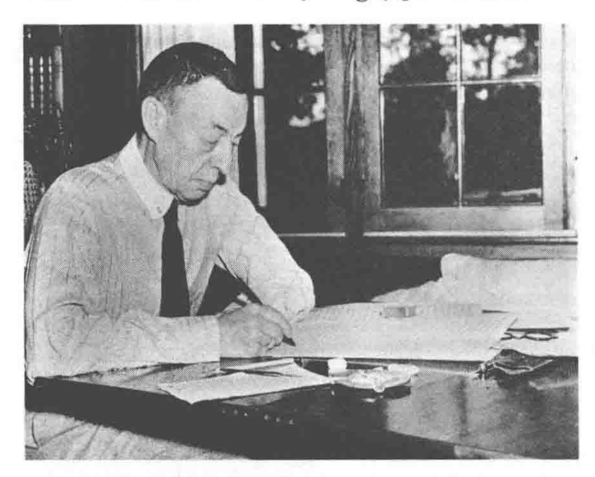
let alone back to Ivanovka in Russia. He was buried, therefore, at the Kensico Cemetery outside New York, near a town aptly called Valhalla, where his grave, marked by a simple Russian cross, stands on a quiet hillside.

His other memorial lies, appropriately enough, at Ivanovka itself. Although the estate was completely destroyed during the 1917 Revolution, it has since been restored. However much his reputation may have waxed and waned in western Europe and America, affection for Rachmaninoff and his music has never wavered in Russia. Indeed, for pianists, conductors and for general music-lovers his works have always (apart from the short ban in the early 1930s) been a staple part of the repertory. In the 1960s, in the run-up to the centenary year of 1973, interest was aroused by further discoveries about the estate from which Rachmaninoff derived so much of his inspiration. The local Tambov historian Nina Emel'yanova (see Emel'yanova, 1971 and 1977) had done much research on Rachmaninoff's activities in the area, and it was decided to approach Sofiya Satina (Rachmaninoff's cousin and sister-in-law), who was still alive and working in America, for her reminiscences about the estate's layout. On the basis of these, and with contemporary photographic evidence, a project to rebuild the smaller of the two houses (where Rachmaninoff had done most of his writing) was set in motion. It was completed by 1974, and it was officially opened as a museum on 18 June 1982. Later, plans were able to expand to include the gardens, including the 'red' tree-lined alley which was Rachmaninoff's favourite haunt (red, because there are bricks in among the soil of the path). More recently, outhouses and the garage have also been reconstructed, and on 24 September 1995 the main manor house was itself completed and officially opened to the public.

5. Rachmaninoff as a performer. Rachmaninoff managed to pursue all three of his careers – as pianist, composer and conductor – with almost equal success, admitting, however, that he found it difficult to concentrate on more than one at any given time: certainly the demands of his performing career in his later life precluded much composition. In later life his reputation perhaps fell victim to his success as a pianist. His concert manner was austere, contrasting sharply with the warm and generous personality he revealed in the company of his family and close friends. He possessed a formidable piano technique, and his playing (like his conducting) was marked by precision, rhythmic drive, a refined legato and an ability for complete clarity in complex textures – qualities that he applied with sublime effect in his performances of Chopin, particularly the B♭ minor sonata. The rest of his comparatively small repertory comprised, besides his own works, many of the standard 19th-century virtuoso pieces as well as music by Beethoven, Borodin, Debussy, Grieg, Liszt, Mendelssohn, Mozart, Schubert, Schumann and Tchaikovsky. Whatever music he was playing, his performances were always carefully planned, being based on the theory that each piece has a 'culminating point'. 'This culmination', as he told the poet Marietta Shaginian, 'may be at the end or in the middle, it may be loud or soft; but the performer must know how to approach it with absolute calculation, absolute precision, because, if it slips by, then the whole construction crumbles, and the piece becomes disjointed and scrappy and does not convey to the listener what must be conveyed' (quoted in Apetian, 1957).

6. Works. Understandably, the piano figures prominently in Rachmaninoff's music, either as a solo instrument or as part of an ensemble. But he used his own skills as a performer not to write music of unreasonable, empty virtuosity, but rather to explore fully the expressive possibilities of the instrument. Even in his earliest works (the three nocturnes of 1887–8, the four pieces probably written in 1888, and the first version of the First Piano Concerto, 1890–91) he revealed a sure grasp of idiomatic piano writing and a striking gift for melody. Some of his early works presage finer achievements: the Prelude in C♯ minor, for example, though less subtle than his mature works, is couched in the dark-hued, nostalgic idiom that pervades much of his music. And in some of his early orchestral pieces – *Prince Rostislav* (1891) and, to a lesser extent, *The Rock* (1893) – he showed the first signs of that ability for tone-painting which he was to perfect in *The Isle of the Dead* (1909) and in some of his later piano pieces and songs. In these early years, though, the textures (usually opaque and chordal) lack the variety of later works; his orchestration is often colourless and heavy; and the musical language (notably in his student opera *Aleko*, 1892) is often redolent of other Russian composers, particularly Tchaikovsky.

With his works of the mid-1890s Rachmaninoff began to strike a more individual tone: the six *Moments musicaux* (1896) have the characteristic yearning themes, combined with a rise and fall of dynamics and intricate passage-work. Even his First Symphony (1895), however 'weak, childish, strained and bombastic' (as Rachmaninoff himself described it), has many original features. Its brutal gestures and uncompromising power of expression (particularly in the finale) were unprecedented in Russian music; and, although it must be said that the work has a



tendency to ramble, nevertheless its flexible rhythms, sweeping lyricism and stringent economy of thematic material (or, as Cui called it 'the meaningless repetition of the same short tricks') were features used with greater subtlety and individuality later on.

After the three vacuous years that followed the poor reception of the symphony in 1897, Rachmaninoff's style began to develop significantly. In the Second Piano Concerto (1900–01) the headstrong youthful impetuosity of the symphony has largely given way to Rachmaninoff's predilection for sumptuous harmonies and broadly lyrical, often intensely passionate melodies. At its most inspired, Rachmaninoff's lyrical inspiration is matchless. Taking only a few examples from many possible others, the long opening theme of the Second Concerto, the broad melodic expanse of the Second Symphony's slow movement or the central section of *The Isle of the Dead* all demonstrate an ability to imagine seamless lines stretching ever onwards to their ultimate goal. And there are certain technical developments. In place of the often garish orchestration of the symphony, the colours of the concerto are subdued and more subtly varied; the textures are carefully contrasted; and Rachmaninoff's writing is altogether more concise. The idiom of the concerto rubbed off on the other works of the period, notably the Suite no.2 for two pianos (1900–01), the Cello Sonata (1901), the Ten Preludes op.23 (1901–3), the cantata *Spring* (1902), and the 12 Songs op.21 (1900–02). In these songs he began to achieve a perfect balance between voice and accompaniment, using the piano to echo the sentiments of the text. (Some of the piano parts are, in effect, separate instrumental studies of the poems, and it is significant that Rachmaninoff later transcribed one of the finest, *Siren'* ('Lilacs', no.5), for piano solo.) This same sensitivity to mood is seen again in his two operas of the period, *The Miserly Knight* (1903–5) and *Francesca da Rimini* (1900–05); but here, despite Rachmaninoff's keen dramatic sense – particularly in the central scene of *The Miserly Knight* and in the love-duet of *Francesca* – the librettos defy successful stage performance (the former being an almost word-for-word setting of one of Pushkin's 'little tragedies', never intended for the stage; the other an anaemic adaptation by Modest Tchaikovsky of the fifth canto of the *Inferno*).

The years immediately following the premières of the two operas, spent partly in Russia, partly in Dresden, were Rachmaninoff's most fruitful as a composer, and it was during this period that his style reached full maturity. The Second Symphony (1906–7) and the Third Piano Concerto (1909) display his fully-fledged melodic style (particularly in the slow movement of the symphony), his opulent but infinitely varied and discerning use of the orchestra (notably in the symphony's scherzo), and a greater confidence in the handling of large-scale structures. Like those of the First Symphony, the opening bars of the Second contain pithy ideas that act as unifying elements, but here the material is allowed a far more leisurely expansion and development than in the First Symphony; the long-breathed themes need space to display themselves fully, and the cuts which used to be made in performances of the symphony and the concerto served only to throw them off balance. The Third Concerto is structurally a more ingenious piece than the Second, not only in the greater continuity achieved through the elimination of the abrupt full stops that occur before important themes in the First and Second Concertos, but also in the subtle recollection and metamorphosis of the first movement material: the fast central section of the slow movement, for example, is a rhythmic mutation of the opening theme.

Certain characteristics of the Third Concerto are brought to mind by the 13 Preludes op.32 (1910), just as the op.23 preludes owe much in style to the Second Concerto. The preludes have the concerto's complexity of texture and flexibility of rhythm, its pungent, chromatic harmony; and, like the concerto, they make extreme demands of agility and power on the pianist. Also, the extreme emotional demands – particularly of the more introspective preludes – represent a mode of expression which Rachmaninoff had been developing in the more contemplative of the op.23 preludes and in some of the *Moments musicaux*: the preludes in B♭ minor, B minor and D♭ major (nos.2, 10 and 13 of the op.32 set) are among the most searching and harrowing music that Rachmaninoff composed. The more lyrical preludes have the same hazy quality of his last set of songs (op.38, 1916), while the more ostentatiously dramatic pieces are set in the intense, impassioned idiom of some of the op.39 *Etudes-tableaux* (1916–17). Varied though these pieces are, they all have a common characteristic in that they demonstrate Rachmaninoff's ability to crystallize perfectly a particular mood or sentiment: each prelude grows from a tiny melodic or rhythmic fragment into a taut, powerfully evocative miniature. They are, in effect, small tone poems, and it is this vivid portraiture that, in orchestral music, reached a peak in *The Isle of the Dead*. Here the awesome gloom of Böcklin's painting is reflected in the dark colours of the opening section (where the motion of Charon's oars is imitated by the persistent 5/8 metre), enhanced, as in so much of Rachmaninoff's music, by references to the *Dies irae*; indeed, the dénouement of the piece consists of a battle between the chant (symbolizing death) and another, more wistful melody that Rachmaninoff called the 'life' theme. Similarly doom-laden is the long finale of his choral symphony *The Bells* (1913), where he was able to express, with an emotional intensity he never surpassed, the fatalistic sentiments that imbue many other works. In *The Bells* the effectiveness of the subdued finale is heightened by the other three, more vivid, movements; and in all four movements he applied the discriminating orchestration, evident in his other mature works, to convey Poe's sharply contrasting campanological symbols: silver bells for birth, golden bells for marriage, brazen bells for terror, iron bells for death. In the tenor, soprano and baritone solos he also showed the perceptive response to poetry and the sympathetic vocal writing of his two last sets of songs, opp.34 and 38.

For the 14 Songs op.34 (1910–12) he chose poems by some of the principal representatives of Russian Romanticism: Pushkin, Tyutchev, Polonsky, Khomyakov, Maykov and Korinfsky, and also the more modern Bal'mont. Most of the songs are tailored to the individual talents of certain Russian singers: the dramatic, declamatory ones, like *V dushe u kazhdogo iz nas* ('In the Soul of Each of Us', no.2), *Tï znal yego* ('You Knew Him', no.9), *Obrochnik* ('The Peasant', no.11) and *Voskresheniye Lazarya* ('The Raising of Lazarus', no.6), are dedicated to Chaliapin; the powerful *Dissonans* ('Discord', no.13) to Feliya Litvin; the more lyrical songs, such as *Kakoye schast'ye* ('What Happiness', no.12), to Sobinov; and the

7. *Serge Rachmaninoff*

wordless *Vocalise* (no.14) to Nezhdanova. Certain features of the op.34 songs (simple vocal lines; sensitive accompaniments that emphasize certain words and phrases by melodic inflections and harmonic shadings) were developed further in the six last songs (op.38). For these Rachmaninoff chose texts exclusively from the works of contemporary poets – Blok, Belïy, Severyanin, Bryusov, Sologub and Bal′mont – all of whom were prominent in the symbolist movement predominant in Russia in the late 19th century and the early 20th. Here, as in the op.39 *Etudes-tableaux*, Rachmaninoff was concerned less with pure melody than with colouring; and his almost Impressionist style perfectly matches the symbolists' mellifluous, elusive poetry in its translucent piano writing, constantly fluctuating rhythms and ambiguous harmonies.

The op.38 songs and the op.39 studies were the last important pieces that Rachmaninoff wrote before leaving Russia (apart from the substantial revision of the First Piano Concerto, done in 1917). His friend Vladimir Wilshaw, in a letter written shortly after the Soviet ban on his works had been lifted, perceptively remarked on the difference in style between the sometimes extrovert studies (during a performance of which Rachmaninoff had broken a string on the piano) and the Variations on a Theme of Corelli, his last piano work, composed in 1931. In these 20 variations (not, in fact, based on a theme of Corelli, but on the tune *La folìa* which Corelli had used in his Sonata op.5 no.12) the piano textures have an even greater clarity than in the op.38 songs, combined with biting chromatic harmony and a new rhythmic incisiveness. These were to be the characteristics of all the works composed during this Indian summer of the 1930s and 1940s, and the Corelli Variations were in a sense preparatory exercises for the Rhapsody on a Theme of Paganini (1934), a much more tautly constructed piece than the often diffuse Fourth Piano Concerto (1926). Like the Paganini Rhapsody, the other late works with orchestra – the Three Russian Songs (1926) and the Third Symphony (1935–6) – reveal Rachmaninoff's interest in individual instrumental tone qualities, and this is highlighted by his use of an alto saxophone in his last work, the Symphonic Dances (1940). In the curious, shifting harmonies of the second movement, and in the rhythmic vitality and almost Prokofiev-like grotesquery of the first and last, the Symphonic Dances are entirely representative of his late style; they also sum up his lifelong fascination with ecclesiastical chants, for he not only quoted (in the first movement) the principal theme from the First Symphony (derived as it is from motifs characteristic of Russian church music), but he also used in the finale the *Dies irae* and the chant *Blagosloven yesi, Gospodi* ('Blessed be the Lord') from his *All-night Vigil* (1915), writing at the end of the score the sadly appropriate line 'I thank thee, Lord'.

WORKS

OPERAS

op.	
—	Esmeralda (after V. Hugo: *Notre Dame de Paris*), 1888; Introduction to Act 1 and frag., of Act 3 only, all in pf score
—	Aleko (1, V. Nemirovich-Danchenko, after A.S Pushkin: *Tsïganï* [The Gypsies]), 1892; Moscow, Bol′shoy, 9 May 1893
24	Skupoy rïtsar′ [The Miserly Knight] (3 scenes, Pushkin), 1903–5; Moscow, Bol′shoy, 24 Jan 1906
25	Francesca da Rimini (prol, 2 scenes, epilogue, M. Tchaikovsky, after Dante: *Inferno*), 1900, 1904–5; Moscow, Bol′shoy, 24 Jan 1906
—	Salammbô (7 scenes, Rachmaninoff, N. Morozov and M. Slonov after G. Flaubert), 1906, scenario only
—	Monna Vanna (Slonov, after M. Maeterlinck), 1907; pf score of Act 1 and sketches for Act 2 only

CHORAL

op.	
—	Deus meus, motet, 6vv, 1890
—	V molitvakh neusïpayushchuyu bogoroditsu [In our Prayers, Ever-vigilant Mother of God], 3vv, 1893
—	Chorus of spirits for Don Juan (A.K. Tolstoy), unacc., ?1894
15	6 Choruses, female or children's vv, 1895–6: Slav′sya [Be Praised] (V. Nekrasov); Nochka [Night] (V. Lodïzhensky); Sosna [The Pine] (M.Yu. Lermontov); Zadremali volnï [The Waves Slumbered] (K. Romanov); Nevolya [Slavery] (N. Tsïganov); Angel (Lermontov)
—	Panteley-tselitel′ [Panteley the Healer] (Tolstoy), unacc., 1899
20	Vesna [Spring] (Nekrasov: *Zelyonïy shum* [The Verdant Noise]), cant., Bar, chorus, orch, 1902
31	Liturgiya svyatovo Ioanna Zlatousta [Liturgy of St John Chrysostom], unacc., 1910
35	Kolokola [The Bells] (K. Bal′mont, after E.A. Poe), choral sym., S, T, Bar, chorus, orch, 1913
37	Vsenoshchnoye bdeniye [All-night Vigil], unacc., 1915
41	3 Russian Songs, chorus, orch, 1926: Cherez rechku [Across the River]; Akh tï, Van′ka [Oh, Ivan]; Belelitsï, rumyanitsï vï moy [Whiten my Rouged Cheeks]

ORCHESTRAL

op.	
—	Scherzo, d, 1888
—	Piano Concerto, c, 1889, sketches only
—	Manfred, sym. poem, 1890, lost
1	Piano Concerto no,1. f♯, 1890–91, rev. 1917
—	Suite, 1891, lost
—	Symphony, d, 1891, 1st movt only
—	Knyaz′ Rostislav [Prince Rostislav], sym. poem after Tolstoy, 1891
7	Utyos [The Rock], sym. poem after A. Chekhov: *Na puti*, 1893
12	Kaprichchio na tsïganskiye temï [Capriccio on Gypsy Themes] (Caprice bohémien), 1892, 1894
13	Symphony no.1, d, 1895
—	Symphony, 1897, sketches only
18	Piano Concerto no.2, c, 1900–01
27	Symphony no.2, e, 1906–7
29	Ostrov myortvïkh [The Isle of the Dead], sym. poem after A. Böcklin, 1909
30	Piano Concerto no.3, d, 1909
40	Piano Concerto no.4, g, 1926, rev. 1941
43	Rhapsody on a Theme of Paganini, pf, orch, 1934
44	Symphony no.3, a, 1935–6, rev. 1938
45	Symphonic Dances, 1940

CHAMBER

— String Quartet, ?1889, 2 movts only

36 Sonata no.2, b♭, 1913, rev. 1931
39 Etudes-tableaux, 1916–17: no.1, c; no.2, a; no.3, f♯; no.4, b; no.5, e♭; no.6, a; no.7, c; no.8, d; no.9, D
— Oriental Sketch, 1917
— Piece, d, 1917
— Fragments, 1917
— Cadenza for Liszt: Hungarian Rhapsody no.2, 1919
42 Variations on a Theme of Corelli, 1931

SOLO VOCAL

for 1v, pf unless otherwise stated

— U vrat obiteli svyatoy [At the Gates of the Holy Abode] (M.Yu. Lermontov), 1890
— Ya tebe nichego ne skazhu [I Shall Tell You Nothing] (A. Fet), 1890
— Opyat' vstrepenulos' tï, serdtse [Again You Leapt, my Heart] (N. Grekov), ?1890
— 2 monologues from Boris Godunov (A.S. Pushkin), ?1890–91: Tï, otche patriarkh [Thou, Father Patriarch]; Yeshchyo odno posledneye skazan'ye [One Last Story]
— Noch' provedennaya bez sna [A Night Spent Without Dreams], (Lermontov), ?1890–91 [Arbenin's monologue from Maskarad]
— Mazepa (Pushkin: *Poltava*), 4vv, fragment
— C'était en avril (E. Pailleron), 1891
— Smerkalos' [Twilight has Fallen] (A.K. Tolstoy), 1891
— Pesnya razocharovannogo [Song of the Disillusioned] (D. Rathaus), ?1893
— Uvyal tsvetok [The Flower has Faded] (Rathaus), ?1893
— Tï pomnish' li vecher [Do you remember the evening] (Tolstoy), ?1893
4 6 Songs, 1890–93: O net, molyu, ne ukhodi [Oh no, I beg you, forsake me not] (D. Merezhkovsky), 1892; Utro [Morning] (M. Yanov), ?1891–2; V molchan'i nochi taynoy [In the Silence of the Secret Night] (Fet), ?1892; Ne poy, krasavitsa, pri mne [Sing not to me, beautiful maiden] (Pushkin), ?1892–3; Uzh tï, niva moya [Oh Thou, my Field] (Tolstoy), 1893; Davno l', moy drug [How Long, my Friend] (A. Golenishchev-Kutuzov), 1893
8 6 Songs (trans. A. Pleshcheyev), 1893: Rechnaya lileya [The Waterlily] (H. Heine); Ditya kak tsvetok tï prekrasna [Child, thou art as Beautiful as a Flower] (Heine); Duma [Brooding] (T. Shevchenko); Polyubila ya na pechal' svoyu [I have Grown Fond of Sorrow] (Shevchenko); Son [The Dream] (Heine); Molitva [A Prayer] (W. Goethe)
14 12 Songs, 1896 (except no.1, 1894): Ya zhdu tebya [I Wait for Thee] (M. Davidova); Ostrovok [The Isle] (P. Shelley, trans. Bal'mont); Davno v lyubvi otradï malo [For Long there has been Little Consolation in Love] (Fet); Ya bïl u ney [I was with Her] (A. Kol'tsov); Eti letniye nochi [These Summer Nights] (Rathaus); Tebya tak lyubyat vse [How Everyone Loves Thee] (Tolstoy); Ne ver' mne, drug [Believe me not, Friend] (Tolstoy); O ne grusti [Oh, do not Grieve] (A. Apukhtin); Ona, kak polden', khorosha [She is as Lovely as the Noon] (N. Minsky); V moyey dushe [In my Soul] (Minsky); Vesenniye vodï [Spring Waters] (F. Tyutchev); Pora ['Tis time] (S. Nadson)
— Ikalos' li tebe [Were You Hiccoughing] (P. Vyazemsky), 1899
— Noch' [Night] (Rathaus), 1900
21 12 Songs, 1902 (except no.1, 1900): Sud'ba [Fate] (Apukhtin); Nad svezhey mogiloy [By the Fresh Grave] (Nadson); Sumerki [Twilight] (J.-M. Guyot, trans. M. Tkhorzhevsky); Oni otvechali [They Answered] (V. Hugo, trans. L. Mey); Siren' [Lilacs] (Ye. Beketova); Otrïvok iz A. Myusse [Fragment from Musset] (trans. Apukhtin); Zdes' khorosho [How Fair this Spot] (G. Galina); Na smert' chizhika [On the Death of a Linnet] (V. Zhukovsky); Melodiya [Melody] (Nadson); Pred ikonoy [Before the Icon] (Golenishchev-Kutuzov); Ya ne prorok [No Prophet I] (A. Kruglov); Kak mne bol'no [How Painful for Me] (Galina)
26 15 Songs, 1906: Yest' mnogo zvukov [There are Many Sounds] (Tolstoy); Vsyo otnyal u menya [He Took All from Me] (Tyutchev); Mï otdokhnyom [Let Us Rest] (A. Chekhov); Dva proshchaniya [Two Partings] (Kol'tsov), Bar, S; Pokinem, milaya [Beloved, Let us Fly] (Golenishchev-Kutuzov); Khristos voskres [Christ is Risen] (Merezhkovsky); K detyam [To the Children] (A. Khomyakov); Poshchadï ya molyu [I Beg for Mercy] (Merezhkovsky); Ya opyat' odinok [Again I Am Alone] (Shevchenko, trans. I. Bunin); U moyego okna [Before my Window] (Galina); Fontan [The Fountain] (Tyutchev); Noch' pechal'na [Night is Mournful] (Bunin); Vchera mï vstretilis' [When Yesterday we Met] (Ya. Polonsky); Kol'tso [The Ring] (Kol'tsov); Prokhodit vsyo [All Things Pass By] (Rathaus)
— Letter to K.S. Stanislavsky, 1908
34 14 Songs, 1912 (except no.7, 1910, rev. 1912): Muza [The Muse] (Pushkin); V dushe u kazhdogo iz nas [In the Soul of Each of Us] (A. Korinfsky); Burya [The Storm] (Pushkin); Veter perelyotnïy [The Migrant Wind] (Bal'mont); Arion (Pushkin); Voskresheniye Lazarya [The Raising of Lazarus] (Khomyakov); Ne mozhet bït' [It Cannot Be] (A. Maykov); Muzïka [Music] (Ya. Polonsky); Tï znal yego [You Knew Him] (Tyutchev); Sey den', ya pomnyu [I Remember that Day] (Tyutchev); Obrochnik [The Peasant] (Fet); Kakoye schast'ye [What Happiness] (Fet); Dissonans [Discord] (Polonsky); Vocalise, rev. 1915
— Iz evangeliya ot Ioanna [From the Gospel of St John], 1915
38 6 Songs, 1916: Noch'yu v sadu u menya [In my Garden at Night] (A. Isaakian, trans. A. Blok); K ney [To Her] (A. Belïy); Margaritki [Daisies] (I. Severyanin); Krïsolov [The Rat-Catcher] (V. Bryusov); Son [A Dream] (F. Sologub); A-u! (Bal'mont)

ARRANGEMENTS

for piano

P.I. Tchaikovsky: Manfred, 4 hands, 1886, lost; The Sleeping Beauty, 4 hands, 1890
A. Glazunov: Symphony no.6, 4 hands, 1897
Behr: Lachtäubchen op.303, pubd as Polka de WR, 1911

GEOFFREY NORRIS

Racine, Jean (*b* nr Soissons, bap. 22 Dec 1639; *d* Paris, 21 April 1699). French dramatist. He was given a thorough classical education by Jansenist priests, and the contrast between their austere philosophy and the more libertine world of the stage was to affect him throughout his life. A natural ability to write poetry provided Racine's entrée into theatrical circles, where he became friendly with other writers, including Molière, La Fontaine and Boileau. His first play, *La Thébaïde*, was peformed in Paris in 1664, his last, *Phèdre*, in 1677. Predictably, given his classical education, he chose subject matter for all but one of his tragedies from Greek and Roman history or mythology. Given the extent of his influence on French theatre, it is remarkable that he wrote only 12 plays, 11 of them tragedies. In 1677 he was appointed Historiographer Royal to Louis XIV. He did not forsake writing, however: he provided two works for Lully, *La chute de Phaëton* (1679, incomplete) and the divertissement *Idylle sur la paix* (1685), and contemporary accounts allude to an unnamed 'petit opéra' (more likely a ballet) written by Racine and De Préaux in three days and performed during the carnival celebrations of 1683. Two religious plays, *Esther* (1689) and *Athalie* (1691), were intended as re-creations of Greek drama, complete with overtures, arias

and choruses set by Jean-Baptiste Moreau. Racine was elected to the Académie Française in 1673.

In Racine's tragedies the epitome of the French classical style was reached. Their primary characteristic is psychological conflict. There is little violence, and what there is usually takes place off stage and is then reported. The conception of the plot is simple: one overruling passion, frequently love, is the stimulus; the motives of the protagonists, on the other hand, are complex and subtly delineated. The plays adhere to the dictates of classical drama: the unities of time, place and action are observed and the main character is imbued with greatness, but with one flaw which causes his or her downfall and often that of others. The principal tragic figure is distinguished by determination and singleness of purpose.

Racine's dramas had a lasting influence on French opera. Their metre and rhythm provided the model for the recitative developed by Lully, who imitated in music the manner of declamation of Racine's verses as spoken by the great classical actress Marie Desmares, known as La Champmeslé, and renowned for her mellifluous delivery. Racine's influence was also, for some years, more direct: in 1683 he was appointed to the Académie Royale des Inscriptions, the body which determined the subject matter of an opera, regulated its acts and assigned places to the divertissements.

Racine's tragedies have provided inspiration for a variety of musical works, mostly operatic. 18th-century librettists often changed the plot to suit contemporary requirements; thus many operas drawn from his works managed to contrive a happy ending by some means: a whim of the gods, the magnanimity of a ruler or the repentance of a sinner. Besides operas, Racine's dramas also prompted other musical treatment. *Phèdre* has served as the basis for ballets by Louis de la Coste (*Aricie*, 1697) and Georges Auric (1949), a symphonic poem by Martin Lunssens, a composition for soprano and piano by Virgil Thomson (1930) and a monodrama for mezzo-soprano and orchestra by George Rochberg, first performed in New York in 1976. Handel wrote oratorios based on the religious tragedies, *Esther* and *Athalie*, the first of them reworked from a masque of 1718. A number of composers wrote incidental music for the plays, among them Mendelssohn for *Athalie*, Massenet for *Phèdre* and Saint-Saëns for *Andromaque*.

ALISON STONEHOUSE

Račiūnas, Antanas (*b* Užliaušiai, near Panevežys, 22 Aug/4 Sept 1905; *d* Vilnius, 3 Apr 1984). Lithuanian composer. He graduated from Gruodis's composition class at the Kaunas Conservatory (1933) and continued his studies in Paris's Ecole Normale with Nadia Boulanger and Roger-Ducasse (1936–9); he also had one lesson with Stravinsky. He then taught at the Kaunas Conservatory (1939–43, 1944–9) and then at the Lithuanian State Conservatory in Vilnius (1949–60, head of composition 1949–59, appointed professor in 1958). In 1954 he was made an Honoured Worker of the Arts and in 1965 People's Artist of the Lithuanian SSR. He composed four operas of which the first one, *Trys talismanai* ('Three Talismans', 1936), based on a fairy tale, was most successful. The score of his second opera, *Gintaro krantas* ('The Amber Shore', 1940), along with that of *Trys talismanai*, did not survive; *Marytė* (1953), the so-called first Lithuanian Soviet opera, depicted the struggle between partisans and fascists while *Saulės miestas* ('City of the Sun', 1965) had as its basis an atheistic theme. His best work is to be found in his solo and chorus songs and folksong arrangements, the latter being published in three collections: *Dainuojam* (1935), *Oi tu, sakale* (1957) and *Ant viso medelio* (1980). His music is rather conservative in harmony and form, romantic in prevailing moods; in many of his compositions he makes use of traditional folk music elements and melodies. The composers Eduardas Balsys, Vytautas Barkauskas, Vytautas Klova and Bronius Kutavičius were among his pupils. The book *Valanda su kompozitorium Antanu Račiunu* [An Hour with the Composer Antanas Račiūnas], by D. Palionytė was published in Vilnius in 1970.

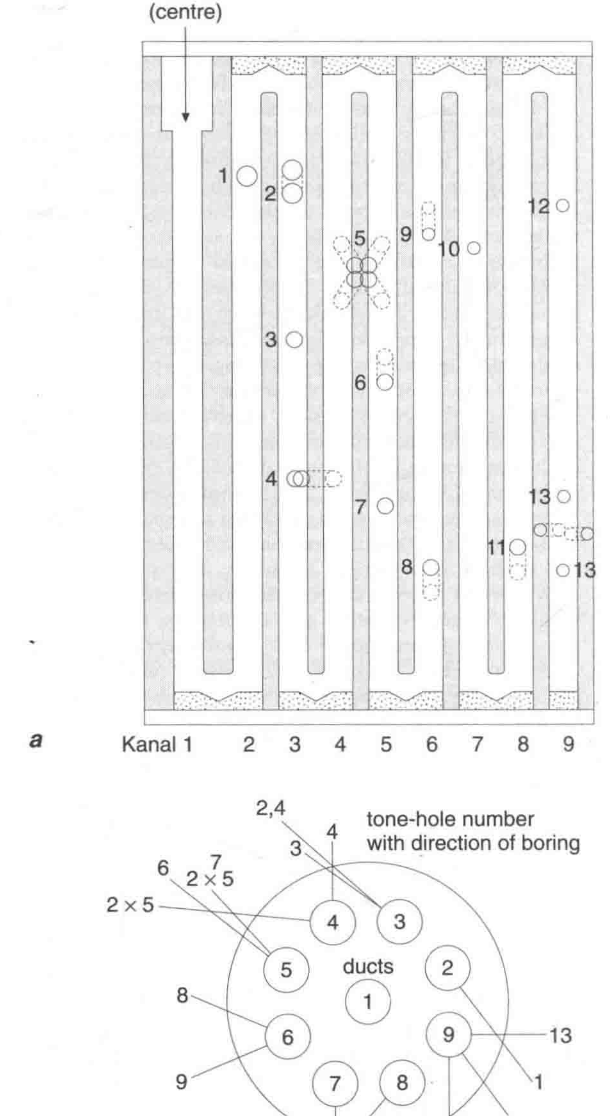
ADEODATAS TAURAGIS

Racket [rackett] (Fr. *cervelas*; Ger. *Rackett, Rankett*). A double-reed woodwind instrument of the Renaissance and Baroque periods. The Renaissance or 'pirouette' type, though never in widespread use, appeared sporadically in central Europe from about the middle of the 16th century to the middle of the 17th. Its structure is ingeniously compact: within its squat cylindrical body (fig.1), nine parallel bores drilled lengthwise (consisting of eight ranged concentrically around one) connect at alternate ends to form a continuous undulating tube as shown in fig.2; into the central bore is inserted a short staple bearing a bassoon-type reed, surrounded by a large ornamental pirouette of a kind peculiar to the instrument. The double reed causes the cylindrical bore to function as a stopped pipe whose fundamental sounds an octave below that of an open pipe; thus the racket, in spite of its modest size, was rivalled only by the organ in the depth of its compass.



The nomenclature of the instrument is involved. An alternative though less used name is 'rankett', a word also

1. *Renaissance racket (with part of a curved cornett): detail of an ivory carving by Christoph Angermair, 1618–24 (Bayerisches Nationalmuseum, Munich)*

applied to an ORGAN STOP. This register on the organ, first noted as *Rancket* in 1564, bore a confusing resemblance in both tone and construction to the racket. Sachs (1922) derived both names from the Middle High German *ranc*, meaning 'to and fro', 'crooked'. However, Seidl (1959) argued that although after 1800 the two terms became synonymous, before that they were well differentiated in meaning; he derived *Rackets* from the Italian 'rochetta', a rock, distaff or spinning bobbin. Early forms of the word found in inventories include *ragget*, *rogetten*, *Raketpfeiffen* and *Racquetten* (which might suggest 'rocket'; see Baines, 1966). The French name *cervelat*(later *cervelas*), first used by Mersenne (1636–7), appears to be derived either from *cervelet*, meaning 'cerebellum' or little brain, or from *cervellato*, an earlier Italian word for a small sausage: whence the German *Wurstfagott*, anglicized as 'sausage bassoon'. Other early names, *cortalli* and *cortaldi*, derive (like *courtaut* and *Kortholt*) from the Latin 'curtus', 'short'. Later German names include *Stockfagott* and *Faustfagott*.

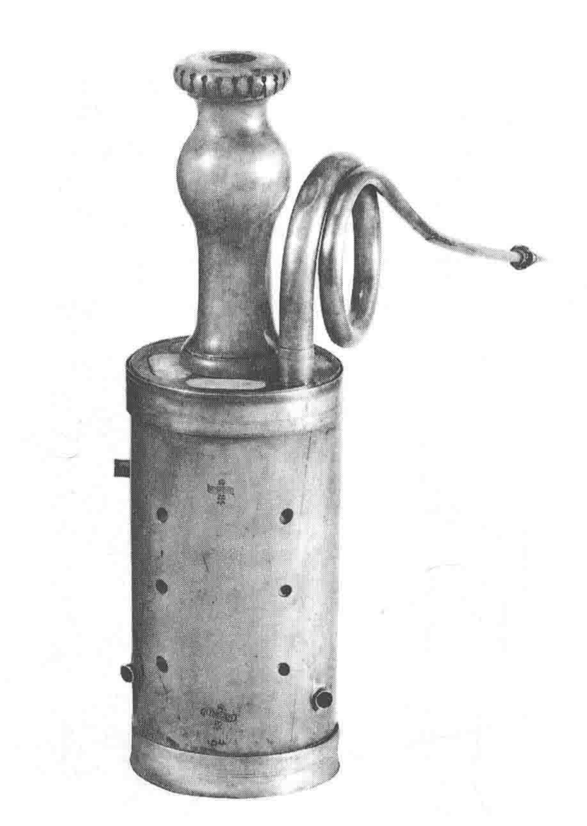
The oldest extant account of the instrument is that given by Praetorius. He described and illustrated four sizes of *Racketten* and defined a consort as consisting of seven instruments, each with a range of a 12th: two *Diskant*, *c*12 cm (*G–d'*); three *Tenor-Alt*, *c*25 cm (*C–g*); one *Bass*, *c*18 cm (*F'–c*); and one *Gross Bass*, *c*35 cm (*D'–A* or *C'–G*). Three instruments of the type described by Praetorius, which may be termed the Renaissance or pirouette racket to distinguish it from the later type, have survived, two now in Vienna and one in Leipzig. They are all made of ivory rather than the less durable wood and appear to originate from the same workshop (the catalogues of Mahillon, 2/1909, 1912, and Schlosser, 1920, give details of their construction). Those in Vienna are a matching pair of descant rackets (fig.3), already listed in 1596 in the Ambras Collection (there are facsimiles in Brussels, New York and Biebrich). The configuration of the bore in each of these instruments is the mirror-image of that in the other. The body of each is 120 mm high and 48 mm in diameter; the nine ducts, each 6 mm wide, are plugged to form a bore totalling a

2. *Diagram of central bore of the racket: (a) schematic vertical section; (b) horizontal section*

3. Pair of Renaissance descant rackets, before 1596, from the Ambras Collection (Kunsthistorisches Museum, Vienna)

little over a metre long. At intervals along this inner bore 17 holes are drilled at various angles, meeting up to form 11 external orifices which are stopped by the fingers and also three that vent the lowest note. There is also a water hole connecting through the bottom of the first duct. The positioning of the fingerholes enables the player to hold both hands at the same level on either side of the instrument, and to use the middle joints (phalanges) as well as the tips of the fingers where necessary. Each end of these instruments is covered by an ivory plate; through the centre of the upper plate is inserted a tapered metal staple on which the reed is fixed, surrounded by an ornamentally perforated, sleeve-like pirouette with an elliptical slit on top through which the reed-tip protrudes. The third surviving pirouette racket, in Leipzig (fig.4), corresponds to Praetorius's *Bass Rackett.* The pirouette of this instrument has a thin, flaring rim 51 mm wide like an eggcup; 20 holes in the bore are arranged to produce 12 fingerholes and four vent-holes. Kinsky (1925) ascribed this instrument to the same unknown maker of the Viennese pair; its base plate (now missing, but illustrated in de Wit, 1903) bore the name and crest of Carl Schurf, a court official of Ferdinand of Tyrol, active at Ambras in 1596. A replica of the instrument is in Brussels.

The pirouette of the Renaissance racket represents a further stage of development from the wind-cap of the crumhorn (where the reed was entirely outside the player's direct control) and from the pirouette of the shawm (against which the player pressed his lips, allowing the reed to vibrate freely inside his mouth). With the racket, the player's lips control the reed blades but are supported and helped very effectively by the pirouette to produce and maintain the loose embouchure demanded by the low tessitura; this device also adds, surprisingly, a considerable degree of resonance to the tone. No original reeds survive; Seidl (1959) recommended one modelled on a surviving



4. Renaissance bass racket, ?c1580 (Musikinstrumenten-Museum der Universität, Leipzig)

Vienna crumhorn reed: medium arch, rather soft without spine, with a blade about 30 mm long and about 18 mm wide at the tip.

A suggestion of an additional, different technique of blowing can be found in Praetorius. He indicated that, although the number of notes would usually correspond to the number of holes, an expert could produce more notes with a good reed, but that 'falsetto' playing was seldom used. This suggests that, by using a harder reed and forgoing the support offered by the pirouette in order to control the reed entirely with the lips, an expert player could extend the range upwards by overblowing; it is known that this more modern technique was already coming into use about this time on the shawm. An ivory carving by Christoph Angermair in Munich (Bayerisches Nationalmuseum; see fig.1 above), datable 1618–24, shows the instrument apparently being played in this fashion. Another roughly contemporary source has recently come to light which shows the same technique. Here the more decorated model of instrument has body and pirouette covered in tooled leather, while the ornate tips and base plate are of gilt bronze. It is perhaps significant too that Mersenne in 1636–7 showed the racket, which he called the 'cervelat harmonique', without any pirouette at all. Using this technique Seidl claimed to obtain almost an extra octave.

The racket never had a wide distribution and was rarely depicted; the only other iconographic source of one being played is an illumination (datable 1565–70) by Hans Mielich in Munich (*D-Mbs*; *see* LASSUS, fig.4). Three instruments are also depicted on the title-page of Praetorius's *Musae Sioniae*, 1609 and 1610. References in inventories in Germany, Austria, Bohemia and Italy start to appear in the last quarter of the 16th century, but there is evidence that by about 1630 the instrument had already started to fall out of use, like its other cylindrical relations the kortholt and sordun. Praetorius described the racket's tone as 'quiet, almost like blowing through a comb. The effect of an entire consort lacked grace, but when a gamba was added, or one was used alone with other wind and strings and played by an expert, it was an attractive instrument, especially effective in the bass'. Although its depth of compass exceeded that of the deepest shawms and dulcians, it lacked their tonal strength and expression and became obsolete by the mid-17th century.

A modified version of the instrument, called the Baroque racket or bassoon-racket, has survived in greater numbers. In 1730 Doppelmayr wrote that the elder Denner, Johann Christoph (1655–1707), reproduced in improved form the *Stock-* or *Rackettenfagotte* already known from early times. A racket attributable to Denner, now in Vienna (facsimile in Brussels), shows what the differences of construction were. The wooden body, 190 mm high and 87 mm in diameter, has ten cylindrical bores increasing in size from 10 mm to 23 mm; the narrowest receives a coiled brass crook (missing here) and the widest in the centre a short pepperpot bell made of ivory. The irregularly conical composite bore, with its ten fingerholes taking the range down to C and with its ability to overblow at the octave, makes the instrument correspond in range and behaviour to the contemporary dulcian. There is a further example in Nuremberg. A Denner racket was among the instruments belonging to the Medici court in Florence (inventory of 1716), and makers in Germany, the Netherlands and France also took up the

5. Baroque racket by W. Wyne, Nijmegen, late 18th century (Musikinstrumenten-Museum, Berlin)

idea. Specimens survive in the museums of Berlin and Munich (two each), Paris, The Hague and Copenhagen. These substitute a pear-shaped or shortened bassoon-type bell for Denner's perforated capsule; sometimes projecting bushes or 'teats' are added to those holes stopped with the phalanges. Some instruments are covered in leather and have two or three keys. The latest, by Tölcke of Brunswick and Wilhelmus Wyne (1730–1816) of Nijmegen (fig.5) are datable to the end of the 18th century. Macquer (1766) considered that 'ils sont fort agréables à jouer, et ont des basses très-majestueuses pour un aussi petit volume'. However, such an instrument, being essentially nothing more than a bassoon in racket form, was never more than a curiosity and failed to survive, even as a mention in contemporary reference works. Hawkins reported that one of the Stanesbys made a *cervelat* according to the dimensions given by Mersenne, 'but it did not answer expectation: by reason of its closeness the interior parts imbibed and retained the moisture of the breath, the ducts dilated, and broke. In short the whole blew up'.

In recent years modern versions of both the Renaissance and Baroque racket have been available, the former usually fitted with a plastic reed. This instrument in particular, with its deep compass and characteristic throaty tone, has been found useful in performing music of the period.

WILLIAM WATERHOUSE

Rackstraw, William. *See* ROCKSTRO, W.S..

Racquet, Charles (*b* Paris, 1597; *d* Paris, 1 Jan 1664). French organist and composer. He was the most important member of a family of organists who flourished in Paris during the 17th century. Early in his career he returned from a journey abroad (his will mentions Germany) laden with honours – seven medallions and a silver crown. His early appointment as organist of Notre Dame in 1618, a post he held until shortly before his death, also shows him to have been highly regarded in Paris. Like his father, Balthazar, he enjoyed royal patronage as *Organiste de la musique ordinaire* to Marie de Médicis. He was also much admired by fellow musicians: Denis Gaultier honoured his memory with a *tombeau*; and Mersenne considered him 'one of the best contrapuntists of this age'. In his *Essai sur la musique ancienne et moderne* (Paris, 1780/R1972) J.-B. de La Borde called him 'the best organist of his time'.

It is to Racquet's acquaintance with Mersenne that we owe most of the surviving examples of his work: *12 versets de psaume en duo* (music examples in M. Mersenne: *Harmonie universelle*, Paris, 1636–7, chap. 'De la composition') and a piece – called *Fantaisie* in modern editions – written in response to Mersenne's request for something that would 'show what could be done at the organ' (MS in Mersenne's copy of *Harmonie universelle*: Paris, Bibliotheque du Conservatoire des Arts et Métiers; edns. of all these pieces, L'Organiste Liturgique, xxix–xxx, Paris, 1961). The last-named piece is on a large scale: a single theme is treated contrapuntally over some 100 bars, culminating in brilliant passage-work over dominant and tonic pedals. It well confirms the verdict of the age on its composer. Another five pieces (in *F-Pn* MS Neerlandais 58) are by 'Racquet', possibly Charles (see Goy). They are arrangements for carillon of more sophisticated organ or harpsichord pieces.

EDWARD HIGGINBOTTOM

Racy, Ali Jihad (*b* Ibl al-Saqi, south Lebanon, 31 July 1943). American ethnomusicologist and performer of Lebanese origin. He gained the BA in Music History at the American University of Beirut (1968) and then moved to the USA to study with Bruno Nettl at the University of Illinois (MA 1971, PhD on commercial recording in Egypt, 1977). He has taught at several American universities, including Washington University, Seattle (1977–8), and in 1978 became professor of ethnomusicology at UCLA. Racy is known for his pioneering research on music of the Arab world, particularly Lebanon, Egypt and the Arab Gulf region. Although settling in the USA, he has conducted field research in Egypt and Lebanon (for example he worked among the Druze of Lebanon in 1970, he resided in Cairo during the summers of 1972 and 1973 and in 1988 he spent six months in the Arab Gulf area at Doha). In his writings, he has focussed on Lebanese laments, ecstasy in Arab music, modal improvisation, the early record industry in Egypt, Arab folk instruments, and nomadic-rural-urban musical connections in the eastern Mediterranean world. Racy is also a performer of many traditional instruments, particularly the double strings long-necked lute *buzuq* and the oblique rim-blown flute *nāy*. He has performed with and composed music for the Kronos Quartet and has played with the Sacramento SO.

CHRISTIAN POCHÉ

Radeck, Johann Martin (*b* ?Mühlhausen, ?1623; *d* ?Copenhagen, 1684). Danish organist and composer of German origin, son of JOHANN RUDOLF RADECK. He became organist of Trinitatis Kirke, Copenhagen, in 1660 and, after his father's death in 1662, of Helligåndskirke there as well. In 1670 he married the sister of Poul Christian Schindler; after Radeck's death she married his successor, Christian Geist. A little manuscript music by him has survived, including a cantata, *Herr, wenn ich nur dich habe* (in *S-Uu*), a set of variations for organ on the chorale *Jesus Christus unser Heiland* (in *D-Bsb*, ed. B. Lundgren, Copenhagen, 1957) and a keyboard suite in German organ tablature (in *S-L*).

JOHN BERGSAGEL

Radeck, Johann Rudolf (*b* Mühlhausen; *d* Copenhagen, 1662). Danish organist and composer of German origin, father of JOHANN MARTIN RADECK. He was Kantor of the Divi-Blasii-Kirche, Mühlhausen, from 1633 to 1635, and of St Marien, Flensburg, from 1635 to 1645. He may have visited Copenhagen in 1638 and 1639, when some of his compositions were copied there (see *The Clausholm Fragments*, ed. H. Glahn and S. Sørensen, Copenhagen, 1974, pp.40, 42ff). From 1645 until his death he was organist of the Helligåndskirke, Copenhagen. Two keyboard pieces, bearing his initials and added in manuscript to a copy (in *DK-Kk*) of Voigtländer's *Oden unnd Lieden* (Sorø, 1642, ed. in Glahn), are probably by him.

JOHN BERGSAGEL

Radeker, Henricus (*b* 1708; *d* 1774). Dutch organist and composer. His father, Johannes, was an organ builder. Henricus went to live at Leeuwarden in 1724 and was appointed organist at the Lutheran church there. In 1729 he was made organist of the Grotekerk (St Michael) in Zwolle, and in 1734 of the Grotekerk (St Bavo) in Haarlem, where he was the first to play the large organ completed by Christian Müller in 1738. He delighted in displaying its wealth of colour by imitating birdcalls, drumrolls and battle scenes. Radeker was in demand as an inspector of organs in the Netherlands, and he also directed the collegium musicum in Haarlem. He published in Amsterdam a capriccio (op.1) and a concerto (op.2) for keyboard, as well as two sonatas (op.3) for harpsichord with obbligato violin.

Radeker's son Johannes (1738–99) was also an organist. He published two sets of three sonatas for keyboard with violin and wrote a description of the Müller organ at St Bavo, *Korte Beschryving van het beroemde en prachtige Orgel, in de Groote of St. Bavoos-Kerk te Haerlem.*

HANS VAN NIEUWKOOP

Radermacher, Erika (*b* Eschweiler, 16 April 1936). Swiss pianist, singer and composer of German birth. She studied the piano in Cologne and Vienna, won major prizes in Germany and Austria, and has performed throughout Europe. After marrying the Swiss composer Urs Peter Schneider she moved to Switzerland, where she was appointed to teach at the Berne Conservatory. She is a member of the Berne contemporary music group Ensemble Neue Horizonte. As a singer one of her principal interests is experimental improvisation. She began to compose in the 1970s and many works have been recorded by Swiss radio. Her compositions include the opera *Das Tanzlegendchen* (1990), a Concerto grosso for strings (1987–8), *Der Tod des Empedokles* for two pianos with ensemble or orchestra ad lib (1992) and a considerable number of chamber works.

WORKS
(*selective list*)

Stage: Das Tanzlegendchen, op.26 (op, after G. Keller), 1990
Orch: Conc. grosso, op.22, str, 1987–8; Der Tod des Empedokles, op.31, 2 pf, opt. ens/orch, 1992
Vocal: 7 Rosen später (P. Célan), op.5, S, ens, 1981; 21 Eisgesänge, op.23, 1v, pf, 1988

Hoffmann, op.4, 2 pf, 1981–3; Chi order X, variations, op.7, vn, pf, 1983; Pf Trio, op.12, 1985; Str Qt, op.13, 1970, rev. 1984–5; Ein apokalyptisches Fragment, ritual after K. von Günderode, op.17, fl, 2 gongs, 1987; 7 Verehrungen der Glühwürmer und der Selbstzufriedenheit, op.20, pf, 1987; 11 Lobgesänge auf das Erwachen der Blüten und der Frösche, op.24, fl, pf, antique cymbals, 1989; 15 Ahnungen der Vergänglichkeit allen Lebens und der Vogelscheuche, op.25, hn, pf, 1989; 5 Glücksrufe, op.28, 3 trbn, 4 gongs, 1990

CHRIS WALTON

Radesca (di Foggia), Enrico Antonio (*b* Foggia, 2nd half of the 16th century; *d* Turin, between 17 April and 19 July 1625). Italian composer and organist. As a young man he served with the Venetian army in Dalmatia. By 1597 he had turned to a musical career and was working in Piedmont, possibly, according to Moffa (1986), in Vercelli. By 1601 he was living in Turin and may already have been working as a chamber musican in the service of Don Amadeo, brother of the Duke of Savoy. By 1604, and not earlier than 1602, Radesca had been appointed organist of Turin Cathedral, and by 1615 he was its choirmaster. He was a chamber musician at the ducal court by 20 June 1610, and by 1615 was *maestro di*

cappella there and at the cathedral. He contributed music to theatrical presentations at court. He fought with the Duke of Savoy against the Gonzagas for the possession of Monferrato; for this service he was awarded, in May 1617, a farm confiscated from the traitorous captain Costantino Radicati. Radesca was granted citizenship of Turin on 29 September 1606 and was naturalized on 14 September 1619.

Radesca seems to have been a popular and admired composer: several of his publications were reprinted, and Banchieri paid him the compliment of including an aria 'in imitation of Radesca' in the second edition of his *La barca di Venetia per Padova* (1623). He was among the earliest composers of sacred music for small vocal ensemble and continuo. His response to Florentine secular monody was, however, more equivocal. He published no real monodies until 1610, preferring instead to issue music for two voices in which the lower voice also served as an unfigured *basso seguente*. This type of duet, which enjoyed some popularity in the early 17th century, appears to have evolved as a reduction to the two outer voices of a three- or four-voice canzonetta texture. The lively and very attractive style that Radesca cultivated in his duet settings of both madrigalian and strophic texts is clearly descended from the 16th-century canzonetta: the music is largely homophonic and diatonic but contains points of imitation 'lightly touched' (to use a phrase of Thomas Morley's) and occasional chromaticism. In an interesting preface to Radesca's 1617 book (not the 1605 book as stated in *SchmitzG*) Ludovico Caligari, who had commissioned the work, stated that he had asked the composer to omit complicated passage-work, which could in any case be added by skilled singers. He also mentioned that the three-part pieces could be performed as solos for soprano or tenor or as duets for soprano and bass: the book, which consists entirely of settings of spiritual texts, was thus clearly intended for the widest possible use.

WORKS

SACRED

Messe, libro primo, 4vv, bc (Milan, 1604)
Armoniosa corona: concerti, il primo libro de motetti, salmi, et falsi bordoni, 2vv, bc (Milan, 1607[7])

JOHN WHENHAM

Radford, Robert (*b* Nottingham, 13 May 1874; *d* London, 1 March 1933). English bass. He studied in London, making his début in 1904 at Covent Garden as the Commendatore. He sang Hunding and Hagen in 1908 in the first *Ring* cycle in English, conducted by Richter; Pogner (*Die Meistersinger*) and Abbot Tunstall in the première of Naylor's *The Angelus*, 1909; and, in 1910, Claudius (*Hamlet*) and Tommaso in the British première of *Tiefland*. During the war years he sang with the Beecham Opera Company on tour and in London, when his roles included Boris. Returning to Covent Garden as a founder-member of the British National Opera Company in 1922–3, he appeared as Méphistophélès, the Father (*Louise*), King Mark and Osmin. His firm, resonant voice and superb diction were particularly admired in Wagner, as his recordings of Wotan in Act 2 of *Die Walküre* and of Hagen's Watch and Call of the Vassals demonstrate.

ELIZABETH FORBES

Radić, Dušan (*b* Sombor, 10 April 1929). Serbian composer. He graduated from the Belgrade Academy of Music as a composition pupil of Živković and then spent a short time in Paris, studying with Milhaud and Messiaen. He was elected to corresponding (1972) and full (1983) membership of the Serbian Academy of Arts and Sciences. In 1979 he was appointed professor at the Academy of Art in Novi Sad.

Resembling closely the music of Stravinsky, Radić's neo-classical style is restrained and, at times, inspired by Balkan folklore. He has shown particular interest in composing for chorus and orchestra, emphasizing various ways of treating text.

He has set poetry by Vasko Popa in *Spisak* ('The List', performed in its revised version at the 1956 ISCM Festival), *Uspravna zemlja* ('The upright country'), which evokes the ancient beauty of Serbian monasteries, and *Ćelekula* ('The Skull Tower'), a cantata concerning the struggle of the Serbs against the Turks in the 19th century. *Oratorio profano* (1973), which uses a collage technique, offers an alternative vision of the contemporary world. Of his instrumental works, the Sinfonietta is serene, the Divertimento is vibrant and humorous and the *Sonata lesta* is inventive.

WORKS

(*selective list*)

Stage: Balada o mesecu lutalici [Ballad of the Roaming Moon] (ballet), 1957; Ljubav, to je glavna stvar [Love, that is the Principal

Thing] (musical comedy-ballet, after Molière: *M de Pourceaugnac*), 1962
Vocal: Spisak [The List] (Popa), 1v, pf, 1952, rev. 2 female vv, chbr orch, 1955; Predeli [Landscapes] (melodrama), reciter, 4 insts, 1953; U očekivanju Marije [Awaiting Maria] (cant., V.V. Mayakovsky), 1955; Opsednuta vedrina [The Obsessed Brightness] (Popa), chorus, 2 pf, 1956; Ćelekula [The Skull Tower] (cant., Popa), solo vv, chorus, orch, 1957; Uspravna zemlja [The Upright Country] (cant., Popa), 1965; Vukova Srbija [Vuk's Serbia] (cant.), 1971; Oratorio profano, 1973; choruses, song cycles

STANA DURIC-KLAJN/ROKSANDA PEJOVIĆ

Radic, (Maureen) Thérèse (*b* Melbourne, 7 Sept 1935). Australian music historian. She studied at the University of Melbourne (MusBac 1958; MMus 1969) and gained the PhD in 1978 with a dissertation on Melbourne Musical Associations. She has published biographies of George Marshall-Hall, Dame Nellie Melba and Bernard Heinze and two anthologies of Australian folksong (*A Treasury of Favourite Australian Songs*, Melbourne, 1983; *Songs of Australian Working Life*, Melbourne, 1989). As Australian Research Fellow in the Department of Music at Monash University (1991–5) she commenced writing *A History of Music in Australia*, exploring her interest in the uses of music in the shaping of society. She has been active as an arts policy adviser (member of the executive body of the Australia Council 1984–7), with a particular concern for women in music. She has also had success with biographical plays on Percy Grainger and Dame Nellie Melba.

KAY DREYFUS

Radica, Ruben (*b* Split, 19 May 1931). Croatian composer. He acquired a basic knowledge of music from his grandfather, the composer Josip Hatze. At the Zagreb Academy he graduated from the conducting class of Zlatić (1957) and from the composition class of Kelemen (1958). In addition he attended classes given by Frazzi, Leibowitz, Messiaen, Ligeti, Boulez and Pouseur at Siena, Paris and Darmstadt variously. After teaching at the Sarajevo Music Academy (1959–63) Radica joined the staff at the Zagreb Academy as a lecturer in music theory.

After tending initially towards neo-classicism (i.e. in *Četiri dramatska epigrama*, 'Four Dramatic Epigrams', 1959, and the *Concerto abbreviato*, 1960), Radica became influenced by Leibowitz's interpretation of the works of Schoenberg and Webern. This first became apparent in *Lirske varijacije* ('Lyrical Variations'). His organization of musical material is aimed at communicating ideas which can also be described verbally but without recourse to programmaticism. The result is a specific kind of expressivity, demonstrated in *19 & 10* (1965) and *Pasija* ('Passion', 1981), that is perhaps typical of his style. In certain works he has included aleatory procedures, as in *Per se II*. In *K a* ('Towards A') he explores melodic texture (expressed through 'a' being both pitch and its accompanying melodic fragment) with the aim of returning to simplicity and the work's original source. His compositional interests in later works focus on the relation between accentual speech patterns and motivic musical ideas (e.g. in *Pasija* and *Prazor*, 'Primordial Sight'), resulting in a style that is reminiscent of composers such as Janaček or even Stravinsky at the turn of the 20th century.

WORKS
(selective list)

Stage: !?Koreografska muzika (dance score), ens, tape, 1962; Formacije [Formations] (media ballet), tape, 1963; Fuga (media ballet), tape, 1980; Prazor [Primordial Sight] (mystery, 10 scenes, after J. Kaštelan), 1987–90

NIKŠA GLIGO

Radical bass. *See* FUNDAMENTAL BASS.

Radical cadence. A CADENCE whose penultimate and final chords are both in root position, as opposed to a 'medial' or 'inverted' cadence, whose penultimate chord is in inversion.

Radicati, Felice Alessandro (*b* Turin, 1775; *d* Bologna, 19 March 1820). Italian composer and violinist. He studied violin with Gaetano Pugnani and in 1800 began his career as a performer, travelling within Italy, as well as to France, Vienna, London, Dublin and Lisbon. In 1801 he married the singer Teresa Bertinotti. During his performance tours he also wrote and had performed various orchestral and chamber compositions and operas. In 1809 his opera *Coriolano* was produced in Amsterdam, and while he was in London *Fedra* (1811) had its première. Returning to Turin in 1814, he took up the position of *maestro* at the Cappella. In 1815 he was appointed to the directorship of the Municipal Orchestra in Bologna where he remained until his death, serving also as first violinist at the Teatro Comunale (1816–17), *maestro di cappella* at S Petronio and professor of violin at the Liceo Musicale. He published his teaching method *Applicazione del mutuo insegnamento alla musica* in Bologna in 1819. His students included Giuseppe Manetti, who is credited with establishing the Bolognese Violin School in the mid-19th century.

Radicati was a strong proponent of chamber music in the late 18th and early 19th centuries, and wrote string quintets and quartets as well as trios, duets and solos for various combinations of string instruments. He drew praise from contemporaries, including Paganini and Beethoven. He also wrote two concertos, one for violin and the other for clarinet. His works are characterized by bold harmonic language and formal freedom and have been described by modern commentators as eloquent. Many of Radicati's chamber works were published during his lifetime by Artaria, Cappi, Ricordi, Schott and Weigl.

ROBERTA MONTEMORRA MARVIN

Radicati, Teresa. *See* BERTINOTTI, TERESA.

Radiciotti, Giuseppe (*b* Iesi, 25 Jan 1858; *d* Tivoli, 6 April 1931). Italian composer and musicologist. He studied music with Faini, his uncle, and then with Baffo and Puccinelli (harmony and counterpoint) at Rome, where he also took an arts degree at the university. In 1881 he taught history at the Ginnasio-Liceo, Tivoli, of which he later became director. He was an active composer (school songs, works for band, church music), but his main work was in musicology, where he implemented a historic-critical approach which was still new in Italy at that time. Much of his research was on the music of the Marche region which he scrupulously documented. He also wrote the first serious monograph on Pergolesi (1910). His most important work was the three-volume *Gioacchino Rossini* (1927–9), which, in addition to providing an impressive biography, tried to establish Rossini's originality in musical forms, harmonic language and instrumentation. When difficulties arose in publishing the work Radiciotti offered it to the Istituto Rossiniano, renouncing any commission and promising to cover printing expenses not reimbursed by sales. At his death he was preparing a similarly thorough work on Spontini.

CAROLYN GIANTURCO

Radino, Giovanni Maria (*b* mid-16th century; *d* after 1607). Italian composer and organist. From the dedication he wrote for his son Giulio's posthumous *Concerti per sonare et cantare* (RISM 1607[8]) we learn that he spent his early life in Carinthia in the service of the family of the Count of Frankenburg. According to Tebaldini, he applied unsuccessfully for the post of organist at the *cappella* of S Antonio, Padua in 1579. The title-page of his *Primo libro d'intavolatura di balli d'arpicordo* (1592) described him as organist of S Giovanni di Verdara, Padua, a post he still held in 1598, when his anthology, *Madrigali de diversi*, was published.

Radino's most important music is contained in the *Primo libro d'intavolatura d'arpicordo*, the first Italian collection of dances for which the harpsichord is specified. A version for lute, *Intavolatura di balli per sonar al liuto*, appeared in the same year. Each contains a passamezzo paired with a galliard, two paduanas and four separate galliards. The two versions differ, however, not only in details of texture and layout but also occasionally in structure: for example, in the lute version of the passamezzo there is an additional variation, and the order of its sections is changed. Radino's keyboard writing consists mainly of a single-line melodic part in the right hand interspersed with some chords, plus a fuller left-hand accompaniment. But whereas Marco Facoli, his predecessor in the publication of dance tablature, used only plain chords with passing tones for his accompaniments, Radino occasionally introduced imitation between the hands and at times gave the left hand the principal part. He thus made an important contribution to the development of the keyboard dance in Italy.

WORKS

all published in Venice

Il primo libro d'intavolatura di balli d'arpicordo (1592); ed. in CEKM, xxiii (1968); arr. lute in Intavolatura di balli per sonar al liuto (1592); ed. G. Gullino (Florence, 1949)

ed.: Madrigali de diversi, 4vv (1598[9]), inc. [includes dialogue-madrigal, D'Eugenia almi pastori, 8vv, by him]

HOWARD FERGUSON

Radino, Giulio (*d* before 1608). Italian composer, son of GIOVANNI MARIA RADINO. In the dedication of his posthumous *Concerti per sonare et cantare* (RISM 1607[8]), his father wrote that Giulio had been in the service of a son of the Count of Frankenburg (in Carinthia) until death 'thwarted his just hopes in the flower of his youth'. The volume contains 16 pieces by him: 13 vocal works to sacred texts and two canzonas and a ricercare for instruments; it also includes vocal pieces by four other minor composers. His father included one piece by him in his anthology *Madrigali de diversi* (RISM 1598[9]), of which no complete copy survives.

HOWARD FERGUSON

Radio. The purpose of this article is to outline the history of music in radio and to examine the influence of radio on the dissemination and composition of music. For the development of the technical foundations of radio broadcasting, *see* RECORDED SOUND, §II.

I. Introduction. II. General history. III. Analysis by region. IV. International organizations and networks. V. Impact on musical life. VI. Radio as patron.

I. Introduction

The musical landscape of radio around the world has changed significantly since the beginning of broadcasting in the 1920s, and it continues to evolve with constant technological advances. Radio stations were used throughout the 20th century for propaganda purposes by totalitarian governments, who maintained strict control over the dissemination of information. With the fall of the Berlin wall in 1989 government control was relaxed, and some of the geographical boundaries that had separated cultures and countries, and barred international broadcasting, began to dissolve. Most democratic governments have appointed independent broadcasting authorities to monitor and regulate both private and public broadcasting since the 1960s and 70s, and no longer uphold policies that routinely affect the dissemination of radio programmes, whether cultural or concerned with current affairs. International cooperation between national broadcasting services also reached new heights in the 1990s, and cost-sharing made larger-scale music programmes possible under the auspices of regional broadcasting unions. Moreover, with the liberalization that led to the abolition of broadcasting monopolies (first in western Europe in the 1970s and 80s, followed by Asia and eastern Europe in the 1990s), private stations have carved niches in specialized programming, including classical music channels. Although some private stations are sponsored by media conglomerates that dictate programming choices, the range of fare offered to the musical public was widened because of the healthy competition between private and public broadcasting.

II. General history

The scientific developments that led to the growth of broadcasting can be traced back to the 17th century, when T. Browne and S. Reyher introduced the concepts of electricity (1646) and acoustics (1693); but only with the development of applied electricity and telegraphy in the late 19th century did transmission over long distances become possible. Helmholtz expounded the theory of hearing and resonance in 1863, Hertz discovered ether waves in 1887, Marconi invented wireless telegraphy in 1896, and in 1900 W. Duddell constructed the first arc transmitter. Meanwhile there were numerous experiments with the telephone, developed by Alexander Graham Bell in the 1870s. Some transmissions were of music: in 1881 C. Adler transmitted in stereo from the Paris Opéra to a pair of headphones at an exhibition, and music was transmitted by telephone from the Leeds Festival. The first experiments in wireless telegraphy were aimed at point-to-point transmission, mainly to extend telephone communication over the sea, and the potential of the

medium for mass communication was only gradually realized. The early development of the medium was largely the result of amateur efforts in Europe and the USA, and it is significant that although these were well under way by World War I it was not until 1919 that a government took part in such experiments, when broadcasts from Chelmsford, Essex, began.

The first radio station to transmit regular broadcasts was in Pittsburgh, Pennsylvania; it went on the air in 1920, followed in 1922 by the BBC, the first European station. Radio spread rapidly, and by 1930 Europe and the USA had comprehensive systems and several other countries were developing them. From the outset music occupied a high proportion of broadcast material, in the form of live relays, studio recordings (made on disc before World War II) and gramophone records. The record industry was well developed by the 1920s (*see* RECORDED SOUND, §I) and the two media were mutually beneficial, records being broadcast and broadcasting promoting their sales. Most pre-war stations had only a single channel broadcasting a mixture of features, news and various types of music. Increasing tension in the 1930s led to stricter government control on radio, particularly in Italy and Germany, where it was a means of propaganda; during the war many radio installations were destroyed, being strategic targets.

After the war technical developments made possible the expansion of the scope of broadcasting. Tape recording, developed by the Germans for military purposes, greatly facilitated the recording process, allowing editing, multi-track recording, higher-quality reproduction and easier storage; it also made *musique concrète* and electronic music possible. The introduction of frequency modulation (FM) in addition to amplitude modulation (AM) led to improved quality; FM was used for many of the second, third and fourth channels introduced by European stations, and made possible the introduction of stereophonic radio in the 1960s. The increase in the number of channels led in Europe to increased specialization, most networks devoting one channel to light entertainment and one to serious music and cultural programmes, although in the 1970s this trend was counteracted by the growth of local stations of the type that have remained the norm in American broadcasting.

With the decentralization of government control in information dissemination in the 1970s in western Europe, monopolies of public broadcasting systems were abolished, and private local, regional and national broadcasting licences were issued. The opening up of central and eastern Europe and of the global broadcasting market led to intense competition, and public radio stations have responded to calls to streamline their operation by reducing staff and performing ensembles, discontinuing certain specialized programmes, and focussing anew on public outreach.

Technological advances between the 1970s and the 1990s resulted in the introduction of satellite relays, connections via ISDN lines, digital transmission, and broadcasting on the Internet and the World Wide Web. Cable radio stations catering to minority audiences were also set up with private licences in many parts of the world. International radio networks tap into the technological resources to improve the sound quality of transmissions of music programmes and to reach the widest possible audience simultaneously across the globe. The 1980s saw the rise of personal radio-cassette players and headsets, which revolutionized the concept of private listening and musical space. The apparatus of the radio receiver, now a standard household item, seems likely to become obsolete as the information age advances.

III. Analysis by region

1. Western Europe. 2. Central and eastern Europe: (i) Czech Republic and Slovakia, Hungary, Poland, Romania (ii) Former Yugoslavia (iii) Albania, Turkey, Bulgaria (iv) Former USSR. 3. The Americas: (i) Canada (ii) The USA (iii) Latin America. 4. East Asia, South Asia, Pacific Rim: (i) China (including Hong Kong, Taiwan), Japan, Korea (ii) India and Pakistan (iii) Australia, Indonesia, Malaysia, New Zealand, Philippines, Singapore. 5. Middle East and Africa: (i) Egypt, Israel (ii) Africa, South Africa.

1. WESTERN EUROPE. In the alphabetical survey that follows, statistics are from the mid-1990s.

In Austria radio was developed through the work of amateur broadcasters in the years after World War I, and in 1923 the post office authorized the building of a station, Radio Hekaphon, by a private company in Vienna; it was short-lived, but stimulated interest in the possibilities of broadcasting. In 1924 a new company, Österreichische Radioverkehrs (RAVAG), was granted a monopoly, its licence specifying music broadcasts. It expanded rapidly, and by 1938 there were transmitters in the provincial capitals. The Salzburg Festival was relayed, and the facilities of the network were extended by the completion of the Funkhaus in Vienna. In 1938 RAVAG was absorbed into the Nazis' Reichsrundfunkgesellschaft, and radio became a military and propaganda medium. The Vienna and Graz stations continued to operate, while the others acted as relay stations either for them or for south German stations. After the war the occupying forces decentralized the network once more, as in Germany, and each Land (province) controlled its own station. In 1945 a second channel was created, devoted largely to cultural programmes and music, and in 1954 authority for broadcasting was passed back from the Länder to the government. In 1967 the Österreichischer Rundfunk (ÖRF) was organized as an independent public corporation. It provides about 200 hours of radio each day in the form of three national and nine local stations. Österreich 1 is Austria's cultural network and provides a 24-hour national service with an emphasis on news, arts and education, literature, science, and especially classical music. About 54% of its output is devoted to music – mainly classics, but some specific programmes of jazz, contemporary and light music. Of the music broadcasts, 56% are studio productions (either live or from tapes), 32% recordings and 12% relays, repeats or productions from other networks. The ÖRF SO was founded in 1969, with special emphasis on contemporary music. It gives its own concert series in Vienna (at the Konzerthaus and Musikverein) and appears at the Salzburg Festival. Many of its concerts are broadcast, and some are subsequently released as commercial recordings. Ö1 has listener share of 6·9%, while Ö2 and Ö3 make up 39·7%. Ö2 features folk music and local news, and Ö3 broadcasts popular music. Blue Danube Radio was founded in May 1992 as the fourth radio channel for the international community, and broadcasts in English, featuring much popular music. Ö3 was split into two stations, Ö3 and FM4, in January 1996. SCYPE (Song Competition for Youth Programmes in Europe) is an annual competition founded by Ö3 to

discover new talent in popular music. ÖRF's broadcasting monopoly lasted until 1994.

The development of broadcasting in Belgium was affected by the fact that two languages are spoken there. Early experimental broadcasts were stopped by World War I. Radio Belgique was established as a private station in 1923. Development was rapid in the 1920s, and in 1930 the Institut National Belge de Radiodiffusion (INR) was founded as a state monopoly. In 1940 it was taken over by the German government, and some exiled Belgian officials set up the Office de Radiodiffusion Nationale Belge in London in 1942; in 1945 the INR was restored. In 1960 it was reorganized as Belgische Radio en Televisie (BRT) and Radiodiffusion-Télévision Belge (RTB), having separate wavelengths for Flemish and French programmes, both of which give prominence to music. BRT and RTB lost their monopoly in 1980, when private radio licences were issued. In 1991 BRT was renamed Belgische Radio en Televisie Nederlands (BRTN) and RTB was renamed Radio-Télévision Belge de la Communauté Français (RTVB). Of the three national channels, Radio 3 broadcasts classical music and cultural programmes and has an audience share of 2·5%. Although in the 1970s there were three permanent radio orchestras and choirs, they were reduced to one orchestra and choir by 1995. Radio 21 is the national channel for contemporary popular music. Popular music is also featured in regional and national information channels. Bruxelles Capitale caters to older audiences for popular music.

In Denmark amateur broadcasters were active as early as 1907. Not until 1925 was a state network, Statsradiofoni, established, controlling all broadcasting. The broadcasting centre in Copenhagen was started in 1934 but was not completed until 1945, having been delayed by the German occupation; its concert hall opened in 1946. There was one station until 1951; a third began broadcasting in 1962. From 1959 Danmarks Radio (DR) was reorganized as an independent public institution. In 1996 there were three national channels, of which Channel 2 broadcasts classical music and Channel 3 popular music. The Danish RSO, founded in 1926, is considered the world's oldest radio orchestra. DR is the country's largest employer in the field of classical music, supporting, in addition to the Danish RSO, a radio choir, concert orchestra (for musicals, light classics and operettas), big band and girls' choir. Commissions have been given to orchestras, choirs and composers to promote the development of Danish music. Approximately 20 CD recordings are produced each year by the various ensembles of DR. Channel 2 arranges about 140 concerts a year (the Danish RSO performs once a week in the DR concert hall during the season) and organizes many competitions both nationally and internationally. DR enjoyed the broadcasting monopoly until 1988.

Regular broadcasting was started in Finland by an association of amateurs in 1924. The state station was founded in 1926, known at first as Oy Suomen Yleisradio and later renamed Oy Yleisradio (YLE). The Finnish RO (later RSO) was established in 1927; it is based in Helsinki, where it gives weekly concerts. A chamber choir was formed in 1962. A second channel for cultural programmes was established in the mid-1960s. By the mid-1980s the Finnish media were deregulated, and in 1995 there were 55 private radio stations in operation. YLE was further reorganized in 1993 with a management structure more like that of a business enterprise. It is still the principal radio station in Finland, with three channels. Channel 1 is devoted to classical music and cultural programmes, and Channel 2 to popular music during the day (but classical music through the night). Channel 1 has a national audience share of 7%. A champion of Sibelius and his music, YLE is host to the Sibelius International Violin Competition (inaugurated in 1965) and International Jean Sibelius Conducting Competition (1995). The Finnish RSO's 1995 series included many outreach programmes, including those described below (§V). Of the private local stations, Classical FM in Helsinki competes for its audience with Channel 1.

France was the scene of many of the earliest advances in radio; as early as 1881 a performance at the Paris Opéra was transmitted by telephone to listeners at an exhibition. In 1910 a commission studied the possibilities of radio, and in 1915 the first French–American radio link was made, from the top of the Eiffel Tower. Development was halted by World War I, but after 1918 private stations developed and in 1923 there were regular broadcasts, also from the Eiffel Tower. In the same year the government reaffirmed control over all broadcasting, but licences were issued to private stations, some of which formed part of the government's national network established in 1926. By 1933, 14 state and ten private stations were on the air, many of the latter associated with newspapers and largely devoted to politics. With the outbreak of war private broadcasting declined, and in 1941 all stations were taken over for military purposes; after 1945 all broadcasting was controlled by Radiodiffusion-Télévision Française (RTF). In 1963 the Maison de la RTF in Paris was opened, completing the process of centralization in French broadcasting. The radio orchestra, now the Orchestre National de France, was founded in 1934. From the 1950s cultural and educational programmes became more numerous, and music broadcasts were mainly on the France-Inter channel. In 1964 broadcasting came under the control of the Office de Radiodiffusion-Télévision Française (ORTF), a newly created body with a greater degree of autonomy, and in 1975 it was divided into six companies in an effort to decentralize control. Music is broadcast on all three channels: France-Inter, France-Culture and, above all, France-Musique, which carries music of all types. In addition to the Orchestre National, French radio supports the Orchestre Philharmonique Radio de France, the Choeur National de Radio France and the Maîtrise de Radio France (children's choir), all of which perform abroad as well as in France. The concert season offered by Radio France includes many choral, orchestral and chamber series. There are also annual festivals celebrating contemporary music (e.g. Présences), music from other cultural traditions, jazz and early music.

German scientists succeeded in transmitting music and speech as early as 1913, and music was broadcast to the troops during World War I. In 1923 a licence was granted to a station in Berlin, and in the following year studios were built in Leipzig, Hamburg, Munich, Cologne, Stuttgart, Frankfurt, Breslau and Königsberg. A national company was established in 1926, advised by regional 'cultural committees'. In the 1920s several of the stations, notably those of Berlin and Frankfurt, gave support to modern music, but with the rise of the Nazis the radio became increasingly used as a propaganda weapon, and

by late 1933 all the provincial companies were dissolved and radio centralized under Goebbels; the only music permitted was that of the German masters, with the exception of Mendelssohn. Other stations, including those of Austria and Czechoslovakia in 1938, were absorbed into the Reichsrundfunkgesellschaft as the Germans expanded their territories.

With the German defeat in 1945 the Allies controlled facilities in the western zones and developed a system free of government control. It was passed back into German hands in 1948–9. Radio was decentralized and organized partly according to the old states: Südwestfunk (SWF, Baden-Baden); Sender Freies Berlin (SFB, established in 1954 to succeed a subsidiary station of NDR founded in Berlin in 1946); Radio Bremen; Westdeutscher Rundfunk (WDR, Cologne); Hessischer Rundfunk (HR, Frankfurt); Norddeutscher Rundfunk (NDR, Hamburg); Bayerischer Rundfunk (BR, Munich); Saarländischer Rundfunk (SR, Saarbrücken); and Süddeutscher Rundfunk (SDR, Stuttgart and Heidelberg). WDR and NDR were originally part of Nordwestdeutscher Rundfunk, but separated in 1956. These stations are members of the Arbeitsgemeinschaft der Öffentlich-rechtlichen Rundfunkanstalten der Bundesrepublik Deutschland (ARD), the main purpose of which is the coordination of programmes. Each station broadcasts on two or three channels, one of which caters for 'minority' interests. An additional Berlin station, RIAS–Berlin, was formed in the American sector after the war; it was reorganized as part of DeutschlandRadio in 1993. From 1945 to 1990 East Berlin was the cultural centre of the German Democratic Republic (DDR), and the main cultural stations there were Radio DDR2 and Deutschlandsender (formerly Stimme der DDR), which later combined to form DSKultur (1990–94). Since the mid-1980s private radio stations have co-existed with public networks. After the reunification of Germany in 1990 the ARD expanded its membership to former East German networks: Mitteldeutscher Rundfunk (MDR, Leipzig) and Ostdeutscher Rundfunk Brandenburg (ORB, Potsdam). DeutschlandRadio (DR) is a corporation (incorporating RIAS and DSKultur) under the joint auspices of ARD and Zweites Deutsches Fernsehen (ZDF), and broadcasts two news and cultural programmes nationally from Cologne and Berlin, including much classical music. Of the regional stations, the following are categorized as 'cultural programmes', in which serious music (from symphonies to jazz) are broadcast: HR2, MDR Kultur, NDR3, Radio Brandenburg, Radio Bremen 2, SFB3, SR2 KulturRadio, S2 Kultur (from SWF and SDR) and WDR3. Bayern4 Klassik offers its listeners classical music 24 hours a day. Among the leading popular music stations are MDR Sputnik, N-Joy Radio (NDR) and WDR Radio Eins Live.

There have been many German radio orchestras, some devoted to 'serious' music: SWF-Sinfonie-Orchester Baden-Baden (founded 1946, Grosses Orchester des SWF until 1966), Kölner Rundfunk-Sinfonieorchester (1947, WDR), Radio-Sinfonie-Orchester Frankfurt (1929, Grosses Orchester des Südwestdeutschen Rundfunks until 1934, Grosses Orchester des Reichssenders Frankfurt until 1945, HR), NDR-Sinfonieorchester (1954), Radio-Philharmonie Hannover (1950, NDR), MDR-Sinfonieorchester and MDR-Kammerphilharmonie (1924, Ensemble of Mitteldeutscher Rundfunk until 1934, Orchester der Reichssenders Leipzig until 1939), BR-Symphonieorchester (1949), Rundfunk-Sinfonieorchester Saarbrücken (1937, merged with SR-Kammerorchester 1972, SR), Radio-Sinfonieorchester Stuttgart (1945, SDR). There are also orchestras and bands that offer lighter fare (operettas, dance and musicals): Kölner Rundfunkorchester (1947, formerly Orchester Hermann Hagestedt, WDR), WDR Big Band (1947, formerly Tanz- und Unterhaltungsorchester Adalbert Luczkowski), HR-Big-Band (1946, formerly Tanzorchester des Radio Frankfurt), NDR-Bigband (1945), Münchner Rundfunkorchester (1952, BR) and SDR Big Band (an independent ensemble associated with SDR). During the 'cold war' (1945–90), there were a number of radio orchestras in East and West Berlin. In 1994 the Rundfunk-Orchester und -Chöre Berlin took over the administration of the Rundfunk-Sinfonieorchester Berlin (1925, Grosses Funkorchester Berlin until 1945), Deutsches Symphonie-Orchester Berlin (1946, Radio-Symphonie-Orchester Berlin until 1953, RIAS), RIAS Jugendorchester (1948), RIAS Tanzorchester (1948), Rundfunkchor Berlin (1945) and RIAS Kammerchor (1948). Radio choirs include the Kölner Rundfunkchor (1948, WDR), NDR-Chor (1946), MDR-Chor (1946), MDR-Kinderchor (1948), Rundfunkchor des BR (1946) and Südfunk-Chor Stuttgart (1946, SDR). German radio stations remain a major force in the musical cultural landscape of the country, organizing festivals and competitions, promoting the avant garde and commissioning compositions (see §VI below).

In Greece the first station to begin regular broadcasting was established in Thessaloniki in 1928, and the government sponsored further stations in 1929. In 1936 it set up its own station, commercially operated by the Telefunken company, which went on the air in 1938; the radio orchestra was established in the same year. With the outbreak of war the government took over the station, but in 1941 it came under German control. In 1945 the Ethnikon Idryma Radiofonias (EIR) was established. It became a public institution holding the monopoly for broadcast media until 1975, when it was renamed Elliniki Radiofonica Tileorassi (ERT) on merging with the television station. ERT's third programme is the main carrier of Western art music. With the rise of private radio stations, a regional station specializing in Western classical music, Melodia, came to prominence in 1993 with an audience share of 3·3%. ERT also operates a light orchestra. Popular music and Greek national and folk music dominate the airwaves in the country.

Ríkisútvarp Íslands (RUV; Icelandic State Broadcasting Service) began operation in 1930. There are two national radio stations that cover the whole of Iceland, as well as three regional programmes. In addition, there are six private radio stations. Icelandic musical culture is diverse, and the radio stations broadcast the entire range from indigenous traditional music through classical to popular music. The Iceland SO (founded in 1950 with financial contributions from the state, the city of Reykjavík and RUV) makes regular radio broadcasts.

In the Republic of Ireland the first station, Radio Éireann, was founded in 1926, followed by another a year later; a more powerful transmitter was built in Athlone in 1932. Radio Éireann was reorganized in 1953; its symphony orchestra, the only one in the republic, contributes significantly to Irish musical life. The station also maintains a light orchestra and a choir. A national service was established in 1960 and renamed Radio Telefis

Éireann (RTÉ) in 1961. There are four stations on RTÉ; FM3 is devoted to classical music. The broadcasting monopoly of RTÉ was abolished in 1988, and almost all of the private commercial stations that have since flourished broadcast popular music or Irish folk music.

In Italy radio was under strict government control from its inception. The Unione Radiofonica Italiana (URI) was created in Rome in 1924, with regional stations in Milan, Naples and Palermo. During the 1920s Mussolini further tightened his control of broadcast material, and even opera and other music broadcasts were subject to approval by the government. In 1928 URI was replaced by a new broadcasting authority, Ente Italiano Audizioni Radiofoniche (EIAR); Ente Radio-rurale was created in 1933 partly with the aim of raising the cultural level of the rural population. In 1944 EIAR was transferred from Rome to Turin by Mussolini, while the Rome station was renamed Radio Audizioni Italia (RAI); with Mussolini's defeat EIAR ceased to exist. By 1958 RAI had three national networks, the third being devoted to cultural programmes and music, although music is also broadcast on the first network: it accounts for over half of the total output. Radio orchestras are maintained in Rome, Naples (1957), Milan (1925) and Turin (1931). An electronic studio, the Studio di Fonologia Musicale, operated in Milan from 1955 to 1977. Since the 1970s foreign radio stations have been allowed to broadcast in Italy. RAI began broadcasting in stereo in 1982. Among the classical programmes are important opera series, broadcast from regional opera houses around the country.

Despite its small size, Luxembourg developed one of the most widely heard stations in Europe, particularly important in serious music before World War II. The first amateur station went on the air in 1924, broadcasting concerts and drama. Interested citizens promoted the formation of the Société Luxembourgeoise d'Etudes Radiophoniques, a commercial station that was granted a monopoly by the government in 1930, when it was renamed the Compagnie Luxembourgeoise de Radiodiffusion (CLR). By that time it had listeners in France, Belgium, the Netherlands, Denmark, Germany, the British Isles and elsewhere. Serious music, both live and on record, was predominant between 1933 and 1939, exceeding that of any other pre-war station. In 1933 a radio symphony orchestra was formed, and from 1936 more time was devoted to light music. The station ceased operation with the outbreak of war, and in 1940 was taken over by the Germans as part of the Reich network; it was destroyed in 1944 by the retreating Nazis but restored after the war with foreign aid. In the 1950s a local FM station took over the cultural part of the service, and the AM station, popularly known as 'Radio Luxembourg', has become predominantly commercial in character, most broadcasts being of popular music. Luxembourg citizens were able to tune into broadcasts from neighbouring countries long before the dismantling of the broadcasting monopoly of CLT (Compagnie Luxembourgeoise de Télédiffusion, successor to CLR) in 1991. CLT is a private corporation whose owners include Belgian and French financial and media groups; these, however, have no influence on programming.

In the Netherlands specialized broadcasting began in Amsterdam in 1920; the first station to broadcast to the general public was that in Hilversum, opened in 1923. In 1925 it increased in power and became Hilversumsche Draadloze Omroep (HDO). Subsequently five broadcasting bodies developed, each representing a section of the population: the Algemeene Vereeniging Radio Omroep (AVRO), Katholieke Radio Omroep (KRO), Nederlandsche Christelyke Radio Vereeniging (NCRV), Vrijzinnig Protestantse Radio Omroep (VPRO) and Vereeniging van Arbeiders Radio Amateurs (VARA). These five organizations, each with its own studio and orchestra, shared broadcasting time on two stations at Hilversum, the technical administration of which was the responsibility from 1935 of Nederlandsche Omroep Zender Maatschappij (NOZEMA), owned largely by the state. The station was taken over by the Germans during the war, but the five organizations were restored afterwards and in 1947 organized themselves into the Nederlandse Radio Unie (NRU), again sharing time on two networks. In 1965 NRU was replaced by Nederlandse Omroep Stichting (NOS), and the monopoly of the pre-war companies was broken. In 1987 the Nederlandse Omroepproductie Bedriff (NOB) was founded to streamline the administration of the Dutch public broadcasting system in the face of competition from private stations. The radio sector of the NOS was renamed Nederlandse Omroepprogramma Stichting, comprising eight broadcasting bodies. The NOS system operates five public radio stations around the country; Radio 4 presents classical music, and Radio 3 (which enjoys 27% of the market share in audience) popular music. At the local level, there are 350 legal radio stations in operation. The average Dutch citizen listens to the radio for three hours a day. The NOS also broadcasts many concerts from the Concertgebouw and organizes its own 'Matinee Concerts' series. During the Amsterdam Mahler Festival of 1995, the NOS and its international network, Radio Netherlands, broadcast and recorded all of the performances (by the Berlin PO, the Vienna PO and the Concertgebouw Orchestra) for worldwide distribution via international radio networks. Other Radio Netherlands programmes include 'Live! at the Concertgebouw' and 'Live! from Rotterdam'. Hilversum is the centre of Dutch public broadcasting. Since 1995 most of the radio ensembles under the NOS – the Radio PO (founded in 1945), RSO, Radio Chamber Orchestra, Metropole Orchestra and Radio Choir – have regrouped under the Muziekcentrum van de Omroep (Music Centre for Broadcasting), which is financially separate from the NOS. However, some networks still make occasional use of their own ensembles, such as AVRO's 'Skymasters' Big Band. All of these ensembles tour nationally and internationally.

Private Norwegian broadcasting companies were active in Oslo from 1924, and by 1929 there were 13 stations. A state monopoly over broadcasting was established with the Norsk Rikskringkasting (NRK) in 1933. Schools broadcasts have been particularly important in Norway since 1931, except during the German occupation. The radio orchestra was formed in 1946. A national network, impeded by the mountainous nature of the country, was complete by 1965. Music occupies 40% of broadcast time, including relays from the Bergen Festival and concerts by the Oslo PO. The state monopoly was abolished in 1981, and by 1992 there were 422 local radio stations in operation, from which popular and classical music were broadcast. The eastern part of the country receives Swedish radio and television broadcasts.

In Portugal the Emissores Associados de Lisboa, a commercial concern, was formed by the union of various private stations that developed during the 1920s. In 1930 the government assumed control of all broadcasting, and in 1940 the Emissora Nacional de Radiodifusão (EN) was created. In 1974 the EN was reorganized in the wake of political changes. The newly founded Radiotelevisão Portuguesa-Empresa Pública (RTP/EP) runs a station Antena Dois that presents classical music and cultural programmes. The Portuguese RSO was formed in 1934. Private radio stations came into being from 1974, the most prominent being Rádio Renascença (organized by the Catholic party), whose second channel broadcasts popular music exclusively.

In Spain a concert was broadcast experimentally in 1920, followed by opera transmissions from Madrid in the next year. Amateur broadcasters were also active. In 1923 the state issued directives for the running of radio, but did not establish its own station. In that year Radio Ibérica began regular broadcasts, mainly of concerts and lectures, and during the 1920s many local stations were founded. In the 1930s they expanded their scope, with Union Radio, Radio España and Radio Sevilla becoming the largest stations. Cooperation between the stations developed, and from 1929 a state-owned organization was planned, but the Civil War of 1936–7 intervened. The government then took over Radio España, with Union Radio becoming the Sociedad Española de Radiodifusión (SER) and growing into the largest Spanish network. In 1942 Red Española de Radiodifusión was created, renamed Radio Nacional de España (RNE) in 1944. In 1951 all stations came under state control, although they were not absorbed into RNE; smaller stations include Radio España de Barcelona, Rueda da Emisoras Rato (RER) and various stations attached to the government political party, the church and the trade unions. In 1977 Spanish public radio was reorganized. Pro-Franco radio stations were consolidated and became the commercial Radio Cadena Española (RCE). As the classical station, Radio 2 of RNE broadcasts performances of Spanish orchestras (including the National RO), while Radio 3 caters to the young popular music audience. Since deregulation Spain has seen significant developments in private radio networks, the largest being Sociedad Española de Radiodifusión (SER), which has the biggest audience share, exceeding that of the RNE.

Broadcasting in Sweden, developed by amateurs in the early 1920s, came under government control in 1924, and in 1925 all broadcasting rights were vested in a single company, Radiotjänst. It remained independent during the war, thanks to Sweden's neutrality, and expanded considerably thereafter, particularly in the domain of music and cultural programmes. An FM network was established in 1955, carrying most of the serious music transmissions, and in 1959 the organization was renamed Sveriges Radio (later Sveriges Radio Television, SRT). Swedish broadcasting monopoly was abolished in 1979. As well as the Sveriges Radio network, of which the second channel is devoted to classical music, Stockholm has a private, local, 24-hour classical music station. Swedish Radio has long been a supporter of new music, with a radio symphony orchestra (formally constituted in 1937) based in Stockholm. Utbildningsradio (UR) is another national network that focusses on schoolchildren and educational programmes, in which classical music also plays a part.

The first official Swiss broadcasting station was established in 1922 in Lausanne and transmitted weather reports and recorded music. In 1923 a private organization, Utilitas, was formed to broadcast to French-speaking Switzerland. A network of stations quickly developed throughout the country, catering for all four languages spoken there: Radiogenossenschaft Zürich (1924), Radiogenossenschaft Bern (1925), Société des Emissions de Radio-Genève (1925), Radiogenossenschaft Basel (1926), Ostschweizerische Radiogesellschaft (St Gallen, 1930) and Società Cooperativa per la Radiodiffusione nella Svizzera Italiana (Lugano, 1930). In 1931 they formed a coordinating confederation, the Société Suisse de Radiodiffusion (SSR; Ger. Schweiz Rundspruchgesellschaft), and during World War II all were controlled by the Service de la Radiodiffusion Suisse. Their former independence was restored in 1945. In 1964 the SSR was reorganized in three sections, catering to the French-, German- and Italian-speaking populations. Most of the serious music broadcasts are on the FM second network, established in 1956, and account for 30% of broadcast time. Music is also the most commonly treated subject in school broadcasts. The main radio orchestras are the Beromünster Studio Orchestra (Zürich, 1945, renamed the Beromünster RO in 1958; transferred to Basle in 1970, and renamed the Basle RSO), Orchestra della Svizzera Italiana, Lausanne SO and Orchestre de la Suisse Romande (Geneva), the last two employed only part-time by the SSR. Local, private stations were established when the SSR lost its monopoly in 1983. Swiss radio is active in promoting its music festivals worldwide, distributed by SRI (Swiss Radio International).

Since the beginnings of broadcasting in the UK, the BBC has used its unrivalled position to spread the knowledge and love of great music. It put out its first programme on 14 November 1922, striving in music as in other fields to attain the standards of excellence inculcated by John Reith, general manager of the British Broadcasting Company and later, when the company became a corporation under royal charter in 1927, the first director-general. Having the use of its own orchestras and choirs in the major cities, it has been able to disseminate music on a scale hitherto undreamt of. From 1923 onwards, London, Birmingham, Manchester and other centres broadcast symphony concerts, chamber music and studio opera productions. During the early years orchestras were enlarged, and choruses maintained as nuclei for large-scale performances of oratorios and other choral works. Among the earliest BBC concerts were six symphony concerts given in 1924 in the Central Hall, Westminster. The orchestra was the 'Augmented Wireless Orchestra', and the conductors included Elgar and Harty.

The outstanding event in the BBC's early musical history was the formation of the BBC Symphony Orchestra in 1930. With Boult as its permanent conductor, it consisted at first of 114 players, raised to 119 in 1934. The world's most famous conductors appeared as guests with the BBC SO soon after its foundation, among them Strauss, Weingartner and Walter, and in 1935 it was the first British orchestra to be conducted by Toscanini. In 1934 the BBC Northern Orchestra (from 1967 the BBC Northern Symphony Orchestra and from 1982 the BBC

Philharmonic) was founded as part of the general BBC policy to set up regional orchestras. The other two main regional orchestras were founded in 1935: the BBC Scottish Orchestra (BBC Scottish Symphony Orchestra, 1967), which began by playing light music and gradually acquired a more serious repertory; and the BBC Welsh Orchestra (BBC Welsh Symphony Orchestra, 1974, BBC National Orchestra of Wales, 1993), which evolved from an ad hoc assembly of players known as the Cardiff Studio Orchestra. The expansion of the BBC during the 1920s made new premises a necessity, and in 1932 its London headquarters were transferred from Savoy Hill to Broadcasting House. In 1934 extensive music studios were established in Maida Vale, and in the provinces the regional headquarters and studios were altered and enlarged.

At the outbreak of war in 1939 the national and regional programmes were combined into a single Home Service, later supplemented by a Forces Programme. In July 1945 the system of Home Service and Regional Programmes was resumed, with the Light Programme (successor to the Forces Programme) as an alternative. The inauguration of the Third Programme on 29 September 1946 was of far-reaching significance for all the arts, for music in particular. It devoted over half its time to music and had no fixed points, which meant that a whole evening could be devoted to an unfamiliar work, and audiences could be guided through the vast range from medieval to avant-garde music. A further expansion in music broadcasting began on 30 August 1964, when the Music Programme was introduced. This channel, running from early morning until the Third Programme took over in the early evening, provided an enormously wide range of music, including non-Western music, and many illustrated talks. A development comparable with the setting up of the Third Programme came to fulfilment in 1970, when the radio networks were reorganized on the lines recommended in the report *Broadcasting in the Seventies*. Under the concept of 'generic broadcasting', serious music was mostly segregated into Radio 3, pop music into Radio 1 and light music into Radio 2, while Radio 4 was mainly given over to the spoken word, though some serious music was still broadcast on this channel.

The BBC Singers (formerly the BBC Chorus, originally the BBC Wireless Chorus) are a permanent professional choir of 28 who sing regularly with the BBC SO. They also perform as professional 'stiffening' to the amateur BBC Symphony Chorus. Concerts given by outside orchestras, and performances by opera companies, are also often broadcast, and in that sense the BBC acts as a patron of many British musical organizations; it consciously aims to reflect national musical life at every level. It also acts as a patron of composers by commissioning new works, including much incidental dramatic music, often from leading composers.

The BBC's effective monopoly in the domestic broadcasting of serious music was broken in 1991, when the Independent Radio Authority awarded Britain's first national commercial radio franchise to Classic FM. The new station came on air in the summer of 1992, and with its recipe of classical 'hits' and easy chat was soon reaching an audience of over four million – more than twice that of BBC Radio 3. The success of Classic FM undoubtedly influenced some of the changes at Radio 3 during the following years, especially the creation of more 'accessible' programmes aimed at a wider, non-specialist audience. Not everyone was convinced by Radio 3's vehement denials that it was becoming too populist in its approach. But at the dawn of the new millennium the BBC remained unsurpassed for the breadth and quality of its musical output, and for its commitment to the commissioning and broadcasting of a wide range of new works.

2. Central and eastern Europe. State control of information dissemination (including broadcasting) was liberalized from 1989 in most countries in this area. Many governments not only allowed private radio to operate, but also permitted international radio networks, such as the BBC, Voice of America and RFI to enter the market. However, specialized music radio stations for classical music remain scarce, while most private commercial stations focus on news and current affairs, and young audiences and popular music.

(i) Czech Republic and Slovakia, Hungary, Poland, Romania. Czech radio began in 1923 as Radiojournal, based in Prague; Slovakian radio followed three years later in Bratislava. The radio histories of these two countries with compatible languages were intertwined until 1993, when the Czech Republic and Slovakia came into being. Partly taken over by the state in 1925, the radio system in Czechoslovakia relayed performances from the National Theatre (Smetana's *The Two Widows*) and Smetana Hall in Prague. The first studio opera production, Dvořák's *The Stubborn Lovers*, was broadcast in 1931. Radio orchestras were founded in 1925 in Prague and Brno (independent from 1956 as the State PO of Brno), growing from small ensembles to symphonic size in the late 1930s. In 1938 the stations were taken over by the Germans; they were nationalized in 1948. The Prague Spring Festival was relayed from 1946, and regular stereo broadcasting began in 1968. Since the war several orchestras have been founded, including the Prague RO, the Little RO of Brno (1945–51), the Brno Orchestra of Folk Instruments (1951) and radio orchestras in Bratislava (1926), Koşice and Plzeň (1946). In the mid-1960s Vladimír Lébl and Eduard Herzog promoted electronic music in Czechoslovakia by means of courses arranged in collaboration with Czechoslovak Radio. After 1989 state radios were decontrolled, and from 1991 Czech Radio (CR) and Slovak Radio (SR) evolved separately, while many private radio stations were set up, and foreign stations (e.g. the BBC, Voice of America, ÖRF International) were allowed to broadcast in both countries. The national classical music station of CR, Vltava (CRo 3), broadcasts 52% classical music, the rest being contemporary, ethnic, jazz and other cultural programmes. CR's non-broadcasting activities include many competitions: Concertino Praga (young soloists), Concerto Bohemia (national youth orchestras), Prix Bohemia (international original radio works festival, founded in 1976) and Prix Musical de Brno (radio music programmes). Ensembles and orchestras organized by the CR include the Prague RSO, Plzeň RO, Disman Children's Dramatic Ensemble and the Children's Radio Choir. In 1995 CR established its own record label; about 30 titles have been issued, mainly from the archives. SR broadcasts two national programmes, S1 and S2, both of which carry much music, S2 being the main cultural and classical music programme. There is a strong sense of regional identity in Slovakia, where two networks, Elan and

Regina, both concentrating on folk music, combined to form S3 in 1991. There are many private radio stations in both the Czech Republic and Slovakia, some of which are joint ventures with other European private stations. One of the most popular private stations in Slovakia, Rock FM Radio, is partly owned by British interests. Rock FM Radio has the second largest market share after S1, the principal news and information station.

There were telephone broadcasts in Hungary as early as 1893, and experimental radio broadcasts after World War I. A state broadcasting enterprise under the control of the post office was established in the mid-1920s. Commercial broadcasting developed in the early 1930s, but was abandoned after World War II when a nationwide service, centralized in Budapest and strictly controlled by the government, was set up. In the late 1950s some local stations were established, and in 1958 a new broadcasting authority, Magyar Rádió és Televízió, was founded. As in most parts of eastern Europe the education of youth is stressed, and radio has played a large part in the general raising of musical culture characteristic of postwar Hungary. More than 60% of broadcast time is devoted to music, and many festivals are promoted by the radio. Magyar Rádió remains a government-controlled institution despite the end of the 'cold war' and political changes throughout eastern Europe. From 1988, however, private stations were allowed, most of which carry popular music.

In Poland, Polskie Radio was established commercially in 1925. A radio orchestra, formed in 1934, was based in Warsaw until 1939, when its activities were interrupted by the war; in 1945 it was re-established in Katowice. Other radio ensembles exist at Warsaw, Katowice, Poznań and Kraków, where the choir and orchestra formed in 1938 have produced a comprehensive series of recordings covering the history of Polish music. Polskie Radio has actively supported the avant garde, and in the 1950s an experimental electronic studio was established in Warsaw. Channel 2 of Polskie Radio broadcasts classical music and cultural programmes daily (20 hours on the air). It also works closely with the production unit of Polish Radio Recordings, and promotes Polish new music and folk culture in its programmes. Its listeners constitute 8% of the country's radio audience.

Romanian radio was begun in 1926 (with regular broadcasts from 1928), centred on Bucharest. A radio symphony orchestra was formed there in 1933 and a studio orchestra in 1955. Radiodifuzinea-Televiziunea Română built a studio and concert hall in Bucharest in 1967. With the fall of the communist regime in 1989, radio stations were no longer controlled by the state. Since 1991, of the three nationwide stations that carry music, Romania Cultural has focussed on classical music, whereas Romania Tineret broadcasts popular music. In 1993 music accounted for about 60% of broadcast time.

(ii) Former Yugoslavia. In Yugoslavia (1918–90), the development of radio was determined by a complex cultural background, and only during World War II was radio fully centralized. There were experimental broadcasts in the years following World War I, and in 1926 a radio club began regular broadcasts in Zagreb, followed by private stations in Ljubljana (1927) and in Belgrade (1929). In 1940 all the stations were nationalized, but most were devastated during the war. Postwar reconstruction led to the establishment of eight regional stations of Jugoslovenska Radiotelevizija (JRT), at Belgrade, Ljubljana, Novi Sad, Pristina, Sarajevo, Skopje, Titograd and Zagreb; these operated independently, although there was a certain amount of programme exchange. Second channels were transmitted from Belgrade, Ljubljana, Novi Sad and Zagreb, and carried most of the serious music programmes; third programmes were introduced at Belgrade and Zagreb in 1965.

With the dissolution of Yugoslavia in 1991–3, regional stations that were originally subsumed under the JRT became independent, many of them no longer under any government control. A significant number of private radio stations were set up in the 1990s. Bosnia and Hercegovina, because of the unrest, saw a decrease in the percentage of music programming (from 22% to 19%) as radio became increasingly the primary means of news dissemination. Croatian national radio (Hrvatski Radio, Zagreb) now operates four channels, the second of which broadcasts classical music, whereas the third focusses on light music; more than 60% of broadcast time is devoted to music. Serbia and Montenegro (the two former Yugoslav states that make up Greater Serbia) decided to continue operating as part of JRT, which remains under total government control. 55% of JRT's broadcast time (among five channels) is devoted to music, of which 61% is popular, 13% folk and 26% classical. Slovenska Radiotelevizija (RTV) became a public organization in 1992, operating three national radio stations. Its second channel broadcasts music and cultural programmes. Music occupies 51% of total broadcast time, comprising 69% popular music, 22% classical, 8% folk and 1% specifically for children.

(iii) Albania, Turkey, Bulgaria. The first successful transmission in Albania was made in 1938 from Radio Tirana, which was under the control of successive totalitarian governments (Italian fascist, German between 1939 and 1945, communist after World War II) until it finally became independent in 1992. It broadcasts mainly music programmes 20 hours a day and has its own symphony orchestra. Albanian residents are able to receive radio programmes broadcast from neighbouring countries. The Turkish government issued the first broadcast licence in 1926. Radio Istanbul and Radio Ankara were founded in 1927 and 1928 respectively. Programmes broadcast on Turkish national radio (Turkiye Radyo Televizyon Kurumu) include traditional Turkish and popular music. The station also runs its own radio orchestra. Private radio stations in Turkey broadcast much American popular and rock music. Bulgarian National Radio (Balgarska Narodna Radio; BNR) broadcasts a wide range of music programmes on two channels; it also supports a symphony orchestra, an orchestra for traditional music, adult and children's choirs, a string quartet and a big band.

(iv) Former USSR. The Khodyne transmitter built in Moscow in 1914 was used by the Soviets during the Revolution. Broadcasting in the USSR was under strict state control until the dissolution of the union. The first regular station, devoted largely to music, went on the air in 1922, and an extensive network subsequently developed throughout the union; numerous local stations catered to the over 85 languages used in the republics. Until the early 1960s only one channel was available in any area, but a multi-channel network developed during the 1960s, from which time music occupied about half of broadcast time on the four stations, subsumed under the

authority of Vsesoyuzno (All-Union) Radio. Three of the four national networks broadcast much classical music and critical commentary on cultural topics. In 1990 All-Union Radio (renamed Ostankino in 1992) lost its broadcasting monopoly as the member states of the Soviet Union gradually became independent from Russia and Moscow. Ostankino's Radios 1 and 2 continue to broadcast throughout Russia and all the former Soviet Union states, carrying similar cultural programmes. The Moscow RO, founded in 1930, has been reorganized but continues to perform in Russia and abroad. In 1992 Radio Orpheus began to broadcast exclusively classical music in Russia, with evening broadcasts of full-length operas.

Many private stations have established themselves in all the former Soviet states, with heavy emphasis on Western popular music, appealing to younger audiences. The national radio in Belarus operates two channels, one of which carries cultural and classical music programmes. The Estonian classical music channel, ER Klassikaraadio (Eesti Raadio 3), is exceptional among newly founded public stations in supporting its own choir, light orchestra and children's ensemble.

3. THE AMERICAS.

(i) Canada. The Canadian Broadcasting Corporation (CBC)/Société Radio-Canada (SRC) was formed in 1936, three years after the start of broadcasting by a government system. Regular CBC productions in 1937 and 1938 included symphonic, chamber and choral music performed by existing groups and others organized by the CBC itself. During the war years the CBC continued to commission new works and held competitions on the air for young concert artists. The CBC Vancouver Orchestra (founded in 1939 and known as the CBC Vancouver Chamber Orchestra until 1980) commissions and records many new Canadian works. It records regularly on the CBC's own label. In 1952 the CBC founded its full-scale radio orchestra, the CBC Symphony; in 1962 Stravinsky accepted an invitation to conduct it in a programme of his own music for broadcast and recording. A number of performers played for both the CBC Symphony and the Toronto Symphony, and in 1964, after joint discussions, the CBC Symphony was disbanded as such so that the best orchestral resources of Toronto could be concentrated in one unit. In 1968 the Canadian Radio-Television Commission (CRTC) was established as the regulatory and licensing authority for public and private, local and national services. Of the two complementary English and French national radio networks of CBC, CBC/SRC Radio 2 is the music and arts network. Programmes such as 'Choral Concert', 'Radio Two in Performance' and 'Symphony Hall' promote Canadian ensembles and music festivals, giving them a national forum. The Glenn Gould Studio, a state of the art concert hall which opened in 1992 at the new CBC Broadcast Centre in Toronto, provides a live performance and broadcasting venue for national and international performing groups.

(ii) The USA. From the early days of experimental radio to modern stereophonic FM radio, music programmes have been an important integral part of the history of broadcasting in the USA. As early as 1910 (13 January) *Cavalleria rusticana* (with Caruso) and *Pagliacci* were broadcast from the stage of the Metropolitan Opera House, and on 2 November 1920, when the first pre-arranged and pre-announced programme was broadcast over KDKA Pittsburgh (many stations in the USA take their names from call signs), election returns were interspersed with records. Notable milestones in radio music include the first KYW broadcast from Chicago (Chicago Civic Opera, 11 November 1921); the first National Broadcasting Company (NBC) network programme (by Mary Garden, the New York SO, Oratorio Society and Goldman Band, 15 November 1926); and the first broadcast by the Columbia Phonograph Broadcast System, later CBS (an orchestra conducted by Howard Barlow, and Deems Taylor's opera *The King's Henchman*, 18 September 1927). Regular broadcasts in the 1920s featured both live and recorded music, readings, lectures, news and weather announcements. A typical programme, the first commercially sponsored evening programme on WBAY (later WEAF) New York, on 28 August 1922, included short recital pieces by a singer and a violinist as well as records and player-piano music.

Concert music lent prestige to music broadcasts, and networks vied for famous singers and conductors; personalities became more important than the quality of the music. An early radio performer, in 1922, was Percy Grainger. The NBC organized its own concert agency in 1928 because of the increased demand for artists' personal appearances. In 1930 Stokowski, an early believer in the potential of radio to disseminate symphonic music, directed the Philadelphia Orchestra in a broadcast by conducting with his right hand and adjusting the tone control with his left.

While many music programmes were single concerts or in short series, some continued for years and became an important part of the American cultural scene. In 1928 the Radio Corporation of America began its 'RCA Educational Hour', which continued until 1942 as the 'NBC Music Appreciation Hour'. Through this series, directed by Walter Damrosch, hundreds of thousands of schoolchildren were introduced to the European tradition. The NBC SO, established for and conducted by Arturo Toscanini, broadcast regularly from 25 December 1937 to 4 April 1954. The longest-standing series, the Saturday afternoon Metropolitan Opera broadcasts, started on 25 December 1931 with *Hänsel und Gretel*. The Texaco company began its sponsorship of those transmissions in 1940, when the programmes were broadcast from the commercial NBC network. In 1960 the Texaco-Metropolitan Opera International Radio Broadcasts were established as a network of 100 stations, including non-commercial ones. Live relays to Europe were inaugurated in the 1990–91 season. The 1995–6 season was transmitted digitally via satellite to 325 radio stations in the USA, CBC French and English networks, and 21 countries belonging to the EBU.

The type of music presented has changed considerably over the years, paralleling changes of public taste and reflecting the commercial demands of privately owned broadcasting companies. Critics have generally deplored the quality of programmes, which invariably included time-worn favourites. The early salon pieces were categorized as 'potted palm' music, referring to the typical pieces played in hotel lounges. B.H. Haggin, writing in *New Republic* (20 January 1932), spoke of the 'little snippets of music' and 'barrel organ excerpts' of opera. Little avant-garde or American music has ever been given,

although in 1936, when American music was in vogue, the CBS commissioned Copland, Gruenberg, Hanson, Harris, Piston and Still to write works for radio.

The broadcasting of concert music has declined because of increasing costs for performers and productions and low audience ratings. After 1944 recorded music became the standard fare; by the 1970s most radio schedules consisted of large blocks of time devoted to recordings of popular music presided over by disc jockeys, with serious music almost exclusively the province of specialist stations in the metropolitan areas.

Classical music programming on public radio was revolutionized by National Public Radio (NPR) and Public Radio International (PRI). NPR, founded in 1971 and based in Washington, DC, is the world's first non-commercial satellite-delivered radio system. It carries programmes to 590 member stations, including popular daily programmes such as 'Performance Today', which reaches an audience of 17 million across the USA. PRI, based in Minneapolis, was founded in 1983 as a public radio network by five leading public radio stations; by 1996 it had more than 500 affiliated stations. The network's music offerings include 'Sound & Spirit' (exploring the common spiritual roots of music from around the world) and 'ECHOES' (a contemporary music programme). Minnesota Public Radio (MPR), in partnership with PRI, developed 'Classical 24' in 1995, a round-the-clock music service designed to support public radio stations committed to presenting classical music. Orchestral music series offered by PRI included those of the Baltimore SO (produced by WJHU-FM), the Minnesota Orchestra (MPR) and the Pittsburgh SO (WQED-FM).

The classical music radio market in the USA is concentrated in the principal metropolitan areas. The San Francisco bay area is served by KDFC, founded in 1948 and one of the oldest classical music radio stations in continuous operation; it runs its own international syndication service. It is the radio home of the San Francisco SO, and puts out a weekly programme 'Bay Area Concert Hall', which promotes performances by regional professional ensembles. The Seattle area is served by KING FM, founded in 1948 as one of the first FM stations in America, when it began broadcasting classical music six hours a day. This privately owned station was donated in 1994 to the Seattle SO, Seattle Opera and the Corporate Council for the Arts, with the stipulation that the dividend from its profits be shared among them. KING FM presents a weekly programme of live performances from its studio, and broadcasts innovatory classical music programmes for children on Saturday mornings. WCLV, based in Cleveland, was founded in 1962. In 1965 it began weekly Cleveland Orchestra radio broadcasts, which have become the longest-running series by an American orchestra. Local live broadcasts include a monthly series featuring the Cleveland Institute of Music and complete coverage of the Cleveland International Piano Competition. WQXR, New York, started in 1936 and was acquired by the *New York Times* in 1944. It added FM programmes in 1939 and began to transmit in stereo in 1961. The only classical music station in the greater New York area in the 1990s, WQXR broadcasts a daily programme, 'On the Town', highlighting New York's cultural scene, a weekly 'Young Artists Showcase', and numerous orchestral and operatic series. Its music director, George Jellinek, presents 'Vocal Gold: 25 Years of the Vocal Scene', using many archival recordings and interviews. In 1997 WQXR began to produce 'Time Warner Presents: The New York Philharmonic Live!', syndicated across the nation by WCLV. WFMT, the radio division of Window to the World Communications, began operation in Chicago in 1951. In 1976 it created the WFMT Fine Arts Network to distribute broadcasts of the Chicago SO and Lyric Opera of Chicago. It is the exclusive BBC and Deutsche Welle outlet in the USA. In 1986 WFMT began to provide a satellite-delivered music service, the Beethoven Satellite Network, which has since become a 24-hour programme used by more than 300 stations in North and Central America. Other radio stations that broadcast 24-hour classical music programmes in major metropolitan areas include WGMA (Washington DC) and WQED-FM (Pittsburgh). Many university stations have made classical music a mainstay in their programming. KUSC in Los Angeles is the leading classical music station in southern California and presents much cultural programming distributed by PRI and NPR. The privately owned WGKA, known as 'The Voice of the Arts in Atlanta' (Georgia), presents mixed programmes of music in a wide range of styles.

(iii) Latin America. Latin American countries operate on the American model of private radio stations, although some public radio stations are directly run by government ministries. Amateur radio broadcasts began in 1921, but the Mexican government never developed a national public radio system (although it owns a few national stations) and has allowed commercial, private stations to flourish. The first radio networks, XEW and XEQ, were both founded in 1938 with American capital as subsidiaries of RCA and CBS respectively. Of the 923 radio stations operating in 1991 in Mexico, only 93 were identified as 'cultural stations'. Radio Educación and Radio Universidad, both non-commercial, are the two main 'cultural' stations in Mexico City. Radio Universidad is the exclusively classical music station, which broadcasts live concerts from the university's philharmonic orchestra and specialized music programmes ranging from the Middle Ages and Renaissance to works by contemporary Mexican composers; Radio Educación (run by the Education Ministry) devotes 30% of its output to classical music programmes, including a weekly series of live concert broadcasts by the Mexican SO. There is one commercial classical music station, XELA, in Mexico City, on the AM band.

The Brazilian government, like the Mexican, issued private radio licences. Although the Bolivian official station, Radio Illimani, broadcasts 35% music programmes, the 'cultural' station of the country is that of the university in Tarija. Many Latin American local stations carry programmes from Deutsche Welle, RFI and the BBC.

4. East Asia, South Asia, Pacific Rim.

(i) China (including Hong Kong, Taiwan), Japan, Korea. The Chinese Central Broadcasting Station (CCBS), founded in 1940 in Yanan, is the sole broadcasting authority in China. Of the six national channels, one FM stereo channel broadcasts cultural programmes ranging from traditional opera and theatre through light music to Western music. The Broadcasting SO was first established in 1949; disbanded during the Cultural Revolution, it was reorganized in the late 1970s. The orchestra presents live

concert broadcasts in association with Chinese National Television, performs the Western symphonic repertory and employs a composer-in-residence. In association with government ministries it has commissioned, performed and recorded much new music.

The first radio broadcasts took place in Hong Kong in 1928, and the official, publicly funded Radio Hong Kong was established in 1948. In 1976 it was renamed Radio Television Hong Kong (RTHK), to reflect its increased television output. RTHK operates seven radio channels; Radio 4, inaugurated in 1974, is the 'fine music' station and also broadcasts jazz and world music, a weekly full-length opera, and other educational programmes. RTHK has transmitted live performances by local orchestras and visiting international artists, and presents the long-running series 'Hong Kong Concert Hall' and 'Studio 1 Recitals', platforms for fostering chamber music and recitals respectively, by local and overseas performers. It also relays programmes from the BBC and Deutsche Welle.

The Broadcasting Corporation of China (BCC) was founded in 1928 in Nanjing, and moved with the nationalist government from the Chinese mainland to Taiwan in 1949. It functions as the official organ of the ruling nationalist party. By 1992 there were 20 further private stations operating from the principal cities in Taiwan. The BCC operates a 'fine music' channel as well as broadcasting much light music.

In Japan, stations were established in Tokyo, Osaka and Nagoya in 1925, run mainly by newspapers. In 1926 they were merged in a single state company now known as Nippon Hōsō Kyōkai (NHK), based in Tokyo. Much Western music is broadcast, as well as music education programmes. The NHK SO was founded in October 1926 as the New SO; it was known as the Japan SO from 1942 until 1951, when it became the broadcasting orchestra. It has performed around the world under internationally renowned conductors, giving on average 60 concerts a year, which are either broadcast live or recorded by the NHK. An electronic music studio was established by the station in about 1953.

Radio broadcasts in Korea began in 1927. In South Korea, the Korean Broadcasting System (KBS) was reconstituted as a public broadcasting organization in 1973. There are four national channels of which two broadcast in FM stereo, one presenting mainly Western classical music (65·9% programme time) and some Korean traditional music (24·4%), the other transmitting Korean and Western popular music. The two remaining channels broadcast in AM; one focusses on light music, accounting for 27% of programme time. The KBS supports professional ensembles: the KBS SO (founded 1956), the KBS Television Chorus and the Korea Traditional Orchestra. All three perform in the KBS Hall, opened in 1991. Another major national radio network is the Munhwa Broadcasting Corporation (MBC), owned by a private news agency.

(ii) India and Pakistan. The first programme in India was broadcast by the Radio Club of Bombay in 1923. It was followed by the establishment of a Broadcasting Service, which began operation in 1927 on an experimental basis in Bombay and Calcutta. After Indian independence (1947), All India Radio (AIR) was established as the only national broadcasting organization in India; it is controlled by the Ministry of Information and Broadcasting. The domestic services are regionalized, with headquarters at Delhi, Bombay, Madras and Calcutta. There are nine principal broadcast and 51 local languages, served by numerous local stations with a total of over 60 channels. More than 40% of total programme time in AIR is given over to music. Between 1952 and 1961 AIR popularized Hindu classical music as India's 'national' music. Part of its effort included founding the 27-piece AIR Vadya Vrind (National Orchestra) in New Delhi and commissioning new compositions. The concept was an entirely Western one and was poorly received by listeners; the orchestra was soon disbanded. Hindu classical music, however, flourished through the influence of radio. In 1957 the Vividh Bharati station was founded to broadcast popular music and provide light entertainment, and in 1969 Yuv Yani was set up to broadcast popular music for the urban youth market. AIR began stereophonic broadcasting in 1988. Western classical music occupied 4%, Indian classical music 13%, folk music 4%, light music 11% and film music 6% of total AIR programme time in the 1980s. The Pakistan Broadcasting Corporation was founded on the birth of the country in 1947. It was the radio that popularized film music in Pakistan in the early 1950s and the 1960s, film being the mainstay of national entertainment.

(iii) Australia, Indonesia, Malaysia, New Zealand, Philippines, Singapore. The Australian Broadcasting Commission (later Corporation; ABC) was established in 1932; it is state-supported. In association with civic and state authorities it maintains orchestras in each of the country's six states; the first two, in Sydney and Melbourne, date from the first year of broadcasting, whereas those in Adelaide, Brisbane, Perth and Hobart were formed in 1936, when the original two were enlarged. As early as 1932, ABC launched the first of its 'Australian Composers' competitions to encourage local talent. In addition to the regional orchestras, the ABC also founded choruses, dance bands and the National Military Band. The Australian Broadcasting Authority was established in 1992 to regulate private and public broadcasting in the country. ABC Classic FM is the main national stereophonic network for classical music (including some jazz), with an emphasis on Australian performers, concerts, festivals (e.g. the Festival of Perth and the Adelaide Festival) and compositions, with programmes such as 'New Music Australia', 'Australia Made' and 'Young Australia'. 'Sunday Live' broadcasts concerts in collaboration with local venues and communities. ABC Classic FM also organizes such events as the annual Young Performers Awards, Recording Awards and 24 Hours Listeners Choice Awards. One of its most innovatory programmes, 'The Listening Room', explored imaginative programming: in October 1997 it broadcast live an interactive improvisation by musicians in Melbourne and Frankfurt, linked by ISDN lines. ABC's six orchestras employ over 480 musicians, performing more than 670 concerts to a total audience of over 900,000 a year. Concert presentations range from outdoor 'pops' programmes to the symphonic repertory and new music in the concert hall. ABC also releases commercial recordings made by the orchestras. Triple J, the ABC national youth network, broadcasts much popular music, particularly by indigenous Australian artists. ABC Classic FM collaborates with ABC-TV in simulcasts of operas, ballets and concerts.

Radio Republic Indonesia (RRI) began operation in 1945. As the government station, it provides mainly news and information. By the 1990s more than 600 private local and regional stations were operating in the country, under the aegis of the Federation of Indonesian Commercial Broadcasters. Most of the private stations broadcast indigenous and imported contemporary popular music and entertainment programmes. Of note is Radio Klasik FM, based in Jakarta, which broadcasts 20% 'popular classics' (Anglo-American popular music from the 1950s to the 1970s) and 80% 'Western classics' (18th- and 19th-century symphonic, chamber and instrumental repertory).

Radio Malaya began operation in 1946, soon after its independence. By 1992 there were four national radio networks broadcasting in four languages, with music occupying 70% of the programmes. Cable radio, offering five channels, began operating in the three main cities, Kuala Lumpur, Penang and Ipoh, in the early 1990s, allowing more specialized programmes including classical music broadcasts.

The New Zealand Broadcasting Service (NZBS) was created in 1936 from the government Broadcasting Board (1932) and was amalgamated with a public radio station (1926) in 1943; it became the New Zealand Broadcasting Council (NZBC) in 1962 and was reorganized as New Zealand Public Radio in 1989. A string orchestra was formed in 1939, followed in 1947 by the National Orchestra of the NZBS, which became the NZBC SO in 1962 and the New Zealand SO in 1975. Concerts by the New Zealand SO (and its predecessors) have been broadcast regularly on public radio since the late 1940s. The orchestra became an independent institution in 1988, and has since recorded for international commercial radio labels. In 1989 New Zealand On Air was established by the Broadcasting Act as the regulatory body for private and public radio and television. New Zealand On Air promotes the country's indigenous music, both classical and popular. There are two public radio networks, National Radio and Concert FM. Up to 14% of the music broadcast by the latter is by New Zealand composers.

Radio Broadcasting in the Philippines started in 1922. Although the government runs two national radio stations, it is the few hundred provincial stations that provide the population with popular musical entertainment.

The first radio transmission in Singapore was in 1938. The Radio Corporation of Singapore (RCS), founded in 1980, is a private body that manages and operates ten local and three international (short-wave) stations. The local stations in this multilingual city-state consist of four English, three Mandarin, two Malay and one Tamil stations. Symphony 92·4 FM, the classical music station, broadcasts 18 hours a day. It is the official station of the Singapore SO and the Singapore Dance Theatre and also presents a popular weekend programme entitled 'Jazz Club', which introduces the audience to music from Broadway shows to fusion jazz.

5. Middle East and Africa.

(i) Egypt, Israel. Egyptian Radio and Television Union (ER-TU), the state broadcasting system, operates a notable network, 'Voice of the Arabs', throughout the Arab world, including a special programme for Palestine. 16% of the programmes centre on European culture and music.

The Palestine Broadcasting Service was established by the British in 1936; programmes were presented in English, Hebrew and Arabic. In 1948 it was renamed the Zionist World Organisation Broadcasting Service and later became the Israel Broadcasting Service (IBS) broadcasting nationally in Hebrew and Arabic. Culture and serious music shared programming in Channel A (in Hebrew), the news and information station until 1983, when Channel B, in stereo, also known as 'Voice of Music', was created. Channel B is on the air 19 hours a day, of which 60% consists of recordings, the rest comprising broadcasts of live symphonic and chamber concerts, and the station's own archival tapes. Channel C, which began in 1966, is the station for jazz and popular music. Channel D, the Arabic-language station, broadcasts 18 hours a day, of which 45% comprises music programmes. The Jerusalem SO is the resident radio orchestra of the IBS. In 1990, with the change in broadcasting laws, commercial and regional broadcasting licences became available.

(ii) Africa, South Africa. In Africa broadcasting services are run directly by the state in all countries except South Africa, Zimbabwe, Kenya, Malawi, Nigeria and Ghana, where there are autonomous public corporations under government control. African stations are generally on the air for less time than their European counterparts (often under 12 hours a day) and less time is given to music.

In South Africa amateur broadcasting began in 1924, and stations were established in Durban and Johannesburg in the same year. In 1936 the South African Broadcasting Corporation (SABC) was established, and in 1954 it was centralized in Johannesburg, with other studios maintained elsewhere, the largest being in Cape Town. In the same year the SABC SO was formed; it became the National SO in 1971, and plays much contemporary music. SABC's English-language arts and culture station, SAfm, broadcasts music series including 'Sunday Recital' and 'Thursday Concert', as well as arts and cultural programmes promoting South African performers, including its own radio orchestra.

IV. International organizations and networks

The International Telecommunications Union (ITU) was established in Geneva in 1865 to promote international cooperation in the domain of the telegraph, and is responsible for the technical coordination of the world's telecommunications systems, primarily through the allocation of wavelengths. In 1925 the Union Internationale de Radiodiffusion was founded with the aim of promoting and coordinating international programme exchange. Its activities were interrupted by the war, but a successor, the Organisation Internationale de Radiodiffusion (OIR), was formed in Brussels in 1946. In 1949 the stations of western Europe and Yugoslavia withdrew, and the OIR moved its headquarters to Prague, becoming the Organisation Internationale de Radiodiffusion et Télévision in 1959. An offshoot, Intervision, coordinated the exchange of music programmes among its member states, which included Vietnam, Mongolia, Iraq and other Arab countries, and, until the mid-1960s, China and Albania, in addition to the USSR and the Warsaw Pact countries. In 1949 the western European stations formed the European Broadcasting Union (EBU), which organizes concert tours and live relays in addition to exchanges of recorded music. With the fall of the Berlin wall and the dissolution of the Soviet Union and the Eastern bloc in the early 1990s, countries of eastern and central Europe joined the EBU, although the OIR remained in existence.

In 1996 the EBU had 117 members in 79 countries and operated two satellite channels. The EBU's Music Programme Group organizes the annual Euroradio season, with about 100 coordinated music events, divided between series covering concerts, opera, jazz, early music and live, whole-day themed broadcasts. It also offers exclusive access to the Texaco-Metropolitan Opera International Radio Broadcasts. In addition, the EBU coordinates members' exchange programmes, which number around 1600 a year. Euroradio offers about 250 live broadcasts of summer festival concerts. Other programmes organized by the EBU included Euroclassic-Notturno (a night-time music channel transmitted by satellite and produced by the BBC on behalf of the EBU, using recordings of live events made available by EBU members), a CD series of traditional music on the Ocora label, Euroring (a big-band music venture) and the EBU Jazz Festival. It also contributes to the Masterprize (London) and the International Forum of Young Performers (IFYP) competitions, and publishes many reports and proceedings of meetings, helping its member stations in targeting audiences and in technological and programme development.

Similar organizations (though none comparable in scope to the EBU) exist in other parts of the world; these include the British Commonwealth Broadcasting Conference (1945; renamed Commonwealth Broadcasting Association in 1974), Asociación Interamericana de Radiodifusión (Mexico, 1948), Université de Radio-Télévision Internationale (1949), Communauté Radiophonique des Programmes de la Langue Française (1955), Union of National Radio and Television Organizations of Africa (1962), the Asian Broadcasting Union (1964) and Arab States Broadcasting Union (1969). There are various religious broadcasting unions, the oldest of which is UNDA (Lat.: 'wave'), formed in 1927 as the International Catholic Radio Bureau and renamed in 1945.

The American NPR and PRI, along with the WFMT Fine Arts Network, Beethoven Satellite Network and the Texaco-Metropolitan Opera International Broadcasts, are exemplary in showing the vitality of the classical music market outside direct state subsidy. The distribution of the Texaco-Metropolitan Opera series through the EBU establishes another level of international collaboration. Numerous broadcasts are made by cable and on the Internet, and the accessibility and sound quality of such transmissions continue to reach ever higher levels of sophistication.

V. Impact on musical life

When broadcasting began there were many who claimed that the immediate availability of music in the home would make live concerts obsolete. There is no evidence to suggest that this has been the case. On the contrary, radio has inspired the development of musical life in many areas without established musical traditions. Both the radio and the gramophone have been criticized for being 'sterile' as a result of studio recording. Naturally 'live' or recorded relays of public concerts or operas convey the atmosphere of an event, which includes a sense of tension and audience participation that often manifests itself both in technical imperfections (usually edited out of commercial recordings) and in a more vital performance. Indeed many artists are at their best only in the presence of an audience. Texaco-Metropolitan Opera International Broadcasts and concerts such as the BBC Proms have been successful in attracting radio listeners because they are transmitted live.

Many national public broadcasting organizations are the chief employers of professional musicians in ensembles ranging from symphony and concert orchestras to choirs and big bands. At the beginning of radio broadcasting in the 1920s there were few commercial records available, hence the need to broadcast a large amount of music on the air, with the consequent founding of radio orchestras. Although many radio stations now have an extensive archive of commercial recordings and others made by their own ensembles, such performing groups continue to make a valuable contribution to the public profile of their parent institutions, as many of their concerts (and some studio recordings) are given in front of an audience. These performances are by their nature outreach programmes and therefore affect the concert life of their countries of origin. A radio orchestra, free from commercial marketing constraints, is able to explore the widest possible repertory and to perform new works. It also enjoys the guarantee of an audience among radio listeners loyal to 'fine' and 'serious' music programmes. Extended orchestral, chamber and recital series have been common – cycles of Beethoven quartets, for example, or Bach's cantatas in their entirety – and programmes have become far more diverse in response to the broadening of taste effected by radio. Mixed programming, in which the standard repertory is played alongside new works, has become common practice since 1945 for the BBC Promenade concerts and some German radio series. British and German radio orchestras played a key role in performances of the post-1945 avant garde, participating in radio new music festivals and giving world premières of commissioned works. In Denmark since the mid-20th century, nearly all records of Danish orchestral music have featured performances by the Danish RSO. Many radio orchestras tour nationally and internationally, achieving wider public recognition of their nations and their respective radio stations. The Finnish RSO's 1995 series, for example, included tours to rural areas of Finland, concerts in parks and railway stations, the introduction of new and old music, and crossover genres (e.g. works for electric guitar and orchestra). Some radio orchestras also record on their stations' own labels or with other commercial companies; one of the most distinguished collaborations between a commercial record company and radio orchestras is Decca's series Entartete Musik, begun in the 1980s and including many recordings first made for German radio stations.

Radio has had a powerful influence on public taste in record buying. In the 1920s and 30s a wide variety of gramophone records became commercially available, and those introduced into the home by radio tended to sell best; that is still true of popular music, whose development in the 20th century was inseparably connected with broadcasting, but it applies also to serious music, which is served by review programmes and selections of new releases to keep the public informed of what is available. In the late 1980s reissues on CD of landmark recordings from the earlier part of the century were promoted assiduously by commercial radio stations. As new record labels have proliferated, radio has become a valuable promotional tool. Commercial stations broadcasting classical music have made airtime and programme slots

available through direct sponsorship, while public radio stations promote such new recordings for their artistic worth or because they focus attention on a neglected repertory.

An ethical question faces all broadcasting organizations: to what extent they should cater for public demand and to what extent mould it, and how they should balance entertainment and education. In the early days the missionary zeal and cultural confidence of men like John Reith of the BBC led to a strong emphasis on education and high standards in general (and political factors may lead to similar attitudes in some countries). But it is now fully recognized in the broadcasting and recording worlds that serious music is listened to only by a minority. In the USA the commercial basis of radio means that this type of music is restricted to the local 'fine music' stations, some of them run by universities. The BBC Third Programme took a decisive step (and set an example widely followed in Europe) in deliberately catering for a cultural minority; its purpose on its launching in 1946 was to aim at 'the alert and receptive listener, who is willing to make an effort and select his programme in advance and then meet the performer halfway by giving his whole attention to what is being broadcast'. The enormous advantage of running such 'minority' stations free from commercial pressures is that they provide opportunity for experiment and instruction within the sphere of serious music; even a cursory survey of the broadcast repertory reveals a mixture of established and unfamiliar works and styles, including a means of bridging the gap between the contemporary composer and a mass audience (see §VI below).

Since the 1950s German public radio has also organized (or produced in association with municipal authorities) music festivals, often broadcast live. By the 1980s many of these festivals were attempting to bridge the divide between 'serious' and 'light' music, high art and entertainment. The occasional nature of such festivals fits into the outreach policy of German radio, enhancing their cultural value and justifying public radio's existence amid competition from private commercial stations. Most German summer festivals organized by regional radio stations combine jazz, orchestral, world music and popular programmes in order to attract the widest possible public. The Schwetzinger Festpiele, founded by SDR in 1952, puts on world and German premières of operas, drama and ballet, including many newly commissioned works. Performance sites include not only concert halls but also city public spaces and parks, where tens of thousands can attend. These public festivals exist alongside conventional new-music series, which continue their tradition, established after World War II, of supporting the avant garde (see §VI below).

The ability of radio to 'educate by stealth' must take much of the credit for the enormous broadening of musical taste that occurred during the 20th century. The standard 18th-century and Romantic repertory remains central to the broadcasting networks of European cultures – indeed, its central position has partly been supported by them – but much music of other periods and other cultures has been made known by the radio. Pioneers in the broadcasting of early music include the London Chamber Orchestra under Anthony Bernard in the 1930s and after World War II, and the Capella Coloniensis established by WDR in 1954 under August Wenzinger. The long historical series on the BBC Third Programme in the late 1940s was probably the first systematic attempt to give full broadcast coverage of the whole tradition of Western music. Programmes of traditional indigenous music had become a staple in radio broadcasting throughout the world by the 1980s, and projects initiated to preserve folk and national music came to the fore in public radio policy. Crossover music (incorporating jazz and popular elements, or such 20th-century genres as American musical theatre) has also found niches in broadcasting, and experiments to extend listeners' horizons are being conducted continually, such as the live improvisation broadcast in ABC's 'Listening Room' described above (see §III, 4(iii)).

The trend towards specialization has been manifested in the tendency to build programmes containing a diversity of music connected by a specific theme (music written in a single year; contrasting works of a single composer; settings of the same poet; the development of a genre; historic organs etc.). The consequent moulding of the public's musical attitudes is reflected in the record market, which since the mid-1960s has seen a striking proliferation of boxed complete works and other composite anthologies; but the phenomenon must also depend upon economic factors, and is restricted to the more affluent parts of Europe, the USA, Canada, Australia, Japan and other westernized countries.

In terms of music education, radio has probably had as great an effect simply through the broadcasting of music as through formal education programmes to be listened to in the classroom, but the significance of music appreciation programmes in school broadcasting should not be underestimated. At the higher, non-formal levels of music education – biography, analysis and history – radio is particularly effective, and most serious music stations carry talks or musical series with introductory notes. Talks and magazine-style programmes have an enormous advantage over their printed equivalents in that they can illustrate their points with the music itself. Feature programmes on composers can also draw on the radio's abilities to stimulate the visual imagination, using the techniques of the radio play, and are often more effective than their television counterparts. Radio's largest contribution to music education, however, has simply been to make a vast amount of music immediately available in the home.

The tendency of radio to carry Western culture (particularly Anglo-American popular music) throughout the world is widely recognized as a danger by public broadcasting authorities, many of whom, according to responses to an EBU questionnaire in 1995, require a minimum percentage of 'indigenous music' to be included in public radio programmes. A greater danger, in the view of many serious musicians, is the tendency of broadcasting organizations and other media to decrease musical appreciation through saturation and the provision of music to accompany every human activity. (A number of commercial classical music stations concentrate on Baroque music because audience statistics indicate that it is the preferred historical period for background music to everyday activity.) Much popular music is produced with the purpose of not being listened to, and there are composition techniques designed to produce mood-influencing music: for relaxation in restaurants and alertness while driving, to generate the impulse to buy in

shops and to maintain productivity in factories. Several broadcasting organizations have recognized the need for light music of high quality, and the BBC, SDR, Bayerischer Rundfunk and Czech and Dutch radios, among others, have organized festivals of light music and sponsored works for the occasion; even so, the popular-music stations tend to restrict themselves to music of uniform style and duration (with rare exceptions, the BBC broadcasts jazz and more serious kinds of popular music safely out of the way on Radio 3). In 1969 the International Music Council passed a resolution denouncing 'the intolerable infringement of individual freedom and the right of everyone to silence, because of the abusive use, in private and public places, of recorded or broadcast music'. The economic gains to be derived from the psychological effects of such 'musical wallpaper' are nevertheless likely to ensure its continued use. With the introduction in the 1970s of personal headsets and battery-operated radio-cassette players, allowing individual choice of what to listen to while performing daily tasks, radio has gained the potential to reach the widest possible audience.

VI. Radio as patron

In most parts of the world, radio has become not only one of the leading employers of performing musicians but also the most important patron of new music; its technical and artistic resources, financial independence and influential position make it the modern equivalent of the courts of previous centuries in this respect. The ISCM was founded in 1922, the same year as the BBC, and in Europe at least new music and broadcasting have developed in close association. The effect of radio on composition has in some ways been ambivalent; it has removed the composer further from direct contact with the public (thus accentuating a trend already evident in the first two decades of the century, before the advent of public broadcasting), but has also made new music generally available, bringing works to the attention of those who would not normally make the effort to go to a concert or buy a record of contemporary music.

New music commissioned or promoted by radio falls into two categories: that written for traditional concert performance, and that written with the specific medium of radio in mind. In the early days of broadcasting, the former predominated, although the dividing line between the two has been eroded by the introduction of electronic techniques of the type used in broadcasting (notably the tape recorder and the synthesizer) into concert performances. Among the notable works written for radio before World War II were Weill and Hindemith's cantata *Der Lindberghflug* (1929), Turina's *Radio Madrid* for piano (1931) and Copland's orchestral *Prairie Journal* (1937). It was only after the war, however, that technical advance enabled radio to offer composers anything really new (although radio drama had always provided opportunities for original uses of music). Most European electronic music studios are supported by or work in collaboration with a radio station; the pioneers were the Groupe de Recherche de Musique Concrète (GRMC), founded in 1951 and affiliated to the RTF, under whose auspices Pierre Schaeffer and Pierre Henry developed *musique concrète*, using various natural or mechanical noises 'composed' on tape (itself developed in the 1940s) and thus ideally suited to radio broadcast. Electronic music was created by Herbert Eimert in the Studio für Elektronische Musik at WDR in Cologne (1951) and was subsequently developed there by Stockhausen. The former DDR has maintained its position as a leading patron of the avant garde: the Donaueschingen Festival is run by SWF; Hessischer Rundfunk gives active support to the Darmstadt summer courses; and other German stations have important contemporary music series (WDR's 'Musik der Zeit', NDR's 'das neue werk' and Bayerischer Rundfunk's 'Musica viva'). The ORTF was an important French patron of the avant garde through the Groupe de Recherches Musicales (1958), which developed from Schaeffer's activity with the GRMC and was linked from 1964 with the Royan Festival. In Italy the RAI Studio di Fonologia Musicale (1953) aided the development of such distinguished figures as Berio, Nono and Maderna. The avant garde has also been supported by radio organizations in Canada, Japan, Poland and Sweden. (*See also* ELECTRONIC INSTRUMENTS.)

Of the more traditional forms, opera has been the one most suited to conception in terms of radio. The enormous capacity of radio (particularly after the introduction of stereophonic sound) to create powerful pictorial images through the simplest combinations of music and sound effects has made possible a quite different approach to opera from that dictated by the theatre. Generally, the possibilities for aural symbolism and the sublimation of psychological or supernatural elements into the action are greater; but plots must be concise, using a handful of characters and lasting no more than 45 minutes, in order not to try the understanding and patience of a non-captive audience. Composers have tended to choose modern rather than historical or mythological subjects, and have concentrated on transparency, economy and sharp delineation. Notable works of this and similar genres include Cadman's *The Willow Tree* (NBC, 1932); Egk's *Columbus* (Bayerischer Rundfunk, 1933); Sutermeister's *Die schwarze Spinne* (Swiss radio, 1936); Martinů's *Comedy on the Bridge* (Czech radio, 1937); Menotti's *The Old Maid and the Thief* (NBC, 1939); Wladimir Vogel's *Thyl Claes* (Swiss radio, 1938–45); Honegger's *Les battements du monde* (Swiss radio, 1944); Dallapiccola's *Il prigioniero* (Israel Broadcasting Authority, 1949); Chevreuille's *D'un diable de briquet* (Belgian radio, 1950); Pylkkänen's *Sudenmorsian* (Finnish radio, 1950); Henze's *Ein Landarzt* (NDR, 1951); Ton de Leeuw's oratorio *Job* (Belgian radio, 1956); Zillig's *Die Verlobung in St Domingo* (NDR, 1956); Miyoshi's *Ondine* (Japanese radio, 1959); Claude Prey's *Le coeur révélateur* (RTF, 1961); Butterley's *In the Head the Fire* (ABC, 1966); H.U. Engelmann's *Der Fall van Damm* (WDR, 1968); Ohana's *Cris* (ORTF, 1968–9); and Kox's *In Those Days* (NOS, 1970). The Italia Prize, inaugurated in 1948, is awarded to members or associate members of the EBU for a musical work with text and for a dramatic work with or without music; a new prize for stereophonic radio works was created in 1961.

A number of non-operatic works have been written specifically for radio since the war, such as Theodor Berger's *Musikalischer Nachrichtendienst* (1953) and Cage's *Radio Music* (1956); however, because of the development of electronic music independently of broadcasting stations and the spread of the gramophone, radio has lost its unique position in this sphere, and most later works commissioned by radio stations are suitable for concert performance. The BBC commissions orchestral works annually for the Promenade Concerts.

As live performance in broadcasting became progressively less viable financially in the 1980s, many radio stations faced budget cuts that had a detrimental effect on classical music programmes, because listener surveys showed that such programmes attracted no more than 6–8% of any nation's potential audience. However, music departments of radio stations have resisted the dismantling of symphony orchestras and abandonment of new composition commissions and music festivals, preferring to meet the challenge of changing times by extending the scope and style of music programmes. German radio stations have remained staunch in their support of new music, although the number of commissions has decreased. The idea of the radio music festival, however, has also become more populist: programmes have become all-embracing, with the aim of educating as well as entertaining all age groups.

SIEGFRIED GOSLICH, RITA H. MEAD, TIMOTHY ROBERTS/JOANNA C. LEE

Radiohead. English rock band. Formed in 1988 by Thom Yorke (*b* Wellingborough, 7 Oct 1968; guitar and lead vocals), Ed(ward John) O'Brien (*b* Oxford, 15 April 1968; guitar), Colin (Charles) Greenwood (*b* Oxford, 26 June 1969; bass), Phil(lip James) Selway (*b* Hemingford Grey, nr Huntingdon, 23 May 1967; drums) and John Greenwood (*b* Oxford, 5 Nov 1971; guitar and keyboards). The band became prominent in 1992 following the American success of the single *Creep*, which, by a British middle-class art-rock band, summed up the disaffection of grunge-era 'Generation X' in the States. Unlike Britpop bands such as Suede, Blur and Oasis, Radiohead were an Anglo-American commercial success. Their early music was a melodic re-articulation of the quiet–loud sonic structures of American grunge music, typified by Nirvana. Their album *The Bends* (Parl., 1994) was, however, considerably more ambitious and sophisticated, with a greater deployment of acoustic guitar and use of ballad structures, revealing Yorke as an emotionally effective lyricist and a distinctive vocalist, his fey, slightly nasal delivery simultaneously touching and grating. However, it was their major work *OK Computer* (Parl., 1997) that distinguished the band as a new, more pop-based and fashionable version of Pink Floyd. This seamless and daring album in the progressive rock tradition was both inventive and melodically affecting; in 1998 the readership of *Q* magazine voted it the best album made to date. The singles *Paranoid Android*, *No Surprises* and the sublime *Karma Police*, were also backed by consistently inventive videos. The critical and commercial reation to their current release, *Kid A* (2000), a more avant-garde and electronic direction for the band, has yet to be seen.

DAVID BUCKLEY

Radio Telefís Éireann. *See* DUBLIN, §§3, 5–7, 9–11.

Radleier (Ger.). See HURDY-GURDY.

Radolt, Baron **Wenzel Ludwig von** (*b* Vienna, bap. 18 Dec 1667; *d* Vienna, 10 March 1716). Austrian lutenist and composer. He was a nobleman of independent means, from an old Austrian family of court and public servants, and was also the heir to possessions in Italy (his grandmother was an Italian countess); the Radolt family vault, established by his forebears, is still in the Dominican church in Vienna. His only publication is *Die aller treieste, verschwigneste und nach so wohl fröhlichen als traurigen Humor sich richtende Freindin* (Vienna, 1701; two works in DTÖ, l, Jg.xxv/2, 1918/*R*); it consists of five partbooks and is dedicated to the Emperor Joseph I. It begins with an explanation of the French lute tablature to which are appended important instructions about the technique of embellishment, special fingerings and ensemble playing in small groups. It also explains the meaning of French terms such as *martellement* and *étouffement*. The volume contains eight concertos, whose movements are either dance forms commonly found in the suite, or freer forms, as well as pieces in the *galant* style showing French influence; *symphonie*, capriccio, toccata and *tombeau* (in place of a sarabande) are among the forms represented. The music is conceived for two concertante lutes with violin (or flute), bass viol and basso continuo, and it calls for various groupings. In Austrian and Bohemian court circles *c*1700 Radolt was, with Weichenberger, the most important composer of delicately balanced ensemble writing with the lute prominently featured. Unlike Weichenberger, he is only rarely represented in manuscripts.

WOLFGANG BOETTICHER

Radom, Nicolaus de. *See* RADOMSKI, MIKOŁAJ.

Radomski, Mikołaj [Nicolaus de Radom] (*b* ?Radom; *fl* first half of the 15th century). Polish composer. A number of references to individuals named Mikołaj who came from Radom are found in Polish records from between around 1380 and 1480, especially in those from Kraków. These individuals (some of whom may be identical) included a student at Prague University in 1379; a priest endowed with incumbencies in the presbytery of Kraków by Pope Boniface IX in 1390 (the composer's style and technique owed much to Antonius Zachara de Teramo, who worked at Boniface's court); a graduate and bachelor of laws who was vicar of Droginia, near Kraków; the donor of four manuscripts to the library of Kraków University, two of them dating from the second half of the 15th century; and various students at Kraków University between 1420 and 1470.

There are two further contemporary references to musicians called Nicolaus, but these do not specify any place of origin: 'Nicolaus clavicembalista dominae reginae Poloniae' was mentioned in 1422 (the composer probably had links with the royal court in Kraków, although definitive proof of this is lacking); and the author of a musical treatise in *A-Gu* 873 was described as 'venerabilis magister Nicolaus ferrimulatoris pollonici teritorii magister parisiensis in septem artibus'. The acrostic NICOLAUS is also found in the texts of several compositions copied in central Europe in this period; it is not known whether or not these refer to Radomski.

Radomski's works bear witness to the use of international stylistic conventions and to the development of mature musical techniques at the eastern boundaries of western Europe during the period of transition from the Middle Ages to the Renaissance. They are preserved in two Polish manuscripts copied around 1440: *PL-Wn* 8054, known as the Krasiński manuscript, and the lost *PL-Wn* 378, now preserved only in facsimile. Only the latter source includes the Polish toponymic form of the composer's name ('Radomski').

The Gloria–Credo pairs and the ballades exhibit the characteristics of the late French and Italian Ars Nova of around 1400, being a stylistic replica of the works of Antonius Zachara de Teramo and in general of the Paduan circle of Johannes Ciconia. They are characterized by a three-voice ballade technique in the manner of the

conductus, a lack of any plainchant cantus firmus, unresolved harsh dissonances and free use of parallel perfect consonances. The three-voice *Alleluia* added to one of Radomski's Glorias is melodically linked to Guillaume DuFay's chanson *Bon jour, bon mois*. The *Magnificat* recalls the earliest phase of the 15th-century Burgundian school, and with its improvised sections 'per bordunum' provides evidence of early fauxbourdon techniques as used also by DuFay. The two surviving ballades follow the conventions of the 'Reina codex' repertory (*F-Pn* n.a.fr.6771). They may originally have had Polish amatory texts, but these are now lost: one is transmitted without any text, while the other has a contrafact text, the hymn *Hystorigraphi aciem* (1422) by Stanisław Ciołek in honour of the royal family.

MIROSŁAW PERZ

Radoux, Jean-Théodore (*b* Liège, 9 Nov 1835; *d* Liège, 20 March 1911). Belgian teacher and composer. He began his musical training on the bassoon with Bacha, whom he succeeded as professor at the Liège Conservatoire in 1856. The same year he took a *premier prix* for piano and started composition studies with Daussoigne. In 1859 he won the Belgian Prix de Rome, and he later spent four years in Paris under Halévy. In 1872 he was appointed director of the Liège Conservatoire, succeeding Soubre. Radoux's compositions include five comic operas, several oratorios and cantatas, symphonic works and songs. (S. Dupuis: *Notice sur J.-Th. Radoux* (Brussels, 1925))

WRITINGS

Daussoigne-Méhul (Brussels, 1882)

La musique et les Ecoles nationales (Brussels, 1896)

WILLIAM WATERHOUSE

Radoux-Rogier, Charles (*b* Liège, 30 July 1877; *d* Liège, 30 April 1952). Belgian composer, pianist and critic. He studied at the Liège Conservatory with his father Jean-Théodore Radoux, and in 1907 he won the Belgian Prix de Rome with his cantata *Geneviève de Brabant*. Appointed professor of harmony at the Liège Conservatoire in 1905, he was inspector of music education from 1930 to 1942. He founded a piano quartet, and was for a long time active as a music critic. His interest in Walloon folk music resulted in the publication of several collections of songs with his own accompaniments. He employed leitmotifs, and his vocal style is clearly influenced by Wagner, as is the composer's use of the orchestra to comment on the actions and emotions of the characters. His musical style is thus hardly original, but he was at his best in his operas and choral works, where his lyrical facility was most pleasing.

HENRI VANHULST

Radovanović, Vladan (*b* Belgrade, 5 Sept 1932). Serbian composer. After graduating from the Belgrade Academy of Music (1956) he became a teacher at the Stanković Music School. In 1972 he was appointed head of the electronic studio he co-founded at Radio Belgrade. Additionally, he has worked at the Experimental Studio of Polish Radio (1966) and at studios in Paris, Utrecht and Budapest. His compositional output encompasses a range of styles: works written between 1949 and 1953 have an expressionistic quality, while those of his middle period, 1953–7, betray influences of neo-classicism; later works belong to avant-garde maximal music; with developed and complex textures and expression. His experiments in the 1950s with 'vocovisual' works, polymedia and tactile forms, though arrived at independently, resembled developments in Western avant-garde art at that time. He is also a visual artist, writer (he had published numerous essays on the arts generally) and the originator of works for computer and a synthesis of media. Indeed, amalgamating all artforms lies at the core of his aesthetic. The work *Rebel* (1989) was commissioned by the French Ministry of Culture and *Yuevents* (1990) by the Bourges International Festival of Electro-Acoustic Music. His works have won a number of prizes, including awards at Bourge in Sao Paulo, the Gianfranco Zafrani award at the Prix Italia and the October Prize of the City of Beograd.

ROKSANDA PEJOVIĆ

Radulescu, Horatiu (*b* Bucharest, 7 Jan 1942). French composer of Romanian birth. He studied the violin privately with Nina Alexandrescu, a pupil of Enescu, and subsequently composition at the Bucharest Academy of Music (MA 1969), where his teachers included Niculescu, Olah and Stroe, some of the leading figures of the newly emerging avant garde. In 1969 Radulescu moved to Paris (he became a French citizen in 1974); here, initially inspired by Stockhausen, he began to develop his version of SPECTRAL MUSIC. In the early 1970s he attended classes given by Cage, Ligeti, Stockhausen and Xenakis at the Darmstadt summer courses, and by Ferrari and Kagel in Cologne; later, from 1979 to 1981, he studied computer-assisted composition and psycho-acoustics at IRCAM. From the mid-1970s Radulescu's works were performed at leading European festivals including La Rochelle, Metz, Royan and Donaueschingen; in 1983 he founded the ensemble European Lucero in Paris to perform his works, and in 1991 the Lucero Festival. His many awards include a DAAD composer residency in Berlin (1988–9) and a French Villa Medici fellowship (1989–90).

The essentials of Radulescu's compositional thinking are expounded in the booklet *Sound Plasma: Music Of The Future Sign* (Munich, 1975). Asserting that the historical categories of monody, homophony, polyphony and heterophony were by then exhausted, Radulescu replaces them with the concept of sounds in a constant state of flux. The resulting 'sound plasma' is articulated, above all, by the periodic or aperiodic appearance and disappearance of particular spectral components, in which dynamics and timbre (especially transitions between clear pitch and noise) play a fundamental role; this constitutes a 'spectrum pulse'. For Radulescu, the notion of 'sound plasma' also implies an almost neo-Boethian distinction between 'planetary' and 'cosmic' music. It is this aspect – in many respects akin to Stockhausen's outlook – that most clearly distinguishes Radulescu's music from the 'instrumental synthesis' (also spectrally based) pursued by composers like Grisey and Murail from the 1970s onwards. While the latter composers' work is in some respects scientific and clinical, expounding clear acoustic processes, Radulescu's aims are essentially spiritual and magical, drawing not only on Catholicism but also on Daoism (in particular, Laozi's *Daode jing*).

From the start, Radulescu's music was extravagant in its conception, duration and means. Its religious aspirations are already evident in early titles such as *Flood for the Eternal's Origins* (1970) and *Everlasting Longings* (1970), and also in use of 'sound icons' (grand pianos laid on their side, and played with bows or gold coins). As for duration, his first spectral piece, *Credo* for nine cellos (1969) lasts 55 minutes, while *Wild Incantesimo* (1978) lasts nearly two hours. The latter work also calls for enormous resources: nine orchestras, whose music is projected on 19 screens using over 4400 slides. Other instances of unusual resources include *Byzantine Prayer* (1988) for 40 flautists playing 72 flutes, and *Do Emerge Ultimate Silence* (1984) for 34 children's voices with 34 monochords; in both these works, Radulescu explores large ensembles, whose constituent instruments possess similar basic spectra.

String instruments play a central role in Radulescu's work. This partly reflects their capacity to make pitch–noise transitions by moving the bow towards and away from the bridge, but above all for their flexibility of tuning. Most of Radulescu's works for strings call for a 'spectral scordatura' in which each string is tuned as an overtone of a low (sometimes sub-audio) fundamental. A particularly spectacular instance is '*infinite to be cannot be infinite, infinite anti-be could be infinite*' (String Quartet no.4) (1976–87) for nine string quartets, eight of which may be prerecorded; here each of the 128 strings of the prerecorded quartets has a separate tuning. For many of these works, conventional notation is inadequate, and Radulescu has devised his own forms of graphic or 'action' notation, sometimes involving the use of several different colours.

In most of Radulescu's music, melody *per se* plays little or no role; form is articulated in terms of changing registers and densities, and evolving spectral and timbral qualities. However, in some works of the 1990s, and especially those for piano (sonatas nos. 2 and 4, and the Piano Concerto), Radulescu has sought, with success, to integrate elements such as Romanian folk melodies into a spectral context.

RICHARD TOOP

Radulphus Laudunensis. Theorist. He was from the collegiate church (*de abaco*) at Laon, and is known solely by a conventional music treatise, the last part of which consists of a section on semitones. With another treatise on semitones, it survives in a 13th-century manuscript formerly belonging to the famous abbey of St Victor, Paris (now *F-Pn* lat. 15120).

GORDON A. ANDERSON/C. MATTHEW BALENSUELA

Radvilovich, Aleksandr Yur'yevich (*b* Leningrad, 28 Feb 1955). Russian composer. He studied at the Leningrad Conservatory with Sergey Slonimsky (composition) and Sof'ya Khentova (piano). In 1980 he began teaching composition at a children's music school, was an editor with Sovetskiy Kompozitor publishers in Leningrad (1984–92), and since 1996 has taught the contemporary music course at the St Petersburg Conservatory. Since 1989 he has been the artistic director and general manager of the festival *Zvukovïye puti* [Sound Ways]; under the same name he has set up a seminar, masterclasses for young composers (since 1990), a creative association and ensemble. He has been involved with the ISCM master-classes, the Darmstadt summer courses, the Brandenburg colloquium of new music and the Mozarteum Festival in Salzburg among others. He was awarded a diploma at the Queen Marie-José International Competition in Geneva (for his composition *De Profundis* for two pianos). Outside Russia, his work has been heard in the USA, Germany, Holland, Poland Yugoslavia and Bulgaria. Concerned primarily with symphonic and chamber music, the stylistic orientation of his work is associated with an attempt to combine features of postmodernism (with references to classicism and late Romanticism) and elements of the avant garde; he has also made original use of the programmatic principle in instrumental music.

M. GALUSHKO

Radziwiłł, Prince **Antoni Henryk** (*b* nr Vilnius, 13 June 1775; *d* Berlin, 7 April 1833). Polish cellist and composer. He arranged weekly concerts in his mansion in Berlin, and was friendly with Beethoven, Zelter, Mendelssohn, Goethe and others: Beethoven and Mendelssohn dedicated works to him – the former his Overture op.115, the latter his Piano Quartet op.1. In 1815 Radziwiłł became governor of the Grand Duchy of Poznań, which at that time formed part of Prussia, following the partition of Poland in 1795. His house in Poznań became a centre of cultural life; he himself was an amateur performer of chamber music, including Beethoven's quartets. With his wife Friederike Dorothea Luise (sister of Friedrich Wilhelm, King of Prussia) he gave support to the Polish theatre and encouraged Polish education; but he was nevertheless criticized for adhering to Prussian policy and failing to defend the Polish cause. He was an admirer and close friend of Chopin, whom he first knew in May 1825 and later entertained at his summer residence at Antonin, near Poznań; there Chopin wrote for Radziwiłł his Introduction and Polonaise for piano and cello, and also dedicated to him the Trio in G minor.

As a composer, Radziwiłł is known particularly for his music to Goethe's *Faust* which he began to compose before 1810 and completed in 1831. Extracts were performed in Berlin in 1816, and at Monbijou, near Berlin, in 1820; the whole work was given in Berlin on 25 October 1835, and the score was published there in the same year. Although not uniform in style, *Faust* was admired by some of the Romantics (including Chopin and Loewe). He composed songs, among them *Trois romances* (Leipzig, 1802), the duet *Im hohen Schilfe* (Oranienburg, 1804) and *Do Emmy*, to a Polish translation of a Schiller text; and he also wrote piano pieces, including the four-hand *Drei National-Polonaisen* (Berlin, n.d.).

ALINA NOWAK-ROMANOWICZ

Radziwiłł, Prince **Maciej** (*b* Szydłowiec, ?1751; bur. Nieśwież, 1800). Polish composer and librettist. Around 1780 he lived at Nieśwież, the house of Karol Radziwiłł, governor of Vilnius Province, who maintained a company of actors, musicians and dancers there and at his estates in Alba, Ołyka, Słuck, Biała and elsewhere. At Nieśwież Radziwiłł wrote the libretto (MS in *PL-Wn*) for J.D. Holland's opera *Agatka, czyli Przyjazd pana* ('Agatha, or The Master's Arrival'), performed on 17 September 1784 during King Stanisław August's visit to Nieśwież. He also

wrote the libretto (MS in Zieliński Library, Płock) and presumably the music for the three-act opera *Wójt osady albiańskiej* ('The Headman of the Settlers at Alba'). Radziwiłł became castellan of Vilnius Province in 1788 and moved to the town of Vilnius where he composed some instrumental and orchestral music.

WORKS

Wójt osady albiańskiej [The Headman of the Settlers at Alba] (op, 3, Radziwiłł), Alba, 4 Nov 1786; Sonate, pf, vn, G (Kraków, 1972); Divertimento, D, orch (Kraków, 1970); Serenada, B♭, str qt (Kraków, 1972); 6 polonoises, orch, *D-Dlb*; 3 polonoises, pf, *Dlb*

Radzynski, Jan (*b* Warsaw, 18 June 1950). Israeli-American composer. Following a wave of anti-Semitism in Poland he moved to Israel in 1969. He studied at the Rubin Academy at Tel-Aviv University, obtaining diplomas in cello and composition (1974), and after study with León Schidlowsky an artist's diploma in composition (1977). In 1977 he moved to the USA, studying composition at Yale with Penderecki and Druckman (MM 1980, DMA 1984). A composition professor at Yale between 1981 and 1994, Radzynski became the professor of composition at Ohio State University in 1994. Among his many awards are the Morse (1985) and Mellon (1987) fellowships at Yale and the Research and Creative Work Grant of the Rothschild Foundation (1995). Radzynski has continued to elaborate the post-Romantic style of his viola and cello concertos, utilising and developing Penderecki's string and percussion techniques. Long and expressive melodic lines, rich textures, chromatic sighing motifs, through-composed yet solid structures and witty virtuoso writing are significant in these concertos, as in most of his works. Although a US resident, his influence on contemporary music in Israel is constant, and many of his works exhibit facets of Jewish and Israeli identity. Premières of his works have often taken place in Israel. His most significant vocal work, *Shirat Ma'ayan* (1997) is a setting of psalms 46 and 137 in the accent and diction of spoken Hebrew. Elaborate use of patterns of Ashkenazi cantilation is clearly evident in *Shirat Ma'ayan*, *Mizmorim* (1983) and the String Trio (1995). In his eloquent, virtuoso symphony *David* (1987) and the vibrant *Encounters* (1989), Radzynski incorporates Middle Eastern, quasi-Arabic elements into his Jewish style, revealing a further facet of Israel's cultural heritage.

RONIT SETER

Raecke, Hans-Karsten (*b* Rostock, 12 Sept 1941). German composer, instrument maker and performer. He studied composition with Wagner-Régeny, the piano with Walter Olbertz and choral conducting with Fritz Höft at the East Berlin Hochschule für Musik (1962–8), and then was lecturer in theory at the musicological institute of the East Berlin Humboldt University (until 1974). His studies were completed in Paul Dessau's masterclass at the German Academy of Arts (1972–4). In 1974 he founded the East Berlin 'Klangwerkstatt'. In 1980, concerned about East German cultural and educational policy, he moved to West Germany. Since then he has given performances in Western Europe and in the USA on instruments he has made himself. He has received scholarships to work in the electronic studios at Freiburg (1981) and at the IRCAM (1982). He taught music to students of music therapy in Heidelberg between 1986 and 1993.

Raecke's early compositions were for traditional instruments and draw on serial and aleatory elements. Since the 1970s, however, most of his work as both composer and instrument maker has included electronic elements, and has involved prepared piano (employing a self-constructed preparation system and two composition cycles) and the construction of new wind (and combined wind and string) instruments.

ECKART SCHWINGER/LARS KLINGBERG

Raes, Godfried-Willem (*b* Ghent, 3 Jan 1952). Belgian composer. He studied at the Ghent Conservatory and Ghent University. Since 1982 he has been teaching experimental music and composition at the Ghent Conservatory. In 1968 he founded Logos, which consists of an ensemble built round the nucleus of the Logos Duo

(Raes and Moniek Darge), a centre for documentation and research on new music, and the publication of a monthly periodical. Between 1971 and 1980 he organized the International Festival of Mixed Media. In 1982 he won the Louis-Paul Boon Prize. Raes's critical view of society informs both his publications and his musical activities. He styles himself a *muziekmaker* (music maker) and has undertaken a great variety of projects: street animation with *Zingende fietsen* (Singing Bicycles), improvisation, computer programs for composing, music machines and instruments of his own invention. Although he has started composing with algorithms, his recent pieces are rather simple. He experiments using the latest technologies, for example the holosound, designed in 1983 and since then improved many times, an 'invisible instrument' that translates the performer's movements into sounds using a system of pure interactive algorithmic composition. This system is also used in the *Book of Moves* and in *Songbook*.

YVES KNOCKAERT

Raesel, Andreas. *See* RASELIUS, ANDREAS.

Raff, (Joseph) Joachim (*b* Lachen, nr Zürich, 27 May 1822; *d* Frankfurt, 24/5 June 1882). German composer, critic and teacher. His father, a teacher and organist who had fled to Switzerland from the Black Forest to avoid military conscription during the Napoleonic wars, taught him to play the violin and organ and to sing. He attended the Gymnasium in Rottenburg (Württemberg), then followed the family to Schwyz, where in 1838 he enrolled in the Jesuit Gymnasium to study philology. He taught in a primary school in Rapperswil between 1840 and 1844, during which time he decided to become a musician. He became an accomplished pianist and organist, and began composing for the piano. In 1843 he sought the opinion of Mendelssohn, who praised the works and recommended their publication to Breitkopf & Härtel (they appeared as opp.2–6). Upon leaving school service, Raff received help from Franz Abt to establish himself in Zürich, where he taught the piano, gave concerts and copied music to make a living. Raff met Liszt in the summer of 1845, though his daughter Helene's account of her father's pilgrimage on foot to Liszt in Basle is probably fictional. Nevertheless, Liszt did immediately take the young composer under his protection, upon which Raff left Switzerland. Liszt helped him find employment in Cologne in a music and piano store, where he worked for two years until unguarded critical comments he made in the *Allgemeine Wiener Musik-Zeitung* caused him to move to Stuttgart in 1847. During the Cologne period, Raff met Mendelssohn (1846) and remained in contact with Liszt. In 1847 he was faced with the choice of working for Liszt or studying with Mendelssohn in Leipzig: Mendelssohn's death in November brought the one plan to naught, and Liszt's travels thwarted the other. In Stuttgart he met Bülow who became a lifelong friend, and began composing for larger ensembles. In 1848 he moved again, to Hamburg, where he worked for the publisher Schuberth as an arranger. While in Hamburg, Raff met Liszt and decided to follow his renewed invitation.

Raff followed Liszt first to Bad Eilsen, and then at the beginning of 1850 to Weimar, where he served as the newly appointed court Kapellmeister's assistant, in instrumentation and in the copying and preparation of manuscripts. He also wrote polemics on behalf of Liszt and other composers associated with Weimar (including Wagner). Raff continued to work as composer under Liszt's supervision, achieving performances of such works as the opera *König Alfred* (1851), Psalm cxxi (composed in 1848 and first performed on 20 April 1855) and the choral fairy tale *Dornröschen* (first performed on 24 May 1856). In Weimar he also made the acquaintance of Brahms, Joseph Joachim, and his future wife Doris Genast (1826–1912), an actress and daughter of the Weimar theatre director Eduard Genast. Raff befriended such fellow Lisztians as Cornelius, Hans Bronsart von Schellendorf and Richard Pohl. As time passed, Raff realized that his career opportunities in Weimar were slight, yet he also had no success with applications for positions elsewhere, in part because of his association with the radical movement of Liszt and Wagner. Even though Liszt frequently helped Raff out of financial difficulties and even eased the conditions of Raff's incarceration in Weimar in 1853 (for an unpaid debt incurred in Switzerland), Raff felt oppressed by the commanding figure of Liszt. He also resented the more radical and partisan aspects of the new movement, feelings that found expression in his book *Die Wagnerfrage* and ultimately resulted in the alienation of his New German colleagues. Thus, in the summer of 1865, Raff exchanged the circle of Weimar for independent production in Wiesbaden, where Doris was working and where he taught the piano, singing and harmony for 21 years. His unpublished letters to Doris from Weimar are an important source on Liszt's Weimar circle of the early 1850s. Coupled with manuscript evidence, these letters help establish the extent of Raff's assistance or collaboration on individual musical and literary projects undertaken with Liszt.

In Wiesbaden Raff produced the majority of his numbered compositions, and achieved his first broad public recognition. Especially noteworthy was the popularity of the Cavatina for violin from *Six morceaux* op.85 in 1859, the year of his marriage to Doris. Many other salon works were written during this time, as well as the First Symphony 'An das Vaterland', for which he won a

prize in 1863 from the Gesellschaft der Musikfreunde. Chamber and sacred music occupied Raff during the late 1860s, as did the Third Symphony 'Im Walde', and the comic opera *Dame Kobold*. In the 1870s he was one of the most frequently played German composers, with five new symphonies, including the still-performed 'Lenore' Symphony, and various concertos.

In 1878 Raff became director of the new Hoch Conservatory in Frankfurt, for which he was able to recruit the baritone Julius Stockhausen as well as Clara Schumann. Despite his heavy administrative and teaching responsibilities, he found time to compose such works as the last two symphonies, an opera (*Benedetto Marcello*) and the apocalyptic oratorio *Welt-Ende*. His last days were embittered by differences with the conservatory's board of directors. Raff died of a heart attack in the night of 24–5 June 1882. Unfortunately, Raff's over-confidence in his lasting fame meant that he did not make financial arrangements for his family in the case of his death. The distraught Bülow was a major contributor to a monument for Raff, which was sculpted by Ludwig Sand and erected in 1903. In 1972 a monument was erected in Raff's honour in his birthplace, Lachen.

Any analysis of Raff's music must confront the historical criticisms of his eclecticism and quantity of production. On the one hand, Raff considered himself an independent creator and thus distanced himself from Liszt and Wagner, even though during his time in Weimar he did circumspectly adopt elements of the New German style; on the other hand, he clearly modelled his work on various predecessors (Mendelssohn, Schumann, Liszt). The perception of Raff's inability to achieve a consistent personal style, which was heightened by his frequent forays into the realm of salon music, was coupled with the widely held view that his speed of production precluded the creation of significant, deeply felt works. These perceptions undoubtedly contributed to Raff's failure to achieve long-term success. In her diary, Clara Schumann recognized Raff's talent and fantasy, yet also observed the ephemeral nature of his popularity. By the time of his 60th birthday, Raff himself had come to give credence to the opinions of critics and friends (including Bülow), who accused him of over-production and thereby caused him to doubt the credibility of his music, a recognition that clouded the last years of his life.

Raff's aesthetic position reflected the eclecticism of his music: he wished to link the old with the new. This led him to infuse traditional genres and forms (such as the sonata form) with programmatic elements, a compromise that was viewed by Riemann as an 'aesthetic lie'. In giving shape to his music, Raff emphasized traditional contrapuntal and motivic work over a more harmonic orientation, which he saw (and criticized) in Wagner's music. This preference for learned styles led to criticism of his own music as lacking emotion, an opinion expressed by Liszt in his review of the choral fairy tale *Dornröschen* (1856). Nevertheless, Raff was able to give to his music a strong sense of drive and direction, and his orchestration was quite effective, even though his forces did not normally exceed Beethoven's in size. Raff's stylistic eclecticism is particularly evident in his themes, which tend to be diatonic and brilliant in his faster movements, but often adopt a sentimental salon style in slow movements.

Raff's influence was wide in his day, and his music was valued by Mendelssohn, Liszt and Bülow (albeit with decisive reservations). The symphonies were of significance for the development of that genre and the symphonic poem in the later 19th century, having an impact upon such composers as Bruch and Strauss. He was also an esteemed teacher; among his pupils were Edward MacDowell and Alexander Ritter. Raff's only daughter, Helene (1864–1942), became a painter, writer and pianist of note. Upon her death, Raff's entire estate of musical manuscripts, letters and other literary and familial documents was bequeathed to the Bayerische Staatsbibliothek in Munich.

WORKS

printed works published in Leipzig unless otherwise stated

many works also appeared in other arrangements by the composer; for full details see Schäfer (1888)

some early opus numbers were duplicated in published and unpublished works

MSS in D-Mbs

STAGE

operas unless otherwise stated

König Alfred (4, G. Logau), 1848–50, Weimar, Hof, 9 March 1851; rev. 1852, Weimar, 13 March 1853

JAMES DEAVILLE

Rafi. French family of woodwind instrument makers. They were active in Lyons in the 16th and 17th centuries. The workshop was probably established by Michaud 'Raffin', who is mentioned as 'fleustier' in 1512, and continued by his sons, Pierre (*fl* 1523–9) and Claude (*b* before 1515; *d* 1553). In literature a chalumeau by 'Raffy' of Lyons is mentioned by Clément Marot, a musette by 'Rafy Lyonnais' by Jean-Antoine de Baïf, and a 'bonne fleuste de Raffy' by François de la Salle. Of the 11 surviving instruments, all Renaissance in style, four transverse flutes and two recorders are branded 'C. Rafi', one flute is marked 'M. Rafi', and one recorder and one flute bear the mark 'G. Rafi'. All these instruments are also marked with a griffin on a shield (the emblem of Lyons) below the name. Two other instruments show only that emblem; it

is assumed that they were also made by members of the Rafi family. One bass flute marked '(?) Rafi' in the Leipzig collection was lost at the end of World War II.

FRIEDRICH VON HUENE

Rafi, Mohammed (*b* Kotta Sultansingh, 4 Dec 1924; *d* Bombay, 31 July 1980). Indian film playback singer. Rafi received early vocal training from classical singers Ustad Wahid Khan and Pandit Jivanlal. He sang for Radio Lahore during his teens and at the age of 20 recorded his first film song for the Punjabi movie *Gul baloch* (1944). He made his début as a Hindi playback singer in the same year, travelling to Bombay to record songs by the music director Naushad Ali for *Pahele aap* (1944). Despite his powerful voice and three-octave vocal range Rafi struggled to gain recognition during the 1940s. His duet with Noorjahan 'Yahan badla wafa ka' in *Jugnu* (1947) and his solo 'Suhani rat dhal chuki' in *Dulari* (1949) earned wide popularity but not the overwhelming success needed to reach stardom. His songs by Naushad in *Aan* and *Baiju bawra* (both 1952) similarly became 'super hits', but not until the 1960s did Rafi's success and popularity rise above that of all other male Hindi playback singers including Mukesh. Manna Dey, Kishore Kumar, Talat Mahmood and Hemant Kumar.

Rafi sang playback for most Hindi film actors during the 1960s and his identification as the singing voice of the new rebel star, Shammi Kapoor, brought him unmeasured success. Yet in 1969 the box-office hit *Aradhana* saw Rafi's lead toppled by singer Kishore Kumar. A disagreement with the 'playback queen' Lata Mangeshkar over the matter of royalty payments from record companies, which Lata was demanding, further harmed his career by effectively ending any future song duets by these two leading artists. His devotion to film singing nevertheless resulted in popular hit songs once again, notably 'Kya hua tera wada' in *Hum kisi se kam nahin* (1977) that won him his sixth annual 'Best Male Playback Singer' Filmfare award. Rafi's voice remains one of the most recorded in the history of Indian music.

Mohammed Rafi

Raftor, Catherine. *See* CLIVE, KITTY.

Rag. *See* RAGTIME.

Rāga (Sans.: '[red] colour', hence 'passion, delight'; Hindi/Urdu *rāg*; Tamil *rākam*). In Indian musical theory and practice a melody-type or mode, suitable for expressing aesthetic ethos and religious devotion (*see* INDIA, §III, 2; MODE, §V, 3). A *rāga* provides the melodic material for the composition of vocal or instrumental melodies and for improvisation (e.g. in ĀLĀPA). Each *rāga* is characterized by a variety of melodic features, including a basic scale (perhaps with additional or omitted notes), grammatical rules governing the relative emphasis of different scale degrees and the sequence of notes in ascending and descending contexts, distinctive ways of ornamenting or pitching particular notes, and motifs or formulae from which complete melodies or improvisations can be constructed. Each *rāga* has a unique aesthetic identity, sometimes described in terms of the classical *rasa* aesthetic system (*see* INDIA, §III, 7). *Rāgas* are normally attributed to divine rather than human origin and are sometimes considered to exist in the form of deities or spirits, or to have magical or therapeutic properties. In North India each *rāga* is associated with a season or time of day at which it is normally performed. Analysis and classification of *rāgas* is a central concern of theoretical texts from the *Bṛhad-deśī* of Mataṅga (*c*9th century CE) onwards.

RICHARD WIDDESS

Raganella (It.). See RATCHET.

Ragazzi, Angelo (*b* ?1680; *d* Vienna, 1750). Italian composer. He studied the violin at the Naples Conservatory of S Maria di Loreto with Giancarlo Chilò (or Cailò), who had moved to Naples from Rome with Alessandro Scarlatti. In 1704 he was employed as a violinist in the royal chapel in Naples (where at some time he was Konzertmeister, according to a Dresden manuscript); when Naples passed under Habsburg rule, he went first to Barcelona and then to Vienna, where he entered the service of Emperor Charles VI. He stayed there from 1713 to 1722, when he returned to Naples, but moved to Vienna again in 1729 (possibly as a result of the transfer of power in Naples from the Habsburgs to the Bourbons); he remained there for the rest of his life, retiring in 1740, ten years before he died.

Ragazzi was one of the leading instrumental composers in 18th-century Naples. His only printed work is a collection of *Sonate a quattro*, compositions of considerable interest for a knowledge of the Neapolitan instrumental tradition, and dedicated (as might be expected) to Charles VI. The collection comprises 12 sonatas for first violin, ripieno first violin, second violin, third violin or viola, and violone and continuo. The sonatas are varied in style and broadly representative of Ragazzi's music. Some of them are close to trio sonatas, others to solo concertos; some are in a contrapuntal style, while others are more homophonic. Ragazzi favoured a classical polyphonic manner combined with instrumental virtuosity; some passages show a Venetian influence, but others are in a strict polyphonic idiom. These characteristics of Ragazzi's style need to be seen in the context of contemporary Viennese taste, where the two dominating factors were J.J. Fux's teaching and the popularity of the Vivaldi concertos.

RENATO BOSSA

Ragazzoni [Ragazzono], **Ottavio** (*b* Parma, mid-16th century). Italian composer and publisher. He was a Carmelite monk belonging to the Congregation of Mantua and was probably related to PIETRO PAOLO RAGAZZONI. He supervised the publication of the anthology *Liber primus psalmorum qui in ecclesia de cantantur ad Vesperas quinque vocibus* (Venice, RISM 1590[7]). This volume contains 20 pieces by 17 composers, including a *Laudate Dominum* by Ragazzoni himself. The dedication is to Padre Maestro Lattanzio Domanino of Mantua.

For bibliography *see* RAGAZZONI, PIETRO PAOLO.

FRANCESCO BUSSI

Ragazzoni [Ragazzono], **Pietro Paolo** (*b* Parma, 28 June 1499; *d* Parma, *c*1580). Italian composer. He lived in Parma, where, with some interruptions, he was a singer in the choir of the Madonna della Steccata from 1539 to 1564. On 20 March of that year he was appointed *maestro di cappella* of the same church. On 22 November 1566 he was made *maestro di cappella* at the cathedral and was succeeded in that post by Marco Oliva on 3 November 1580. Of his compositions only one volume is extant: *Madrigali di Pietro Paolo Ragazzoni da Parma a quattro voci* (Venice, 1544), dedicated to Girolamo Provosto de la Scala.

FRANCESCO BUSSI

Ragga [raggamuffin]. A sub-genre of reggae; an alternative term for much of the dancehall music emanating from Jamaica and Britain since the mid-1980s, in much the same way that 'blue beat' has become the accepted UK term for ska. Most trace its beginning to Wayne Smith's influential Jamaican single, *Under Me Sleng Teng* (1985), which used a rhythm from a Casio electronic keyboard of the time, so ushering in the era of digitized rhythms that have subsequently almost taken over the sound of reggae. Performing in a pumped-up DJ style, with elements of hip hop combined with aggressive and sometimes witty vocal stylings, raggamuffin artists include the DJs Shabba Ranks, Capelton, Buju Banton, Beenie Man, Admiral Bailey, Cutty Ranks, Gen. Levi, Red Rat, Tiger, Goofy, Elephant Man, Spragga Benz, Mr Vegas and Ward 21, often singing in combination with one another. Among the main producers are Bobby Digital, Donovan Germaine, Gussie Clarke, Steely and Cleevie, Mafia and Fluxy, Jr. Kelly and King Jammy. A more recent development of the sub-genre, called opera house, taps the operatic talents of multi-talented Pavarotti-inspired artists such as Lukie D, singing in a satirically bombastic style.

ROGER STEFFENS

Raghavan, Venkatarama (*b* Tiruvarur, Madras State, India, 22 Aug 1908; *d* Madras, 5 April 1979). Indian scholar and bibliographer. He was educated at Tiruvarur in Tanjore District and at Presidency College, Madras, and distinguished himself as a student of Sanskrit. Under the guidance of S. Kuppuswami Śastri he wrote his monumental doctoral dissertation on Bhojarāja's *Śṛṅgāraprakāśa*, an 11th-century treatise on aesthetics and poetics. His early scholarly research involved him in the chronological charting of Sanskrit sources on music theory as well as poetics. After a brief period as superintendent at the Sarasvati Mahal Library in Thanjavur, Raghavan joined the Sanskrit department of Madras University in 1935. He remained there for the rest of his career, becoming professor and head of the department in 1955. From the early 1950s he made several study and lecture tours to Europe, America, the USSR and East Asia, and he represented India at international conferences. He was a member of numerous Indian Government committees concerned with education, Indological research and the arts, and was honoured with some of India's most prestigious national awards, including the Padma Bhushan in 1962. He was for many years closely associated with the Music Academy in Madras, acting as its secretary and as editor of its journal, and in these roles he exerted great influence in the field of Karnatic music and its performance in and around Madras. Connected with his interest, both personal and official, in the preservation and documentation of Indian manuscript collections in India and abroad, his lasting scholarly monument will be the multi-volume *New Catalogus Catalogorum*, a detailed and comprehensive inventory of Sanskrit authors and texts in printed and manuscript sources. He was the founding editor of this project, of which around half had been printed by the end of the 20th century. He was an extremely prolific researcher and writer in the fields of classical Indian literature, drama, aesthetics, linguistics and historical musicology.

JONATHAN KATZ

Ragin, Derek Lee (*b* West Point, NY, 17 June 1958). American countertenor. He studied at the Oberlin College Conservatory of Music, Ohio, and at the age of 26 won the ITT International Fellowship, which enabled him to study in Amsterdam. He has won several major prizes, including first prize in the 1986 Munich International Music Competition of the ARD. In 1983 he made his operatic début in Cesti's *Il Tito* at the Festwoche der Alten Musik, Innsbruck. His American début was as Nirenus in Handel's *Giulio Cesare* at the Metropolitan in 1988, when he was one of the first countertenors to appear there. He has appeared at the Aldeburgh, Maryland and Aix-en-Provence festivals, and in 1990 made his Salzburg Festival début as Orpheus in Gluck's *Orfeo ed Euridice*. He sings in concerts in Germany and elsewhere, but is particularly renowned for his dramatically forceful interpretations of operatic roles, recordings of which include Handel's *Giulio Cesare*, *Tamerlano* and *Flavio*, Hasse's *Cleofide* and Gluck's *Orfeo*.

NICHOLAS ANDERSON

Ragnarsson, Hjálmar Helgi (*b* Ísafjörður, 23 Sept 1952). Icelandic composer, choral conductor and teacher. He studied the piano at the Reykjavík College of Music (1969–72) and composition with Shifrin and Shapero at Brandeis University (BA 1974). Following two years' teaching in Ísafjörður, he studied electronic music at the Institute of Sonology, University of Utrecht (1976–7), before studying with Husa at Cornell University (1977–80). In addition to the *Six Songs to Icelandic Poems*, his master's thesis consisted of the first major study of the life and works of Jón Leifs. He conducted the Iceland University Choir from 1980–83 and taught at the Reykjavík College of Music from 1980 to 1988. He served as president of the Federation of Icelandic Artists (1991–8) and was appointed president of the newly founded Iceland Academy of the Arts in 1999.

Ragnarsson's experience in writing for voices is evident in the primacy given to melody and phrase in much of his music, including his instrumental works. In his choral music, such as his Ave Maria, frequent cross-relations betray the influence of Leifs. His Organ Concerto is one of his most ambitious and colourful scores, with a lyrical central section framed by outer movements that combine toccata-like organ writing and explosive chordal sonorities in the orchestra.

ÁRNI HEIMIR INGÓLFSSON

Ragossnig, Konrad (*b* Klagenfurt, 6 May 1932). Austrian guitarist and lutenist. He studied the guitar with Karl Scheit at the Vienna Music Academy (1954–7) and made his début in Vienna in 1956. He took part in Segovia's masterclass at Santiago de Compostela in 1960; his career was launched in 1961, however, when he won first prize in the Concours International de Guitare, sponsored by Radio France. His performance there revealed a clean, precise and disciplined style of playing (also heard on numerous recordings), in marked contrast to the more idiosyncratic and impulsive performance styles associated with Segovia and his followers. A scholarly musician, Ragossnig followed Bream's example in taking up the lute, mastering a broad range of lute repertory and making five significant recordings in the 1970s. Many other recordings with lute in ensembles and accompanying the voice followed. He gave the premières of Webern's *Drei Lieder* op.18 and Hans Erich Apostel's *Sechs Musiken für Gitarre* op.25 in Vienna in 1961, and of important works of von Einem, in 1970 (*Drei Studien*, op.34) and 1980 (*Leib- und Seelen-Songs* with Peter Schreier). With the latter, Ragossnig created a sensation in performing Schubert's *Die schöne Müllerin* with guitar accompaniment at the 1978 Salzburg Festival. Recordings of it and much unknown music for voice and guitar (by Weber, Spohr, Giuliani and others) followed. Ragossnig has held teaching posts at the Basle Musikakademie (since 1964) and the Vienna Hochschule für Musik (since 1983), and was a guest professor at the Musikhochschule in Zürich in 1989. He has been much in demand as a performer and teacher of masterclasses at various music festivals in Europe, the USA and Japan. Ragossnig has published a *Handbuch der Laute und Gitarre* (Mainz, 1978) and numerous editions of solo and chamber works with guitar, songs with guitar accompaniment, and concertos.

THOMAS F. HECK

Ragtime. A style of popular music, chiefly American, that flourished from about 1896 to 1918. Its main identifying trait is its ragged or syncopated rhythm. While today it is most commonly thought of as a piano style, during the ragtime period the term also referred to other instrumental music, to vocal music and to dance. The best instrumental ragtime pieces manifested sophisticated musical thought and demanded considerable technical facility of a performer for their fullest realization. Ragtime songs, on the other hand, were generally less concerned with musical values, designed as they were to reach a large and undiscriminating audience.

1. Stylistic conventions. 2. History. 3. Ragtime song. 4. The ragtime revival.

1. STYLISTIC CONVENTIONS. Improvisation was common in ragtime, but little of this has been preserved. Our information comes primarily from non-improvised performances on recordings and piano rolls and from published sheet music, sources that reveal a notable standardization of musical tracts. The characteristic syncopated rhythm of ragtime was grafted onto an existing stock of conventions associated with the duple-metre march and two-step. While these conventions are themselves unremarkable, an understanding of their application to ragtime provides a useful vantage point for viewing the musical character of ragtime and its relation to other genres of the time.

Virtually all rags conceived as instrumental pieces follow the formal concept established by earlier duple- and quadruple-metre dances: the march, two-step, polka and schottische. These dances comprised three or more independent 16-bar themes, each divided into periods of four four-bar phrases and arranged in patterns of repeats and reprises. Typical patterns were *AABBACCC′*, *AABBCCDD* and *AABBCCA*, with the first two strains in the tonic key and the following strains, known as the 'trio', in the subdominant. Common additions or interpolations to the form included a four-bar introduction, a four-bar introduction to the trio, and an interlude between trio themes (or their repeats or variants) consisting most often of four or eight bars, but extending at times to 24 bars in length. Most rags are in the major mode, but when the first strain begins in a minor key, the second is usually in the relative major and the trio in the subdominant of the relative major.

The rhythmic conventions of ragtime were far less rigid than those of form. While rhythmic stereotypes were essential to ragtime's identity, departures from those stereotypes were used to impart individuality. Most rags were written in 2/4 or 4/4. As a general rule, the left-hand part reinforced the metre with a regular alternation of low bass notes or octaves on the beat (or on the strong beats in 4/4) with mid-range chords between. Frequent exceptions included successive octaves, successive mid-range chords, syncopations mirroring the right-hand part, or habanera- or tango-like syncopations. More sophisticated ragtime composers sometimes wrote bass lines of melodic interest. The right-hand part generally provided a melody combining even, march-like rhythms and uneven syncopations.

Several rhythmic configurations typical of ragtime are shown in ex.1. The rhythm in ex.1*a*, in which either half of a bar may be syncopated independently, is found throughout the period but predominated during the early years, especially in pieces termed 'cakewalk'. Ex.1*b*, an augmented form of the syncopated half of ex.1*a*, was also prominent in cakewalks, but quickly lost importance after the turn of the century. In ex.1*c* the syncopation occurs over the centre of the bar; this figure is occasionally found in rags of the 1890s, but after the turn of the century it gradually became ragtime's most typical trait. The rhythm in ex.1*d*, termed 'secondary ragtime', is notable for being unsyncopated; however, as a repeating three-note melodic pattern superimposed on a duple metre, it creates shifting accents. It was rare before 1906, but quickly gained in popularity thereafter, becoming a cliché by 1910. Dotted notes (exx.1*e* and 1*f*) were not considered typical of ragtime until the 1910s, when they gradually found acceptance as ragtime became associated with the foxtrot and other dances making use of such dotted rhythms.

2. HISTORY. The single most important element of ragtime, the rhythmic syncopation that distinguishes it from other contemporary dance music, was recognized as a general trait of African-American music. It was commented upon by various 19th-century writers in reference to performances of vocal and instrumental music by blacks and was disseminated and mimicked as a stereotype in blackface minstrelsy. By the late 1880s march-patrols for the minstrel stage with syncopated, ragtime-like rhythms were being published in New York, and blackface minstrels in various parts of the country were syncopating songs in a ragtime manner. The conception that ragtime was associated with blacks became an underlying cause of much of the criticism that was directed towards the music.

A signal event in bringing ragtime to a large audience was the World's Columbian Exposition in Chicago in 1893. As the grandest exposition in American history up to that time, it was attended by more than 20 million people, including such ragtime pioneers as Ben Harney, SCOTT JOPLIN, Johnny Seamore (or Seymour, a pianist to whom the minstrel entertainer Shep Edmonds referred as 'the father of ragtime') and Jesse Pickett. Whether these and dozens of other black musicians actually performed within the fairgrounds or in the surrounding areas is not known, but countless visitors were reportedly thrilled by the jubilant sounds of this 'new' – and perhaps still nameless – syncopated music. Consequently, as ragtime spread throughout the USA in the following years, the Chicago World's Fair was frequently cited as its place of origin. The only rag specifically associated with the fair, and thus the earliest known rag, is Jesse Pickett's *The Dream*. It was not published, but as recorded by Eubie Blake, who learned it from Pickett in 1896, *The Dream* has a syncopated, habanera-like bass, which may confirm Ben Harney's claim in 1897 that one source of ragtime was Latin-American music.

The earliest known printed use of the term 'rag' is in black, Kansas newspapers from 1894, with reference to both dance and piano styles. In 1896, rag appeared in sheet music to describe syncopated arrangements of 'coon songs', and in 1897 it found its way to the titles of instrumental pieces. The first such instrumental rag was *The Mississippi Rag*, a patrol in the minstrel style by the bandleader William H. Krell. Several ragtime patrols by other composers followed, but the instrumental style that dominated the late 1890s was the CAKEWALK.

The cakewalk dance, derived from plantation dances performed by black slaves, had become popular in the early 1890s as a theatrical presentation and as a ballroom dance. The music as published was usually unsyncopated, but from 1897 it assumed the syncopations associated with ragtime. More than 100 cakewalks were published between 1897 and 1900, most with descriptive labels such as 'cake walk march', 'two-step', and 'ragtime cake walk'. Among the best known were Kerry Mills's *At a Georgia Camp Meeting* (1897) and Abe Holzmann's *Smoky Mokes* (1899). These works appeared in the repertory of such notable bands as that of John Philip Sousa, and were performed both in the USA and in Europe. (One example of the influence of the syncopated cakewalk in Europe was Debussy's *Golliwogg's Cake-Walk*, 1908.)

Concurrent with the cakewalk was a style of ragtime that was both more pianistic and had a richer rhythmic language, making prominent use of syncopation over the centre of the bar. An outstanding early example is *Harlem Rag* (1897) by the St Louis saloonkeeper Tom Turpin (ex.2), the first black composer to publish instrumental ragtime. His music shows a sophistication and stylistic maturity far beyond that of the contemporary cakewalks, suggesting that, for him, ragtime had long been a familiar language. Turpin's saloon, the Rosebud Bar, was a centre for ragtime players in St Louis. Composers associated with him (the most prominent being Joplin, whose *The Rosebud March* of 1905 was dedicated to Turpin) are grouped by some modern writers in a loosely defined school known as 'classic' or 'St Louis' ragtime composers. Neither of these interchangeable terms really refers to a school in a stylistic or chronological sense, since the classic composers manifested diverse styles and were active from the 1890s to the early 1920s. Nor is there agreement as to the membership of the school apart from Joplin and his colleagues and associates, including James Scott and the Eastern white composer Joseph F. Lamb. There is no doubt, however, that most classic ragtimers wrote ragtime of a superior quality.

During the first decade of the 20th century the term classic ragtime had a more precise meaning. It was at this time that the publisher John Stark (who issued works by Joplin, Lamb, Scott, Artie Matthews, Paul Pratt and J. Russel Robinson, among others) began to advertise his publications as classic rags, comparing their quality to that of European art music. Joplin, when dealing later with other publishers, retained the term classic for his works as an expression of his artistic aspirations. May Aufderheide of Indianapolis, a composer not associated with Stark, adopted the term for her own Joplin-influenced compositions. Historically then, classic ragtime referred to rags composed by Joplin, by Aufderheide and those published by Stark.

Despite the central position today of classic ragtime, the term was not widely known during the ragtime years and its recognition was limited. Notwithstanding the phenomenal success of Joplin's *Maple Leaf Rag* (1899; see illustration), classic compositions were less popular with the public than the simpler, more accessible rags of such figures as Ted Snyder, Percy Wenrich, Henry Lodge, Charles L. Johnson and George Botsford. It was Johnson's *Dill Pickles* (1906) that popularized the secondary rag figure; this was quickly adopted by Botsford and others,

Ex.2 T. Turpin: *Harlem Rag* (1897)

becoming a standard ragtime figuration before the decade was out (ex.3).

Ex.3 G. Botsford: *Black and White Rag* (1908)

Major accretions to the ragtime language developed in the 1910s. The new dance styles added dotted notes, at first in syncopated formations but eventually, in the last years of the period, also without syncopation. A second important development was the blues. Blue notes had long been idiomatic to some ragtime composers, and the 12-bar blues progression appeared in rag strains as early as 1904 (*One o' Them Things*, by James Chapman and Leroy Smith). But the publication of W.C. Handy's

Sheet-music cover of Scott Joplin's 'Maple Leaf Rag', first published 1899, in an edition issued after 1904

Memphis Blues (subtitled 'A Southern Rag') in 1912 brought blues into the popular ragtime mainstream. Thereafter, ragtime-blues hybrids were common.

With Harlem 'stride' ragtime (*see* STRIDE) came changes equally significant, although because of the virtuoso demands of the style they were less widespread. Stride was developed in New York in the 1910s by such pianists as Eubie Blake, Luckey Roberts and James P. Johnson. As revealed in their few (and simplified) publications during the ragtime years, in piano rolls made in the late 1910s, and in recordings from the early 1920s, they expanded the stereotyped rhythmic language of ragtime and fostered tempos considerably faster than those of dance-oriented rags. Their stride style was a direct forebear of later jazz piano styles.

Ragtime declined in popularity during the late 1910s and, by the end of World War I, had been replaced by jazz (*see* JAZZ, §2), the new American syncopated popular music. The change was at first primarily one of terminology; musically there was no distinct break, and many ragtime musicians, including Jelly Roll Morton and Robinson, merely began to call themselves jazz musicians.

Some modern writers extend the ragtime period into the 1920s and 30s, referring to the styles of popular piano composition of those decades as novelty ragtime. This is a modern term dating from the early 1970s, and has little historical justification. By the 1920s ragtime was outmoded both as a style and as a term, and popular piano styles were called either jazz or NOVELTY PIANO.

3. RAGTIME SONG. Many types of popular song current during the ragtime era, including coon songs and blues, were referred to as ragtime songs. This music was more familiar to the general public than instrumental ragtime. The first of these song types, the racially denigrating COON SONG, came to prominence in the 1890s. Important early examples are *The Bully Song* (1895) by Charles E. Trevathan and Harney's *Mister Johnson turn me loose* (1896), both becoming popular after interpolations by May Irwin in Broadway musicals. While most ragtime coon songs were soon forgotten, a few are still familiar today, such as *A Hot Time in the Old Town Tonight* (1896) by Theodore Metz, *Hello! Ma Baby* (1899) by Joe Howard and Ida Emerson, and *Bill Bailey, won't you please come home?* (1902) by Hughie Cannon. Black composers and lyricists also contributed to the repertory, their offerings frequently amounting to a racial self-mockery. The black community, at first accepting of coon songs, gradually turned against the style, especially songs with offensive lyrics. But the rejection of the black dialect song was not total; some prominent spokesmen argued that non-disparaging dialect lyrics were a cultural heritage to be treasured and preserved. Artistically, the genre reached its peak in the dialect songs of black songwriting teams such as Bob Cole and the brothers J. Rosamond Johnson and James Weldon Johnson (*Under the Bamboo Tree*, 1902) and Will Marion Cook and Paul Laurence Dunbar (*Darktown is out tonight*, 1898). Between 1905 and 1910 the ragtime song gradually lost its exclusively racial character, and any American popular song of a strongly rhythmic nature was apt to bear the description ragtime. Thus typical representatives of ragtime songs were *That Ragtime Suffragette* (music by N. Ayer, 1910), *Ragtime Cowboy Joe* (L.F. Muir and M. Abrahams, 1912), *Waiting for the Robert E Lee* (Muir, 1912), and Irving Berlin's *Alexander's Ragtime Band* (1911). The last-named song, though virtually unsyncopated, was viewed by many of the public as the greatest of ragtime hits, and probably influenced the acceptance of nonsyncopated ragtime. Blues, already a part of the ragtime style, became a recognized sub-genre after the success of Handy's *Memphis Blues* in 1912. The use of the term ragtime became increasingly pervasive and indiscriminate until, around the time of World War I, it was replaced by the new catchword, jazz.

Distinctions between ragtime songs and instrumental ragtime pieces are usually considerable, for the songs adhere less consistently to the principles of ragtime syncopation and are generally cast in a two-part verse–chorus pattern. Overlaps between the categories, however, are also significant. Developments in one were quickly adapted for the other: songs were routinely performed in instrumental versions, song choruses were frequently appended as final strains to early instrumental rags, and many works were published both as instrumental pieces and as songs (true even of the most famous of instrumental rags, Joplin's *Maple Leaf Rag* of 1899, which was published in a song version in 1903). However, despite their many points of convergence, the historical paths of instrumental and vocal ragtime remained distinct; the instrumental rag led inexorably to instrumental jazz, while the ragtime song merged with other American popular song forms (*see* POPULAR MUSIC, §I, 3).

4. THE RAGTIME REVIVAL. Ragtime has passed through several stages of revived interest. The first was in the 1940s, during the revival of traditional or dixieland jazz, whose foremost exponent, Lu Watters, included many forgotten piano rags in his band's repertory. By the end of the decade Pee Wee Hunt's recording (1948) of Euday Bowman's *12th Street Rag* was a bestseller. Complementing the efforts of performers was Blesh and Janis's book *They All Played Ragtime* (1950), the first historical study of the genre, which elevated classic ragtime to a place of honour among a newly developed audience. Throughout most of the 1950s ragtime was presented as a novelty – a brittle honkytonk piano music – by such performers as Joe 'Fingers' Carr (Lou Busch) and Crazy Otto (Johnny Maddox). A broader view was offered by Max Morath in a succession of television and theatre productions (beginning in 1959) that portrayed ragtime in its social context; and Eubie Blake, at an advanced age, came to prominence as a leading rag pianist and lecturer.

In the 1960s ragtime acquired a small but active coterie of aficionados who formed organizations and assiduously collected, researched and performed the music. But it was the attention of several classical and academic musicians and scholars, focussing primarily on the works of Joplin, that spurred the ragtime explosion of the 1970s. A classically orientated recording of piano music by Joshua Rifkin (1970), a recording of works for a 12-piece ensemble conducted by Gunther Schuller (1973), and a two-volume collection of Joplin's music published by the New York Public Library (1971) brought ragtime to the attention of performers and scholars in the classical music world. From these sources Joplin's music reached Hollywood, and was used in the highly popular film *The Sting* (1973). A number of collected editions of piano rags also appeared in the 1970s, making the music, which had long been out-of-print and had become rare, now available to performers. As a result of these events, a music several generations old was again popular and found itself

anachronistically positioned alongside current rock hits on the surveys of best-selling popular music. This revitalized interest unleashed a flood of performances, inspired such composers as William Bolcom and William Albright to merge ragtime and modern idioms, and opened a new field in American musical scholarship.

EDWARD A. BERLIN

Ragué, Louis-Charles (*b* before 1760; *d* Moulins, after 1793). French composer and harp teacher. He appeared on the musical scene in Paris in 1783, when the press described him as an 'amateur distinguished in more than one genre' (*Mercure de France*, October 1784, p.239). He had an active and highly successful career for a decade, after which he disappeared. His first published work, *Trois sonates pour la harpe*, was engraved in Brussels in 1783, and in the same year his op.2, *4 sonates pour la harpe*, was published in Paris, as were all of his subsequent publications. His name appeared frequently in the Parisian press until December 1793, when his ballet *Les muses* was presented at the Opéra. According to Fétis, Ragué retired to the environs of Moulins in 1792 (1794, after the première of his ballet, seems a more likely date).

Although Ragué was not known as a performing harpist, almost all his compositions were for the harp, an instrument much in vogue in Paris at the time, as is shown by the existence of publishers such as Cousineau and Naderman, who specialized in the publication of harp music. Ragué wrote 20 works or groups of works bearing opus numbers, most of them for harp accompanied by another instrument. Other works include two methods for the harp, two rather unsuccessful operas, one ballet and a number of smaller works and arrangements published separately or in periodic collections. His only symphonic work, *Trois symphonies à grand orchestre* op.10, was dedicated to Friedrich Wilhelm II of Prussia. In its preface Ragué called himself 'élève du célèbre Sacchini', who had lived in Paris fron 1782 until his death in 1786. These works, which reflect an attempt at more serious composition, were first performed at the Concert Spirituel; the *Mercure de France* (May 1787, p.192), considered them 'very agreeable'. Indeed, all press references indicate that Ragué's compositions were well received both in performance and on publication. The symphonies employ textbook sonata structures with short development sections. The first of the *Trois symphonies*, in D minor, shows Mannheim influence in the drama of its opening theme, but also exhibits the gentle lyricism of the French *romance* in its second theme, for solo flute. The sonatas and other chamber music for harp rarely have more than two movements, and although somewhat unpretentious and lacking in depth, they are melodic and pleasing, and well suited to the demands of the Parisian salons of the 1780s. The *Mercure de France* (January 1784, p.239) noted Ragué's particular affinity for composing harp music, and found the *Sonates* op.2 'brilliant and agreeable'.

WORKS

printed works published in Paris unless otherwise stated

STAGE

Memnon (oc, 3, J.-F. Guichard, after Voltaire), Paris, OC (Favart), 26 Aug 1784; 3 airs pubd in P. Le Roy: Airs de Richard Coeur de Lion, Memnon etc. (Paris, 1784)
L'amour filial (oc, 2, B.F. de Rosoi, after J.J. Engel: *Der dankbare Sohn*), Paris, OC (Favart), 2 March 1786; excerpts pubd in contemporary anthologies
Les muses, ou Le triomphe d'Apollon (ballet, 1), Paris, Opéra, 12 Dec 1793

BARRY S. BROOK, SUSAN KAGAN

Raguenet, François (*b* Rouen, *c*1660; *d* 1722). French writer on music. A doctor of medicine and a priest, he was tutor to the nephews of Cardinal de Bouillon, whom he accompanied to Rome in 1697. In Italy he developed a passionate interest in both Roman architecture and contemporary Italian music, which after his return to Paris he expressed in *Les monumens de Rome* (1700) and *Paralèle des italiens et des françois, en ce qui regarde la musique et les opéra* (1702).

The *Paralèle*, the title of which was inspired by Charles Perrault's *Parallèle des anciens et des moderns en ce qui regard les arts et les sciences* (1692), compares Italian with French music, strongly favouring the former. Taking opera as his focus, Raguenet is unstinting in his praise for the Italian-born composer Lully. But he damns the French with faint praise by considering Lully the only French opera composer worth mentioning and suggests that parity between the two musics can be achieved only when a French-born composer succeeds in winning Italian approbation. For him, the Italians are born musicians and their castratos, with their 'voix de rossignol' and 'haleines infinies', are indispensable to opera. Raguenet praises the instrumentalists' technical training, their ability to sight-read and to play without a *batteur de mesure* and, noting the lowly status of French musicians, remarks on the prestige the Italians enjoy at home and abroad.

The warm reception accorded to the *Paralèle* by the press was starkly contrasted by the criticism voiced in the Première Partie of the *Comparaison de la musique italienne et de la musique françoise* (published anonymously in 1704). The author of the *Comparaison* was JEAN LAURENT LE CERF DE LA VIÉVILLE, vigorous champion of French music and a fellow *rouenais*.

The controversy reached a climax in 1705 with the publication of Raguenet's bitter and often carping *Défense du Parallèle des italiens et des françois* (to which he appended André Maugars' 1639 *Response faite à un curieux sur le sentiment de la musique d'Italie*, expurgated of any praise of French music), the Seconde Partie of Le Cerf's *Comparaison*, and, more particularly, Le Cerf's *Réponse à la Défense du Parallèle*. They were joined by Nicolas de Boisregard Andry, a physician and medical journalist who supported Raguenet in the *Journal des Sçavans* of 7 December 1705. Though Raguenet bowed out of the polemic, Le Cerf and Andry issued further publications in 1706.

WRITINGS

Les monumens de Rome (Paris, 1700)

ALBERT COHEN/JULIE ANNE SADIE

Ragusa (It.). *See* DUBROVNIK.

Raharjo, Sapto (*b* Jakarta, 16 Feb 1955). Indonesian composer and performer. Moving to Yogyakarta at the age of five, he played Javanese gamelan and performed in a band. Self-taught as a composer, in 1973 Raharjo began creating music for instruments made out of tin cans, and in the following years experimented with synthesizers. He presented the resulting works as Yogyaharmonik between 1977 and 1980 in Jakarta and Yogyakarta. In 1975 he enrolled at the Academy of Film and Dramatic Arts in Yogyakarta. He subsequently became increasingly interested in music for the theatre and worked on projects involving opera and *wayang kulit* (Javanese shadow puppet theatre). As well as creating music for computers which use sampled gamelan sounds, Raharjo has worked on multimedia representational forms; his most sensational multimedia work is *Win* (1992), performed as a solo non-stop for three days. He has also made regular appearances at the Jakarta International Percussion Festival. In the late 1990s he worked with a number of French folk and jazz musicians to produce recordings including *Borobodur Suite*, *Merapi* and *Java*. He occupies a unique position in the generation of Indonesian musicians that emerged during the 1970s.

FRANKI RADEN

Raḥbānī. Lebanese family of musicians.

(1) 'Āṣī Raḥbānī (*b* Anṭilyās, nr Beirut, 1923; *d* Beirut, 1986). Composer and lyricist.

(2) Manṣūr Raḥbānī (*b* Anṭilyās, nr Beirut, 1925). Composer and lyricist, brother of (1) Āṣī Raḥbānī.
'Āṣī Raḥbānī and Manṣūr Raḥbānī were usually known as al-Akhawān Raḥbānī ('The Raḥbānī Brothers'). They came from a musical family; their father Ḥannā al-Raḥbānī was an amateur player of the *buzuq* (long-necked fretted lute). In their early lives the brothers worked as policemen. They studied music in Lebanon with Father Būlus Ashqar (1881–1962) and Bertrand Robillard (*d* 1964). In 1954 'Āṣī married FAYRŪZ, who became one of the most popular singers of Lebanon and the Arab world. Between the late 1950s and the early 70s 'Āṣī and Manṣūr created a vast vocal repertory for Fayrūz, who sometimes performed with other well-known artists. Working together, the brothers and Fayrūz became widely

recognized as a musical team; their repertory included hundreds of songs and about two dozen musical plays which incorporated dialogues, songs and folk dances with new choreographies. Presented at the Baalbek International Festivals and other important Arab and Lebanese venues, the plays and songs became collectively known as *fūlklūr* ('folklore'). This new Lebanese art form embraced numerous adaptations of older traditional and popular tunes and elements of traditional Arab and European musics. The lyrics and plots of musical plays such as *Mawsam al-'Izz* (1960), *al-Ba'albakiyyah* (1961) and *Jisr al-Qamar* (1962) centre around Lebanese village life, while other plays such as *Ayyām Fakhr al-Dīn* (1966) are based on historical and nationalistic topics; the themes of later works such as *Lūlū* (1974) and *Mays al-Rīm* (*c*1975) are predominantly urban. Many of the Raḥbānīs' songs also address topics of general Arab interest.

'Āṣī and Manṣūr sometimes worked with their younger brother, the composer Elias (Ilyās) Raḥbānī (*b* 1938), who is known for creating numerous television jingles and film scores. The Raḥbānī Brothers' collaboration dwindled and eventually ceased following Āṣī's stroke in 1972 and the separation of 'Āṣī and Fayrūz around 1979.

After his collaboration with his brother 'Āṣī ended, Manṣūr continued to compose musical plays. Although related in many ways to the earlier *fūlklūr* style, Manṣūr's later works are characterized by a more prominent use of the symphonic idiom and choral singing. His musical plays have a variety of historical, philosophical and moral plots; examples include *Ṣayf 1840* ('The Summer of 1840', *c*1987), *al-Waṣiyyah* ('The Will', 1993) and *Ākhir ayyām Suqrāṭ* ('The Last Days of Socrates', 1998), which was recorded by the Kiev Symphony Orchestra under Vladimir Sirenko.

(3) **Ziyād Raḥbānī** (*b* Anṭilyās, nr Beirut, 1 Jan 1956). Composer, pianist, actor and singer, son of (1) 'Āṣī Raḥbānī and FAYRŪZ. In Lebanon he studied with Boghos Gelalian, an Armenian-Lebanese composer and teacher of piano and music theory. Ziyād became an accomplished pianist and also developed facility on traditional Arab instruments, especially the *buzuq*. He emerged as a renegade artist with leftist leanings and gradually departed from the 'Raḥbānī School' of his parents and his uncle Manṣūr, instead developing a multi-faceted style of his own. His musical plays combine singing with dialogue, often in the city vernacular of Beirut; he usually acts in his plays and sometimes sings. His music brings together Lebanese popular idioms and traditional Arab elements and also incorporates influences from Western musics, especially jazz. His dramatic narratives include caricatures of the nationalistic and folkloristic themes of the early Raḥbānī plays and satirical allusions to social and political corruption in Lebanon, especially during the civil war (1975–90). His theatrical works include *Sahriyyah* ('Festive Evening', 1973), *Nazl al-Surūr* ('The Inn of Joy', *c*1974), *Bin-nisbi la-bukrā shū?* ('What About Tomorrow?', 1978), *Fīlm Amīrkī Ṭawīl* ('Long American Movie', *c*1980), *Shī fāshil* ('A Fiasco', 1983) and *Bi-khuṣūṣ al-karāmi wal-sha'b al-'anīd* ('Concerning Dignity and the Unyielding People', 1993). After the early 1980s, following the separation of his parents and the cessation of collaboration between his father and his uncle, Ziyād became a major composer of Fayrūz's song repertory.

ALI JIHAD RACY

Rahbari, Alexander [Ali] (*b* Varāmīn, Iran, 26 May 1948). Austrian conductor of Iranian birth. He studied conducting and composition in Vienna with von Einem and Swarowsky, then returned to Iran and became involved in developing its musical life. He came to Europe again in 1977 and won the Besançon international competition that year, followed by a silver medal at Geneva in 1978. He was invited by Karajan to conduct the Berlin PO in 1979, and returned on several later occasions, as well as deputizing for Karajan at Salzburg in 1980. He began touring widely in Europe as a guest conductor, and appeared in Japan and Hong Kong. From 1986 to 1987 he was principal guest conductor of the BRTN PO; he became the orchestra's principal conductor in 1989, and has made many recordings with them. He made his ENO début in 1993 with *Simon Boccanegra* and returned to the ENO for *La forza del destino* in 1995. Rahbari's conducting is virile and dynamic, often favouring brisk tempos, as can be heard on his recordings of *Rigoletto*, *Simon Boccanegra* and *Madama Butterfly*.

NOËL GOODWIN

Raï. A genre of North African popular music, most closely associated with the city of Waharan (Oran) in western Algeria and nearby towns on both sides of the border with Morocco.

1. The origins of *Raï*. 2. Pop-*raï*.

1. THE ORIGINS OF '*RAÏ*'. The earliest music of this name was performed by female singers in the bars of Oran during the 1920s and 30s. They were accompanied by the *gaspah* (an end-blown flute) and the *guellal* (a pottery, single-headed cylindrical drum). During this period of French colonial rule Oran was a busy port, largely inhabited by Europeans and surrounded by *bidonvilles*, the homes of dispossessed Arab migrants. This mix of peoples and cultures gave rise to an entertainment business which appropriated elements of the sexually frank *medhatte* repertory, moving it from its traditional place at single-sex wedding parties into a public and morally ambiguous context.

Cheikhat (female equivalent of *cheik*, 'elder') performed songs which expressed passion, powerlessness and lamentation and also included elements of local religion. These themes traditionally belonged to a discrete female repertory. The presentation of these topics to a mixed audience and the boldness of the singers themselves were widely condemned by a local Arab community striving to present a morally superior identity in opposition to that of European colonialists.

Following regional traditions, the music of early *raï* typically included repeated phrases and sung lines alternating with passages played on the flute. The range was limited to that of the *gaspah* but emphasis was placed on a timbre of sensual hoarseness. The *guellal* maintained a steady rhythmic pattern throughout the performance, typical of other local genres derived from dance or religious practices. This early style gradually absorbed influences from further waves of Moroccan, Saharan and Berber immigrants to the city, before and after independence in 1962.

Until the 1970s, because of the dubious moral associations of *raï*, performances were usually limited to semi-public domains such as men's bars, bordellos and wedding parties. Singers such as Cheikha Rimitti and Cheikha Djennia often added wry and witty comments to songs

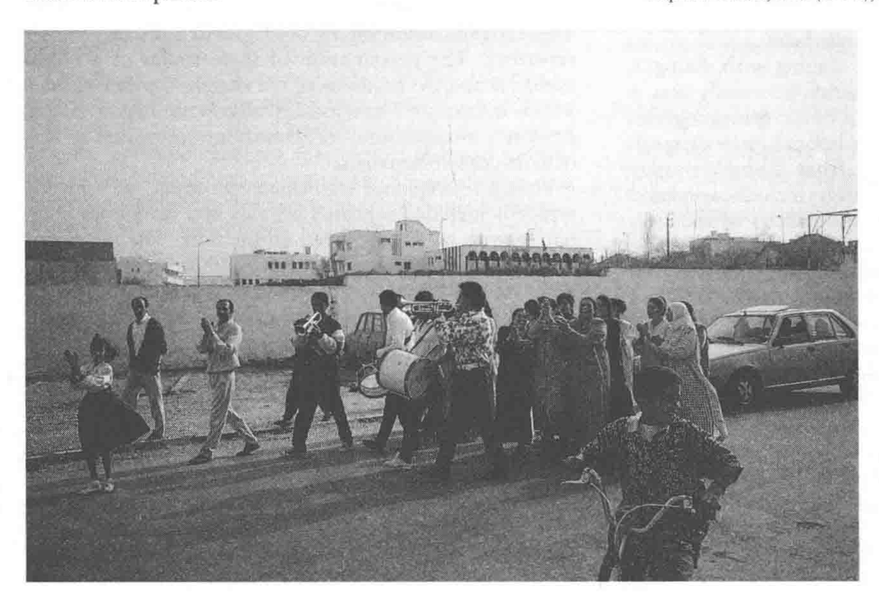
Ex.1 Common rhythmic patterns used in pop-*raï*

and dedications were often made to members of the audience who gave money to the singer's *berrah* (master of ceremonies).

2. Pop-'raï'. With the arrival of cassette technology and a period of relative political calm in the late 1970s, *raï* recordings began to be produced for local consumption. There was considerable experimentation in the recording studios and gradually the genre incorporated novel regional and global musical elements. Early pop-*raï* recordings, such as those by Messaoud Bellemou, show relatively little change to the melodic patterns and tonal range. However, an improvised introduction in free rhythm was appropriated from either *andalouse* or Egyptian traditions and a version of the *tam-tam* rhythm was included from the wedding musics of the Moroccan border (ex.1). The songs themselves reworked familiar local material, often referring to specific places in Oran itself. Singing in Darija, the local dialect of Arabic, pop-*raï* singers adopted the title *'Cheb'* (female, *Cheba*), meaning 'young', which defined their main audience and distinguished them from an earlier generation of singers. The production of such a linguistically and musically syncretic genre as *raï*, combined with its already immoral associations, offended many Algerians. Nevertheless, the music became increasingly popular at wedding parties (see illustration) and in the nightclubs that dotted Oran's *corniche*. The recordings of Houari Benchenet, Cheb Khaled, Cheba Zahouania and Cheb Hamid typify the music of this period.

Despite the lack of dissemination by the radio, *raï* thrived throughout the 1980s, in part because of the interest of expatriate Algerian communities and the broader world music market. *Raï* reflected this increasing globalization by the inclusion of reggae and funk influences, Western harmonic progressions and chorus structures drawn from Western popular styles. At the same time, it was equally affected by the Egyptian and Moroccan popular *cha'abi* styles. Many of these genres were already popular in Algeria, but such a development highlighted a growing cultural dilemma facing Algeria at the start of the 1990s.

As political opponents of the single-party (FLN) state rallied around radical Islamic alternatives, so views on issues such as language, music and traditional gender roles became polarized ideological positions. Algeria entered a protracted cultural civil war after the government cancelled elections in 1991, and many *raï* performers (among other musicians, writers and artists) were intimidated into silence or emigration. Several were abducted or killed, including the producer Rachid Baba and the 'king' of 'romantic *raï*' Cheb Hasni.



By the end of the 1990s *raï* had developed in various ways. Outside Algeria Khaled has become internationally famous, and Cheb Mami and Cheb Sahraoui have also forged successful expatriate careers. In the process much of the music lost any of its distinctive local characteristics, although it was still sung in Waharani Darija. In Oran local tastes and political circumstances have constrained experimentation, but *raï* has remained very popular, particularly the performers Cheb El Hindi, Cheb Nasro and Cheb Fathi. The *raï* performed just over the Moroccan border in the town of Oujda, by Mohammed Ray, Mimoun el Oujdi and Les Frères Bouchenak, continues to blend elements from the *raï* of Oran with European and local forms.

TONY LANGLOIS

Raick [Reyck, Rhijck, Ryck, etc.], **Dieudonné** [Deodatus] **(de)** (bap. Liège, 1 March 1703; *d* Antwerp, 30 Nov 1764). Flemish composer and organist. In 1717 he became a choirboy at Antwerp Cathedral, and was allowed by the Chapter to take harpsichord lessons. On 11 October 1721 he succeeded the deceased organist Jacob La Fosse; in the meantime he had taken minor orders and was ordained priest in 1726. In July that year, after quarrels with the new singing master Willem De Fesch and others, he resigned and left Antwerp. From 23 August 1726 until 6 September 1741 he was organist in the collegiate Pieterskerk in Leuven, where Matthias van den Gheyn was probably his pupil. Meanwhile Raick became a doctor in civil and canon law at Leuven University. In August 1741 he was appointed organist at St Baafs Cathedral in Ghent, and in 1757 he returned to Antwerp Cathedral following the death of the organist Christiaen Balthazar de Trazegnies. He remained there for the rest of his life.

Raick's brilliant style shows the influence of Rameau, Handel and Scarlatti rather than that of the pre-Classical Italian sonata.

PHILIPPE MERCIER/GODELIEVE SPIESSENS

Raimann, Ferdinand. *See* RAIMUND, FERDINAND.

Raimbaut d'Aurenga (*fl* 1162–73; *d* Cortezon). Troubadour. He was a lord of the town of Omelas, west of Montpellier. Through his father he was a vassal of the seigneurs of Montpellier; he also had connections, through his mother, with the lords of Baux. Raimbaut maintained a fairly lavish court at his castle at Cortezon (between Orange and Avignon in the marquisate of Provence), where he may have received Marcabru, Guiraut de Bornelh, and Peire d'Alvernhe, and a *joglar* named Levet who is mentioned in his poems and in his testament. His 40 surviving poems contain allusions to French literature, Ovid and rhetoric, with recondite versification schemes, a style known as *trobar ric*. Only one *canso* melody is extant, in the northern French source *F-Pn* fr.20050: *Pos tals sabers mi sors e·m creis* (PC 389.36; ed. in van der Werf and in Aubrey). It is essentially through-composed, but several phrases are repeated with variations, a common technique among the troubadours. It makes use of a three-note rising figure at the beginning of almost every phrase, similar to motivic treatments in music by his contemporaries.

ELIZABETH AUBREY

Raimbaut de Vaqeiras [Vaqueiras] (*b* Vaqueiras, nr Orange, Provence, ?1150–60; *d* ?Greece, ? 4 Sept 1207). Troubadour, companion-at-arms of Boniface I, Margrave of Monferrat (1152–1207). According to his *vida* (*I-Rvat* 5232, f.160) he was the son of a 'poor knight' ('paubre cavaillier'), and the fact of his humble origin, at least, is confirmed in his own writings. As a young man, he travelled to the court of Monferrat in northern Italy, where he entered the service of the Margrave of Monferrat and his son Boniface; he remained there probably until the early 1180s. Less is known of his life during the period from about 1183 to 1188, but in 1189 he was again in Provence, possibly in the service of Hugues I des Baux (*d* 1240). In 1190 he was back in Italy, and in 1192 had returned to Monferrat and the court of Boniface (who succeeded his father as margrave in that year).

It is from the succeeding period that Raimbaut's military exploits are known. His action in saving his patron's life in Sicily in 1194 earned him his knighthood. In 1201 Boniface was elected leader of the fourth crusade, and in 1202 he set off for the Holy Land from Venice. Raimbaut apparently returned to Provence rather than accompany his patron, but when the crusade was diverted into an action against the Byzantine Empire he finally joined the margrave in Constantinople in 1203. In 1205 Raimbaut composed his celebrated 'epic letter' to the margrave (see Linskill, 301–44), where there is a description of the events in which he participated during his colourful career. This document (*F-Pn* fr.856 (anc.7226), f.130) is an invaluable biographical source. Boniface was killed near Messiople on 4 September 1207 during a surprise attack by the Bulgarian allies of the Greeks, and it is generally assumed that Raimbaut died at his patron's side in this battle. There is no direct testimony for this, however, and it may be that he survived and even returned to Provence. A Raimbaut de Vaquieras who is named as

a witness on a document in Provence dated 1243 is thought by some scholars to be the same man.

Of the 35 poems attributed to Raimbaut, seven survive with music. The best known of these is *Kalenda maya* which calls itself an *estampida* in its last line. A *razo* states that Raimbaut composed this poem to fit a melody which he had heard played on the fiddle (*violar*) by two French *jongleurs*.

Since many later *estampies* are instrumental, this story is at least plausible. In any event, *Kalenda maya* is the oldest example of the genre, although it differs in its construction from later specimens. It is uncertain whether *Souvent soupire* is the original French melody which Raimbaut used as the basis for his poem, or whether it is a later imitation.

ROBERT FALCK

Raimbaut d'Orange. *See* RAIMBAUT D'AURENGA.

Raimo, Padre. *See* BARTOLI, ERASMO.

Raimon de Miraval (*fl* 1185–1229). Troubadour. Although his name appears in documents of 1157–1229, these apparently refer to two persons, possibly father and son; it is thus difficult to determine the approximate birthdate of the poet. A member of the lesser nobility, Raimon shared with three brothers a small castle at Miraval, north of Carcassonne. This was taken by the Albigensian crusaders in either 1209 or 1211, and *Bel m'es qu'ieu chant e condey* refers to its loss. Raimon received the patronage of Count Raimon VI of Toulouse (alluded to in his poetry as 'Audiart') and Viscount Raimon-Rogier of Béziers ('Pastoret'). He was familiar with Uc de Mataplana, and, like Aimeric de Peguilhan, he visited the courts of Pedro II of Aragon and Alfonso VIII of Castile (perhaps in the company of Raimon VI, following the latter's defeat in 1213). According to his *vida* he died in a monastery at Lérida. Various noble ladies and men are mentioned in Raimon's poetry under fictitious names. Raimon Vidal and Matfre Ermengaut regarded Raimon de Miraval as the embodiment of the courtly lover, and two of his works are cited by Berenguier de Noia. Francesco da Barberino indicated that a story by Raimon provided the basis for one of his own, but Raimon's work has apparently not survived.

48 poems may be attributable to Raimon, including *chansons courtoises*, sirventes, *coblas échangées*, a partimen, and a *dompnejaire* (*salut d'amour*). 22 survive with melodies, the largest extant troubadour musical output after that of Guiraut Riquier. All are contained in *F-Pn* fr.22543, while three occur also in the Ambrosiano Chansonnier (*I-Ma* R.71 sup.). The poems are normally simple and direct, of excellent craftsmanship and often elegant. Those with music show a marked preference for octosyllabic and heptasyllabic lines, though lines of five, six and ten syllables are also employed. There are usually two different line lengths per strophe, but *Ben aja·l cortes essiens* has five.

The variety in poetic construction is mirrored by a similar variety in the musical structures. On the one hand there are such tightly organized bar forms as in *A penas sai don m'aprenh* and *Chansoneta farai, Vencutz* with symmetrically constituted caudas, and on the other there are non-repetitive settings such as *Sel cui joy tanh*, *Entre dos volers*, *Res contr' Amor* and *Si·m fos de mon chantar*. There is a variety of irregular repetition schemes, as well as some interesting examples of phrases which have similar basic contours but display different tonal groupings. There is also considerable variety of modal structure, and two of the three works that survive in both sources vary significantly in their modal organization. In some melodies there is a very strong feeling for a main tonal centre, while in others, such as *Ben aja·l cortes essiens*, *Ben aja·l messatgiers* and *Si tot m'es ma domn' esquiva*, the final is different from the main centre of the opening phrases. Both simple recitations and moderately florid passages are to be found. Only in *Si·m fos de mon chantar* is there a regularity in the disposition of ligatures that suggests symmetry of rhythmic organization.

THEODORE KARP

Raimondi, Gianni (*b* Bologna, 17 April 1923). Italian tenor. He studied in Bologna with Albertina Cassani and Antonio Melandri, and in Milan with Mario Basiola and Gennaro Barra Caracciolo. He made his début in 1947 at Budrio, near Bologna, in *Rigoletto*. He sang frequently at the S Carlo, Naples, from 1952 to 1979 and at La Scala from 1956 to 1972, also appearing at the Vienna Staatsoper between 1957 and 1974 and at the Metropolitan Opera (1965–9). Endowed with an ample voice of pure, warm timbre, he had clear enunciation and an exact sense of phrasing. The facility, range and brilliance of his top register enabled him to excel in such arduous parts as Arturo (*I puritani*), Arnold (*Guillaume Tell*) and Arrigo (*Les vêpres siciliennes*). Raimondi's other notable roles included Edgardo (*Lucia di Lammermoor*), Alfredo Germont (which he recorded), Cavaradossi, Rodolfo and Pinkerton.

RODOLFO CELLETTI/VALERIA PREGLIASCO GUALERZI

Raimondi, Ignazio (*b* Naples, *c*1735; *d* London, 14 Jan 1813). Italian violinist and composer. In Naples, he played in the S Carlo orchestra (1759–62) and studied the violin with Emanuele Barbella, thus coming into contact with the violin school of Tartini. In 1762 he went to Amsterdam, where he appeared as conductor in many subscription concerts and also performed regularly as a soloist. At a concert on 15 January 1777, he conducted, with great success, his symphony *Les aventures de Télémaque dans l'isle de Calypso*. He settled in London in 1780, winning immediate success with his symphony *The Battle* and his concert appearances. In 1789 he went to Paris for the performance of his opera *La muta* and in 1792 gave a series of 12 subscription concerts, as soloist and conductor, at Willis's Rooms. Burney praised Raimondi's playing for its 'sweet tone and polished style'; his chamber compositions are also characterized by sweetness and simplicity. His descriptive orchestration employs a rich variety of effects and techniques.

WORKS

Chbr: 27 trios: 6 for 2 vn, vc, op.1 (Amsterdam, *c*1770, 2/*c*1775 as 6 Sonatas), 6 for (2 vn, b)/(vn, va, vc), op.5, 12 for vn, va, vc, opp.11–13, 3 for fl, vn, vc, op.14; 9 qts, fl, vn, va, vc, opp.7, 10; 21 sonatas: 12 for vn, b, opp.3, 6, 6 for 2 vn, op.4, 3 for pf, acc. vn, vc, op.15; 1 duet, vn, va (London, *c*1790); 6 duetti, 2 vn, *I-Mc*; 6 trios, 2 vn, b, *Mc* (lacking vn 2)

GUIDO SALVETTI

Raimondi, Pietro (*b* Rome, 20 Dec 1786; *d* Rome, 30 Oct 1853). Italian composer. After completing studies with Tritto at the Conservatorio di S Maria della Pietà in Naples, he embarked on a series of operas, mostly comic, for Genoa, Florence, Naples and Rome. In 1815 he took his first post as *maestro di cappella* in Acireale, Sicily, and apart from reviving two earlier operas for Messina and Catania, he was occupied mainly with cantatas and sacred music during this period. He resumed operatic composition after settling in Naples in 1820, reaffirming the gift for light farcical works, partly in Neapolitan dialect and with spoken dialogue, that was largely to sustain his theatrical career. His skill in treating comic dialect parts is shown in the first-act duet of *Il finto feudatario* (1826), in which the disguised Baron Folpo affects a lofty Italian while attempting to trick Albina into marrying him, reverting to dialect in an explosion of patter-singing as he sees his plan fail. The performance of such works was naturally restricted to Naples, though *La donna colonello* (1822), profiting by its association with Rubini, who had created the lead tenor role, was revived in Dresden in an all-Italian version. Rubini also included arias written for him in *La caccia di Enrico IV* (1822) and *Argia* (1823) on concert tours, and inserted them into other operas, helping to spread Raimondi's fame.

The serious operas of Raimondi's Neapolitan period were generally unsuccessful; even the most touching scenes found him incapable of rising to the requisite pathos. In 1824 he was appointed music director of the royal theatres in Naples, and became an instructor in counterpoint at the Naples conservatory the following year. In addition to his own steady operatic production, he supplied numbers for insertion into other composers' operas; his tampering with the score of Bellini's *Il pirata* at the time of its first Neapolitan performance in 1828

brought the wrath of the young composer upon him. Better appreciated were the sacred works he provided for the royal chapel, which led to Pacini's calling him the most celebrated contrapuntist of his day.

Il ventaglio (1831), after Goldoni, was both the greatest success and the undoing of Raimondi's operatic career, a model against which his later operas were compared and found wanting. Exceptions were *La vita di un giuocatore* (1831), *La verdummara de puorto* (1832), which survived to the 1860s, and *Isabella degli Abenanti* (1836). In June 1833 Raimondi left Naples for Palermo to become director of both the conservatory and the Teatro Carolino. His frequent return visits to Naples, where he continued to receive operatic commissions, soon aroused complaints at both institutions. Rejected in his applications for posts in Paris and Milan, and aware that he was being eclipsed by Donizetti and Bellini as he had earlier been by Rossini, he turned with renewed interest to sacred music and contrapuntal theory. Around 1836 his first didactic text *Bassi imitati e fugati* was published, and the same year a *messa di gloria* for double chorus and double orchestra was performed in Palermo. This was the first in a series of experiments in musical simultaneity which culminated in his 'triple oratorio' *Putifar-Giuseppe-Giacobbe* (1847–8), a set of three oratorios to be performed first separately and then simultaneously. The great success of this work led to Raimondi's appointment in 1852 as *maestro di cappella* at S Pietro, Rome.

After the relative failure of the tragic melodrama *Francesca Donato* (1842), a sincere if belated attempt to employ the flexible structures introduced by his more advanced contemporaries, Raimondi's renunciation of opera had been nearly total. But the reception given to his triple oratorio now encouraged him to plan a definitive demonstration of his operatic prowess with the serious opera *Adelasia* and the comic *I quattro rustici*, works that could be performed both separately and as a combined 'double opera'. He planned to have the piece ready for Carnival 1854, but his duties at S Pietro and his final illness prevented him from completing the instrumentation of many passages. As in the triple oratorio, Raimondi exercised great ingenuity in differentiating component parts of the work, juxtaposing different tempos, textures (such as aria and recitative) and, so far as can be seen from the completed orchestral parts, accompaniment patterns and instrumentation. Scene changes in the two operas overlap, as do the beginnings and endings of individual numbers. Dramatically each opera forms an oblique commentary upon the other, in the larger theme of parental authority – treated comically in *I quattro rustici* and seriously in *Adelasia* – as well as in individual scenes.

The complicated appearance of some of Raimondi's experiments has led to an erroneous impression of him as a musical radical. But the extreme simplicity of his harmonic language (surprising in one admired for his doctrine and learning), the prevalence of neat, symmetrical formal patterns and the abundance of spoken dialogue in his operas, which naturally worked against the progressive trend towards larger musical unities, all mark Raimondi as a most conservative musician. Certainly he was seen as such by his contemporaries; *Il ventaglio*, his only national success, was universally considered a throwback to an essentially pre-Rossinian idiom. Even so spectacular a novelty as the 'double opera' may be viewed as an attempt to breathe life into forms and procedures which by the mid-19th century were artistically dead.

WORKS

DRAMATIC

Operas: *c*50 operas, 1808–1851, principal sources *I-Fc*, *Mr*, *Nc*, incl. La donna colonello (farsa per musica, 1), Naples, Fondo, 22 May 1822; Il finto feudatario (melodramma, 2, Checcherini), Naples, Nuovo, 18 May 1826; Il ventaglio (commedia per musica, 2, D. Gilardoni, after Goldoni), Naples, Nuovo, 22 Jan 1831; La vita di un giuocatore (azione melodrammatica, 3, G. Checcherini), Naples, Nuovo, 28 Dec 1831; La verdummara de puorto (commedia, 1), Naples, Nuovo, 4 April 1832; Isabella degli Abenanti (melodramma tragico, 3, G. Sapio), Naples, S Carlo, 26 Sept 1836; Francesca Donato (melodramma tragico, 3, F. Romani), Palermo, Carolino, 12 Dec 1842, vs (Milan, 1845)

Other works: *c*13 sacred ops and orats, some *Nc*, incl. Il giudizio universale, Palermo, ?1844, vs (Milan, before 1846); at least 4 cants., 1 in *Fc*; 22 ballets, incl. Gonsalvo e Zilia, autograph *US-STu*

SACRED

At least 6 masses, vv, orch; 3 requiem; cr, 16vv; Libera me; numerous vesper pss; 4 Miserere; 3 Tantum ergo; 3 Stabat mater, 2 pubd (Rome, Naples, n.d.); Le 7 parole, 3vv, str orch; 2 lits; 2 complines; Veni Creator Spiritus; La salmodia Davidica, 4–8vv, all unacc., inc. [only 1st 60 pss composed]; hymns; others

DIDATIC

Fughe diversi (?Naples, n.d., Milan, 2/?1838): pt.i, 20 fughe, 4–8vv, untexted except no.20, Confutatis maledictis, pt.ii, Tu es sacerdos, 4 fughe in una, pt.iii, Et exultavit, 5 fughe in una; Bassi imitati e fugati (Milan, ?1836); Nuovo genere di scientifica composizione: divisa in 12 esempi (?Naples, n.d.); 4 fughe in una dissimili nel modo: opera scientifica, on text Cum sanctis (Milan, ?1846); 6 fughe in una dissimili nel modo, unpubd; 2 fughe in una dissimili nel modo: opera scientifica, 9 pieces (Rome, ?1849); Nuovo genere di scientifica composizione: andamenti di basso numerati con una, due, o tre armonie (Naples, 1852); 2 grandi fughe a 4 voci l'una, e un canone similmente a 4 (12 voci) riunite insieme (Rome, n.d.)

JESSE ROSENBERG

Raimondi, Ruggero (*b* Bologna, 3 Oct 1941). Italian bass. A pupil of Teresa Pediconi and of Piervenanzi, he made his début at Spoleto in 1964 as Colline, followed immediately by Procida (*Les vêpres siciliennes*) at the Rome Opera; he continued to appear in Italy, notably at La Fenice and La Scala (as Timur in *Turandot*, 1967–8, returning in 1969–70). In 1969 he sang an acclaimed Don Giovanni at Glyndebourne and in 1970 he made his Metropolitan début as Silva (*Ernani*). At Covent Garden he sang Verdi's Fiesco in 1972, and he appeared as Boris at La Fenice later that year. His repertory has included Massenet's Don Quichotte (1982, Vienna), Gounod's Méphistophélès (1985, Hamburg) and Selim in *Il turco in Italia* (1986, Pesaro). He returned to Covent Garden, as

Rossini's Moses, in 1994, and sang Iago at Salzburg in 1996 and Falstaff at the Berlin Staatsoper in 1998. He possesses the full, smooth and resonant voice of a *basso cantante* (with a certain baritonal quality and colour in the upper register) and an imposing stage presence. His career is extensively chronicled on disc, his Fiesco, Philip II and Selim particularly notable, as are his video performances as Don Giovanni in Joseph Losey's film and his Scarpia recorded live on location in Rome in 1992.

RODOLFO CELLETTI/ALAN BLYTH

Raimon Jordan (*fl* 1178–95). Troubadour. He was a member of the family of the viscounts of Saint-Antonin in Quercy but appears never to have held the title of viscount. These viscounts embraced Catharism, which eventually cost them their seignory and their title. Other than a document of 1178 that mentions Raimon as witness to a feudal transaction, little else is known about the composer. Of his 13 extant songs, two are transmitted with melodies, in *F-Pn* fr.844 (ed. in van der Werf). One of these, *Vas vos soplei, domna, premeiramen* (PC 404.11, music ed. Aubrey, 118), was borrowed several decades later by Peire Cardenal for a sirventes. The other *canso* melody, *Lo clar temps vei brunezir* (PC 404.4), was adapted for several songs in Old French: a Marian song by either Guillaume Le Vinier or Jaques Le Vinier (the attributions conflict); an anonymous Marian song; and a jeu-parti between Thibaut IV and one 'Phelippe'. Raimon's melodies are characterized by conjunct motion and a range of slightly more than an octave, with some occasional motivic variation and repetition of phrases.

ELIZABETH AUBREY

Raimund [Raimann], **Ferdinand** (*b* Vienna, 1 June 1790; *d* Pottenstein, Lower Austria, 5 Sept 1836). Austrian dramatist, actor and theatre director. The son of a carpenter, Raimund became fascinated by the theatre when he sold refreshments at the Burgtheater as a boy. He determined to become an actor, and he spent some years as a member of small touring troupes. In 1814 he was engaged at the Theater in der Josefstadt in Vienna, three years later joining the famous ensemble of the Theater in der Leopoldstadt. His rise to pre-eminence was steady rather than meteoric, and was based above all on his remarkable powers of mime and of timing. For some years his rivalry with the older Ignaz Schuster deprived the public of the opportunity to see them both on the same stage in the same performance: Raimund's suspicious, melancholy nature must bear much of the responsibility. He rose to the position of producer and then, in 1828, to that of director of the Leopoldstadt company. In 1830 he left and spent the rest of his life making guest appearances and touring; despite his archetypal Austrian dialect and style he enjoyed remarkable successes in Munich and even in Hamburg and Berlin. During his years at the Josefstadt theatre he contracted an ill-advised marriage to Luise Gleich which broke up after a year and left him unable to legalize his later union with Antonie Wagner. He died by his own hand, believing that a dog that had bitten him was mad.

Raimund was the most poetic of the dramatists of the Viennese popular theatre, though he became a playwright only out of necessity: the fortunes of Meisl, Bäuerle and Gleich, who had dominated the repertory in the first two decades of the century, were on the wane, and when Meisl failed to provide Raimund with a satisfactory play for a benefit performance, he wrote *Der Barometermacher auf der Zauberinsel* (1823, music by Wenzel Müller, 96 performances in the Leopoldstadt until 1855). Raimund followed this success with a further seven dramas: *Der Diamant des Geisterkönigs* (1824, music by Drechsler, 160 performances until 1854), *Das Mädchen aus der Feenwelt, oder Der Bauer als Millionär* (1826, music by Drechsler, 207 performances until 1859), *Moisasurs Zauberfluch* (1827, music by Riotte), *Die gefesselte Phantasie* (1828, music by Müller), *Der Alpenkönig und der Menschenfeind* (1828, music by Müller, 163 performances until 1859), *Die unheilbringende Zauberkrone* (1829, music by Drechsler), and *Der Verschwender* (1834, music by Conradin Kreutzer, 142 performances in the Leopoldstadt until 1859). Raimund himself wrote the melodies for some of his best-known songs (sketches survive in his hand, notated in the treble clef – he was an accomplished if untutored violinist – for the 'Aschenlied' and 'Brüderlein fein' from *Das Mädchen aus der Feenwelt*, to mention but two of the songs that became *Volkslieder*). Though his voice was neither beautiful nor particularly strong, he was acclaimed for his skill at putting across the songs in his own and other authors' plays. Along with his younger contemporary and antipode, Nestroy, Raimund marks the end and the peak of a long and distinguished tradition; though the most ambitious and tragic of his plays (*Moisasur*, *Phantasie* and *Zauberkrone*) enjoyed little success in Raimund's lifetime and even now are less popular than the great comedies, his achievement as a dramatist is broad, unified and powerful. The role of music in his plays is considerable, averaging 20 numbers.

PETER BRANSCOMBE

Rain, Cunz. *See* REIN, CONRAD.

Rainaldi, Carlo (*b* Rome, 4 May 1611; *d* Rome, 8 Feb 1691). Italian architect, composer and instrumentalist. At the wish of his father, the architect Girolamo Rainaldi, he received a humanist education at the Collegio Romano, which he completed by studying geometry at the Sapienza. At the same time he received instruction in music, probably from Virgilio Mazzocchi, *maestro di cappella* of the Collegio Romano. According to Passeri he not only played the organ, harpsichord, double harp and *lira da braccio* 'exquisitely and with great refinement' but also composed 'with exceptional taste and skill'. His known compositions, comprising two Lamentations, a psalm and 19 cantatas for one or two sopranos and continuo, have only recently come to light. They are similar to the cantatas of Carissimi and Luigi Rossi in their form – alternation of recitative and aria with the inclusion of ritornellos – and in the expressiveness with which the texts are enhanced by the use of dissonance. They are, moreover, no less notable than the churches, altars, monuments and triumphal arches that he designed in his principal capacity as an architect.

HANS JOACHIM MARX

Rainbow, Bernarr (Joseph George) (*b* London, 2 Oct 1914; *d* Esher, 17 March 1998). English music educationist and musicologist. While a civil servant, he was a part-time student at Trinity College of Music (1936–40) and after war service became head of music at the Royal Grammar School, High Wycombe (1944). He moved in 1952 to become director of music at the College of St Mark and St John, Chelsea; in 1972 he became postgraduate tutor, and from 1973 to 1978 head of the music department at Gipsy Hill College of Education (now Kingston University), and then director of the Curwen Institute, which he had founded in 1970. He received both the PhD (1967), for his research into the Anglican 19th-century musical revival, and the DLitt (1992) from Leicester University, and in 1995 was made an honorary FTCL.

Rainbow's teaching commitments and his research were closely related. *The Land without Music* (1967) was acclaimed as the first work to chronicle convincingly a neglected period of 19th-century musical education, and was responsible for the reassessment of the validity of the title. His continuing interest in music education was further demonstrated with the establishment of the Bernarr Rainbow Award for School Music Teachers (1996), which was formed to make annual awards recognizing excellence in school music teaching and to foster the publication of music education texts. He brought his wide practical experience of the Anglican liturgy and a sound historical approach to his study of the Anglican choral revival.

DAVID SCOTT/R

Rainer, Jacob. *See* REINER, JACOB.

Rainey, Ma [née Pridgett, Gertrude] (*b* Columbus, GA, 26 April 1886; *d* Rome, GA, 22 Dec 1939). American blues, jazz and vaudeville singer. Her career began in a talent show in Columbus when she was 12 and soon afterwards she appeared as a cabaret singer. She married Will 'Pa' Rainey in 1904 and toured with him in F.S. Wolcott's Rabbit Foot Minstrels and other shows until 1916, when they formed their own company as 'Rainey and Rainey, Assassinators of the Blues'. By the time she first recorded (1923) she had become famous throughout the South. In five years she made more than 100 recordings. These did little justice to her vocal power, but a majestic phrasing and 'moaning' style close to folk tradition are evident from her first titles (and most celebrated compositions), *Bo-Weevil Blues* and *Moonshine Blues* (both 1923, Para.). Although she recorded under the name of Ma Rainey, she was known as 'Madame' on tour with the Georgia Jazz Band during the 1920s, when she played to large audiences throughout the South and in Mexico and established a lasting reputation as the most significant early female blues singer. Her rumbustious disposition is rarely evident in her recordings, and *Ma Rainey's Black Bottom* (1927, Para.) is one of the few to demonstrate her humour. She is best remembered for her classic versions of *See See Rider* (1924, Para.) and *Soon This Morning* (1927, Para.). In 1935 she retired to Columbus, where she was active in the Baptist church.

PAUL OLIVER

Rainforth, Elizabeth (*b* ?23 Nov 1814; *d* Bristol, 22 Sept 1877). English soprano. She studied singing with George Perry and T. Cooke in London. She made her stage début in 1836 as Mandane in Arne's *Artaxerxes* at St James's Theatre, London. After a period of further study with Crivelli she continued to sing at Covent Garden until 1843; her repertory included Zerlina in *Fra Diavolo*, Susanna and the Countess in *Le nozze di Figaro*, and the title roles in Cherubini's *Lodoïska* (in a pastiche version) and Boieldieu's *Barbara, or The Bride of a Day*. She then joined the company at Drury Lane where she created Arline in Balfe's *The Bohemian Girl* in November 1843. In 1845 she sang the soprano part in the first performance of Mendelssohn's *Hear my Prayer* at the Crosby Hall, London. She retired in 1856 and taught music until 1871. Her voice was a high soprano, even and sweet in quality.

HAROLD ROSENTHAL

Rainger [Reichenthal], **Ralph** (*b* New York, 7 Oct 1901; *d* nr Palm Springs, CA, 23 Oct 1942). American composer and pianist. He studied music at the Damrosch Institute, where his teachers included Gallico and Clarence Adler, and law at Brown University. He began a career as a lawyer, but in 1926 became a pianist for Broadway musicals and also toured as a vaudeville accompanist and arranger. While playing in a piano duo with Adam Carroll in Arthur Schwartz's *The Little Show* (1929), he composed 'Moanin' Low', which was the most successful song of the production. He then went to Hollywood as a rehearsal pianist. From 1930 until his death in an aeroplane crash he composed songs for over 50 films for Paramount (1930–38) and 20th Century-Fox (1938–42), mostly with the lyricist Leo Robin. Many were for Bing Crosby, others for Betty Grable; 'Thanks for the Memory', introduced by Bob Hope in *The Big Broadcast of 1938*, won an Academy Award. Rainger's songs are mostly in the contemporary light, romantic style, but have a particular elegance and sophistication in their integration of music and lyrics.

WORKS
(*selective list*)

songs, mostly associated with films, films in parentheses; lyrics by L. Robin unless otherwise stated

Moanin' Low (H. Dietz), in A. Schwartz: The Little Show, 1929; Please (The Big Broadcast, 1932); Love in Bloom (She Loves me Not, 1934); June in January, With every breath I take (Here is my Heart, 1934); I wished on the moon (D. Parker; The Big Broadcast of 1936, 1935); I don't want to make history (Palm Springs, 1936); A Rendezvous with a Dream (Poppy, 1936); Blue Hawaii (Waikiki Wedding, 1937); Blossoms on Broadway (Blossoms on Broadway, 1937); Ebb Tide (Ebb Tide, 1937); Thanks for the memory (The Big Broadcast of 1938, 1938)

What have you got that gets me? (Artists and Models Abroad, 1938); I have eyes, The Funny Old Hills, You're a sweet little headache (Paris Honeymoon, 1939); Faithful Forever, Bluebirds in the Moonlight (Gulliver's Travels, 1939); Here you are (My Gal Sal, 1942)

ANDREW LAMB

Rainier, (Ivy) Priaulx (*b* Howick, Natal, 3 Feb 1903; *d* Besse-en-Chandesse, France, 10 Oct 1986). South African-English composer of English-Huguenot origin. After early childhood in Zululand, she entered the South African College of Music, Cape Town, as a violin student (1913); in 1920 her playing won her the Cape of Good Hope University Scholarship to the RAM. She then settled permanently in London, earning her living as a violinist and teacher until 1935, when an anonymous grant enabled her to concentrate on composition. In 1937 she studied with Nadia Boulanger for three months, and she was a professor of composition at the RAM (1943–61). In 1952 she won the John Clementi Collard Fellowship. After her retirement in 1961, she received many commissions, some funded by the Arts Council of Great Britain (*Vision and Prayer*; the *Concertante* for two winds and orchestra) and others by the BBC (Cello Concerto; *Ploërmel*); *Aequora lunae* was written for the Cheltenham Festival and *Due canti e finale* for Yehudi Menuhin. In June 1982 she received the honorary DMus from the University of Cape Town. She had a long association with the Worshipful Company of Musicians, becoming a Freeman (1955) and their first Lady Liveryman (1983); after her death they established a Priaulx Rainier Fund for young composers at the RAM and the University of Cape Town.

Rainier developed a fastidious language drawing little from other 20th-century styles. Rather, the most important influences were the language and music of the Zulus, and the natural sounds of their country; beyond this, the visual insights of Barbara Hepworth and Ben Nicholson, with both of whom she had contact, greatly extended the range of her music. She came to the attention of a wider public after the success of the String Quartet, a work whose originality is particularly clear in the scherzo and

Priaulx Rainier, 1981

in the finale. Crystalline textures and short ostinato rhythms assist in the building of fast movements independent of Bartók and Stravinsky and of more conventional styles. Although Rainier never consciously used African musical techniques, these movements obviously reflect her origins, and at the same time introduce a characteristic distancing, both literally – as if sounds were being heard across the open air – and metaphorically, the product of classically disciplined musical thinking. Subsequent works of the 1940s emphasize rhythmic novelty, chief among them the Clarinet Suite and the *Barbaric Dance Suite*, where, despite its title, the dominant impression is of delicacy rather than savagery.

At this time Rainier's harmony was triadic and even diatonic; chromaticism was the consequence of melodic inflection and bitonality. Her melodic writing was typified by concise motivic phrases. The promise of functional harmony and extended melodic line was amply realized in *Requiem*, a work of beauty and passion, whose simple yet expressive neo-tonal harmony and incantatory solo part mark the culmination of a period in her output. During the 1960s her music became more compressed, owing in part to a fondness for clusters and an associated emphasis on melodic semitones and minor 9ths, in part to a continuing use of short, pulsating rhythmic figures, but more particularly to the gestures themselves. These retain Rainier's meticulously polished sounds, but are isolated, often abruptly contrasted, and highly concentrated, suggesting an energy activated only briefly. Continuity is achieved more through patterns of timbre and texture than through consistent impulse. A more relaxed expression is evident in the works composed in the 1970s, although the uncompromisingly objective sounds remain distinctive.

Except for *Quanta* and *Due canti e finale*, which were bequeathed to the British Library, her manuscripts are housed at the University of Cape Town; a collection of her papers is held at the RAM.

Rains, Robert de. *See* ROBERT DE REINS LA CHIEVRE.

Rais, Jakub de. *See* REYS, JAKUB.

Raisa, Rosa [Burchstein, Rose] (*b* Białystok, 23 May 1893; *d* Los Angeles, 28 Sept 1963). American soprano of Polish birth. When she was 14 she fled to escape a pogrom and settled in Naples, where she studied with Barbara Marchisio. She made her début as Leonora in *Oberto* during the 1913 Verdi celebrations at Parma. Later that year she sang Queen Isabella (*Cristoforo Colombo*) at Philadelphia; she then sang in Chicago (1913–14) and at Covent Garden in 1914. She sang regularly in Chicago, 1916–32 and 1933–6, appearing in the first American performances of Mascagni's *Isabeau*, Montemezzi's *La nave* and Respighi's *La fiamma*. In 1936 she sang Leah in the American première of Rocca's *Il dibuk* at Detroit.

Engaged at La Scala, she created Asteria in Boito's *Nerone* in 1924 and Turandot in 1926. She returned to Covent Garden in 1933 as Tosca, with her husband, Giacomo Rimini, as Scarpia. She was a thrilling singer and actress, and a great dramatic soprano.

HAROLD ROSENTHAL/R

Raison, André (*b* before 1650; *d* Paris, 1719). French organist, composer and teacher. He was educated at the seminary of Ste Geneviève, Nanterre. From about 1665 he was organist at the royal abbey of Ste Geneviève, Paris; later he became organist at the church of the Jacobins (rue St Jacques). A tax register of 1695 places him in the top rank of Parisian organists, along with François Couperin (ii), D'Anglebert, Gigault, Marchand and Grigny. He taught L.-N. Clérambault, who dedicated his *Premier Livre d'orgue* (1710) to Raison.

Raison's *Livre d'orgue* constitutes a major portion of the extant organ mass repertory. The masses follow the usual pattern of short organ versets for *alternatim* performance of the Kyrie, Gloria, Sanctus and Agnus Dei. Genres used include the traditional *plein jeu*, duo, trio, *récit*, *basse de trompette*, fugue and *grands jeux*. Raison made no use of a plainchant cantus firmus, but this was not unusual. These organ masses were intended for use in convents and monasteries that had their own contemporary mass chants (*messes musicales*); hence, the lack of plainchant made the book more versatile and enabled Raison to claim that the five masses could also be used to form 15 *Magnificat* settings. His *Deuxième Livre d'orgue* commemorates the Treaty of Utrecht (1713) with a setting of the *Da pacem*; this is followed by a fugue on the same theme, several preludes and fugues, an offertory and an overture. The remainder of the volume consists of an allemande and many noëls with variations. Raison's music is characterized by rhythmic vitality, consistent use of imitative counterpoint and imaginative use of registration, often requiring the full resources of a four-manual French Baroque organ.

Opening of Raison's 'Offerte ... pour l'heureuse convalescence du Roy en 1687' (Paris, 1688)

Since Raison designed his first *Livre d'orgue* to assist secluded monastic musicians, its preface contains a wealth of valuable information about performing practice. His advice about observing the metre of each piece to determine which dance movement is implied is often quoted; however, it should not be inferred that Raison used dance rhythm more than his contemporaries, or that his music is unusually 'secular' in nature. The book contains detailed information on registration, ornamentation, *notes inégales* and fingering. A striking example of Raison's didacticism and attention to detail is his early use of the double dot in the French overture-style offertory (see illustration).

Raison's influence is clear in Clérambault's organ works; further it seems that J.S. Bach borrowed the theme of his 'Christe: Trio en passacaille' (*Messe du deuxième ton*) for his Passacaglia in C minor (BWV582).

H. JOSEPH BUTLER

Raitio, Pentti (*b* Pieksämäki, 4 June 1930). Finnish composer and teacher. He studied composition at the Sibelius Academy in Helsinki with Kokkonen and Bergman, gaining the diploma in 1966. He was a junior school teacher at Järvenpää (1954–67), rector of Hyvinkää Music College (1967–92) and chairman of the Association of Finnish Music Schools (1986–92). His roots are in free dodecaphony and lyrical, rhythmically differentiated vocal music, such as *Kuun tietä* ('Along the Moonlit Path', 1965). The rhythms nevertheless became simpler after the wind quintet (1975), and *Petandrie* for orchestra (1977) is dominated by what is subsequently his typical march-like tread. The timbre expands, chiefly towards noise effects on the strings (*Canzona d'autunno* and the Flute Concerto). Much of his output consists of vocal works, the most dramatic being *Lemminkäinen kuokkavieraana Pohjolassa* ('Lemminkainen Gatecrashes at Pohjola') for male chorus. He has composed a wealth of fairly easy pieces for amateurs.

WORKS

MIKKO HEINIÖ

Raitio, Väinö (Eerikki) (*b* Sortavala, 15 April 1891; *d* Helsinki, 10 Sept 1945). Finnish composer. He studied at the Helsinki Conservatory (1911–16), in Moscow (1916–17), in Berlin (1921) and in Paris (1925–6). After a period of teaching at the Viipuri Music Institute (1926–32) he lived as a freelance composer in difficult circumstances.

With Pingoud and Aarre Merikanto, Raitio was responsible in the 1920s for introducing the first period of chromatic but not serial modernism in Finnish music. His early output was bound by Romanticism, but in Moscow and Berlin he received new influences that made his style more radical: his harmony was affected by Skryabin and German Expressionism, his orchestration by Debussy and other French impressionists. The first work to show these new features was the tone poem *Joutsenet* ('The Swans', 1919), still traditional in form and melodic writing. Much more complex and powerful in structure and expression are the *Fantasia estatica* (1921) and the symphonic trilogy *Antigone* (1921–2), which are perhaps his most impressive achievements. They are, without any doubt, influenced by Skryabin's ecstatic visions. 'Chaotic Expressionism' is one of the terms that have been used to describe their style, but they also contain sections of sensitive lyricism, often beautifully scored and neither chaotic nor Expressionist. Thematic elements, particularly in the *Antigone* trilogy, are short motifs that merge into a complex web whose dissonant character is softened by the mellow use of a very large orchestra. During the 1920s Raitio composed further tone poems, notably *Fantasia poetica*, *Kuutamo Jupiterissa* ('Moonlight on Jupiter') and *Puistokuja* ('The Avenue'), of which the latter, for soprano and orchestra, is

perhaps his most impressionist piece and also the one furthest from traditional tonality.

The most important of Raitio's works from the following decade are operas. Some of them suffer from weak texts, but they do not lack musical interest, even if they fall short of the level of the tone poems. Raitio's vocal writing makes extensive use of recitative in order to have every detail of the text faithfully reflected in the music. His ideas on the relationship between drama and music, as well as his use of leitmotifs, were evidently based on Wagner, but in general atmosphere his operas are closer to *Pelléas*. The best of them are *Prinsessa Cecilia* (1933) and *Kaksi kuningatarta* ('Two Queens', 1937–40). The one-act ballet *Vesipatsas* ('Water Column, 1929) is of strong rhythmic expression. During the 1930s Raitio also wrote a considerable number of orchestral compositions, but their interest is small: his style became increasingly conventional in these pieces, and his harmony lost the tension which had been the strength of his earlier works. There has been increased interest in his compositions in recent years.

WORKS
(*selective list*)

Operas: Jephtan tytär [The Daughter of Jephtha], op.30 (J. Linnankoski, S. Ranta), 1929; Prinsessa Cecilia (H. Jalkanen, C. Lilius), 1933; Kaksi kuningatarta [Two Queens] (L. Haarla), 1937–40; Lyydian kuningas [The King of Lydia] (E. Leino, after Herodotus), 1938

Ballet: Vesipatsas [Water Column], 1929

ILKKA ORAMO/ERKKI SALMENHAARA

Raitt, John (Emmett) (*b* Santa Ana, CA, 29 Jan 1917). American actor and singer. His background and training in opera prepared him for his career in Broadway, having sung Figaro in *Il Barbiere di Siviglia*, Count Almaviva in *Le Nozze di Figaro*, and Escamillo in *Carmen*. He played Curly McLain in the national tour of *Oklahoma!*, which opened in Chicago in 1944, before being cast as the first Billy Bigelow in *Carousel* (1945), and hence the first singer to perform that show's 'Soliloquy'. Raitt also created the part of Sid Sorokin in *The Pajama Game* (1954) and reprised the role in the 1957 Warner Brothers film. Although he played many parts in numerous revivals, it is for the two Rodgers and Hammerstein characters of Curly McLain and Billy Bigelow, especially the latter, that he will be remembered. He possesses a well-produced high baritone voice and is known and respected for his vocal endurance and consistency. He was able to avoid excessive operatic mannerisms, thus giving an authentic American sound to his stage personas, and establishing high standards for musical theatre baritones. The natural quality of his voice appealed to a broad spectrum of the American people. His daughter, Bonnie, is a successful country singer.

WILLIAM A. EVERETT, LEE SNOOK

Rajā'ī, Fu'ād [Aghā al-Qalā] (*b* Aleppo, 1910; *d* Aleppo, 14 July 1965). Syrian music researcher, dentist and poet. He studied music in parallel with dentistry, tutored in Aleppo by Aḥmad Obarī (theory) and Siāsak Afandī (*'ūd*), in Damascus by Tawfiq al-Sabbagh (violin) and in Istanbul by Massud Gemil Bek and Rauf Yekta Bek (theory).

Rajā'ī laid down the foundations for many musical institutions. In Aleppo in 1938 he established the Society for Musicians, bringing numerous social benefits to musicians, of which he was elected chairman for many years. Also in Aleppo, in 1946 he established the first free private conservatory to exist within Syria, Al-ma'had al-mūsīqī ('Music Institute'). Teachers included OMAR AL-BATSH (*muwashshaḥ* and *samah* dance), 'ALĪ AL-DARWĪSH (Arab music form and theory), Shukrī al-Antakī (*qānūn*), Nadīm al-Darwīsh (*'ūd*), Muḥammad Rajab (*'ūd* and *nasha'atkar*), Bahjat Hasan (*samah* dance), Yūsef Hejjeh (Western music theory) and Michel Borizenko (Western violin). Using his reputation to prevail against general conservative opinion, Rajā'ī opened a special section for girls, administered by his aunt, Dr Azizeh Izzat. In 1949 he founded the Aleppo radio station where he documented a huge number of old *muwashshaḥ* and *adwār* songs (sing. *dawr*; instrumental pieces).

Rajā'ī delivered numerous talks on music, for Arab radio and at many European universities, and he represented Syria at many musical conferences. He checked several old musical manuscripts (including MĪKHĀ'ĪL MUSHĀQA's treatise on the Arab scale and parts of AL-FĀRĀBĪ's writings). He designed an electronic microtone device to analyse notes of the Arab scale. His book, *Min kūnūzīna*, was the first to study and document with notations the *muwashshaḥ* suites of Andalusia (Arabic Spain).

Min kūnūzīna [From our treasures]

SAADALLA AGHA AL-KALAA

Rajeczky, Benjamin (*b* Eger, 11 Nov 1901; *d* Pásztó, 1 July 1989). Hungarian musicologist and folklorist. After joining the Cistercian order (1917) he studied theology and music history with Ficker at the University of Innsbruck (1920–26), taking the doctorate in theology in 1926; concurrently he was Kapellmeister at the Collegium Canisianum (1924–6). He later studied composition under Kodály in Budapest (1932–5). While teaching in secondary schools in Budapest he also lectured in folk music at the university (1945–50); he then held posts as a research fellow in the music department of the Ethnographical Museum (1950–60) and in the folk music research group of the Hungarian Academy of Sciences (1960–67), of which he was director after Kodály's death until his retirement in 1971. During his years as a teacher (1926–50) he became associated with the reform in music teaching led by Kodály, in which he played a prominent part through his exceptionally successful teaching methods, textbooks and articles, and his organization and training of music teachers.

From 1940 Rajeczky's research, much of it unprecedented in its methods and subjects, was concerned with three main areas: medieval Hungarian music history, plainchant, and the collection, transcription and analysis of Hungarian folk music. His publications have dealt with the plainchant variants in medieval Hungarian manuscripts, the relationship between plainchant and folk music and aspects of plainchant performance, the surviv-

ing traces of Hungarian polyphony, and dialect forms, laments and other genres of Hungarian folk music. He was the editor of the first volume of *Magyar zenetörténet* ('History of Hungarian music'), on the Middle Ages, and he worked on the Melodiarium Hungariae Medii Aevi.

LÁSZLÓ DOBSZAY

Rajičić, Stanojlo (*b* Belgrade, 16 Dec 1910). Serbian composer. After piano studies at the Belgrade School of Music he attended the Prague Conservatory as a pupil of Albín Šima (piano) and Karel (composition), also taking part in the master classes of Suk (composition) and Karel Hoffmeister (piano). He graduated in 1935 and returned to Belgrade in 1936. He was professor of composition at the academy in Belgrade (1939–77) and was elected to corresponding (1950) and full (1958) membership of the Serbian Academy of Art and Sciences.

A prolific composer, he has pursued a variety of genres. At first his Prague training influenced him in the direction of Expressionism. As his personal technique became more rounded, he produced tonal, classically formed works, employing conventional structures, motor-like rhythms, occasional folk elements and a language of broadened tonality, sometimes extended to polytonality; the opera *Simonida* (1956), for example, contains Classical form and harmonically enriched tonality. His later period has seen a synthesis of earlier developments. Among his orchestral works are the popular Third Piano Concerto and Second Violin Concerto; the song cycles *Lisje žuti* ('The Leaves Turn Yellow') and *Na Liparu* ('On the Lipar'), containing expressive arioso writing and folk-like melodies, are also regularly performed.

WORKS
(*selective list*)

STAGE

Operas: Simonida (2, after M. Bojić), 1957; Karadjordje (TV op, 1, after I. Studen), 1972; Dnevnik jednog ludaka [The Diary of a Fool] (TV op, 22 scenes, after N.V. Gogol); Bele noći [White Nights] (TV op, 1, after F.M. Dostoyevsky)
Ballets: Pod zemljon [Underground], 1940; Premija [First Prize], 1940; Poema, 1944

OTHER

STANA DURIC-KLAJN/ROKSANDA PEJOVIĆ

Rajna, Thomas (*b* Budapest, 21 Dec 1928). British pianist and composer of Hungarian birth. He studied with Kodály, Veress and Weiner at the Liszt Academy of Music (1944–7) and was awarded the Liszt Prize in 1947. That year he moved to London, where he continued his studies under Howells (composition) and Morrison (piano) at the RCM, and then began a career as performer, composer and teacher. He held appointments at the GSM from 1963 and the University of Surrey from 1967; in 1970 he moved to the University of Cape Town and became senior lecturer in music (1970–88) and from 1989 until his retirement in 1993 an associate professor. He has performed widely in Great Britain and South Africa, winning praise for his sympathetic presentation of a repertory that includes all Stravinsky's piano music and works by Messiaen, Skryabin, Liszt and Granados. His compositions exhibit a firm tonal feeling, a keen ear for colour effects and a strong lyrical quality.

JAMES MAY

Rajter, Ľudovít (*b* Pezinok, 30 July 1906; *d* Bratislava, 6 July 2000). Slovak conductor and composer. He began to compose while still a child, studied the piano and cello in Bratislava, and made further study in composition and conducting at the Vienna Music Academy (1924–9), where his teachers included Clemens Krauss. He also studied with Dohnányi at Budapest, and became conductor of the Budapest RO (1933–45) and professor of conducting at the Liszt Academy (1938–45). During this time he toured widely in Europe, and he made his New York début in 1936. In 1945 he returned as conductor of the Bratislava RO, and became resident conductor of the Slovak PO on its formation in 1949. He built up the orchestra's standard repertory and added to it the works of Cikker, Suchoň and other contemporary Slovak composers. In 1949 he was appointed to teach conducting at the Bratislava Academy of Music and Dramatic Art; he remained active as a conductor there until shortly before his death. His compositions include symphonic and chamber works, and the ballet *Majales* (1938, Budapest).

ALENA NĚMCOVÁ

Rak, Štěpán (*b* Ukraine, 8 Aug 1945). Czech guitarist and composer. He was abandoned by his natural parents and taken by Soviet troops to Prague, where he was adopted by the Rak family. He studied music and the guitar at the Prague Conservatory (where he is now professor of guitar) from 1965 to 1970 and composition at the Prague Academy of Music in 1975. From 1975 to 1980 he taught at the conservatory in Jyväskylä, Finland. After the 'velvet revolution' of 1989 his international career flourished, and he is now recognized as a leading international performer, whose playing is both charismatic and technically brilliant. As a composer, his works embrace the romantic, folkloric and neo-Renaissance; intensely dramatic, they are often enhanced by a remarkable range of original effects.

JOHN W. DUARTE

Rakhmadiyev, Erkegali (*b* Medeniyet, Semipalatinsk district, 1 Aug 1932). Kazakh composer. He studied the dömbra and musicology at a music college (1948–52) before taking composition classes with Brusilovsky at the Alma-Ata State Conservatory (1952–7). He received further training in Moscow through the Composers' Union under Litinsky and Fortunatov. He worked as a music teacher from 1949, in 1959 was appointed director of the Kazakh PO and also worked in the Kazakh Ministry of Culture (1961–5). In addition to these activities, he has directed the Abay Kazakh State Academic Theatre of Opera and Ballet, taught at the Alma-Ata State Conservatory (director 1967–75 professor 1979), headed the Kazakh Composers' Union and been a member of the Central Committee of the Communist Party of Kazakhstan. He was Minister of Culture of Kazakh SSR from 1988 to 1994. He has received a number of official prizes and honours in recognition of this work, including the title of People's Artist of USSR (1981). The majority of his works seek to combine traditions of Kazakh folklore and folk-professional music with formal aspects of Western genres.

RAZIA SULTANOVA

Rakhmanova [Rahmanova], **Marina Pavlovna** (*b* Moscow, 30 May 1947). Russian musicologist. She graduated from the Gnesin Music College and the Moscow Conservatory having specialized in the organ, music theory and music history. From 1969 to 1987 she worked for the journal *Sovetskaya muzïka*, where she directed the music history division from 1978. After taking the doctorate at the Leningrad Conservatory in 1987, she joined the staff of the State Institute for Art History that same year, and was later made a director. She became co-editor of the *Rossiyskaya Muzïkal'naya Gazeta* in 1996 and was appointed academic secretary of the Glinka State Museum for Musical Culture in 1997. For many years she has worked regularly with the radio channel 'Orfey'. The

main area of her research is Russian music, including medieval music, sacred music from various periods, 18th- and 20th-century music, and the works of the Russian emigrés. She has contributed major articles to *Istoriya russkoy muzïki* (on Rimsky-Korsakov and Grechaninov, vols.viii–x, Moscow, 1994–7) and *Russkaya khudozhestvennaya kul'tura vtoroy polovinï XIX veka* (vols.ii–iii, Moscow, 1991–6); she is also editor of the new Tchaikovsky collected edition and has prepared volumes of Prokofiev's film music for *Ivan the Terrible* and the sacred music of Rimsky-Korsakov and V.S. Kalinnikov. Her work is characterized by a comprehensive understanding of Russian music, and she is particularly drawn to lesser-known Russian composers, whose works she popularizes through her activities as an editor, writer and concert organizer.

LYUDMILA KORABEL'NIKOVA

Raking play. A right-hand playing technique for the lute as described by Thomas Mace (*Musick's Monument*, London, 1676, pp.101–2). Chords are played by plucking the bass note with the thumb while simultaneously sweeping or smoothly stroking (raking) all the remaining upper notes, from top to bottom, with the index finger alone. Mace indicates that this is the current fashion in lute playing, but that one can also, on occasion, use the more old-fashioned technique of arpeggiating chords with the separate index, second and third fingers. This technique, with no specific term applied, is found notated in several French lute sources of the 17th century.

JAMES TYLER

Rakov, Nikolay Petrovich (*b* Kaluga, 14 March 1908; *d* Moscow, 3 Nov 1990). Russian composer. He studied under Glière and Vasilenko at the Moscow Conservatory where he later became a professor, and the head of the orchestration department. In all, he worked at the conservatory for 58 years, and created his own school of composition. His pupils included Denisov, Eshpay, Muradeli and Schnittke and he wrote manuals on orchestration. He composed in various genres for almost all instruments, and was considered to be a composer with a vividly national and democratic orientation. In particular, he gave much time to writing music for children and teenagers which continues to enjoy popularity. The performers of his work include David and Igor' Oistrakh, Yury Sitkovetsky and Oleg Kagan. He appeared as a conductor and a pianist, and as a performer of his own works. He occupied various posts in the USSR Union of Composers' network. He is an artist of the RSFSR, a laureate of the State Prize and the author of two manuals on orchestration.

GALINA GRIGOR'YEVA

Raksin, David (*b* Philadelphia, 4 Aug 1912). American composer, arranger, conductor and author. He first learnt about music from his father, who conducted an orchestra for silent films. While at school he studied several instruments and played professionally in dance bands; at the University of Pennsylvania he studied composition with Harl McDonald and developed a strong interest in jazz. He went to New York (1934), studied privately with

Isadore Freed and continued to play and arrange for bands; his arrangement of *I Got Rhythm* impressed Gershwin and got him a position as an arranger at Harms/Chappell.

In 1935 Raksin went to Hollywood to work with Charlie Chaplin on the music for *Modern Times*. This collaboration yielded one of the most effective original scores ever written for a silent film. He also met Alfred Newman who nurtured his career as a film composer. Raksin settled permanently in Los Angeles in 1937, working in the Hollywood studios as a composer, arranger and/or orchestrator and studying privately with Schoenberg. Raksin's unusually complex textures and harmonies typecast him as a specialist in horror films and mystery, but he was adept in other genres, including westerns and comedies.

In the early 1940s Raksin was employed at Fox, for whom he wrote the score to *Laura* (1944). One of his most original and enduring works, the film's reputation as a classic owes much to the haunting score; at its heart is Raksin's elusive melody for the title character which, remarkably, is never completed. The theme was a great popular success as a song (lyrics by Johnny Mercer), became a jazz standard and is one of the most performed and recorded of all film themes. The score also includes distinctive jazz-influenced harmonies, innovative orchestrations, evocative distortion effects and highly skilful variation and contrapuntal elaboration of the principal melody. Many film music books (especially Burt and Brown) offer analyses of its key sequences.

Raksin worked regularly as a film composer until the early 1970s; his body of about 100 scores includes perhaps some 20 works that rank among Hollywood's very best, although of the later films, only the *The Bad and the Beautiful* (1952) approached the success of *Laura*. His finest film scores, such as *Force of Evil* (1949), *Al Capone* (1959), *The Redeemer* (1966; see Prendergast) and the cartoon *The Unicorn in the Garden* (1953), demonstrate a highly original, versatile and emotionally committed musical mind combined with a flair for unusual technical feats.

Highly regarded as a teacher, administrator, author and raconteur, he has done much to promote the understanding of film music. From 1956 he has been an adjunct professor of music at the University of Southern California and has served as President of the Composers & Lyricists Guild of America (1962–70). He has arranged many of his film scores for concert performance, notably *Laura*, *Forever Amber* and *The Bad and the Beautiful*. Raksin is the first member of his profession to have received a Coolidge Commission from the Library of Congress (having previously been the first invited to establish a collection of his manuscripts there). He conducted the première of the resulting *Oedipus Memneitai* in 1986. A book of his songs, most not previously published, was issued in 1997.

WORKS
(*selective list*)

FILM AND TELEVISION
director in parentheses

Complete scores: The Undying Monster (J. Brahm), 1942; Laura (O. Preminger), 1944; Fallen Angel (Preminger), 1945; Smoky (L. King), 1946; Forever Amber (Preminger), 1947; The Secret Life of Walter Mitty (N.Z. McLeod), 1947; Force of Evil (A. Polonsky), 1949; Whirlpool (Preminger), 1949; Giddyap, 1950 [cartoon]; The Magnificent Yankee (J. Sturges), 1950; Across the Wide Missouri (W. Wellman), 1951; The Man with a Cloak (F. Markle), 1951; The Bad and the Beautiful (V. Minnelli), 1952; Carrie (W. Wyler), 1952; Madeline, 1952 [cartoon]; Pat and Mike (G. Cukor), 1952; The Unicorn in the Garden, 1953 [cartoon]; Apache (R. Aldrich), 1954; Suddenly (L. Allen), 1954; The Big Combo (J.H. Lewis), 1955; Bigger than Life (N. Ray), 1956; Hilda Crane (P. Dunne), 1956; Jubal (D. Daves), 1956; Separate Tables (D. Mann), 1958; Al Capone (R. Wilson), 1959; Too Late Blues (J. Cassavetes), 1961; Two Weeks in Another Town (Minnelli), 1962; Sylvia (G. Douglas), 1965; A Big Hand for the Little Lady (F. Cook), 1966; The Redeemer, 1966; Will Penny (T. Gries), 1968; What's the Matter with Helen? (C. Harrington), 1971

Many arrs and partial scores, 1936–43, incl. Modern Times (C. Chaplin), 1936; Marked Woman (L. Bacon), 1937; Mr. Moto's Last Warning (N. Foster), 1939; Dead Men Tell (H. Lachman), 1941

Scores for American television series, incl. The Olympics, a History of the Golden Games (1976) [pilot]; Ben Casey; Breaking Point; Wagon Train

OTHER WORKS

Oedipus Memneitai (Raksin), B-Bar, nar/soloist, 6vv, chbr ens, 1986

Stage works, incl. musicals, ballets, and incid. music; radio music; songs

Arrs. of film music for orch (film in parentheses): Theme (Laura); Suite (Forever Amber); Scenarios (The Bad and the Beautiful); Nocturne and Finale (Force of Evil); Grande Polonaise (The Best of the Bolshoi)

Arrs. of film music for chbr ens. (film in parentheses): Hoofloose, Fancy Free (Giddyap); Serenade (The Unicorn in the Garden); A Song after Sundown (Too Late Blues)

Other arrs., incl. Circus Polka (Stravinsky), band

MARTIN MARKS

Ralf, Torsten (Ivar) (*b* Malmö, 2 Jan 1901; *d* Stockholm, 27 April 1954). Swedish tenor. He studied in Stockholm and in Berlin with Hertha Dehmlow and made his début at Stettin (now Szczecin) in 1930 as Cavaradossi. After engagements at Chemnitz (1932–3) and Frankfurt (1933–

5) he joined the Dresden Staatsoper, of which he remained a member until 1944. At Dresden he created Apollo in Strauss's *Daphne* (1938) and sang in the recording of the work; he also appeared in the première of Sutermeister's *Die Zauberinsel* (1942). During the 1930s and 40s he appeared regularly at the Vienna Staatsoper. He sang at Covent Garden (1935–9) as Lohengrin, Walther, Parsifal, Erik and Tannhäuser, and in 1936 was heard as Bacchus in a single performance of *Ariadne auf Naxos* given in London by the Dresden company with Strauss conducting. He returned to Covent Garden in 1948 as Radames. He sang at the Metropolitan (1945–8) in the Wagnerian repertory and as Radames and Otello, and appeared at the Teatro Colón, Buenos Aires, in 1946.

Ralf had a *lirico spinto* tenor voice with a reedy but resonant timbre. His recordings include a complete *Fidelio* under Böhm (1944), in which his careful musicianship and the heroic ring of his voice make his interpretation of Florestan ideal, and excerpts from the roles of Otello, Lohengrin and Walther. Ralf's two brothers, Oscar (1881–1964) and Einar (1888–1971), were also musicians. Oscar, a tenor, was a member of the Swedish Royal Opera from 1918 to 1940, and was the first Swedish tenor to sing at Bayreuth, as Siegmund in 1927; he translated many operas into Swedish and wrote an autobiography *Tenoren han går i Ringen* ('The tenor goes into the Ring', Stockholm, 1953). Einar, a choral conductor, was from 1940 director of the Swedish Royal Academy of Music.

HAROLD ROSENTHAL/ALAN BLYTH

Rallentando (It.: 'becoming slower'; gerund of *rallentare*, 'to relax', 'slacken', 'slow down'). A direction to reduce tempo, often abbreviated to *rall.* In the 18th century the form *lentando* was common. *Rallentando* itself is of relatively recent usage, being scarcely encountered in scores before the 19th century; now it is perhaps the most common of such terms, though *ritardando* and *ritenuto* both occur frequently. Each word has different shades of meaning, but each composer has interpreted these shades in his own way, if at all. From this point of view Peter Cahn's excellently documented interpretation of the difference ('Retardatio, ritardando', 1974, *HMT*) seems a little rigid.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Rāmāmātya (*fl c*1550). South Indian musician and musical scholar. He was probably the grandson of the court poet and commentator Kallinātha. His Sanskrit music-theoretical treatise *Svaramelakalānidhi* ('Treasury of Musical Scales', *c*1550), composed at the court of Vijayanagar shortly before the fall of the capital, was the first to present a scheme of rāga classification in which the basic modes (*jāti*) are no longer used but rather a system of scale-types (*mela*), into which the rāga in current practice can all be accommodated. In so doing he laid the foundation of the modern Karnatic melodic system and, though he may not have invented the *mela* notion, his treatise may be counted the earliest work of the modern period. It was expressly written with a view to 'reconciling the conflicting views of theory', and the author was at pains to explain the actual musical practice of his time in terms of theoretical language derived from the traditional Sanskrit sources such as Śārṅgadeva's *Saṅgīta-ratnākara*. The *Svaramelakalānidhi* is in five chapters, dealing only with the melodic component of music. Ancient notions of intervals and tonality are simplified and modified to account for what appears to have been in effect a scale of 12 semitones, some of which could have been microtonally adjusted, when required, in playing technique. The positions of notes are explained with reference to the fixed fret positions on a *vīṇā* (stick-zither). Information is thereby also given about various types of plucked string instruments of the author's day.

JONATHAN KATZ

Ramann, Lina (*b* Mainstockheim, 24 July 1833; *d* Munich, 30 March 1912). German writer and music teacher. The daughter of a wine merchant, she was taught music by the wife of Franz Brendel, the editor of the *Neue Zeitschrift für Musik*. Since the *Zeitschrift* was a mouthpiece for the New German School, Ramann was brought into contact with Liszt and his circle at an early age. She first taught in Gera, then went to the USA for a few years. In 1858 she founded a music school for women teachers in Glückstadt. After moving to Nuremberg in 1865 she opened a new, enlarged school in collaboration with Ida Volckmann. Her school was one of the first in Germany to combine general philosophical education with music teaching, and drew national attention. In 1890 she sold the school to Liszt's pupil August Göllerich and moved to Munich.

Ramann wrote a number of books, especially about Liszt, the first of which, a study of the oratorio *Christus* (1874), caught the attention of Princess Carolyne von Sayn-Wittgenstein, who proposed to Liszt that Ramann would make an ideal biographer. From 1874 Ramann worked on her 'official' biography of Liszt, a project which occupied her for 20 years. The book was criticized because of its unflattering picture of Countess Marie d'Agoult, Liszt's first mistress and the mother of his three children. It used to be thought that this portrait showed the malign hand of Princess Carolyne, who had taken Marie d'Agoult's place in Liszt's life and had a vested interest in rewriting his past. That view is no longer tenable. With the belated publication of her *Lisztiana* (1983) Ramann's biography is today better appreciated. She sent Liszt many questionnaires (duly filled in by him) and kept a careful record of her interviews with him. *Lisztiana* makes clear that far from being the 'willing accomplice' of Princess Carolyne (the charge most frequently levelled against her) Ramann fought for her scholarly independence. An especially valuable book is her *Liszt Pädagogium*, which contains many remarks on piano playing by Liszt and his pupils. Ramann translated Liszt's collected writings into German, and also composed a number of piano sonatas and other works. Her papers are held in the Goethe-Schiller Archive in Weimar.

ALAN WALKER

Rambert, Dame **Marie** [Rambam, Civia; Ramberg, Miriam] (*b* Warsaw, 20 Feb 1888; *d* London, 12 June 1982). British dancer and choreographer of Polish birth. *See* BALLET, §3(ii).

Rameau, Jean-Philippe (*b* Dijon, bap. 25 Sept 1683; *d* Paris, 12 Sept 1764). French composer and theorist. He was one of the greatest figures in French musical history, a theorist of European stature and France's leading 18th-century composer. He made important contributions to the cantata, the motet and, more especially, keyboard music, and many of his dramatic compositions stand alongside those of Lully and Gluck as the pinnacles of pre-Revolutionary French opera.

1. Life: (i) Early life (ii) 1722–32 (iii) 1733–44 (iv) 1745–51 (v) 1752–64. 2. Cantatas and motets. 3. Keyboard music. 4. Dramatic music. 5. Theoretical writings.

1. LIFE.

(i) Early life. His father Jean, a local organist, was apparently the first professional musician in a family that was to include several notable keyboard players: Jean-Philippe himself, his younger brother Claude and sister Catherine, Claude's son Jean-François (the eccentric 'neveu de Rameau' of Diderot's novel) and Jean-François's half-brother Lazare.

Jean Rameau, the founder of this dynasty, held various organ appointments in Dijon, several of them concurrently; these included the collegiate church of St Etienne (1662–89), the abbey of St Bénigne (1662–82), Notre Dame (1690–1709) and St Michel (1704–14). Jean-Philippe's mother, Claudine Demartinécourt, was a notary's daughter from the nearby village of Gémeaux. Although she was a member of the lesser nobility, her family, like that of her husband, included many in humble occupations. Jean-Philippe, the seventh of their 11 children, was the eldest surviving son. His birthplace in the cour Saint-Vincent on the rue Saint-Michel still remains (now 5–7 rue Vaillant). Despite only modest means, the family maintained influential connections; the composer's godparents, for example, were both from noble families connected with the Burgundian *parlement*.

The first 40 or more years of Rameau's life can be reconstructed only sketchily. Most of this period was spent in the comparative obscurity of the French provinces; it was not until his 40th year that he began to make his mark as a theorist and later still as a composer. He himself was secretive about the first half of his life: according to Chabanon, 'he never imparted any detail of it to his friends or even to Madame Rameau his wife'.

Rameau *père* apparently took responsibility for his children's early musical education: 'he taught them music even before they had learnt to read' (Maret). It is possible that in 1692 or later Jean-Philippe also had lessons from Claude Derey, organist of the Ste Chapelle, Dijon. Eventually, perhaps as late as the age of 12, he was sent to the Jesuit Collège des Godrans. There he would have encountered the didactic music theatre that was an important element in the contemporary Jesuit curriculum; indeed, it was quite probably the experience of taking part in such productions that sparked off his enthusiasm for opera which, he later admitted, had begun when he was 12. No precise details of the Dijon school productions have come to light, however. In view of his later achievements, it is surprising that the young Rameau did not distinguish himself at the college; according to a classmate, he would sing or write music during lessons, and he left without completing the course. Certain anecdotes suggest that his written French was defective at this time, and indeed his prose style in the theoretical works and elsewhere is notable for its lack of clarity.

After leaving school, Rameau went to Italy. The date of his departure from Dijon is not known; Maret presumed that it was before his 19th year, but Decroix, in a biographical article (A1824) based on material collected as much as 50 years earlier, states that the composer was 18. The visit was short – perhaps only a few weeks or months – and he never went beyond Milan. In later life he confided to Chabanon his regrets at not having stayed longer in Italy, where he believed he might have 'refined his taste'. Decroix claims that Rameau returned to France as a violinist with a touring theatrical troupe that performed in various towns in Provence and Languedoc. If this is true, the troupe concerned was that of the Lyons Opéra (Zaslaw, *Dijon 1983*), in which case Rameau must have joined it in southern France (not in Milan, as Decroix maintains). Yet no documentary evidence of Rameau's involvement survives, and Decroix may even have confused the composer with the dancing-master Pierre Rameau (no relation), known to have belonged to the troupe at that time.

On 14 January 1702 Rameau was temporarily appointed *maître de musique* at the Cathedral of Notre Dame des Doms, Avignon. By 1 May, however, he had taken up a post as organist at Clermont Cathedral. The contract, signed on 30 June, was for six years, though in fact Rameau served no more than four. By 1706 he had moved to Paris, where he is said to have lodged opposite the monastery of the Grands Cordeliers (Franciscans) to be near the church where Louis Marchand was organist. By the time his *Premier livre de pieces de clavecin* was published in 1706, he had succeeded Marchand as organist at the Jesuit college in the rue Saint-Jacques (the famous Collège Louis-le-Grand, the pupils of which at that time included his future collaborator Voltaire); he

1. Jean-Philippe Rameau: portrait by Jacques Aved, mid-18th century (Musée des Beaux-Arts, Dijon)

was also organist to the Pères de la Merci (Mercedarians). On 12 September 1706 he won a competition for the post of organist at Ste Madeleine-en-la-Cité, but when the judges learnt that he was unwilling to give up his other two posts they appointed Louis-Antoine Dornel. Rameau still held the same posts in July 1708.

In 1709 he returned to Dijon to succeed his father as organist at Notre Dame, at that time the town's principal church. On 27 March he signed a six-year contract with the church authorities, sharing the post with Lorin *fils*. Rameau was required to play only on solemn feast days, at performances of the *Te Deum* and at public ceremonies. It is clear, though, that when Lorin succeeded to the post (2 July 1713), Rameau had relinquished it some time before. Probably he had already moved to Lyons: by 13 July he had been there long enough to be described as 'maistre organiste et musicien de cette ville' when the Lyons authorities paid him for organizing a concert to celebrate the Peace of Utrecht (the concert never took place). Rameau's compositions at this time probably include motets: the library catalogue of the Lyons Concert, a concert-giving society founded in August 1714, lists his *Deus noster refugium* among its earliest acquisitions; the piece may even have been written for the Concert. (Although the catalogue includes three more of his motets, among them the lost *Exultet coelem laudibus*, their position in the catalogue suggests that they were acquired after Rameau had left Lyons.) By 1 July 1714 he was organist at the Dominican convent known as the Jacobins, the organ of which had only recently been rebuilt; he may already have been there for a year or more. On 13 December, the day of his father's death, he drew his salary and travelled to Dijon, remaining there for the wedding of his brother Claude in January 1715. When he returned to Lyons, he organized and composed music for a concert at the Hôtel de Ville (17 March 1715) in honour of the

new archbishop. By this date he had been succeeded at the Jacobins by Antoine Fioco (presumably Antonio Fiocco) and Etienne Le Tourneur.

The following month, Rameau signed a second contract as organist at Clermont Cathedral, this time to run for 29 years from 1 April 1715. A contemporary description of the organ reveals that it had 15 stops on the *grand orgue*, ten on the *positif* and four each on the pedals and echo organ. As in 1702, his duties included the instruction of one chorister. (According to Suaudeau (F1958), there existed autograph teaching materials from 1717, but none is now known.) Rameau briefly revisited Dijon for the baptism on 31 January 1716 of his brother Claude's eldest son Jean-François. Maret claims that three of Rameau's cantatas – *Médée, L'absence* (both lost) and *L'impatience* – were composed at Clermont. Four others – *Thétis, Aquilon et Orithie, Orphée* and *Les amants trahis* – survive in copies made during his time there. It was at Clermont, too, that the greater part of his *Traité de l'harmonie* must have been written. From 22 August 1721 until his departure a year later, Rameau seems to have shared his cathedral post with an organist named Marchand, a member of a local family of musicians.

Rameau was still at Clermont on 11–13 May 1722, when he was paid for taking part in three Rogation Day processions. He finally left for Paris shortly afterwards, once again well before his contract expired (on this occasion it still had 21 years to run). It is alleged that at first the cathedral authorities refused him permission to go, and consequently that during the octave of Corpus Christi he selected the most disagreeable stop-combinations and discords until the authorities relented. It is possible, however, that this incident took place (if at all) before Rameau first left Clermont in 1705 or 1706 (Zaslaw, *Dijon 1983*). There is, in any case, a well-documented account of a similar occurrence at Dijon in 1736, when the organist was his brother Claude.

(ii) 1722–32. Rameau probably arrived in Paris in late May or in June 1722. He was to live there for the rest of his life. The immediate reason for his move seems to have been a desire to supervise the production of his *Traité de l'harmonie* which, he states, had been typeset in Paris while he was still at Clermont. The printing of this work, which the publisher J.-B.-C. Ballard claimed to have commissioned, had evidently been started three years earlier. Yet numerous errors remained, and before the treatise was published Rameau included a lengthy supplement of corrections, a revised or possibly new preface and other changes. The *Traité* must eventually have been issued soon after his arrival in the capital, since the first review appeared in the October–November issue of the *Journal de Trévoux* (familiar title of *Memoires pour l'histoire des sciences et des beaux-arts*).

Rameau was virtually unknown in Paris. The appearance of this monumental 450-page treatise immediately earned him a formidable reputation in France and abroad, soon to be consolidated by the publication of the *Nouveau système de musique théorique* (1726). Shortly after publication Rameau sent a copy of the *Nouveau système* to the Royal Society in London, where a review by the mathematician Brook Taylor was read on 18 January 1727/8 (Miller, F1985).

The controversial nature of some of Rameau's theories, in particular that of the *basse fondamentale*, led to a public debate with 'a second musician' in Paris on 8 May 1729, continuing into the following year as a series of polemical exchanges in the *Mercure de France*. Rameau's opponent has sometimes been tentatively identified as Jacques de Bournonville, but is more likely to have been the composer and theorist Michel Pignolet de Montéclair. Meanwhile, the firm of Ballard, which had published the *Traité* and the *Nouveau système*, was in the process of printing the *Dissertation sur les différentes méthodes d'accompagnement pour le clavecin, ou pour l'orgue* when Rameau broke off relations with them. The *Dissertation*, first mentioned in the preface to his *Pieces de clavessin* (1724), was eventually published by Boivin and Le Clerc in 1732. Thereafter, Rameau changed publisher with almost every new theoretical work.

Incongruous as it may seem in view of his newfound eminence as a theorist, Rameau's first compositions in Paris consisted of incidental music to a farcical *opéra comique*, *L'Endriague*, at one of the Fair theatres (3 February 1723). The suggestion that he should provide music to supplement the well-known tunes traditionally used in such plays came from the author, Alexis Piron, a fellow Dijonnais and one of the few people in Paris that he would already have known. Rameau's music, of which there was a considerable quantity, is now lost. In his three subsequent collaborations with Piron at the Fair theatres, he contributed much less. In spite of the lack of prestige attached to the Fairs, he was to make useful contacts there, among them Louis Fuzelier, future librettist of *Les Indes galantes*.

On 10 September 1725 Rameau attended a performance by two Louisiana Indians at the Théâtre Italien; he was soon to characterize their dancing in the harpsichord piece *Les sauvages*, later published in his *Nouvelles suites de pieces de clavecin*. *Les sauvages* was one of the works that Rameau referred to in his oft-quoted letter (25 October 1727) to the dramatist Antoine Houdar de Lamotte, the text of which shows that he was already actively planning his operatic début, that Lamotte had already refused him a libretto and had cast doubts on his chances of success. Evidently stung by this, Rameau set out with unusual clarity his credentials as a potential opera composer, but to no avail.

During the middle and late 1720s, more of his music appeared in print. A second keyboard collection, the *Pieces de clavessin*, was issued in 1724, followed by the *Nouvelles suites de pieces de clavecin* and the *Cantates françoises à voix seule*. These last two publications have now been redated, the *Nouvelles suites* by Bruce Gustafson (Gustafson and Fuller, D1990) and the *Cantates* by Neal Zaslaw (*Dijon 1983*) both to 1729 or 1730, a year or two later than had long been assumed. One of the cantatas, *Le berger fidèle*, had been performed at Philidor's Concert Français on 22 November 1728 by Mlle Le Maure.

On 25 February 1726, now aged 42, Rameau married the 19-year-old Marie-Louise Mangot (1707–85), an accomplished singer and harpsichordist and possibly already one of his pupils. She bore him four children. Her father, Jacques, was one of the *symphonistes du roy*, while her brother, Jacques-Simon, was later to make Rameau's music known at the court of Parma and to act as intermediary in correspondence between Rameau and Padre Martini.

In spite of his growing reputation as a theorist, composer and teacher, especially of harmony and continuo playing, Rameau was unable to secure an organist's

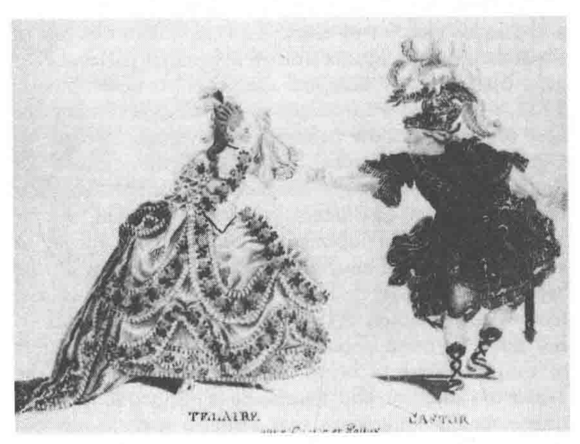
appointment of any importance for many years after reaching Paris. The title-pages of his music printed in the 1720s, unlike those of his previous publications, give no current post; that of the *Nouveau système* describes him as 'formerly organist of Clermont Cathedral'. He is not mentioned by Nemeitz (A1727) or Valhebert (A1727) in their listings of prominent Parisian organists. He competed for the post of organist at the parish church of St Paul (28 April 1727), but lost to Louis-Claude Daquin. By 1732, however, Rameau had become organist at Ste Croix-de-la-Bretonnerie and, by 1736, at the Jesuit Novitiate ('les Jésuites de College'). In 1738 he still held the former appointment but not the latter. (According to Decroix (A1824), after his defeat in the St Paul competition in 1727 the disillusioned Rameau left Paris to become organist at St Etienne, Lille. This is unlikely: Rameau was in Paris for the baptism of his son Claude-François on 3 August 1727, and his subsequent publications give Paris addresses. In any case, Decroix's placing of the St Paul competition – before Rameau's arrival at Clermont – is far too early. Yet the claim cannot be ignored: Decroix, a native of Lille, was in frequent contact with Claude-François Rameau after the composer's death and had access to sources unavailable to other early biographers. Unfortunately, the relevant church archives were destroyed in 1792.)

(iii) 1733–44. Although Rameau did not make his operatic début until he was 50, it is clear from passages in the *Traité*, from his letter to Lamotte in 1727 and from later remarks that it had long been his ambition to write for the Paris Opéra. The final impetus, it was widely claimed, was provided by Montéclair's *Jephté* (February 1732). Although he had earlier quarrelled publicly with its composer, in his later writings he referred admiringly to this work, which had greatly moved him.

The impact of Rameau's first opera, *Hippolyte et Aricie* (1733), was immense. Initial reactions ranged from excitement and admiration to bewilderment and disgust. The work gave rise to a long-running dispute between the conservative *lullistes*, as the anti-Rameau faction was known, and the composer's supporters, the *ramistes* (or, more provocatively, *ramoneurs*: chimney sweeps). The *lullistes*, who formed a powerful and vociferous cabal, were variously motivated by a distaste for the quantity, the complexity and the allegedly italianate character of Rameau's music and by fear that the new style would annihilate the traditional repertory, above all the works of their revered Lully. There was a strong element of professional jealousy on the part of certain composers and librettists, and Rameau had to contend with the ill-will of some of the Opéra performers. The dispute raged around Rameau's second opera two years later ('The music is a perpetual witchery ... I am racked, flayed, dislocated by this devilish sonata of *Les Indes galantes*', complained an anonymous contributor to the *Observations sur les écrits modernes* in 1735) and reached its height with the production of his fifth, *Dardanus*, in 1739. Rameau was the object of several satirical engravings and a scurrilous poem; this last led to an unseemly brawl between the composer and its perpetrator, Pierre-Charles Roy (Sadler, 1988). Although the dispute abated during the following decade as the public came to terms with the composer's powerful and sophisticated idiom, and accepted that a great theorist could also be a great artist, echoes could still be heard in the 1750s and beyond. Despite the controversy, Rameau's first five operas were by no means failures. *Castor et Pollux* and *Dardanus*, the two least successful at their first appearance, had runs of 21 and 26 performances respectively. The two earliest *opéras-ballets* proved even more popular: *Les Indes galantes* was performed 64 times between 1735 and 1737, *Les fêtes d'Hébé* 71 times in 1739 and 1740.

In December 1733 Rameau made his first visits to the court. Between then and 1740 all the operas he had so far written were given concert performances attended by the queen, Maria Leszczyńska, and occasionally by Louis XV. The singers sometimes included Rameau's wife; the *Mercure de France* (February 1734) reports that 'the Queen highly praised her voice and her tasteful ornamentation'.

Almost immediately after the première of *Hippolyte et Aricie*, Rameau began the first of three collaborations with Voltaire. The libretto of the ill-fated *Samson* had been sketched between October and December 1733, and the composer had written enough of the music by the following October for a rehearsal to take place at the home of the *intendant des finances*, Louis Fagon. By then, however, the Sorbonne had begun to take an unwelcome interest in an opera based on scripture by a writer known for his outspoken criticism of the religious and political establishment; further, Voltaire had enemies at court. Thus, despite the successful precedent of Montéclair's biblical opera *Jephté*, fears of censorship beset the project. At the beginning of 1736 Voltaire was still keen to see it through, but Rameau appears to have lost interest and the opera was subsequently abandoned. Voltaire later stated that music from *Samson* had eventually found its way into 'Les Incas' (the second entrée of *Les Indes galantes*), *Castor et Pollux* and *Zoroastre*. Fragments may also be identified in *La princesse de Navarre* and in the 1753 version of *Les fêtes de Polymnie* (Sadler, C1989).



At the time of his first collaboration with Voltaire, Rameau was beginning his last with Piron – not this time at the Fair theatres but on the exalted stage of the Comédie-Française. *Les courses de Tempé*, one of the few pastoral plays staged there, was given a single performance, on 30 August 1734. The Marquis D'Argenson described Rameau's divertissement (now largely lost) as 'pretty and well performed'.

During the 1730s Rameau came under the protection of the tax-farmer A.-J.-J. Le Riche de La Pouplinière and acted as his director of music. La Pouplinière was one of the richest men in France and an influential patron of the arts. The formerly accepted date for this development, 1731, was based on a collection of Voltaire's letters, the first of which is now believed to have been written in October 1733. Rameau had not by then joined La Pouplinière's entourage. Evidence for earlier contacts between the two (a rehearsal of *Hippolyte* said to have been held in La Pouplinière's home in the spring or summer of 1733 and his 'loan' of Rameau during September to the financier Samuel Bernard) is not trustworthy (Sadler, A1988). Moreover, in a letter to Rameau of around December of that year, Voltaire refers to the composer as being under the protection of the Prince of Carignan, and it seems he continued so for some time since for well over a year Voltaire sent messages to Rameau, not through his own agent, Formont (who lived at La Pouplinière's house), but by way of Berger, the prince's secretary. It is in any case more likely that the

fashion-conscious La Pouplinière would have interested himself not so much in Rameau the eminent theorist and teacher as in Rameau the newly famous (or infamous) opera composer. Significantly, it was in 1734 or shortly after that the financier took as mistress Thérèse des Hayes, a devoted pupil of Rameau and one of his most enthusiastic champions; it may even have been Thérèse, whom La Pouplinière later married, who introduced Rameau to the household. At all events, Rameau cannot with any certainty be said to have joined the financier's circle before November 1735, and possibly not until August 1736.

Rameau's association with La Pouplinière, which lasted until 1753, was of the utmost importance to his career. The financier's home was 'a meeting-place for all classes. Courtiers, men of the world, literary folk, artists, foreigners, actors, actresses, *filles de joie*, all were assembled there. The house was known as the menagerie and the host as the sultan' (Grimm; see Tourneux, A1877–82). It was there that Rameau met most of his future librettists, while the house became 'la citadelle du Ramisme' (Cucuel, A1913). Yet little is known about the terms of Rameau's appointment or, before 1751, the size and constitution of his patron's musical establishment. In 1741 La Pouplinière took over some of the Prince of Carignan's players, including the violinist Joseph Canavas, possibly the flautist Michel Blavet and (more doubtfully, despite his signing himself in 1751 'chef des violons de M. de la Pouplinière'), the violinist Jean-Pierre Guignon. Singers and dancers from the Paris Opéra were frequent dinner guests and took part in concerts and theatrical entertainments. In the later 1740s La Pouplinière was to import from Germany and Bohemia virtuoso players of the clarinet and orchestral horn. These instruments were then new to France, and Rameau was the first to use them at the Paris Opéra.

A second polemic on the subject of music theory erupted in the mid-1730s, this time between Rameau and his former friend, the Jesuit priest Louis-Bertrand Castel, mathematician, physicist and scientific journalist. The history of their association dates back to 1722 with the publication of the *Traité de l'harmonie*. Castel had been captivated by the treatise and had sought Rameau out through a mutual friend, 'M.B.' (perhaps the Borin whose book *La musique théorique et pratique*, published anonymously in 1722 shortly after the *Traité*, is full of praise for Rameau's book). Castel took harmony lessons with Rameau, and may also have introduced him to the work of the mathematician and acoustician J. Sauveur. Castel's enthusiastic review of the *Traité (Journal de Trévoux*, October–November 1722) brought Rameau's work to the attention of a wide – indeed, a European – readership. Reviewing the *Nouveau système* six years later, Castel had become distinctly cooler. By the early 1730s his views had diverged sharply from Rameau's. It was for this reason, he was later to claim, that he had refused the offer of all Rameau's research work, around 1733, when the composer had considered abandoning music theory to concentrate on his newly launched operatic career. That was apparently their last meeting. Two years later, Castel's article 'Nouvelles expériences d'optique & d'acoustique' (*Journal de Trévoux*, August–December 1735) contained an implication that Rameau had not sufficiently acknowledged his debt to certain earlier scholars. Rameau and Castel exchanged open letters, the tone of which is stiffly courteous. But when Castel finally wrote a grudging and equivocal review of *Génération harmonique* (1737), Rameau unleashed a riposte of such withering sarcasm that the Jesuit *Journal de Trévoux*, which had hitherto published the entire polemic, seems to have refused to print it; it appeared instead in the Abbé Prévost's independent *Le pour et contre* (1738). Voltaire's characteristically witty 'Lettre à Mr. Rameau' congratulating Orpheus Rameau on vanquishing Euclid Castel appeared later the same year.

2. *Costume designs for Telaira and Castor, possibly by Jean-Louis Fesch, in a revival of Rameau's 'Castor et Pollux', Paris Opéra, ?1764: gouache on vellum (Bibliothèque et Musée de l'Opéra, Paris)*

Génération harmonique is Rameau's only major theoretical work of the period 1733–49. It was dedicated to the members of the Académie Royale des Sciences, who responded by commissioning a report on the work from three of their foremost academicians, R.-A. Ferchault de Réaumur and J.-J. Dortous de Mairan, both physicists, and the scholar E.S. de Gamaches. The last two had already discussed music theory with Rameau, Mairan as much as 12 years earlier. The report was complimentary and Rameau proudly included in his treatise the 'Extrait des registres de l'Académie Royale des sciences' which echoed the sentiments of the report and was signed by the academy's eminent secretary, Bernard Le Bovier de Fontenelle. Shortly after publication, Rameau sent a copy to the distinguished English scientist Sir Hans Sloane, president of the Royal Society, together with a letter inviting his opinion of the work. It is not known whether Sir Hans replied.

Between 1737 and 1741 Rameau's views on temperament were criticized by Louis Bollioud-Mermet in lectures at the Lyons Académie des Beaux-Arts. In a letter to Jean-Pierre Christin, secretary of the academy (3 November 1741), Rameau defended himself sharply; he may even have been responsible for the open letter 'from a person interested in Rameau's works' threatening to publish Bollioud's paper 'in the public interest' unless the writer did so himself. Other academicians, notably Charles Cheinet and Jacques Mathon de la Cour the elder, were staunch supporters of Rameau's theories.

In December 1737 the *Mercure de France* carried Rameau's announcement that he was establishing a school of composition. Up to 12 pupils would meet each week for three two-hour classes. In this way, Rameau claims, a thorough grasp of the theory and practice of harmony could be gained in six months at the most, even by those

who could not already read music. Around this time, four reviews of *Génération harmonique* appeared in the leading Parisian periodicals. That in *Le pour et contre* was written by 'a young muse', almost certainly Thérèse des Hayes, who was by now Mme de La Pouplinière and renowned for her sharp intellect. (Maret, however, claimed that the author was 'Mme de Saint-Maur, née Aléon', another of Rameau's pupils.) Thérèse and her husband were among the godparents of the composer's third child, born in 1740. The following year Rameau honoured her husband by giving one of the *Pieces de clavecin en concerts* the title 'La Lapopliniere' [*sic*].

The period 1740–44 was uncharacteristically slack by the standards of Rameau's mature years. He produced no theoretical writings – indeed, nothing of this kind between 1738 and 1749 – while his musical output was limited to the publication of the *Pieces de clavecin en concerts* (1741) and the revision for their first revivals of *Hippolyte et Aricie* in 1742, *Les Indes galantes* in 1743 and *Dardanus* (this revision admittedly involving much new music) in 1744. There is some evidence of a quarrel with the Opéra management (Sadler, A1988). That might explain his marked lack of enthusiasm for a libretto, *Pandore*, that Voltaire offered him in 1740, though Rameau might equally have refused it because he sensed the controversial nature of the work and its librettist or wished to avoid another, possibly fruitless collaboration. At all events, Rameau's productivity revived sharply soon after Thuret was replaced by Berger as Opéra director in May 1744.

(iv) 1745–51. The immediate stimulus to Rameau's creative activity was a series of commissions, three of them from the court, resulting in the production of no fewer than four dramatic works in 1745. For the festivities surrounding the dauphin's wedding he composed *La princesse de Navarre* (his second collaboration with Voltaire) and *Platée* (a work that was probably already in progress); for the court celebration of the victory of Fontenoy he wrote *Le temple de la Gloire* (again with Voltaire); for the Paris Opéra commemoration of Fontenoy he provided *Les fêtes de Polymnie*, a work originally intended, it would seem, for performance at court. *Les fêtes de Polymnie* was the first of at least seven collaborations with Louis de Cahusac. Apart from Voltaire and J.F. Marmontel, no other librettist worked with Rameau on more than two operas.

On 4 May, shortly after the dauphin's wedding, Rameau received a royal pension of 2000 livres and the title *compositeur de la musique de la chambre du roy* (in some sources *compositeur du cabinet du roy*): an exceptional honour, for the title was normally conferred only on a member of the king's musical establishment.

Thus began a closer association with the court: from 1745 onwards, more than half of Rameau's stage works were intended for court premières. One, *Les surprises de l'Amour* (1748), was even written as a vehicle for Mme de Pompadour's theatrical talents in her Théâtre des Petits Cabinets. There is evidence that, at the time of his first royal pension, Rameau had not been financially well off. After *Le temple de la Gloire* Voltaire generously donated his own fee to Rameau, since 'his fortune is so inferior to his talents'. (On the other hand, Rameau was already said to have worked with librettists only if they surrendered their fees to him.) In 1750 the king accorded him a further pension of 1500 livres, payable by the Opéra out of its revenue. There is, however, some doubt as to whether this was honoured, at least before 1757.

The five years 1745–9 were Rameau's most productive. No fewer than nine new works were performed, including the *tragédie Zoroastre*, the *comédie Platée*, two pastorales and three *opéras-ballets*. Moreover, several of his undated, unperformed operas were probably written during this period or in the following few years (see Green, B1992). By 1749 his works dominated the stage to such an extent that the Marquis D'Argenson, who had supervisory responsibility for the Opéra, felt compelled to forbid the management to stage more than two of his works in any one year, to avoid discouraging other composers.

Around 1750 Rameau had the support of a wider cross-section of the French public than ever before. His position at court was secure, he enjoyed the esteem of most of the intellectuals (including many who were later to side against him) and his works were widely performed in the provinces. The extent to which he had won over the audiences and performers at the Opéra can be judged by a report in the *Mercure de France* for May 1751:

> At Wednesday's performance [*Pigmalion*] M. Rameau, who had only just recovered from a long and dangerous illness, appeared at the Opéra in one of the rear boxes. His presence aroused a murmur that began in the stalls and spread rapidly throughout the whole audience. Then suddenly there broke out a general applause and – something that had never been seen before – the assembled orchestra added their rapturous cheers to those of the *parterre* ... [Rameau] shared with the public the pleasure of an excellent performance. That night it seemed that all the actors were striving to excel themselves.

Such spontaneous demonstrations of respect and affection were to become more common during the 1750s and after. Even so, audiences were still slow to respond to new works; it was frequently observed that Rameau's operas were really successful only when they were revived.

One operatic casualty of the period was the *tragédie Linus*. Decroix, who acquired and had a copy made of the first violin part (now almost the sole contemporary source of the music known to survive), was told by the composer's son Claude-François that the opera was being rehearsed at the home of the Marquise de Villeroi when the Marquise was suddenly taken seriously ill. In the confusion, the score and all the other parts were lost or stolen. The rehearsal must have taken place by 1752; the Abbé de Laporte alludes to it in a book published that year. In 1760 he was to state that the opera was never performed because of flaws in the music of the fifth act. Collé had claimed in 1754 that Rameau had never quite completed the music after La Bruère had made changes to his libretto. The libretto survives in manuscript.

Rameau's operatic activities in the mid- and later 1740s had left little time for theoretical work, but in 1749 he broke an 11-year silence in this field with some minor writings. (The long silence supports Castel's claim that in the mid-1730s Rameau had felt he could develop his theoretical work no further.) The following year he published the far more important *Démonstration du principe de l'harmonie*. Here he had the 35-year-old Denis Diderot as collaborator: hence the clarity and elegance of what is generally regarded as one of his best and most mature theoretical works. The *Démonstration*, approved by members of the Académie Royale des Sciences, including Alembert, was dedicated to the Count D'Argenson, himself a member of the academy. Though the book was widely reviewed, no copy – surely deliberately – was sent to the *Journal de Trévoux*.

In 1745 two events took place that were to sow the seeds of Jean-Jacques Rousseau's undying hatred of Rameau. Rousseau had completed an opera, *Les muses galantes*, modelled on *Les Indes galantes*, and tried to elicit Rameau's opinion of it. Although Rameau at first refused, a performance of excerpts was arranged at La Pouplinière's. Rameau listened with growing impatience and, according to Rousseau, finally declared that 'part of what he had heard was by someone who was a master of the art and the rest by an ignoramus who did not understand the first thing about music'. (The stylistic discrepancy he noted is explained by the fact that the young F.A. Danican Philidor had composed some of the accompaniments and inner parts.) 'Admittedly', Rousseau continued, 'my work was unequal and inconsistent ... Rameau claimed that he could see in me nothing but a little plagiarist without talent or taste'. Later in the year, while Voltaire and Rameau were busy on *Le temple de la Gloire*, the Duke of Richelieu commissioned Rousseau to complete *Les fêtes de Ramire*, the libretto of which had been written by Voltaire to re-use Rameau's divertissements from *La princesse de Navarre*. The task involved writing verse as well as music, and Rousseau maintained that it cost him much effort. But the result was so harshly criticized by Richelieu's mistress (the scarcely impartial Mme de La Pouplinière) that the work was sent back to Rameau. Rousseau claimed to have composed the overture and recitatives, but surviving sources suggest that his musical contribution to the work as finally performed consisted of little more than the undistinguished monologue 'O mort, viens terminer les douleurs de ma vie'. At all events, Rousseau gained no credit from the episode. From then on, he seldom missed an opportunity to speak in scathing or hostile terms of the compositions, and to a lesser extent the theories, of his former idol.

When Rameau's troublesome nephew Jean-François was sent to the prison of Fort l'Evêque in 1748 for insulting the Opéra directors, the composer was asked by the authorities 'how long he deemed it fitting that [the nephew] should stay there'. Rameau evidently suggested that Jean-François be deported to the colonies. In his reply, the Secretary of State, Phélypeaux, sympathized that Jean-François had not profited more from the good education procured for him by his uncle, but explained that deportation was out of the question; the nephew was released three weeks later.

(v) 1752–64. During his final 13 years Rameau's operatic activity declined sharply. Apart from two major works, *Les Paladins* and *Les Boréades*, his composition was limited to small-scale pastorales and *actes de ballet* and to the revision of earlier works for revivals, notably *Castor et Pollux* and *Zoroastre*. From 1749 until 1757 Rameau was on bad terms with the Opéra management. Of the new works from 1752 onwards, only *Les Paladins* was given there; the rest were performed solely at court. *Les Boréades* is now known to have been prepared for performance not at the Opéra but at Choisy in June 1763; it was rehearsed two months earlier in Paris and Versailles by a mixture of court and Opéra personnel, but subsequently abandoned and never performed in the 18th century (Bouissou, C1983). Until his last year, Rameau continued to take an active part in new productions and in revivals, giving his views on the distribution of roles and attending rehearsals.

No doubt advancing age and the ill health that Rameau and others increasingly allude to contributed to the reduction in the quantity, if not necessarily the quality, of his compositions. But this slackening coincides with a remarkable resurgence of activity in his theoretical work. From 1752 he produced some 23 writings. Many are short pamphlets; but more weighty works include the *Observations sur notre instinct pour la musique* (in part a reply to J.-J. Rousseau's notorious *Lettre sur la musique françoise*), the *Code de musique pratique* and the recently discovered *Vérités également ignorées et interessantes tirées du sein de la nature*, Rameau's last work (formerly known only in the fragmentary form, *Vérités interessantes*; see Schneider, F1986).

The dissemination of Rameau's theories was given powerful impetus in 1752 when Alembert, acting on Diderot's suggestion that 'someone should extract [Rameau's] admirable system from the obscurities that enshroud it and put it within everyone's reach', produced his *Eléments de musique théorique et pratique suivant les principes de M. Rameau*. Here the master's theories are expounded with lucidity and elegance. The book was translated into German by Rameau's lifelong admirer F.W. Marpurg (Leipzig, 1757). A letter of about 1750 from the 33-year-old Alembert to the 67-year-old Rameau reveals that the two were on cordial terms. The *Mercure de France* of May 1752 contains an open letter in which Rameau touchingly acknowledges his deep gratitude to Alembert.

By contrast, he was brusque to the point of rudeness with a little-known provincial, 'M. Ducharger of Dijon', whose niggling criticism of his ideas Rameau had apparently promised to answer in a forthcoming book. When Ducharger inquired when this would appear, he received the following reply (13 June 1754) which he later published:

> Sir, The book in question is now in print. It is entitled *Observations sur notre instinct pour la musique*. I have neither time nor health to think or to reflect. Forgive me, sir, I am old, you are young, and I am your very humble and very obedient servant, RAMEAU.

The *Observations* contain a dismissal of Ducharger's ideas but without even mentioning him by name.

Evidence of Rameau's contacts with foreign scholars increases markedly in this period as he sought wider recognition. Beginning in 1750 he entered successively into correspondence with Gabriel Cramer (Geneva), Johann II Bernoulli (Basle), Christian Wolff (Halle), Leonhard Euler (Berlin), Giovanni Poleni (Padua), J.B. Beccari and Padre Martini (both at Bologna). Although he had also communicated with many French scientists and scholars over the years, the list now widened to include the aesthetician Charles Batteux, the architect Charles-Etienne Briseux and the scholar François Arnaud, all of whom were to prove influential.

With the obvious exception of Rousseau, Rameau still had the support of most of the intellectuals at the start of the decade. During the Querelle des Bouffons (1752–4), however, Melchior Grimm and others found it expedient, partly at least for extra-musical reasons, to side against the principal living exponent of French music; and Rameau was soon to break with Diderot and Alembert in a polemic concerning the articles on music in the *Encyclopédie*. When Diderot had asked him to write some of these, Rameau had regretfully declined but had offered to comment on the manuscripts before they were

3. *Autograph MS of Daphnis's ariette 'Oiseaux chantez' from Rameau's pastorale-héroïque 'Daphnis et Eglé', first performed 1753 (F-Po Rés.208, f.19)*

printed. Eventually it was Rousseau who wrote these articles. He later complained that Diderot had allowed him only three weeks and that this had impaired their quality. Rameau, however, was never shown them before publication (possibly Rousseau had seen to that). His pride doubtless hurt, he kept silent for some time, but eventually felt compelled to point out their failings in a series of pamphlets. By the time Diderot and Alembert had been fully drawn into the conflict, when they defended Rousseau in the preface to volume six of the *Encyclopédie*

(1756), Rameau had alienated all the principal *philosophes*. Even without this quarrel, however, these men could not have allied themselves with some of the latest developments in Rameau's thinking, in particular when it took on a metaphysical or a theological tone.

The break with the *philosophes* must have been desperately disappointing to Rameau, since it had long been his principal ambition to be accepted as a thinker. 'Can it not be clearly seen', he wrote to Diderot and Alembert in 1757, 'that in honouring me with the titles "artiste célèbre" and "musicien" you wish to rob me of the one [i.e. "philosophe"] which I alone among musicians deserve, since I was the first to have made music a science by the discovery of its natural principle?' He must have been equally disappointed never to have been elected to the Académie Royale des Sciences despite the high regard that the academy had shown for his work. The nearest he came to such an honour was in 1752 when, with several other distinguished Burgundians, he was elected an associate member of Président Richard de Ruffey's Dijon literary society. When that society ceased to exist in 1761, he was elected to its victorious rival, the Académie des Sciences, Arts et Belles-Lettres de Dijon.

After nearly two decades, Rameau's association with La Pouplinière came to an end in 1753. Although the financier had separated from his wife five years earlier, the composer and Mme Rameau stayed on, spending each summer at his country home in Passy and even living for a time in an apartment in his Paris residence. But in 1753 La Pouplinière's new mistress established herself there and soon made life unbearable for a number of residents, including the Rameaus. At the same time, the financier seemed keen to replace his venerable, 70-year-old music director with a more fashionable musician. Maret claimed that the final rift came when La Pouplinière installed another composer in his house. If so, that composer cannot (as has been conjectured) have been Johann Stamitz; although Stamitz was eventually to succeed Rameau at La Pouplinière's, he arrived in Paris only in 1754.

Rameau's activities in the 1750s still included teaching. In addition to those already mentioned, his pupils over the years had included Diderot and possibly Alembert, the future Mme Denis (Voltaire's niece and mistress), Anne-Jeanne Boucon (later to marry the composer Mondonville) and the composers Claude Balbastre, Pierre-Montan Berton, Antoine Davergne, Pietro Gianotti and Jean-Benjamin de La Borde.

In his last years, aware that time was running out, he made feverish attempts to finish his theoretical work, now more important to him than composition. A rare glimpse of the aged Rameau is contained in his letter of November 1763 to the businessman Casaubon. He begins with profuse apologies for having seemed brusque or even insulting in a previous letter, but 'the time that I take up to write concerning my domestic affairs is very precious to me since I steal it from Him whom I fear and who does not fail me, so that I can bring to light new discoveries'. He was forced to communicate his thoughts in abbreviated form, he says, because of 'a lack of brainpower, of eyesight, and because I cannot concentrate nowadays more than two hours during the daytime'. Very few personal letters of this sort have survived. According to Claude-François Rameau, who in his youth had often served as a messenger boy, his father burnt most of his correspondence (Schneider, A1985).

By now Rameau was comparatively rich, having a respectable income from his royal pensions, pupils' fees, payments from the Opéra, the court and, until 1753, La Pouplinière. There was also revenue from the sale of books, scores and pamphlets. Details survive of a number of his investments. In 1757 the Opéra belatedly granted him a pension of 1500 livres, though Rameau justifiably claimed that he had never been adequately recompensed by the management, considering the revenue his works had brought them. Three years earlier, he helped his son Claude-François buy the coveted title of *valet de chambre* in the king's service, providing 17,500 of the necessary 21,500 livres. On several other occasions he gave financial help to members of his family circle (for the most recent evidence see Bouquet-Boyer, *Dijon 1983*).

Rameau died at his home in the rue des Bons-Enfants on 12 September 1764, three weeks after contracting a violent fever. He was buried the next day in his parish church of St Eustache. Five months earlier, he had received from the king letters patent of nobility; among the papers found after his death is proof that the necessary registry fees were paid, but only during his final illness and probably on his wife's or eldest son's initiative. The inventory of his estate, valued at almost 200,000 livres, reveals a sparsely furnished apartment containing only one musical instrument ('un vieux clavecin à un clavier en mauvais état'). Yet money bags in the writing desk in his wife's room contained coins worth 40,584 livres. Mme Rameau was able to provide a grand 'society' wedding for her 20-year-old daughter Marie-Alexandrine (according to Collé, Rameau had sworn that she would never marry in his lifetime) less than four months after the composer died.

Three memorial services were held in Paris. The first, at the church of the Pères de l'Oratoire (27 September 1764), involved nearly 180 musicians from the Opéra and from the *musique du roi* and was attended by perhaps 1500 people. Other services were held at the Carmelite church ('les Carmes du Luxembourg') on 11 October and again at the Pères de l'Oratoire on 16 December. Similar commemorations took place in various provincial towns, among them Marseilles, Orléans and Avignon. Dr Hugues Maret, secretary of the Dijon Academy of which Rameau had been a member, delivered a carefully researched *éloge* (25 August 1765) that was published the following year and is one of the most valuable sources of information on the composer's life.

Descriptions of Rameau's physique agree on his height and build: 'his stature was extremely tall; he was lean and scraggy, with more the air of a ghost than a man' (Chabanon); 'though much taller than Voltaire, he was as gaunt and emaciated' (Grimm; see Tourneux, A1877–82); 'like a long organ pipe with the blower away' (Piron; see Proschwitz, A1982). Collé and Grimm give extremely unflattering and doubtless jaundiced accounts of his personality. 'Rameau was by nature harsh and unsociable; any feeling of humanity was foreign to him ... His dominant passion was avarice' (Grimm); 'he was a difficult person and very disagreeable to live with; ... he was, furthermore, the most uncivil, the most unmannerly and the most unsociable man of his day' (Collé; see Barbier, ed., A1807). Almost all accounts are by those who knew him only as an old and evidently eccentric man; the

picture that they give is thus almost certainly distorted. There are, sadly, scarcely any accounts from his earlier years to provide balance. He was undoubtedly a difficult man to work with, as numerous scholars, librettists and others discovered. His shyness and modesty are attested by various anecdotes. The charge of avarice cannot be dismissed, but against it must be set his acts of generosity to members of his family.

As a keyboard player he excelled in continuo realization. Although he never acquired an organist's post of any great prestige in Paris, his playing at Ste Croix-de-la-Bretonnerie attracted many music lovers. Marmontel described him, on the organ at La Pouplinière's house at Passy, playing 'pieces of astonishing vitality'. Maret's assessment, though second-hand, derives from those well acquainted with Rameau's playing: 'Less brilliant in execution, perhaps, than Marchand's, but more learned, his touch yielded nothing in delicacy to that of Clérambault'.

2. CANTATAS AND MOTETS. Rameau's first sojourn in Paris (*c*1706–9) coincided with the remarkable first outpouring of French cantata publications from Morin, Bernier, J.B. Stuck, Campra and others. If Rameau experimented with the new genre in those years, the results have been lost. Most of his surviving cantatas – all but *Le berger fidèle* (*c*1728) and the recently identified *Cantate pour le jour de la Saint Louis* (probably dating from the early to mid-1730s; see Green, B1992) – seem to have been written in the provinces during the decade or so before his return to Paris in 1722.

For much of the 20th century, Rameau's cantatas were regarded as mere prentice works, insipid and somewhat anonymous beside the powerful and individual creations of his maturity. While it is true that only *Orphée* and *Le berger fidèle* contain hints of the emotional force of the future opera composer, that has much to do with the fact that the cantata was always a relatively lightweight genre, decorative and largely undramatic. There may be little profundity here, but there is much that is charming, witty and thoroughly refined. To his immediate forerunners Rameau owes not only his conception of the cantata but to a large extent its musical style, a peculiar amalgam of French and Italian elements that tends strongly towards the latter. Among the distinctive features of Rameau's cantatas are the many energetic and technically demanding obbligato lines, in particular the concerto-like bass viol parts of *L'impatience* and *Les amants trahis* and the fiery *tirades* in *Thétis*. Not surprisingly, his work tends to be harmonically less bland than that of his contemporaries, especially in such poignant movements as the first air of *Le berger fidèle* or the central monologue, 'Emu par des nouveaux accords', in *Orphée*. Rameau's only other secular vocal music consists of convivial drinking songs and some canons, genres that for him, as for others of his day, were not mutually exclusive.

For one who was employed as a church musician for at least 26 years, albeit mainly as organist rather than as *maître de musique*, Rameau appears to have written remarkably little sacred music. Apart from the lost *Exultet coelum laudibus*, there is no evidence of any *petits motets*. Only four *grands motets* survive, two of them incomplete. The collector Decroix, who searched assiduously for missing Rameau works during the later 18th century, was unable to locate anything further. Likewise, the organizers of various memorial services to the composer in 1764 and 1765 evidently found nothing suitable among his sacred music and resorted to making *contrafacta* from his operas which they performed alongside works by Gilles, Philidor, Rebel, Giroust and others.

It may well be that Rameau's *grands motets* were in any case intended not so much for church as for concert use. This is certainly true of the surviving version of *In convertendo*, which was performed at the Concert Spirituel in Paris in 1751, while *Deus noster refugium* was probably written for the Lyons Concert. Like *Quam dilecta tabernacula*, both have a quasi-secular character with frequent graphically descriptive passages and bold orchestral writing. All are substantial works (except 'Laboravi', an isolated quintet almost certainly detached from a lost *grand motet*). In their use of clearcut, autonomous movements, elaborate arias and ensembles, predominantly contrapuntal choruses and a vigorously independent orchestra, they resemble, and in some works perhaps even anticipate, the *grands motets* of Lalande's later years. Solos and to a lesser extent choruses tend to be more brilliant and technically demanding than those of Lalande and other older contemporaries. Both *Deus noster* and *In convertendo* contain prominent cross-references between movements.

3. KEYBOARD MUSIC. Until recently, Rameau's output of keyboard music was believed to consist of three solo collections (1706, 1724, *c*1729–30), a volume of accompanied keyboard music (the *Pieces de clavecin en concerts*, 1741) that also contains five solo arrangements, and the independent *La Dauphine* (?1747 or later). To these must now be added some two dozen harpsichord arrangements of orchestral music from *Les Indes galantes* (1735; see Sadler, D1979) and, if the attribution is reliable, *Les petits marteaux* (Fuller, D1983). Some 18th- and 19th-century writers claimed that Rameau composed for the organ, but no such works have survived.

This corpus of music, containing Rameau's first known compositions as well as works of his full maturity, naturally exhibits considerable development of style and approach. The 1706 book comprises a single suite much in the tradition of Lebègue, Louis Marchand and Gaspard Le Roux. Beginning with an old-fashioned, partly unmeasured prelude (one of the last of its kind printed in Rameau's day), it consists mainly of the standard dances – two allemandes, courante, gigue, two sarabandes, gavotte and menuet – and contains only one genre piece, 'Vénitienne'.

In the next two keyboard collections, this type of suite co-exists with a newer one: each contains a pair of suites contrasted both in tonality and in character. The first of each pair is dominated by dances (not all of them the traditional ones) and includes only two or three genre pieces; the second consists almost exclusively of pieces with genre titles. In their make-up, if not in their style, these latter suites are closer to the *ordres* of François Couperin, 19 of which (books 1–3) were published between the appearance of Rameau's first two collections. Given that this newer type was to dominate French harpsichord publications, Rameau can be seen to be a little conservative in devoting half of each collection to the older type. The traditional dance movements of the third book, and particularly the monumental allemande and courante, are indeed among the finest and most highly developed in the French repertory. It may be that Rameau's interest in such dances was prolonged by the

example of Handel, whose first book of suites, published in 1720, he appears to have known. Kenneth Gilbert (D1979) points out the remarkable resemblance between the Gavotte with six *doubles* in the third collection (*c*1729–30) and the Air with five *doubles* in Handel's Suite no.3. The structure of Rameau's theme closely follows Handel's, as do the textures and figuration of the first three variations. His intention seems to be to emulate and, in the amazing display of virtuosity in the last three variations, to surpass his model.

If the new emphasis on genre pieces represents one of Rameau's few important debts to Couperin, an equally important influence may have been Castel. Castel claimed that he introduced Rameau, soon after the composer had settled in Paris in 1722, to the 'birdsongs noted in Kircher' (i.e. in *Musurgia universalis*, 1650), among which he specifically mentioned the hen and the nightingale; with Kircher as his example, Castel claimed to have given Rameau 'the outlines of pieces which imitate the truth of Nature'. While Rameau's birds in *Le rappel des oiseaux*, *La poule* and elsewhere do not in fact sing the same songs as Kircher's, the composer was undoubtedly stimulated in the mid-1720s to produce his series of magnificent descriptive movements drawn not only from nature (as in the bird pieces, *Les tourbillons* and others) but also from the theatre: *Les sauvages*, the popularity of which was to be unrivalled in the 18th century, characterizes the dancing of two Louisiana Indians at the Théâtre Italien in 1725; *Les cyclopes* may well have been inspired by the portrayal of these one-eyed giants in Lully's *Persée*, revived in November 1722 and probably one of the first operas Rameau saw on returning to Paris. Many titles (e.g. *Les soupirs*, *La joyeuse*, *Les tendres plaintes*) evoke a mood. Some (*La vilageoise*, *La follette*, *L'egiptienne*) are character studies. Others (*Les trois mains*, *L'enharmonique*) allude to compositional technique.

Rameau's final collection, the *Pieces de clavecin en concerts* (1741), incorporates several features, most obviously the inclusion of additional instruments, that set it apart from the earlier ones. There is also the internal organization of the collection: whereas the suites of the first three books each contain between seven and ten movements, the *concerts* of the fourth contain only three or five. Moreover, dance movements are almost entirely supplanted by genre pieces; of the 19 movements, all but the two menuets and tambourins have characteristic genre titles. By this time, however, Rameau's approach to titles had changed. While five movements still bear such titles as *La timide*, *La pantomime* or *L'indiscrette*, nine are named after pupils, patrons, fellow composers and others, a fashion he had hitherto ignored. The link between title and piece may not, in any case, be strong: according to Rameau's preface, many titles were suggested by 'persons of taste and skill' after the pieces had been composed.

Not surprisingly, all four books consist almost exclusively of binary and rondeau forms (there are no chaconnes). But whereas the first and third books are composed mainly of binary movements, more than half the pieces in the second are rondeaux. In the *Pieces ... en concerts*, binary movements outnumber rondeaux by two to one. Rameau's handling of binary form shows a steady development. In 1706 he still occasionally used the traditional French technique of balancing elegant phrases that are rhythmically similar but melodically independent. In the later collections, motivic organization becomes increasingly tighter, and the integration of the two sections by 'rhyming' terminations, structural symmetry and other means becomes far closer. None of the solo pieces, however, comes as near to sonata form as *La pantomime* in the *Pieces ... en concerts*, with its brief but unmistakable development section and clearcut recapitulation.

In all three of his mature collections, Rameau provided lengthy prefaces that give invaluable insights into the performance and composition of his harpsichord music. Among other things, the 1724 preface draws attention to two features of his keyboard writing: *roulements* – virtuoso scale passages of the sort found in *Les tourbillons*, *Les trois mains* or *La Cupis* and often involving hand-crossing; and *batteries* – rapid, disjunct figuration of which five main varieties may be distinguished: (1) the same note or notes are struck alternately by the two hands

Ex.1 Gavotte, 4me double

(ex.1); (2) the hands play rapidly in turn, the left alternately above and below the right (ex.2); (3) the hand rotates

Ex.2 *Les cyclopes*

around the thumb in widely-spaced figures of various shapes (ex.3); (4) one hand is required to make successive

Ex.3 *Les cyclopes*

Ex.4
(a) *Les niais de Sologne*

(b) Gavotte, 5me double

wide leaps in the same direction (ex.4); and (5) the hands share brilliant arpeggio figures spanning up to four octaves. None of these may be found in the 1706 book but they are common from 1724 onwards. Although Rameau's claim to have invented the first two may not be entirely justified, his use of such virtuoso figuration is both more extensive and more imaginative than that of any French predecessor; it contributes to the muscular yet spacious character of such pieces as the A minor Gavotte and *Les niais de Sologne* (with their multiple *doubles*), *Les cyclopes* and many of the *Pieces ... en concerts*.

While Rameau's keyboard idiom shows a remarkable flexibility and variety of texture, overt examples of the classic *style luthé* beloved of Couperin and his predecessors are strikingly rare, at least from the second book onwards. Apart from the extraordinarily Couperinesque

Les soupirs, or *La Livri* from the *Pieces ... en concerts*, it may be found only fleetingly in the mature collections. Broken-chord figures, often slurred to indicate that notes should be held beyond their written value, continue to form an important element of his style, however. Although the compass required for his works gradually increases from just over four octaves in 1706 to a full five octaves in 1741, Rameau was unusual among the French harpsichord composers in being relatively indifferent to the exploration of unfamiliar keyboard sonorities. He more than compensated, however, in harmonic boldness, at least from the third book (*c*1729–30) onwards. Examples include the strange progressions of the A major Sarabande, the quirky chromaticisms in *La triomphante* and the G minor Menuet of 1741, and above all the frankly experimental *L'enharmonique*.

On at least 20 occasions Rameau borrowed harpsichord pieces for use in his operas. More numerous are his keyboard arrangements of orchestral originals, even apart from those pieces in the 1724 book (e.g. the musette, tambourin and rigaudons) that are almost certainly derived from the music to *L'Endriague* (1723). In 1735 or 1736 Rameau made harpsichord transcriptions of about two dozen movements from *Les Indes galantes*; these were published in a multi-purpose volume where the opera's set pieces are regrouped into four concert suites. In his arrangements Rameau used harpsichord-style ornament signs rather than those normal in opera scores; the arrangements were, however, intended to be played either as solos or as ensemble pieces, and this dual purpose prevented Rameau from using keyboard figuration that could not easily be adapted by other instrumentalists. Even so, many of the pieces are no less idiomatic than, say, *La follette*, *L'indifferente* or the rigaudons of earlier collections. The best of them, the 'Air gratieux pour les Amours', the menuets, the rigaudons and, above all, the 'Air vif pour Zéphire et la Rose', make attractive additions to the repertory. The arrangements make more use of full block chords and left-hand octave passages than do Rameau's earlier keyboard works, foreshadowing the greater use of such features in the *Pieces ... en concerts*.

In permitting other instrumentalists to double the harpsichord, the arrangements from *Les Indes galantes* might be considered Rameau's first contribution to the genre of accompanied keyboard music. Far more important in this respect, however, is his final collection, the *Pieces de clavecin en concerts*, in which the harpsichord is partnered by a violin or flute and a seven-string *basse de viole* or second violin. From his preface it is clear that the immediate stimulus was Mondonville's *Pieces de clavecin en sonates* op.3 (1734), for harpsichord and violin, though the composer must have been aware of a longer tradition of accompanied keyboard music.

Rameau's technical demands on the players, of harpsichord and viol especially, are high. Indeed, the viol part is one of the most taxing in the repertory: the instrument spends so little time doubling the bass and so much in the higher registers that the composer's alternative part for second violin involves remarkably little adaptation. The collection was published in score, Rameau stated, 'because not only must the three instruments blend but ... the violin and viol must above all adapt themselves to the harpsichord, distinguishing what is merely accompaniment from what is thematic, in order to play still more softly in the former case'. In spite of the subtle and intimate interplay between the three instruments, the harpsichord remains the dominant partner. Indeed, the composer maintained that the pieces could be played by harpsichord alone; his preface gives detailed instructions as to what small changes would be necessary if this were done, and the volume includes solo arrangements of five pieces that required more extensive adaptation. Although we might not agree with Rameau that such solo versions 'lose nothing', a number of movements, notably those of the second *concert*, deserve to be heard more often in this guise.

Apart from the 1706 collection, surviving exemplars of which are so rare that it was long considered lost, Rameau's harpsichord publications circulated widely. Although there were people who preferred such music 'free of that affected harmony and those risky and brilliant passages that astonish the mind more than they touch and charm the heart' (Titon du Tillet, *Suite du Parnasse françois jusqu'en 1743*, 1743), the collections proved at least as influential as Couperin's. There can be little doubt, however, that they contributed to an emphasis, in the works of his successors, on virtuosity at the expense of emotional depth and intellectual weight. Indeed, Rameau's own last surviving harpsichord pieces, *La Dauphine* and *Les petits marteaux*, cannot escape the same criticism.

4. DRAMATIC MUSIC. By French standards, Rameau's operatic output was large. Taking into account lengthy prologues and works now lost, it amounts to the equivalent of more than a hundred separate acts. This quantity is the more astonishing in view of the composer's late start at the Opéra and his continued production of theoretical writings.

The operas may be grouped into three periods: 1733–9, 1745–51 and 1753–63. To the first belong five works, the *tragédies Hippolyte et Aricie*, *Castor et Pollux* and *Dardanus* and the *opéras-ballets Les Indes galantes* and *Les fêtes d'Hébé*. All are now considered among his finest achievements, controversial though they may have been at their first appearance. The second period, more prolific, includes 12 varied and attractive works but few, apart from *Platée* and *Pigmalion*, that are the equal of those of the first. In his final period Rameau's rate of production slackened as he devoted more of his by now limited energies to theoretical writing. Most of the operas of this period are one-act ballets and pastorales, but there are also two full-length works, including one of his finest, *Les Boréades*. This and the major revisions of *Castor* (1754) and *Zoroastre* (1756) demonstrate that his creative powers had in no way failed.

Rameau's output includes virtually all the sub-species of French opera then current, but is perhaps most remarkable for its emphasis on the *tragédie*. At a time when most composers were paying scant attention to this weightiest and most demanding of French operatic genres, Rameau devoted to it almost a quarter of his output. Only four of his seven *tragédies* were staged during his lifetime (*Samson*, *Linus* and *Les Boréades* were for various reasons abandoned), but *Dardanus* and *Zoroastre* were so extensively revised for their first revivals that these later versions can almost be considered new works. Rameau himself described the revised *Dardanus* as a 'nouvelle tragédie' when he published it in 1744.

Revolutionary though they may at first have seemed, Rameau's *tragédies* now appear firmly rooted in French operatic tradition. This is true of their subject matter (only *Samson* and *Zoroastre* depart from classical myth and legend or medieval romance), of their dramatic structure and organization (all are in five acts, each involving a spectacular *fête* or divertissement) and of many important musical details. Rameau's achievement was to invigorate the native tradition by bringing to it a musical imagination of unrivalled fertility, a harmonic idiom of greater richness and variety than that of any French predecessor, and a forcefulness of expression that can still seem astonishing. He may never have been as fortunate as Lully in his choice of librettist (he is known to have shied away from the idea of re-setting Quinault), but the librettos of several of his *tragédies*, notably those by Pellegrin, Bernard and Voltaire, are among the finest of the 18th century.

Of the five surviving *tragédies*, the most successful in their integration of music and drama are *Hippolyte et Aricie*, *Castor et Pollux* and *Les Boréades*. There is about *Hippolyte* a tragic grandeur that few of Rameau's other works possess (significantly, the libretto's ancestry can be traced to Euripides by way of Seneca and Racine). This is in no small measure due to the scope that Pellegrin provided for characterization, his eye for impressive and dramatic set-pieces and his skill in placing the obligatory divertissements so that they enhance rather than weaken the action.

In spite of the opera's title, it is not the youthful lovers Hippolytus and Aricia that dominate the drama but rather the tragic figures of Theseus and Phaedra. That of Theseus is the more extensive and powerful. It gains immensely by Pellegrin's decision to devote the whole of Act 2 to the king's selfless journey to Hades, his eloquent pleas for the life of his friend Peirithous and his trial by Pluto's court. In Act 3 Theseus is forced by the welcoming of his loyal subjects to suppress his reactions to what seems an attempt on his wife's honour by his own son; the delay, subtly engineered by Pellegrin, gives extra force to Theseus's eventual outburst, the tragic consequences of which are felt in Act 4. Finally, his attempted suicide when he discovers his son's innocence and his dignified acceptance of the punishment exacted by Neptune provide a fitting end to one of the most moving and monumental characterizations in Baroque opera.

The smaller role of Phaedra naturally suffers from comparison with Racine's altogether more subtle study in the psychology of jealousy. But the queen's revelation of her guilty love for her stepson is certainly worthy of Racine, while her expression of remorse at his apparent death is among the outstanding passages in 18th-century opera. Nevertheless, *Hippolyte* was never considered Rameau's finest work during the composer's lifetime. This was undoubtedly the result of the savage cuts, made early in the first run and never restored, that severely weakened the characterization and blunted the opera's impact.

It was, in fact, *Castor et Pollux* that was generally regarded as Rameau's crowning achievement, at least from the time of its first revival (1754) onwards. The opera's subject matter – the brotherly love of the twins Castor and Pollux, the one mortal, the other immortal – was unusual in French opera of the period, which normally concerned itself with romantic love. The central theme of the plot is the generosity of Pollux in renouncing his immortality so that his mortal twin might be restored to life. This provides the motivation for more genuine conflicts of feeling than can be found in any other Rameau opera: the struggle between Pollux's own inclination and his duty, the complication of his love for Castor's bereaved Telaira, the jealousy of the spurned Phoebe and the conflict of the brothers' mutual affection, where neither can be persuaded to return to Earth while the other is condemned to remain in Elysium. This last is particularly marked in the revised, dramatically more taut version of 1754, arguably the best constructed libretto Rameau set.

Dardanus and *Zoroastre* are both marred by serious defects in their librettos. The former suffers from an inept and puerile plot. The latter, though its theme is the conflict of Good and Evil as found in the dualist religion of ancient Persia (Cahusac's libretto also contains much masonic symbolism), is weakened by structural flaws and by the introduction of a conventional love element that implausibly involves the great religious reformer Zoroaster himself. Both works also make excessive use of the supernatural. Although many of the worst failings of these operas were eliminated or lessened at their first revivals, neither opera succeeds more than fitfully in dramatic terms. Yet they are full of music that is at times awe-inspiring in its power and seldom below Rameau's best.

If *Les Boréades* is not quite on the level of *Hippolyte* and *Castor*, it avoids most of the failings of the other *tragédies*. The plot may be conventional but it is expertly constructed and is swept along by music so lively and inventive that it is astonishing to realize that Rameau was in his late 70s when he completed it. Much of the work's character derives from the many representations of storms, whirlwinds and the like (the plot involves Boreas, god of the North Wind, and his descendants). Though much of this tempestuous writing is directly linked to the action, it may also be found in the decorative music of the divertissements (e.g. those of Acts 1 and 2) and thus provides a unifying element. Why the opera was abandoned in 1763 is still not known. Doubtless the explanation has to do with changing musical tastes in the 1760s, with seemingly subversive elements in the libretto, or with the fact that the music is phenomenally difficult to perform on mid-18th-century instruments, particularly the woodwind. It may even be connected with the disastrous fire which burnt down the Opéra a few weeks before the two rehearsals that the work is known to have received.

The six *opéras-ballets* belong to the years 1735–48. Rameau was, however, sporadically concerned with the form during his final decade or so, refurbishing earlier works and composing numerous one-act ballets and pastorales that may be considered isolated *opéra-ballet* entrées, to be loosely combined as 'fragments' or 'spectacles coupés', or, like *Les sibarites*, eventually subsumed into an existing *opéra-ballet*.

Cahusac (C1754) neatly characterized the differences between *opéra-ballet* and *tragédie*: if the latter was 'un tableau d'une composition vaste' like those of Raphael or Michelangelo, the former comprised 'de jolis Watteau, des miniatures piquantes' that demanded precision of design, graceful brushstrokes and a brilliant palette of colours. Unlike the *tragédie* with its continuous action, the *opéra-ballet* is made up of three or four acts or entrées, each with its self-contained plot. The subject matter of

4. Model of the set for Act 5 (Teucer's palace) of Rameau's 'Dardanus' for the revival at the Paris Opéra (Palais Royal), 1760

these is linked to some general theme hinted at in the title (or more often, in Rameau's case, in the subtitle – e.g. *Les fêtes de l'Hymen ... ou Les dieux d'Egypte*) and expounded during the prologue. In each case, a slender thread of plot leads up to the all-important divertissement, dominated by spectacle, chorus and, above all, ballet.

It would be a mistake to imagine that the limitations of such a genre preclude dramatic interest. The subject matter of *Pigmalion*, for example, is ideally suited to the medium in this respect. The legend is familiar: the sculptor Pygmalion falls hopelessly in love with his own creation, implores the aid of Venus, and is eventually rewarded when the statue comes to life. This simple plot gives rise to a surprisingly wide range of moods – the deeply-felt yearning of Pygmalion's opening monologues, his wonderment and elation as the statue comes to life, the uninhibited joy of the final divertissement. It also gives a central position to the obligatory ballet: soon after the statue has come to life, she naturally tries out her steps, at first haltingly but then with growing confidence, until she has encompassed almost the entire range of dance movements.

Spectacle in these works is often suggested by exotic locations. Like all the entrées in *Les fêtes de l'Hymen*, 'Canope' is set in ancient Egypt; the action involves preparations for a human sacrifice and culminates in the overflowing of the River Nile. Equally exotic are the locations of *Les Indes galantes*. The four entrées are set respectively in a Turkish garden, a desert in the Peruvian mountains, a Persian market and a village in the North American forests. Three of the entrées culminate in a ritual act: the adoration of the Sun in 'Les Incas du Pérou', a Persian flower festival in 'Les fleurs' and the ceremony of the Great Pipe of Peace in 'Les sauvages'. The librettist cleverly uses these ethnic elements to develop fashionable Enlightenment themes involving the interaction of and contrast between European and other cultures, not always to the former's advantage. In its choice of modern characters, *Les Indes galantes* reverted to an earlier style of *opéra-ballet* pioneered by Campra in *L'Europe galante* (1697). Rameau's other works in this genre all derive from the more orthodox oriental and Greek myths or legends.

The *opéra-ballet* was ideally suited to Rameau's musical talents, and he responded with an inexhaustible stream of first-rate and by no means merely decorative music. Not surprisingly, many of the *opéras-ballets* and isolated entrées have proved to be among his most popular and enduring works.

Among Rameau's remaining operas, two principal species may be distinguished: the *pastorale-héroique* and the *comédie lyrique*. Both differ from *opéra-ballet* in their use of a single continuous plot and from *tragédie* in their division usually into three rather than five acts and in their subject matter. This last is self-evident in the *comédies*; the pastorales, for their part, lack the sustained dramatic tone of the *tragédie* and place greater emphasis on the decorative divertissement. They are 'heroic' only in that they happen to involve the actions of heroes and gods.

Although none of the pastorales contains any serious emotional conflict or much attempt at characterization, their straightforward plots usually prove adequate to sustain interest from one divertissement to the next. The plots also provide dramatic justification for the divertissements, which are cleverly varied and rich in colour. Those of *Naïs*, for example, involve the ancient Isthmian Games, a country grotto (where the blind soothsayer Tiresias predicts the future by interpreting the song of the birds) and Neptune's undersea palace. Supernatural elements, strong in *Naïs*, are even stronger in *Zaïs* and *Acante et Céphise* which are set in the enchanted world of Middle Eastern mythology, inhabited by spectacular aerial beings. Not surprisingly, all these operas contain an abundance of pastoral music, much of it in the languorous yet wistful vein so characteristic of Rameau.

The *comédie lyrique* was the least established of all the genres that Rameau cultivated. Since the mid-1670s, when Lully eliminated comic roles from his operas, instances of deliberate humour were rare at the Paris Opéra. Isolated

examples may be found by Campra (1699), Destouches (1704), La Barre (1705), Mouret (1714 and 1742) and Boismortier (1743). It was perhaps the example of these last two works (Mouret's *Les amours de Ragonde* and Boismortier's *Don Quichotte chez la duchesse*) that stimulated Rameau to choose a comic subject, *Platée*, for the celebration of the dauphin's marriage in 1745. Much of the humour derives from the ugliness and incongruous behaviour of the marsh-nymph Plataea, a travesty role created by the *haute-contre* Pierre de Jélyotte (fig.5). To the modern mind the choice of subject may seem distasteful or even mischievous (the dauphine herself is said to have been plain). But Rameau's contemporaries were less fastidious and apparently voiced no such criticism. Though not immediately successful, *Platée* came to be regarded as a masterpiece. That is not an unjust view, for there can be no denying the work's skilful construction and dramatic pace nor the high level of its musical and comic invention. Few of these qualities, however, may be found in *Les Paladins*, Rameau's only other essay in the genre; yet the musical invention, astonishing in a septuagenarian, remains as fresh as ever.

Rameau's debt to the French operatic tradition extends to most of the musical forms found in his dramatic works and also to many elements of his style. Few of these elements, however, escaped reappraisal or intensification. In his recitative, for example, he accepted the fundamental character of the Lullian model, with its meticulously notated declamatory rhythms, its active bass line and frequent changes of metre; he even accepted many of its turns of phrase. Yet compared with that of his predecessors, Rameau's recitative seems far more flexible and varied. It makes greater use of syncopation, cross-accents

Ex.5 *Les Boréades,* Act 2 scene v

and, in later works, triplets, and contains a wider variety of note values (ex.5). Bold leaps, especially those involving augmented or diminished intervals, are frequent (ex.6),

Ex.6 *Hippolyte et Aricie,* Act 2 scene i

while the severely syllabic style of word-setting is increasingly relieved by discreet use of decorative or expressive detail (ex.7). Above all, Rameau brought to the recitative one of the richest harmonic idioms of his generation, full of 7ths, 9ths and other dissonant chords, numerous appoggiaturas, frequent modulations, often to remote keys, and even occasional enharmonic progressions.

Many of these developments arise from a desire both to enhance and to intensify the declamation. At the same time, Rameau could not help allowing purely musical considerations to invade his recitative: 'Lully needs actors', Voltaire reported him as saying, 'but I need singers'. It was this greater musical elaboration and complexity that caused many contemporaries to compare his recitative style unfavourably with 'le beau naturel' of Lully's.

5. *Pierre de Jélyotte in the title role of Rameau's 'Platée': portrait by Charles-Antoine Coypel, c1745 (Musée du Louvre, Paris)*

Accompanied recitative, though by no means absent from the operas of his predecessors, is used by Rameau with increasing frequency, especially from the mid-1740s onwards. In style it is uniquely French. The vocal line remains much as in simple recitative, while the accompaniment generally takes one of two principal forms: the first, reserved for solemn pronouncements, consists of organ-like sustained chords involving double-stopped strings and, occasionally, independent woodwind lines; the second, found in agitated contexts, consists of

Ex.7 *Castor et Pollux* (1754 version), Act 3 scene iii

Ex.8 *Zoroastre* (1756 version), Act 3 scene viii

tremolandos, scales and a variety of energetic figures demanding considerable orchestral agility and co-ordination. Rameau broke new ground in using this sort of accompaniment in passages of dialogue (e.g. *Hippolyte et Aricie*, Act 4 scene iii). In his later operas, accompanied recitative is treated with growing flexibility and may indeed be used to add extraordinary intensity even to the briefest passages (ex.8).

The vocal *airs* in Rameau's operas, like those of his contemporaries, are of four principal varieties: the dance songs and *ariettes* found exclusively in the divertissements, and the *airs de mouvement* and *monologues* of the main scenes. In many of his dance songs, Rameau adopted the traditional practice of 'parodying' (in this context, adapting words to) an existing dance. Often, however, he reworked the material. Occasionally this reworking is so extensive that *air* and dance have wholly different musical forms (e.g. 'Pénétrez les humains' and the 'Air vif pour les Héros' in the prologue of *Le temple de la Gloire*).

Rameau's treatment of the *ariette* (the French used this diminutive for what, paradoxically, were their longest solo vocal items) underwent considerable development. In his first operas, these large-scale but essentially decorative da capo arias are not numerous; moreover, vocal display is limited to long-held notes and to occasional, fairly brief vocalises on standard words (*gloire*, *volez* etc.). It was doubtless the expertise of singers like Marie Fel, Pierre de Jélyotte and Sophie Arnould that encouraged the composer not only to include more *ariettes* in his later operas and revivals but also to increase the element of vocal display. The technical demands of an *ariette* like 'Un horizon serein' (*Les Boréades*, 1.iv), with its high tessitura and extended melismas (ex.9), would

Ex.9 *Les Boréades*, Act 1 scene iv

have been unthinkable 30 years earlier. Even so, the technique required in Rameau's music remained modest by contemporary Italian standards.

Quite different in character are the vocal set pieces employed outside the divertissements. Much the simplest are the *airs de mouvement* (sometimes known as *petits airs* or *airs tendres*) that are scattered throughout the recitative. Rameau's treatment of these *airs* – some only two or three bars long, most no more than two dozen – differs little from that of his predecessors. He was, however, inclined to make use of orchestral rather than continuo accompaniment and to decorate the melodic line with appreciably more ornament (e.g. 'Que d'un objet aimé', *Les Boréades*, 3.ii).

By far the weightiest 'arias' are the large-scale *monologues* often situated at the beginnings of acts and employed exclusively for expressions of pathos. Rameau was drawn to this type of air which, in the hands of composers such as Campra, Destouches and Montéclair, had already developed into a potent, highly-charged mode of expression. Although most of his *monologues* involve a da capo section, they have stylistically little in common with contemporary Italian da capo arias. The vocal lines, slow-moving, intense and almost entirely syllabic, have the character of heightened recitative. The opening ritornello introduces thematic ideas that are employed, often only loosely, in the subsequent accompaniments but not necessarily in the vocal line itself. Accompaniments tend to be very rich and sombre, as in 'Tristes apprêts' (*Castor et Pollux*, 1.iv) or 'Lieux funestes' (*Dardanus*, 1744 version, 4.i), both of which have important lines for bassoons.

French opera in Rameau's day was as rich in ensembles and choruses as it had always been. In this it contrasts strikingly with contemporary *opera seria* where such elements had become rare. Yet even by French standards, Rameau's first opera contains a high proportion of ensembles, several of them (e.g. the enharmonic Trio des Parques, *Hippolyte*, 3.iv) quite extensive. This opera includes a number of duets in which the characters express conflicting ideas in terse, vigorous counterpoint. To many Frenchmen this sort of ensemble seemed irrational; in response to criticism, therefore, Rameau shortened several of them during the first run of *Hippolyte* and thereafter composed fewer ensembles of this type. Duets in which the singers express the same sentiment remain an important ingredient. One of his late works, the 1756 version of *Zoroastre*, includes as many as eight, three of them admittedly short. In these 'unanimous' duets, counterpoint is not wholly eliminated; it plays an important part, for example, in 'Mânes plaintifs' (*Dardanus*, 1.iii). But more characteristic is a homorhythmic style in which parallel 3rds and 6ths predominate, especially in love duets.

In their richness, variety and dramatic power, Rameau's choruses are comparable with those of the Handel oratorios and the Bach passions. They are deployed in the traditional French manner, either as important decorative components of the divertissements or as agents in the drama itself. It is in the latter role that the chorus is at its most powerful and expressive, whether in reaction to dramatic events such as battles (*Castor*, 1754 version, 1.v), spectacular natural or supernatural phenomena (*Les fêtes de l'Hymen*, 1.vii) or, above all, to the deaths of protagonists (*Hippolyte*, 4.iii, iv; *Castor*, 1.i). Sometimes the distinction between divertissement and action choruses is blurred, as in those that occur during Theseus's trial by Pluto's court (*Hippolyte*, 2.iii, iv) or during Abramane's occult sacrifice (*Zoroastre*, 4.vi, vii). In the latter the successive choruses build up to a climax of unprecedented ferocity as the forces of evil rouse themselves to vengeance.

Rameau maintained the traditional distinction between the *grand choeur*, or full four-part chorus in which the 'alto' part was sung by high tenors (*hautes-contre*), and the *petit choeur*, a semi-chorus consisting usually of three upper voice parts. Occasionally he would divide the *grand choeur* into as many as eight (e.g. 'Impétueux torrents', *Les fêtes de l'Hymen*, 1.vii). Here and elsewhere, he combined the chorus with independent lines for the principal singers. The chorus 'Quel bonheur, l'enfer nous seconde' (*Zoroastre*, 4.vi) combines a three-part men's choir with lines for three furies and the allegorical figure of La Vengeance.

In his treatment of the orchestra, Rameau was generally more original than in his writing for voices, eloquent though that often is. Not only in the accompaniments to vocal pieces but also in the many purely instrumental movements, his eclectic approach and imaginative orchestration (the latter often misrepresented in the Durand *Oeuvres complètes*) help create music of almost symphonic richness and variety. His introduction of instruments new to France (orchestral horns from about 1745, clarinets from 1749) is paralleled by his experimentation with techniques previously seldom used at the Opéra: pizzicato from 1744, glissando in 1745. With younger contemporaries such as Royer and Mondonville, he gradually developed a much more varied approach to the combining of wind and strings. In his later works he pioneered a style of orchestration less concerned with blend than with a 'counterpoint of timbres', whereby superimposed layers are distinguished not only by instrumental timbre but also by their thematic material.

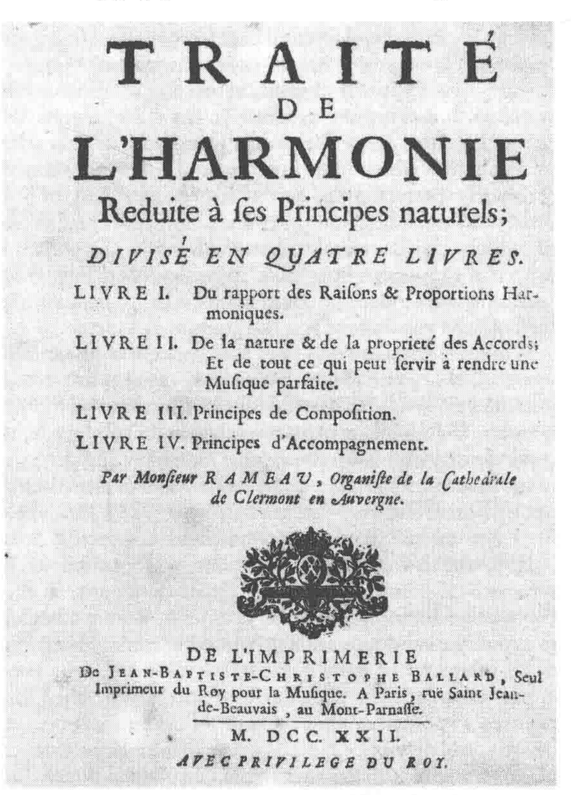
Orchestral virtuosity is at its greatest in the purely instrumental movements – the dances and dramatic *symphonies*. Rameau's ballet music is second to none in its freshness and variety. Diderot may have been exaggerating when he claimed that before Rameau 'no-one had distinguished the delicate shades of expression that separate the tender from the voluptuous, the voluptuous from the impassioned, the impassioned from the lascivious'. But the composer's ability to capture a wider range of moods in his dance music, as elsewhere, is indeed one of his most remarkable gifts – the more remarkable given the limitations of form, phrase structure and rhythm imposed by contemporary choreography. Almost without exception he breathed new life into the standard patterns of menuet, gavotte, tambourin and the rest; at the same time, he vividly characterized freer movements bearing such titles as 'Air tendre pour les Muses' or 'Air pour les guerriers'. No other Baroque dance music seems so clearly to suggest its own choreography. As the famous ballet-master Claude Gardel was modestly to admit: 'Rameau perceived what the dancers themselves were unaware of; we thus rightly regard him as our first master'.

Clear signs of Rameau's desire to integrate the instrumental movements can be seen in his development of the *ballet figuré* and dramatic entr'acte and in his re-thinking of the role of the overture. The *ballet figuré*, in which the dancers present a stylized action linked to that of the drama, may be found in the earlier 18th century and before; but it was not until Rameau – or rather his librettist Cahusac – championed the idea in their works of the 1740s that examples become plentiful. The dramatic entr'acte appears in the Rameau operas at about the same period. Traditionally, the entr'acte had usually consisted of the repetition of an instrumental movement drawn almost at random from the act that had just ended. The 1744 version of *Dardanus*, however, includes a newly-composed *bruit de guerre* accompanying offstage action between Acts 4 and 5. An expanded version of this was used in 1754 between Acts 1 and 2 of *Castor*. Further specially composed entr'actes may be found in *Naïs*, *Acante et Céphise*, the 1756 version of *Zoroastre* and *Les Boréades*.

More significant is Rameau's transformation of the overture from an isolated introductory movement into one closely connected with the ensuing drama. Though briefly anticipated in *Castor*, the idea of connecting the two did not gain ground until the mid-1740s. From that date, several of Rameau's overtures contain tone-paintings that clearly foreshadow the action (e.g. *Pigmalion*, *Zaïs*, *Zoroastre* and *Acante et Céphise*). Others are linked musically to a later scene (e.g. *Platée*, *La naissance d'Osiris* and *Les Paladins*). Some fall into both categories (e.g. *Les fêtes de Polymnie*, *Les surprises de l'Amour*, *Naïs* and *Les Boréades*). In all of these, Rameau anticipated Gluck by several decades. Rameau was also the first to diversify the form and style of the overture. Only those of his first two *tragédies* can truly be said to preserve the spirit of the Lullian French overture. Several of his later works adopt the general form – or even, in *La princesse de Navarre*, the style – of the contemporary Italian overture, with its two fast movements flanking a slower one.

In spite of such developments, it is remarkable how little Rameau's concept of opera seems to have changed when his output is viewed as a whole. *Hippolyte et Aricie* and *Les Boréades*, for instance, have much in common, though separated by some 30 years. The only major structural difference is the absence from the later work of the traditional prologue, considered redundant from the time of *Zoroastre* (1749) onwards. Yet even in his 60s and 70s, Rameau remained receptive to new musical fashions. His lofty and dignified idiom of the 1730s became noticeably influenced during the next two decades by the lighter German and Italian styles of the mid-18th century and softened by a proliferation of ornamental detail. The differences of style appear most acute from the 1750s onwards whenever new music was added to revivals of older operas.

A number of Rameau's works remained in the repertory after the composer's death. Few, however, survived beyond 1770 and fewer still beyond the middle of that decade, when Gluck's operas took Paris by storm. Those that did survive were subjected to the same reworking as the rest of the 'ancien répertoire'. There were some people, a small minority, who deplored what they saw as this corruption of taste. To Decroix, it even seemed a contributory cause of the Revolution.



5. Theoretical writings. If Rameau's lifelong engagement with problems of music theory strikes us today as at odds with his activities as a composer, no such incompatibility was perceived in his own day. The kind of theoretical speculation in which Rameau involved himself was held in high prestige among his intellectually minded peers; in the self-proclaimed age of Enlightenment, it was seen as eminently reasonable that one of France's leading composers should also be the one most suited to the task of analysing and explaining the musical practice in which he was an acknowledged master.

Inspired by the celebrated examples of scientific synthesis bequeathed by 17th-century scientists such as Descartes, Kepler and Newton, Rameau believed music to represent an empirical body of acoustical evidence for which rational principles could be found. The 'evidence' with which he was initially concerned was the burgeoning variety of chord 'signatures' confronting any musician attempting to realize or compose a figured bass. As a young organist and music instructor in Clermont, Rameau wished to simplify the mastery of figured bass and composition for himself and for his students by reducing the plethora of signatures to a few fundamental types (Suaudeau, F1960). At the same time, he hoped to be able to account for the behaviour of most dissonant intervals and harmonic successions encoded in these signatures using a few basic prototypes. Towards this end, Rameau conceived of the *basse fondamentale*, which is perhaps less properly to be seen as an original invention than as a unification of received practical and speculative traditions in music theory.

Beginning with an informal heuristic of chord inversion (*renversement*) that can be found in many 17th-century thorough-bass manuals, Rameau invoked a more systematic notion of 'octave identity' by which he could reduce most chord signatures to one of two fundamental types: the triad and the 7th chord. Taking disparate arguments of intervallic generation made by Descartes and Mersenne, Rameau further claimed that the lowest pitch class of each triad and 7th chord constitutes its fundamental sound (*son fondamental*). By displaying the succession of these chord fundamentals on a fictive bass line, Rameau could reveal the 'fundamental bass' of any harmonic succession and show how it followed a limited number of paradigmatic cadence-like models.

It was in his pioneering *Traité de l'harmonie* (1722; fig.6) that Rameau attempted to offer a more rigorous formalization of his empirical theory by casting it within a Cartesian-inspired deductive model based on a single 'evident and clear principle'. In the first book of the *Traité*, Rameau posited this principle to be the first six aliquot (harmonic) string divisions of a monochord. While successful in generating the major triad in this manner (as had Zarlino), Rameau's arguments quickly ran aground when he was unable to discover a satisfactorily consistent means of generating the minor triad. Generating the repertory of 7th chords he needed proved even more vexing, requiring Rameau to resort to eclectic arguments of 3rd-stacking, 'borrowed' fundamentals (for the diminished 7th chord), and 'supposition' (wherein 9th and 11th chords were explained as 7th chords with feigned roots 'supposed' a 3rd or 5th below their true fundamentals).

In later writings (beginning with *Nouveau système*, 1726), having learnt of Sauveur's acoustical research, Rameau became convinced that a better principle for his theory of chord generation was to be found in the harmonic overtone series detectable in many vibrating systems (*corps sonores*). Just as Newton had demonstrated, using a prism, that white light was in fact composed of a spectrum of individual colours, Rameau tried to show how a single sound was a composite of harmonic overtones. While offering an indubitably more 'natural' means of chord generation than artificial monochord divisions, the overtone series offered little help in the production of the minor triad and 7th chords. Again, Rameau conceived many ingenious arguments to solve

this problem, including recourse to a putative 'undertone' series of arithmetic partials, double fundamentals and functional borrowings (*Génération harmonique*, 1737; *Démonstration du principe de l'harmonie*, 1750). Eventually, Rameau conceded that only the major triad (*accord parfait*) was directly generated, and that all other harmonies had to be conceptually deduced by analogy using the natural harmonic ratios found in the *corps sonore* (*Nouvelles réflexions*, 1760).

If Rameau's attempt to find a rigorously systematic explanation for the generation of all harmonies proved in vain, his ability to analyse most harmonic successions using the fundamental bass proved far more successful. Utilizing the two fundamental chord types of the 7th chord and triad, Rameau conceived of the primary dynamic of music as a quasi-Cartesian mechanistic model of dissonance (displacement) and consonance (repose). As shown in the second book of his *Traité*, this dynamic was best exemplified in the paradigmatic progression of the perfect cadence (*cadence parfaite*) in which a dominant 7th chord on the fifth scale degree (called the *dominante tonique*) resolves to a consonant tonic triad by a falling perfect 5th in the fundamental bass. Regardless of inversion, the 'major' dissonance of the leading note (*notte sensible*) should resolve upwards to the tonic in this progression, while the 'minor' dissonance of the 7th resolves downwards to the third. 7th chords on other scale degrees (called simple 'dominants') normally imitated the motion of the perfect cadence. Secondary cadence types related to the perfect cadence were also deduced by Rameau. The 'irregular' cadence (*cadence irrégulière*) inverts the motion of the perfect cadence by ascending a

perfect 5th in the fundamental bass from the fourth degree to the tonic, while a 'broken' cadence (*cadence rompue*) thwarts the expected resolution of the dominant 7th chord with a deceptive cadence on the sixth degree. Of particular note was Rameau's observation that the intervals by which the fundamental bass progressed (primarily perfect 5ths, secondarily major and minor 3rds, with ascending 2nds introduced by licence) are those of which chords were constructed. This fact offered powerful support to Rameau's claim that his principle of harmony was indeed a comprehensive one, accounting for both the vocabulary and the grammar of music.

While the fundamental bass was conceived to explain localized chord connections, Rameau was also interested in more global questions of harmonic function and modal identity. The evolution of his thoughts on the subdominant (*sous dominante*) is an illustrative case. The importance of the fourth scale degree in the mode was initially singled out by Rameau in his *Nouveau système* (1726). Modelled by a 'geometric' triple progression of connected 5ths (1:3:9), the lower (*sous*) dominant was posited as a symmetrical counterpart to the upper dominant. In the *Génération harmonique* (1737), though, Rameau began to assign the subdominant a privileged harmonic function in his hierarchy of scale degrees, not only because of its important role in the irregular cadence (now dubbed the *cadence imparfaite*), but because of its importance in framing and defining a modal centre. Inspired by elements of Newtonian physics that were circulating widely in France during the 1730s, Rameau reconceptualized the tonic chord as a kind of gravitational body that was surrounded by upper and lower dominants. Each of these dominants was attracted to the tonic and at the same time helped constitute the mode. The subdominant could further play two different functional roles called by Rameau *double emploi*. Unlike the dissonant 7th added to the dominant chord, the 'characteristic dissonance' added to the subdominant chord to distinguish it from a common tonic triad was the major 6th (*sixte ajouté*). While the bass note would be understood as the chord's fundamental sound when it resolved to the tonic as an imperfect cadence, the added 6th could also be inferred as a fundamental (on the second degree) if the chord moved to the dominant.

Rameau was always insistent that major and minor scales were generated by the fundamental bass, partly in order to prove the primacy of harmony over melody and partly to justify the pedagogical efficacy of his fundamental bass. But he found he could not demonstrate this in any systematic way without either transgressing the modal boundary of the triple geometric proportion, or breaking the prescribed motion of the perfect 5th in the fundamental bass. In order to solve the problem of harmonizing the scalar harmonies contained in the standard 'rule of the octave' (*règle de l'octave*), Rameau invoked a number of ad hoc arguments, including interpolated basses, double employment, rearranging the order of the scale, and changing keys. Although he never arrived at a satisfactory solution, his efforts led him to many sensitive observations concerning harmonic motion through and between keys (and referred to at the time as 'modulation'). He recognized that there was only one principal tonic (*ton régnant*) in any composition, while all non-tonic consonant triads represented secondary levels of modulation depending on their degree of cadential confirmation (called *censée tonique*, *tonique passagère* etc.).

In Rameau's later writings, beginning with his manuscript *L'art de la basse fondamentale* from the early 1740s (published as Gianotti, F1759) and particularly in the *Code de musique pratique*, his last and most comprehensive composition treatise (1760), Rameau loosened the rigorously deductive structuring of his theory. He allowed greater flexibility in the rules governing the fundamental bass (to produce, for example, various kinds of chromatic and enharmonic progressions). Of special note was his increasing willingness to explain chords of supposition as products of melodic suspension and his acceptance of equal temperament as a necessity demanded by reason and taste.

Rameau was never so obstinate a theorist that he would disregard his own intuitive musicality. Throughout his writings he continually invoked 'the judgment of the ear' to resolve discrepancies within his theory, even if this meant reworking or abandoning various of his arguments. When Rameau became acquainted with the sensationalist epistemology of John Locke in the 1750s, his empirical views became even more pronounced, although his conviction as to the sensory potency of the *corps sonore* led him to make some extravagant claims on its behalf, to wit, that it might be the principle of all arts and sciences (*Nouvelles réflexions*, 1760).

While Rameau may never have quite attained his desired degree of systematization in his theory of harmony, his fundamental bass was nonetheless convincing enough as a practical aid for musicians to become, by the end of the 18th century, the dominant pedagogical paradigm throughout Europe. At the same time, his success in finding an apparently scientific foundation for harmony, however imperfect, had earned the attention and support of many distinguished philosophers and scientific minds (Castel, Mairan, Euler, Condillac, Jean Bernoulli, Christian Wolff), some of whom actually collaborated with him in the formulation and dissemination of his ideas.

Rameau's stormy relations with the group of *philosophes* associated with the *Encyclopédie* – Diderot, Alembert and Rousseau – has been mentioned above (§1). Although Diderot and Alembert were initially strong supporters of Rameau – Diderot helped Rameau in the writing of his *Démonstration du principe de l'hamonie* (1750) and Alembert published the most influential summary of Rameau's theory in his *Elémens de musique théorique et pratique* (1752) – they soon parted ways with him in noisy disputations over Rameau's ever more insistent claims as to the metaphysical priority and scientific validation of his principle of the *corps sonore*. Rousseau's arguments with Rameau took a more aesthetic, and ultimately political turn, and concerned the priority Rameau accorded to harmony. For Rousseau, the fierce partisan of Italian opera, Rameau's elevation of the 'rational' component of harmony over the 'passionate' component of melody perniciously inverted music's origins in natural language.

But despite the many polemics, which consumed much of Rameau's energy for the last dozen years of his life, even his most ardent critics continued to acknowledge the profound intellectual accomplishment of his theory and its indispensable value to music pedagogy. Over some 50 years of relentless contemplation and effort, drawing upon an astonishing variety of musical and philosophical

arguments, Rameau produced a compelling body of writings that has furnished the basic agenda for tonal harmonic theory over the last two centuries. If he was unable to answer satisfactorily all the many questions he posed, no-one since has brought to questions of music theory his extraordinary combination of intellectual perseverance and musical sensibility.

GRAHAM SADLER (1–4, work-list, bibliography) THOMAS CHRISTENSEN (5, bibliography)

Rameau, Pierre (*fl* early 18th century). French dancing-master and author. He was dancing-master to Elisabetta Farnese (1692–1766), who became Queen of Spain on her marriage to Philip V in 1714. Rameau wrote two important works on French court dance, both published in Paris in 1725. The first, entitled *Le maître à danser*, is the most authoritative exposition of the early 18th-century French style of dancing, a style which was performed throughout Europe because of its elegance and refinement. The book was read and approved by Louis Pécour, dancing-master for the Paris Opéra, and may thus be taken to represent the central French practice of its day. It gives a clear and detailed account of such matters as the correct way to stand, move and ask a lady to dance, etiquette at court balls and the movements and steps of dances, as well as a complete description of the minuet. It is directed primarily towards the needs of social dancing, and does not discuss virtuoso practices peculiar to ballet. The book, which was several times reprinted, contains many excellent drawings which clarify the verbal descriptions. John Essex translated it into English in 1728; a second edition (1732) contained new drawings by G. Bickham junior, which are used in C. Beaumont's modern English translation (London, 1931/*R*).

The second book, *Abrégé de la nouvelle méthode*, concerns dance notation, and it offers improvements upon R.A. Feuillet's system of recording dance. 12 previously published choreographies by Louis Pécour are included, set in these slightly modified symbols.

For pages from *Le maître à danser*, *see* MINUET, figs.1 and 2.

MEREDITH ELLIS LITTLE

Ramella, Giovanni Francesco (*fl* Novara, 1590–1615). Italian composer. His printed works suggest that he was

canon and *maestro di cappella* at Novara. He is known entirely by motets and masses for five to eight voices; one volume of such works, dating from before his 1590 book, is lost. Those that are extant testify to his skill in handling polyphonic textures, especially *cori spezzati* techniques: his eight-part motets, whose harmony is well judged and whose melodies are quite often instrumental in character, display inventive dovetailing of the two choirs, the writing for which is sometimes contrapuntal with complex imitation, and sometimes homophonic. These motets were known as far afield as Pomerania and Silesia.

Sacrae cantiones, 5, 6, 8vv, una cum missa & cantico BMV, 8vv, liber primus (Milan, 1590)
Sacrae cantiones cum litaniis sanctorum et duabus missis, lib. 3, 8vv (Venice, 1601)
Missarum, liber primus, 5vv (Venice, 1615)
2 motets, 8vv, 1612[3], 1613[2] (both possibly repr. from earlier vols.)

5 motets, 8vv, *PL-PE*; facs. scores in AMP, vi (1965), incipits in AMP, i (1963)

MIROSŁAW PERZ

Ramey, Phillip (*b* Elmhurst, IL, 12 Sept 1939). American composer, pianist and writer on music. He studied with Alexander Tcherepnin both at the Académie Internationale de Musique, Nice (artist's certificate 1959), and at DePaul University (BMus 1962). He went on to study at Columbia University (MMus 1965), where his teachers included Beeson, and later worked privately with Copland. From 1977 to 1993 he served as annotator and programme editor for the New York PO; other writings include more than 500 disc notes for recordings and a biography of the American composer Irving Fine.

Ramey's early works, such as the Piano Sonata no.1 (1961) and the Concert Suite for piano and orchestra (1962, rev. 1983–4) feature the pithy forms and linear textures of Tcherepnin's style, characteristics that, together with post-Bartókian harmonies and wide keyboard spacing, inform his later music. Experiments with atonality and serialism reached fruition in the virtuoso Piano Fantasy (1969–72), in which variation techniques steadily evolve towards a climax of symphonic proportion. Subsequent works, such as the Concerto for horn and string orchestra (1987, rev. 1989, commissioned by the New York PO) and the Trio Concertant (1993), reintroduce triadic elements and long lyrical lines. Seeming paradoxes also help to define this keyboard-centred style: although melodic repetition and sequences are avoided, descending stepwise bass lines are frequently employed; and while homophonic textures largely exclude motivic counterpoint, chromatic progressions involve considerable polyphonic interest, with minor 9th chords often resolving dissonance.

BENJAMIN FOLKMAN

Ramey, Samuel (Edward) (*b* Colby, KS, 28 March 1942). American bass. He studied in Wichita and New York, making his début in 1973 as Zuniga at New York City Opera, with whom he sang until 1986; later roles with the company included Gounod's Méphistophélès and Boito's Mefistofele, Don Giovanni, Leporello, the *Hoffmann* villains, Henry VIII (*Anna Bolena*), Archibaldo, Olin Blitch (Floyd's *Susannah*), Attila and Don Quichotte (1986). At Glyndebourne (1976–7) he sang Mozart's Figaro and Nick Shadow. He made his Chicago and San Francisco débuts (1979) as Colline. At Aix-en-Provence (1980) he sang Assur (*Semiramide*), returning as Nick Shadow (1992). He first appeared at La Scala and the Vienna Staatsoper (1981) as Figaro, the role of his début at Covent Garden (1982), where he later sang Don Basilio, Gounod's and Berlioz's Méphistophélès, the *Hoffmann* villains, Philip II and Attila. He sang several Rossini roles at Pesaro between 1981 and 1989. He made his Paris Opéra début as Rossini's Moses (1983), and then sang Bertram in *Robert le diable* (1985); in 1984 he made his Metropolitan début as Argante (*Rinaldo*), returning as Sir Giorgio (*I puritani*), Escamillo, Bartók's Bluebeard, Don Giovanni, Philip II and Pagano (*I lombardi*). He sang Don Giovanni at Salzburg in 1987. Ramey's other roles include Arkel, Rodolfo (*La sonnambula*) and Boris Godunov, which he first sang in Geneva in 1993. A compelling actor with a magnificent stage presence, he has a resonant, flexible, evenly produced voice particularly well suited to Rossini and the Verdi bass roles such as Philip or Attila, but no less effective as Gounod's Méphistophélès and Nick Shadow. He has recorded many of his operatic roles (including a richly comic Gaudenzio in *Il Signor Bruschino* and a subtle, dangerous Nick Shadow), in addition to such choral works as Bach's Mass in B minor, Haydn's *The Creation* and Verdi's Requiem.

CHARLES JAHANT/ELIZABETH FORBES

Ramin, Günther (*b* Karlsruhe, 15 Oct 1898; *d* Leipzig, 27 Feb 1956). German organist, choral conductor and composer. He sang in the Thomanerchor at Leipzig as a

boy, then studied the organ, the piano and composition at the conservatory there. After frequently deputizing at the Thomaskirche for Karl Straube, his organ teacher, Ramin succeeded him as organist in 1918 (when Straube was promoted to Kantor). From the outset Ramin's playing was noted for its vitality, stylish interpretation and brilliant technique. In 1920 he also became organist for the Gewandhaus concerts and taught the organ at the conservatory; and from 1923 his style was significantly influenced by the Schnitger organ at the Jacobikirche in Hamburg, on which he gave many recitals. He undertook tours of other European countries, and of the USA, 1933–4. He also became well known as a harpsichordist and song accompanist, and had a varied career as a conductor, directing the Leipzig Lehrergesangverein (1922–35), the Gewandhaus Choir (1933–4 and 1945–51) and the Berlin Philharmonic Choir (1935–43), as well as conducting numerous orchestral concerts. In 1940 he succeeded Straube as Kantor of the Thomaskirche, the 12th in succession to Bach and one of the most dynamic interpreters of Bach's music. It was thanks to Ramin that the Thomanerchor tradition survived, and he rebuilt the choir in the immediate postwar period, demonstrating its new vitality on many tours, including visits to the USSR in 1953 and South America in 1955. He directed the Leipzig German Bach Festivals in 1950, 1953 and 1955, the first of which was a particular artistic triumph for him. In 1950 he received the National Prize of the German Democratic Republic and an honorary doctorate from Leipzig University, and in 1952 he was elected a member of the Academy of Arts. He wrote a few works, mainly organ and choral music. A memorial volume of essays on Bach appeared on the 75th anniversary of his birth (ed. D. Hellmann, Wiesbaden, 1973).

□

Raminsh, Imant Karlis (*b* Ventspils, 18 Sept 1943). Canadian composer of Latvian birth. He studied violin with Albert Pratz at the Royal Conservatory of Music, Toronto (1958–62) before completing the BMus (1962–6) at the University of Toronto. He undertook further studies at the Mozarteum in Salzburg (1966–8) and at the University of British Columbia (1968–9). Raminsh's music is grounded in expressive, often modally-based, melodies that use a rich harmonic vocabulary. He is best known for his choral music (especially *Ave, Verum Corpus*, 1972 and *Magnificat*, 1983), for which he has received a number of awards. His melodic lines are generally based on the natural rhythms of the text, inviting comparison with chant. Raminsh has been active as a composer, performer, teacher and conductor in Vernon, British Columbia, his home after 1977. He has founded and conducted a number of choral and orchestral groups and has a special interest in working with amateurs. Many of his compositions are accessible to amateur groups.

JOAN BACKUS

Ramírez, Louie (*b* New York City, 28 Feb 1938; *d* New York City, 6 June 1993). American vibraphone player, percussionist, composer, arranger, bandleader and producer. He trained at the Juilliard School of Music and launched his career in 1957, recording with Joe Loco. In 1960 he contributed to Johnny Pacheco's first *charanga* album, *El güiro de macorina* and launched his own band in 1963, recording *Introducing Louie Ramírez*. Through the 1960s he performed with Joe Cuba and was a member of the Alegre All-Stars and, with the vocalist Pete Bonet, led the house band at New York City's Corso Club in the late 1960s. Through the 70s and 80s he was a staff producer for Fania Records and its subsidiary labels Vaya, Inca, Cotique and Tico, and was also acting president of Alegre Records. As a producer, arranger and composer, he influenced the growing sophistication of New York salsa during this time, evident on his own tunes *Paula C*, *Something New*, *Mentirosa* and *Suddenly*.

One of the most respected names in salsa, Ramírez was a prolific composer and arranger, noted for his innovative arrangements and sophisticated, jazz-inflected harmonizations. Always recruiting excellent musicians, his albums have long been cherished among collectors. In the early 1980s, Ramírez and vocalist Ray de la Paz helped launch *salsa romántica*, a fusion of pop ballads with salsa rhythms, with *Noche caliente* (K-Tel, 1982) and subsequent albums. A versatile musician, he also recorded Latin jazz albums such as *A Tribute to Cal Tjader* (Caiman, 1986) and continued to record classic salsa. He died in 1993 after suffering his third heart attack.

LISE WAXER

Ramírez, Luis Antonio (*b* San Juan, 10 Feb 1923; *d* San Juan, 15 May 1995). Puerto Rican composer. He came late to serious studies in music and was persuaded by his teacher, Alfredo Romero, to consider music as a profession. From 1957 to 1964 he attended the Madrid Conservatory, with scholarship aid from the Institute of Puerto Rican Culture and the Puerto Rico Department of Education. Returning to the island, he was named to the

post of musical director of WIPR, the educational radio station of the government of Puerto Rico, and in 1968 became a teacher of harmony and composition in the Puerto Rico Conservatory of Music. In 1980 he organized a music workshop in the Dominican Republic.

Ramírez was the recipient of numerous honours and awards, including an honorary doctorate awarded by the World University of Puerto Rico (1983), the music award of the Puerto Rico Academy of Arts and Sciences (1983) and a diploma of recognition by the Institute of Puerto Rican Culture (1984). He received commissions for compositions from the Puerto Rico Department of education, the Institute of Puerto Rican culture and the Puerto Rico SO.

DONALD THOMPSON

Ramis [Ramus] **de Pareia, Bartolomeus** [Bartolomeo; Ramos de Pareja, Bartolomé] (*b* Baeza, Andalucía, *c*1440; *d* ?Rome, after 1490). Spanish theorist and composer active in Italy. His life is undocumented; all that is known about him comes from his own testimony or that of later writers. His first teacher was one Johannes de Monte. He claimed to have lectured at the University of Salamanca for a time, though his position (as later in Bologna) may have been unofficial. While there he wrote a treatise in Spanish (perhaps the one he elsewhere referred to as *Introductorium seu Isagogicon*) and a mass, both now lost. He went to Italy in the 1470s; his extended residence in Bologna is the best-recorded period of his life. There he lectured publicly on music (though not under the auspices of the university) and had private pupils, including GIOVANNI SPATARO. His important *Musica practica* (ed. J. Wolf, Leipzig, 1901/*R*; ed. C. Terni, Madrid, 1983; Eng trans., MSD, xliv, 1993) was published in Bologna in two nearly identical editions dated 12 May 1482 (the surviving copy belonged to Spataro and was annotated by Gaffurius) and 5 June 1482 (*R*1969, 1983). According to Spataro (1491), Ramis had written a much larger treatise ten years before but had withheld it from publication, finally releasing about a third of the whole in support of his pursuit of a stipendiary lectureship (*Spataro*C); but this was unsuccessful, probably owing to his denunciation of the standard university texts and his distinctly idiosyncratic method. He remained in Bologna at least until 1484, when he gave Spataro a holograph copy of a small treatise, probably the one in Spanish mentioned above; but he left in disgust at the university's neglect and settled in Rome, where he intended to prepare his larger treatise for publication. He was still alive in 1491, but Spataro said he had adopted a 'lascivious life-style, which was the cause of his death', probably no later than 1500. Both his critic Burzio and his pupil Spataro described him as short in stature.

Besides the mass composed in Salamanca, Ramis also referred to a Magnificat and a Requiem, probably the same as the 'missa ... supra "Requiem eternam"' mentioned by Spataro; the place and date of composition of these is unknown. Ramis stated that he had composed his motet *Tu lumen tu splendor Patris* in Bologna. It is preserved in fragments: Ramis himself explained the canonic inscription, while Gaffurius (1520) printed the enigmatic tenor and Giovanni del Lago cited a passage from the bass (*Spataro*C). In 1482 the Kyrie and Gloria of a mass by Ramis and a canzonetta were sent to Ercole d'Este, Duke of Ferrara (see Mischiati). What may be his only complete surviving composition, the perpetual canon *Mundus et musica et totus concentus*, is preserved in a chansonnier of Florentine origin (*I-Fn* B.R.229, ed. in MRM, vii, 1983). There is no other reason to believe he lived in Florence.

Ramis's lack of success with the University of Bologna is easily understood from the characteristics of his *Musica practica*. Although the treatise is organized in an ostentatiously scholastic format and is filled with cogent citations drawn from numerous authors ancient, medieval and contemporaneous, Ramis scorned the authority of classic writers like Boethius and Guido of Arezzo and emphasized an empirical method that was utterly at odds with the academic norms of his time. He parted company with Boethius over PYTHAGOREAN INTONATION, offering a division of the monochord that produced major and minor 3rds in the ratios 5:4 and 6:5 instead of the Pythagorean 81:64 and 32:27 (*see* JUST INTONATION). He stated, and Spataro later emphasized, that these were the intervals of actual practice, not those of theory (though Gaffurius refused to accept the distinction). It was left for Lodovico Fogliano and Zarlino to put the intervals arising from Ramis's monochord division on a sound theoretical and historical basis.

Ramis had no patience with the tradition of hexachordal solmization attributed to Guido. He found that the practice of mutation, especially as extended in order to deal with accidental sharps and flats, led to confusion among singers and instability of pitch. In its place he proposed the earliest known octave-based solmization system, using the syllables *psal-li-tur per vo-ces is-tas* ('It is sung with these syllables') beginning only on C; the only mutation necessary is *tas–psal* when a melody ascends above or descends below C. Ramis observed that the assonance of final consonants in *tur per* helped locate the semitone E–F and that that in *ces is tas* characterized the variable semitone between A and B♭ or between B♮ and C, but Hothby justly faulted him for using the same syllable for B♭ and B♮. Not even Ramis's devoted pupil Spataro adopted this particular innovation, and indeed Ramis himself reverted to traditional solmization for most of his treatise.

Ramis's empirical tendencies are further highlighted by his embrace of the keyboard as a demonstrative aid. For example, he argued that there was no effective difference between the tritone and the diminished 5th, even though the intervals function differently both melodically and contrapuntally. His discussion of keyboard tuning is an early piece of evidence for MEAN-TONE temperament.

Gaffurius (1496) was evidently referring to Ramis and his friend Tristão da Silva when he castigated the 'organists' who admitted parallel 5ths if one of them was diminished. In all these respects Ramis opposed himself to most of his predecessors and contemporaries, casting particular scorn on Johannes Gallicus and John Hothby as 'adherents of Guido' (though elsewhere he cited Gallicus with approval). He also took issue with contemporaneous theorists in the matter of the relation between perfect and imperfect *tempus*. He upheld the equal length of the breve under either *tempus*, while Tinctoris and Gaffurius argued for the invariability of the minim, leading to a perfect breve under O being half again as long as a breve under C.

Ramis also expounded, much more circumstantially than his predecessors, a pattern of astrological and medical correspondences with the musical modes that may have derived from Arab traditions (see Haar). He expressed his negative opinions of other theorists, living or dead, in intemperate language, which stimulated vigorous assaults against his *Musica practica* on the part of Hothby and Burzio. He was defended in equally abusive terms by Spataro, which led to an ongoing polemic between the latter and Gaffurius. But thanks to Spataro's advocacy, Ramis's empiricism was transmitted to a new generation of Italian theorists represented by Aaron and Lanfranco and exerted a conceptual influence on the 16th century that was far greater than that of any of his particular ideas.

Ramkie. A long-necked unfretted finger-plucked lute with three or four strings. The exact origins of the *ramkie* are unclear, although it was known to have been played by the Khoi (Hottentots or Nama) in the Cape as early as 1730 and later by other southern African peoples (Kaye). The name is probably derived from the Portuguese *rabequinha* ('little violin'). Mentzel, who was in the Cape from 1733 to 1741, wrote of it as 'an imitated instrument which the slaves of Malabar brought with them, from whom some Hottentots copied it' (quoted in Kirby). Derivation from the Portuguese *machete* or *machada*, which was also the prototype for the ukelele, has been suggested, though non-European influence seems evident in the body construction. No 18th-century specimens have survived, but the consensus of early reports points to a 'kind of guitar' about 1 metre long, the body made from a half-gourd covered with stretched sheepskin and attached to one end of a straight plank about 10–13 cm wide. The gut or wire strings were raised by a bridge on the body and by a nut near the end of the neck; tuning-pegs were inserted from behind, as on the ukelele.

Bushmen (or San) and Bantu-speaking peoples in southern Africa later adopted the instrument from the Khoi, replacing the gourd body with carved wood or a tin can. From all accounts, the *ramkie* was always used for repetitive chord-playing rather than melody, which was not typical of indigenous southern African practice. The construction of home-made guitars, used by boys throughout southern Africa, often shows some resemblance to the *ramkie*, as does the practice of repetitive chord playing. Other names found in the literature include *gabowie*, *!gutsib*, *raamakie*, *rabékin*, *rabouquin*, *ramakie*, *ramakienjo*, *ramgyib*, *ramki* and *xguthe*.

DAVID K. RYCROFT/ANGELA IMPEY

Ramler, Karl Wilhelm (*b* Kolberg [now Kołobrzeg], 25 Feb 1725; *d* Berlin, 11 April 1798). German poet. After studying at Halle he moved to Berlin in 1745, taught at the cadet school from 1748, and from 1787 until 1796 was director of the Royal Theatre. As friend and correspondent of Gleim, Nicolai and Lessing, and as an exponent of the classical values in lyric verse, he exercised a quiet but important influence. Few of his *Oden* and *Lyrische Gedichte* were set to music, but his collection entitled *Lieder der Deutschen mit Melodien* (1766–8) was highly regarded in its day, and some of his longer texts were frequently set: the cantatas *Der Tod Jesu* by (to name only the best-known composers) Graun, Telemann and J.C.F. Bach, *Die Hirten bei der Krippe zu Bethlehem* by Agricola, Telemann, Türk, Reichardt, Rellstab and Eybler, *Der Mai* by Telemann, J.M. Krans and Reichardt, *Die Auferstehung und Himmelfahrt Jesu* by J.C.F. Bach, Agricola, Telemann, Vogler, C.P.E. Bach and Zelter, *Ino*

by Telemann, Vogler and J.C.F. Bach, and *Pygmalion* by J.C.F. Bach and F.W.H. Benda; a melodrama *Cephalus und Prokris* was set by J.F. Reichardt. Ramler also wrote many occasional pieces for musical setting, and in 1766 he translated Handel's *Alexander's Feast* into German. One of his earliest published works was an essay 'Vertheidigung der Oper', which was included in F.W. Marpurg's *Historisch-kritische Beyträge zur Aufnahme der Musik* (i, 1754).

PETER BRANSCOMBE

Ramondon, Littleton [Lewis] (*b* London, 28 Jan 1684; *d* after 1715). English baritone and composer. Although he was christened Lewis and so called by Burney and Hawkins, he signed himself Littleton on theatre documents. Ramondon made his stage début in April 1705, performing songs in Italian and English. He created minor roles in English in *Camilla* (1706), *Pyrrhus and Demetrius* (1708) and *Clotilda* (1709) but lost his place in the Queen's Theatre opera company when performances were given completely in Italian.

Ramondon wrote at least 26 songs, a dozen of which, mainly for the theatre, were published in London in *The Monthly Mask of Vocal Music* between April 1706 and July 1710. Songs by him also appeared in *Wit and Mirth* (London, 3/1707, 4/1714) and *The Merry Musician* (London, 1716). He wrote both words and music for the six songs in his own *New Book of Songs* (London, *c*1713). His arrangements of tunes from *Camilla* for harpsichord and for two flutes and bass appeared in 1706 and opera tune arrangements by him were printed in *The Lady's Entertainment* (London, 1708). The tune of his song 'All you that must take a leap in the dark' (on the execution of two criminals in May 1712) was used in *The Beggar's Opera.*

OLIVE BALDWIN, THELMA WILSON

Ramoneda, Ignacio (*b* Tarrasa, *c*1732; *d* El Escorial, 19 Oct 1781). Spanish theorist and instrumentalist. On 18 November 1756 he became a monk in the order of St Jerome at the monastery of El Escorial, where he taught plainsong and remained until his death. His brother Pablo Ramoneda, also a monk at El Escorial, was the *maestro de capilla*. Ignacio's treatise *Arte de canto llano* (Madrid, 1778) circulated widely in Spain; a second edition (abridged by Juan Rodó, organist at the monastery) was published in 1827. Ramoneda also compiled the *Indice de la insigne librería del coro de este Real Monasterio de San Lorenzo* (MS, *c*1775, *E-E*), the earliest catalogue of the monastery's music collection. In the same archives are a number of his compositions: a mass, five Lamentations for Holy Week and psalms, some with instruments and continuo. In his lifetime he was renowned for his remarkable skill on the organ and other instruments, but his subsequent reputation is based on his plainsong manual.

JOSÉ LÓPEZ-CALO

Ramones, the. American punk rock group. Its members included Dee Dee Ramone (Douglas Colvin; *b* Fort Lee, VA, 18 Sept 1952; bass guitar), Joey Ramone (Jeffrey Hyman; *b* New York, 19 May 1952; drums and later vocals), Johnny Ramone (John Cummings; *b* New York, 8 Oct 1951; electric guitar) and Tommy Ramone (Thomas Erdelyi; *b* Budapest, 20 Jan 1952; drums). The group showed an unswerving devotion to the simplicity of three-chord, up-tempo rock and roll which was tempered by a cartoon-style wit. Formed in New York in 1975, the Ramones came to the fore through performances at the fashionable CBGBs club before recording an eponymous album which lasted 30 minutes and included 14 songs, played at breakneck speed, with such titles as *Blitzkrieg Bop*, *Judy is a Punk* and *Now I wanna sniff some glue.* The most commercially successful of their later recordings were *Sheena is a Punk Rocker* (1978) and *Baby I love you* (1980). The latter was produced by Phil Spector who had created the original Ronettes version. With a number of personnel changes the Ramones continued to provide audiences with an experience of 1970s punk rock well into the 1990s.

DAVE LAING

Ramón y Rivera, Luis Felipe (*b* San Cristóbal, 23 Aug 1913; *d* Caracas, 21 Oct 1993). Venezuelan ethnomusicologist and composer, husband of ISABEL ARETZ. He studied at the Caracas Escuela Superior de Música (1928–34) under Vicente Emilio Sojo, Ascanio Negretti, Miguel Angel Espinel and Juan Bautista Plaza, taking a diploma as a viola teacher (1934). For several years he played the viola in various Caracas ensembles such as the Orfeón Lamas and the Symphony Orchestra, before returning to his native state, Táchira, as music teacher at the Escuela de Artes y Oficios in San Cristóbal (1939). There he founded the Táchira Music School in 1940 and directed it until a Venezuelan government fellowship enabled him to study folklore and ethnomusicology with Carlos Vega at the Institute of Musicology, Buenos Aires, and with

Isabel Aretz and Augusto Raúl Cortázar at the Colegio Libre de Estudios Superiores (1945–7). On his return to Caracas (1947) he was appointed chief of musicology of the Servicio de Investigaciones Folklóricas Nacionales; with his wife he undertook several field trips in Venezuela before moving to Buenos Aires (1948). There he directed the Americana Orchestra in programmes of Latin American folk music until 1952, when he returned to Caracas and became director of the National Institute of Folklore of Venezuela (1953). During the 1950s and 1960s he travelled extensively throughout the Latin American continent, collecting a considerable amount of material, and taught folklore and ethnomusicology in several Venezuelan and foreign universities. He received a Guggenheim Fellowship (1967), and was an active member of IFMC, SEM, Chilean and Mexican folklore societies, and president of the Venezuelan Society of Authors and Composers (1972–3). He was a co-founder of the Fundación Internacional de Etnomusicología y Folklore (FINIDEF) in 1986.

Ramón y Rivera's main areas of study were Venezuelan folk and traditional music and Latin American musics; his extensive field experience enabled him to make a comparative study of the music of the continent. He contributed greatly to the knowledge of Venezuelan indigenous, folk and popular music. His work as a composer is closely connected to the popular music of his native state of Táchira, such as the *valse*, the *bambuco*, the *canción* and the *joropo*. His bambuco *Brias del Torbes* has enjoyed such popularity that it is considered as the anthem of his native city.

GERARD BÉHAGUE

Ramos de Pareja, Bartolomé. *See* RAMIS DE PAREIA, BARTOLOMEUS.

Ramovš, Primož (*b* Ljubljana, 20 March 1921). Slovenian composer. He studied the piano and composition, the latter with Osterc at the Ljubljana Academy of Music (1941), with Frazzi in Siena (1941) and with Casella and Petrassi in Rome (1942–3). In 1945 he joined the staff of the library of the Slovenian Academy of Sciences and Arts, becoming its head in 1952. He also taught at the Ljubljana Conservatory (1948–64). An extremely prolific composer, Ramovš began in a neo-classical style, become increasingly Expressionist and began to employ 12-note and serial methods, and then established himself as the first exponent of avant-garde techniques in Slovenia. His earlier lyricism, which became ever more dramatic and dissonant during the 1950s and early 60s, has given place to 'non-programmatic sound combinations for sound's sake'.

ANDREJ RIJAVECIVAN KLEMENČIČ

Rampal, Jean-Pierre (Louis) (*b* Marseilles, 7 Jan 1922; *d* Paris, 20 May 2000). French flautist. He studied with his father and then at the Marseilles Conservatoire and the Paris Conservatoire, where he gained a *premier prix* in 1944. His international career began with his appointment as solo flautist at the Vichy Opéra orchestra (1946–50), the Paris Opéra (1956–62) and with concert tours from 1947 in Europe, Africa, the USA (where he appeared annually from 1958) and the East Asia. His keen interest in chamber music led to his founding of the Quintette à Vent Française (1946) and the Ensemble Baroque de Paris (1952). He also formed a duo, lasting more than 30 years, with the pianist and harpsichordist Robert Veyron-Lacroix.

Rampal's favoured repertory was music of the 18th century and its performance in authentic style. Even his early performances and recordings were notable for their smooth but unromantic phrasing and stylish ornamentation. He also performed much 20th-century music, and commissioned works from composers including Poulenc, Jolivet, Boulez, Feld, Françaix, Marinon and Penderecki. Acknowledged as one of the greatest flautists of his day, his tone was clear but mellow, with a great variety of shading, fluid phrasing and delicate, impeccable articulation. His numerous recordings included music by J.S. and C.P.E. Bach, Vivaldi, Mozart, Pergolesi, Leclair and Molter, in addition to 20th-century works by Debussy, Ravel, Ibert, Bartók, Prokofiev and others. He often edited the music of little-known composers and rediscovered much new repertory for the flute; many of his editions are published. His autobiography, *Music, my Love*, co-written with Deborah Wise, was published in New York in 1989.

NIALL O'LOUGHLIN/DENNIS VERROUST

Rampazetto, Francesco (*b* Lona, *c*1510; *d* Venice, ?1576). Italian printer and bookseller. He was active in Venice and worked in the parish of S Giovanni Novo, with a shop on the calle delle Rasse. In 1572 he was elected Prior of the Guild of Booksellers and Printers, succeeding Girolamo Scotto. Working mainly on commission for others, Rampazetto produced at least 190 books in Italian, Latin, Greek or Spanish; literary works, notably reprints, figure prominently in his output.

From 1561 until 1568 he printed music – 31 sets of partbooks, one theory book and a book of *laudi spirituali*. The last, Serafino Razzi's voluminous collection (RISM 1563[6]), was sent to Rampazetto by the Florentine publisher Filippo Giunta because Florence had no musical press at the time. Among his other commissions were an anthology of motets (1563[3]) compiled and edited by the printer Antonio Barrè, and the second book of Vinci's five-part madrigals (1567[24]), financed by Giovanni Comencino. Besides commissions for first editions, Rampazetto reissued works by Rore, Lassus and Arcadelt. In reprints he made few musical changes, but often altered spellings, contractions and text underlay.

Rampazetto's activity as a music printer falls within the years that Girolamo Scotto and Antonio Gardano monopolized the Venetian industry, and indeed he was the only other printer until 1566 to produce more than a handful of musical editions. There is evidence of a connection between Rampazetto and Scotto. Printing materials first used by Scotto, including music type, historiated initials and a woodcut, appear in editions printed later by Rampazetto. Furthermore, several Rampazetto madrigal books, notably Primavera's third (1566[13]) and Vinci's second book of five-part settings, complete editions of the same composers' works issued by Scotto. Apparently Scotto's overflow of work prompted him to send material to Rampazetto. A correlation exists also between the time that Rampazetto stopped printing music and the years the Scotto firm increased its music production. From the late 1560s Girolamo's nephew Melchiore took a more active role in the family business; music which earlier would have been passed to Rampazetto may have remained with the Scotto press.

Printers' marks hint at another possible source of support in Rampazetto's work. On nine music books of 1565–8, the title-page has a woodcut of 'Virtue' holding a banner and palm fronds. Since the Venetian printer Plinio Pietrasanta used the same mark on four music books in the 1550s, it is possible that he was Rampazetto's silent partner for these nine editions.

After Rampazetto's death his son Giovan Antonio took over the firm. He used the imprint 'heredi di Francesco Rampazetto' from 1578 until 1583, and his own name until around 1607. In 1610 another Francesco Rampazetto printed at least one volume. The firm is known to have continued until 1662.

CLARE IANNOTA NIELSEN

Rampazzi, Teresa (*b* Vicenza, 31 Oct 1914). Italian pianist and composer. She studied the piano at the Milan Conservatory and for a number of years studied composition at the Darmstadt summer courses. She taught electronic music at the Padua Conservatory (1972–9). After a busy career as a pianist specializing in new music, in 1958 she met John Cage. This encounter proved crucial: she abandoned the piano to devote herself to working in, developing and disseminating electronic music. In 1965 she founded in Padua the Gruppo NPS (Nuove Proposte Sonore) which soon became one of the leading private electronic music studios in Italy; it stood out for its

interdisciplinary approach and also its spirit of collective experimentation.

Her first works were thus written in collaboration and their aim was to investigate systematically individualized sound parameters. After the Gruppo NPS ceased its activities in 1972, her work became more personal and, with the use of frequency modulation, she manipulated on tape fragments of Bach, Mozart, Stravinsky, Webern and, eventually, the human voice. The year 1975 marked the beginning of a new compositional phase, in which her vast experience of analogue electronic music was expanded by the new possibilities offered by the computer and, especially, its microscopic control of timbral parameter.

ANTONIO TRUDU

Rampini, Domenico (*b* Friuli province, *c*1765; *d* Trieste, 19 Dec 1816). Italian composer. He held posts as harpsichordist at the theatres of S Samuele, Venice (Carnival 1791), and S Pietro, Trieste (1792–1801). When Trieste's Teatro Nuovo was opened in 1801, he became its *maestro di cappella*, a post he held for at least a dozen years, along with that of *maestro* at the cathedral. His many occasional cantatas performed at the Teatro Nuovo suggest considerable public success.

A Vincenzo Rampini (*fl* Venice, 1790) wrote two brief keyboard treatises, *Regole per suonare la spinetta* (including seven sonatinas) and *Regole per accompagnare il basso, e partimenti* (both in Museo Correr Manuscripts, *I-Vc*). He also composed two arias for the pasticcio *Didone abbandonata* performed in Venice in 1790 (copies in *D-BFb*, *F-Pc*, *I-Vc*). Schmidl suggested that he may have been a cousin of Domenico Rampini.

WORKS

Stage, all perf. Trieste: L'impresario di Smirne (dg, 2, ? G. Foppa), S Pietro, 3 Feb 1798; Inno popolare (cant., G. de Coletti), 3vv, S Pietro, 4 Oct 1798; Inno (cant., Coletti), 3vv, S Pietro, 4 Oct 1799; Pimmalione (dg, 2), Nuovo, 6 March 1802; Trieste rasserenata (cant.), Nuovo, 12 Oct 1802; I geni pacificati (cant.), Nuovo, 12 Feb 1808; Minerva consolata (cant.), Nuovo, 28 Jan 1814; Il sogno di corvo (cant.), Nuovo, 12 Feb 1814; La gloria (cant., D. Rossetti), Nuovo, Feb 1814

SVEN HANSELL

Rampini [Rampin], **(Giovanni) Giacomo (i)** (*b* Padua, 1680; *d* Padua, 27 May 1760). Italian composer, uncle of GIACOMO RAMPINI (ii). Of modest family background, he became a priest when little more than 20 and was elected *maestro di cappella* of Padua Cathedral on 29 June 1704, succeeding P.R. Pignati. He held this position until his death, when Adolfati, who had assumed his duties on 26 April 1760, was named his successor.

Among the relatively few works by Rampini in the cathedral archive is a cycle of graduals and offertories that he compiled in 1710 with music by other composers as well as his own. The archaic choirbook notation of these Propers is unusual, and the contrapuntal style of the music contrasts markedly with the modern homophonic style of Rampini's other works. La Borde described him as an excellent composer of sacred music and a successful one of operas. His reputation as a teacher attracted numerous students, including his nephew.

WORKS

Opere serie: Armida in Damasco (3, G. Braccioli), Venice, S Angelo, 17 Oct 1711; La gloria trionfante d'amore (3, Braccioli), Venice, S Angelo, 16 Nov 1712; Marco Attilio Regolo (3, M. Noris), Verona, Accademia Vecchia, aut. 1713; Ercole sul Termodonte (3, G.F. Bussani), Padua, Obizzi, June 1715

Oratorios: Christo al cenacolo, Padua, S Tomaso, 1708; L'angelo di Castiglione (P. Morari), Padua, S Leonardo, 21 June 1712; Il trionfo della costanza, ?Padua, 1717; David pentito, Padua, 1728

Sacred: Mass, 4vv; Requiem, 4vv, 1756; Laudate pueri (Ps cxii), 4vv; Salmi di terza (Ps cxviii), SATB, SATB, org; Graduali e offertori per tutto l'anno ... 1710 [incl. works by other composers], all *I-Pc*

SVEN HANSELL

Rampini, Giacomo (ii) (*b* Rovigo; *d* Udine, 15 Nov 1811). Italian composer and organist, nephew of GIACOMO RAMPINI (i). After studying music with his uncle in Padua, he became organist in Latisana and in spring 1775 began substituting for the organist Leonardo Dordolo at Udine Cathedral. When Dordolo died on 18 September 1779, Rampini was named permanent organist. A priest, he also taught at the Udine seminary from 1775 to 1781. On 19 January 1799 he was elected *maestro di cappella* at the cathedral, a post he held along with that of organist until his death.

Rampini, Vincenzo (*fl* Venice, 1790). Italian theorist and composer, possibly a cousin of DOMENICO RAMPINI.

Rampollini, Mattio [Mattia] (*b* Florence, ?2 June 1497; *d* Florence, *c*1553). Italian composer. In 1520 he succeeded

Bernardo Pisano as master of the boys at Florence Cathedral; he may have been Francesco Corteccia's composition teacher after Pisano left Florence. Rampollini was also in the service of the Medici family and contributed to the 1539 wedding festival for Duke Cosimo and Eleanora di Toledo, composing two madrigals for their wedding banquet, *Lieta per honorarte* and *Ecco la fida*. Both were published in Gardane's edition of the wedding music (RISM 1539[25]). About 1554 Moderne published Rampollini's *Primo libro de la musica*. Dedicated to Duke Cosimo, this remarkable volume includes cyclic settings of seven complete canzoni of Petrarch, all composed in the new cyclic canzone form with the stanzas set for a varying number of voices ranging from three to six; the final stanza usually uses all the voices. Several madrigals by Rampollini were published in anthologies.

ANDREW C. MINOR

Ramponi, Virginia. *See* ANDREINI, VIRGINIA.

Ramsey, Robert (bur. Cambridge, 12 Feb 1644). English composer. He may have been related to the court trumpeters of the same name who were of Scottish origin and who accompanied the king to London in 1603. He is first mentioned in the Trinity College Steward's Book in 1616, when he received payment for assisting at the college during the king's visits to Cambridge in March and May of 1615. From then until his death he was organist and master of the choristers at Trinity College. He supplicated for the degree of MusB in 1616, having practised the arts for seven years, so we may deduce that he was active as a composer from about 1610. Three of his works, the elaborate *Dialogues of Sorrow upon the Death of the Late Prince Henrie*, *Sleep fleshly birth* and *What tears, dear Prince*, are obituary tributes to Henry, Prince of Wales, who died in 1612, suggesting that he might have known the prince through court connections in Scotland and England. He married Elizabeth Ryding (bur. Cambridge, 1667) in 1622 and had three children.

Ramsey's music reflects the influence of contemporary Italian music and the emergence of the early Baroque style in England. The *Dialogues of Sorrow* are elaborately contrapuntal consort songs for six voices and viols, quite unlike the other dialogues on mythological or biblical subjects, which are for smaller forces and constitute embryo operas and oratorios. The setting of *In guilty night*, a paraphrased version of *1 Samuel* xxviii.8–20, anticipates Purcell's similar setting by at least half a century.

Most of his compositions are settings of English or Latin liturgical texts. The Latin works embrace the spirit of the *seconda pratica* to a greater extent than the English and were probably intended not for Trinity but for Peterhouse College, where Latin was sung. The two settings of the (Latin) *Te Deum* and *Jubilate* make extensive use of concertante textures and choral recitative which in their rhythmic vitality and harmonic daring recall Monteverdi's new-style church music. The English Service on the other hand is similar in style to Gibbons's Short Service.

Between these extremes of style lie the motets and collects, in all of which imitative points still serve a structural purpose although the textures are not really polyphonic. Expressive dissonance takes precedence over beauty of line or imitative interplay. The anthem *O come, let us sing unto the Lord* is conspicuously modern. Its clearcut phrase lengths, rhythmic patterns, affective melodic lines and concluding 'Alleluia' are characteristic of the Restoration full anthem. The earlier madrigal-anthem is best exemplified in *How are the mighty fallen* and *When David heard that Absalon was slain*.

EDWARD THOMPSON

Ramshā. An Office of the Syrian Churches, corresponding to Vespers. *See* SYRIAN CHURCH MUSIC, §3.

Ramsier, Paul (*b* Louisville, 23 Sept 1937). American composer. He studied at the University of Louisville (composition, piano), the Juilliard School (Beveridge Webster, piano), Florida State University (Ernő Dohnányi, composition) and privately in New York (Alexei Haieff, composition). He completed the PhD at New York University in 1972 and taught composition there until 1983. He has also taught at Ohio State University. Although Ramsier writes for a variety of media, he is best known for his compositions for solo double bass and orchestra. Works such as *Divertimento Concertante* (1965), first performed by Gary Karr and the Chicago SO, have become part of the standard repertory for that instrument. Despite a tonal musical language, Ramsier's characteristic textures often create harmonies best described as pan-diatonic or bitonal. *Divertimento Concertante* and *Silent Movie* (1985) are made up of a series of brief movements, a common feature of his musical structures.

WORKS

MARK ALISON MORTON

Ramus de Pareia, Bartolomeus. *See* RAMIS DE PAREIA, BARTOLOMEUS.

Ran, Shulamit (*b* Tel-Aviv, 21 Oct 1949). American composer of Israeli birth. In Israel she studied composition with Alexander Boscovich and Paul Ben Haim, the piano with Miriam Boscovich and Emma Gorochov, and was a student at the Tel Aviv Academy. She was awarded scholarships that enabled her to continue her studies at the American-Israeli Cultural Foundation and the Mannes College of Music, New York (BM 1967), where her principal teachers included Dello Joio and Reisenberg. She pursued further studies with Dorothy Taubman (1970–76) and Ralph Shapey (1976). After serving as artist-in-residence at St Mary's University, Halifax, Nova Scotia (1972–3), she joined the music department at the University of Chicago in 1973. She has served as composer-in-residence with the Chicago SO (1990–7) and the Lyric Opera of Chicago (1994–7). Her numerous honours include awards from the Rockefeller Fund (1968), the Ford (1972) and Guggenheim (1977, 1990) foundations, the American Academy of Arts and Letters and the Kennedy Center (1992). She was elected to the American Academy of Arts and Sciences in 1992.

Ran's musical style is diverse, often involving gravitating pitch centres, complex rhythms and highly organic formal structures. Many of her compositions are virtuosic, emphasizing the dramatic potential of instrumental and vocal resources through a heightened attention to expressive detail. *Hyperbolae* (1976) was selected as the required work for the Artur Rubinstein International Piano Competition in 1977. Her Symphony (1989–90) won the Pulitzer Prize in 1991. A number of later works incorporate elements characteristic of Middle Eastern music. She has completed commissions for the Chamber Music Society of Lincoln Center (*Concerto da Camera II*, 1987), the Taneyev String Quartet, Leningrad (String Quartet no.2 'Vistas', 1988–9), and the Chicago SO (*Legends*, 1992–3).

ROBERT WILLIAM PECK

Ranāt [roneat]. Name of a group of xylophones and metallophones of THAILAND and CAMBODIA; the Laotian equivalent is the *lanat*. The *ranāt ēk* (in Cambodia, *roneat aek*) is a high-pitched xylophone with a boat-shaped resonator mounted on a pedestal and 21 (occasionally 22) keys of bamboo or hardwood (for illustration *see* XYLOPHONE, fig.9). The keys, which range in length from 38 cm to 30 cm, are strung on cords passing through the acoustical nodes and suspended from hooks on the end-boards. A tuning paste of beeswax and lead shavings is applied to the underside of the keys. The instrument has a range of three octaves (*F* to *e″* or *f″*). It is played with a pair of beaters with either padded ends (for indoor use) or hard knobs (used outdoors). In ensemble playing the *ranāt ēk* is the leading instrument. Until the early 20th century it provided a fast-moving, rhythmically unchanging variation, in octaves, of the main melody, but later it became used almost without exception for the main melody, sustaining pitches of longer duration by a technique known as *krǫ* (rapid alternation of the beaters on bars an octave apart). Virtuoso solos, however, use a dazzling array of techniques.

The *ranāt thum* (in Cambodia, *roneat thung*) is a low-pitched xylophone with a rectangular box-shaped resonator, about 125 cm long, and 17 (occasionally 18) keys of bamboo or hardwood ranging in length from 42 cm to 35·5 cm. The keys are strung on cords suspended from hooks on the end-boards in the manner of the *ranāt ēk*, and a similar tuning paste is used. The *ranāt thum* has a range of just over two octaves (*D* to *f′*, or *g′*). It is played with two padded beaters. In ensemble playing it provides a variation of the main melody, with much use of octaves and 4ths and great rhythmic variety.

The *ranāt ēk lek*, formerly called the *ranāt thǫng*, is a high-pitched METALLOPHONE adopted by the Thai in the 19th century and possibly derived from Indonesian metallophones. The Cambodian equivalent is known as *roneat daek*. The *ranāt ēk lek* has a rectangular box-shaped resonator (about 40 cm long) on four short legs with rectangular bronze keys, ranging from 23·5 cm to 19 cm in length, supported at the acoustical nodes on narrow wooden tracks along the tops of the sides of the box. The keys are tuned by filing away part of the metal on the underside. The range and pitch of the *ranāt ēk lek* duplicate those of the *ranāt ēk*, whose part it doubles in ensemble playing. Like the latter, it is played with either hard or soft beaters.

The *ranāt thum lek* is a low-pitched metallophone whose history and construction are similar to those of the *ranāt ēk lek*, except that it is a little larger. Its range and tuning duplicate those of the *ranāt thum*, but unlike the latter, it is played with either hard or padded beaters.

Randall, J(ames) K(irtland) (*b* Cleveland, 16 June 1929). American composer. He received early training at the Cleveland Institute of Music (1934–47) and subsequently attended Columbia University (BA 1955), Harvard (MA 1956) and Princeton (MFA 1958). He studied the piano with Leonard Shure and composition with Elwell, Thad Jones, Sessions and Babbitt. From 1958 to 1991 he taught at Princeton, where he was professor of music. He was a founding member of the American Society of University Composers and has written articles on composing and music theory for several journals, notably *Perspectives of New Music*.

From the early 1960s into the 1970s Randall engaged principally in computer synthesis of sound and, with Godfrey Winham, developed facilities for this at Princeton University. His tape compositions were generated by the MUSIC IV B program, a version of MUSIC IV introduced at Princeton. He designed his own software 'instruments', which enabled him to specify every aspect of every sound and structure developments within single notes in ways that reflect principles of development used in whole compositions – as, for example, in *Lyric Variations* (1968). Beginning in 1980 he turned his attention to improvised musical performance and began a series of explorations of spontaneous group performance, or 'real-time co-creation', involving many kinds of musicians and other artists (painters, dancers) as well. The ongoing efforts, preserved on hundreds of sound recordings and videotapes (under the project name INTER/PLAY), document the emergence of idiosyncratic group styles and performing conventions. Randall is himself a regular participant in these performances. In 1990 Randall, with Elaine Barkin and Benjamin Boretz, started the publications series OPEN SPACE.

In 1991, Randall began a series of works for piano, of which pianist Martin Goldray has written: 'This music invites both the performer and the listener to listen carefully, and to delight in musical events in which traditional rhetoric and conventionalisms of piano technique are swept away, and we can find ourselves at the core of musical experience'. The GAP series (1991–6) is, in its way, music 'about' piano music and 'about' piano playing, reflecting Randall's lifelong involvement in both.

WORKS

Vocal: Improvisation on a poem by e.e. cummings, S, cl, sax, tpt, gui, pf/S, pf, 1960; Troubadour songs (from old MSS), v, perc, 1977; 3 settings (C. Rossetti, P. Sidney), v, 1997

Pf: Slow Movement, 1959; '... such words as it were vain to close ...', 1974–6; Meditation on Rossignol (1978); Soundscroll 2, 19 pieces, 1978; Greek Nickel 1, 1979; Greek Nickel 2, 3 pieces,

1979; GAP (1st batch), 1991; GAP2, 1993; GAP3, 1993–4; GAP4, 1994; GAP5 (In Memoriam Leonard Shure), 1994; GAP6 (one of those 2mvmt middleBeethoven pianosonatas in E/F/F♯ not G), 1995–6

Elec: Qts in Pairs, cptr, 1964; Mudgett: Monologues by a Mass Murderer, taped v, cptr, 1965; Lyric Variations, taped vn, cptr, 1968; Quartersines, cptr, 1969; Music for Eakins, film score, cptr, 1972; 9 pieces for DX100, synth, 1996

Other: Pitch-derived Rhythm: 7 demonstrations, fl, cl, pf, 2 vc, 1961–4; INTER/PLAY, 1980–88 [tapes of improvised performances]; Svejk, vn, mar, 1994–6

ELAINE BARKIN

Randall, John (*b* 26 Feb 1717; *d* Cambridge, 18 March 1799). English organist and composer, brother of WILLIAM RANDALL (ii). As a chorister under Bernard Gates in the Chapel Royal, he sang the title role in Handel's *Esther* given on 23 February 1732 directed by the composer at the Crown and Anchor Tavern in the Strand. He graduated MusB at Cambridge in 1744 and later held a variety of posts as organist of King's College (1745, or 1743 according to Mann), St John's, Pembroke and Trinity (1777). In 1755 he succeeded Maurice Greene as professor of music, and the following year proceeded MusD. On 5 October 1756 he married Grace Pattison. The music that he composed for Gray's ode for the installation of the Duke of Grafton as chancellor of the university (July 1769) is now lost. Burney, who originally intended to set the ode, wrote a spiteful and inaccurate biography of Randall in *Rees's Cyclopaedia*. Randall edited a collection of psalms and hymn tunes (Cambridge, 1794), including several of his own; a number of song settings and hymn tunes (two reprinted in the *English Hymnal* as nos.93 and 250) survive, as well as the anthems *O be joyful* (*GB-Cjc*), *O Lord, grant the king* (*Cjc, Ckc*) and *Who hath believed our report?* (*D-Hs, GB-Cjc, Ckc*).

CHRISTOPHER HOGWOOD

Randall, Peter. English music publisher, associated with JOHN WALSH (i).

Randall [Randoll], **William** (i) (*b* ?mid-16th century; *d* ?1604). English cathedral musician and composer. He was a lay vicar at Exeter Cathedral as early as 1578, but resigned his post on his appointment as a Gentleman of the Chapel Royal on 15 February 1585. His attempt to be restored to his Exeter post in 1601 was unsuccessful, despite the support of the Queen. In a Chapel Royal Cheque Book entry dated 26 July 1592 Randall is described as 'organist'. Francis Meres, in his *Palladis Tamia* (London, 1598), listed Randall among the 16 'excellent Musitians' of his day. He was granted mourning livery for the funeral of Queen Elizabeth on 28 April 1603, and is listed as having attended the coronation of James I on 25 July 1603; his successor at the Chapel Royal, Edmund Hooper, was appointed on 1 March 1604. Greenwood Randall, who also worked at Exeter, was probably his son or otherwise related.

A good five-part In Nomine by Randall survives (in *GB-Ob* Mus.Sch.D.212–16), and three keyboard pieces (two of them arrangements) are in Tisdale's Virginal Book (*Cfm* Mus.52.D.25; ed. A. Brown, London, 1966). Of his church music only a six-part full anthem *Give sentence with me* survives complete (*Lbl, US-NYp*); two verse anthems are incomplete (*GB-Lbl, Ob, US-NYp*) and the words of a third are known. A full service in G survives only in post-Restoration sources. A verse service sometimes attributed to him is clearly ascribed in its source (*GB-Lbl* Add.17784) to Greenwood Randall.

NORMAN JOSEPHS/JOHN MOREHEN

Randall, William (ii) (*b* London, *c*1728; *d* London, ?Jan 1776). English music seller and publisher, brother of JOHN RANDALL. He was a son or more probably a grandson of Peter Randall, a London music publisher associated with JOHN WALSH (i), and was presumably the Randall found among the Children of the Chapel Royal from 1736 to 1745. At the death of his cousin JOHN WALSH (ii) in 1766, he and John Abell inherited the extensive Walsh business, where they had doubtless been employed. They published for the first time the complete full scores of a number of Handel oratorios, starting with *Messiah* (1767). After Abell's death on 29 July 1768, Randall remained in business alone. Besides reprinting Walsh publications, sometimes with the original imprint in addition to his own, he published many interesting works, including a reissue in 1771 of Morley's *A Plaine and Easie Introduction to Practicall Musicke*. Collections of country dances and pleasure-garden songs also came from his press. At his death, his widow Elizabeth carried on the business until 1783, when it was taken over by WRIGHT & WILKINSON.

FRANK KIDSON/WILLIAM C. SMITH/PETER WARD JONES

Randegger, Alberto (*b* Trieste, 13 April 1832; *d* London, 18 Dec 1911). English conductor, teacher and composer of German and Italian descent. He studied the piano with Jean Lafont and composition with Luigi Ricci. His first works were masses and other pieces of church music, together with two operas, one a pasticcio *Il lazzarone* (1852, Trieste, in collaboration with three more of Ricci's pupils), the other a tragedy *Bianca Capello* (1854, Brescia). He was also musical director of theatres in Fiume, Senigallia, Brescia and Venice (1852–4). In 1854 he moved to London, where he took composition lessons from Molique and became widely known as a singing teacher, conductor and composer. His comic opera *The Rival Beauties* was produced in Leeds in 1864. In 1868 he became professor of singing at the RAM, of which he was appointed a director and a member of the committee of management; he also became professor of singing at the RCM, holding both posts until his death. As an opera conductor he directed an Italian season at St James's Theatre (1857) and also worked with the Carl Rosa Company (1879–85) and at Covent Garden and Drury Lane (1887–98). He also conducted the Queen's Hall Choral Society and the first two seasons of symphony concerts at Queen's Hall (1895–7) and was conductor at the Norwich Festival (1881–1905) and the Wolverhampton Festival (from 1868). He was organist of St Paul's in Regent's Park from 1854 to 1870. Randegger's vocal works include a dramatic cantata *Fridolin*, composed for the Birmingham Festival (1873), a choral setting of Psalm cl for the Boston Musical Festival (1872), and the vocal scenas *Medea* (1869), *Saffo* (1875), and *The Prayer of Nature* (1887). He also composed a large number of songs and edited several collections of vocal music. As an enthusiastic promotor of British music, he conducted new works at the Norwich Festival by Cowen, J.F. Barnett, Stanford, Mackenzie, Prout, Parry, German and others, and at the 1905 Festival invited 14 British composers to conduct performances of their own works.

Randegger did much to encourage a following for Wagner's early operas, and was admired for his Verdi interpretations: he had known the composer in Italy, particularly in Trieste at the time of *Stiffelio* (1850). At Covent Garden in 1888 he conducted *Die Zauberflöte* with an inserted ballet to Mozart's chamber music; in later Mozart performances he was more scrupulous, discarding for instance the extra orchestration that had been introduced into *Don Giovanni* by Costa and others. He collaborated with T.J.H. Marzials on the libretto for Arthur Goring Thomas's *Esmeralda* (1883). But his greatest influence was as a singing teacher: he helped to raise standards at the RAM and RCM, and his textbook *Singing* (London, 1893), one of Novello's Music Primer's, was widely used in English-speaking countries.

His nephew, the violinist Alberto Randegger (1880–1918), composed a short opera, *L'ombra di Werther* (1899, Trieste), and also lived in London for a time.

GEORGE GROVE/JOHN WARRACK/ROSEMARY WILLIAMSON

Randel, Andreas (*b* Ramdala, Blekinge, 6 Oct 1806; *d* Stockholm, 27 Oct 1864). Swedish violinist and composer. He was taught the violin by an itinerant player and in 1818 went to Karlskrona, where his talent was noticed. Between 1821 and 1828 he studied at the Paris Conservatoire with Baillot and Cherubini, who thought highly of him. After returning to Sweden in 1828 he joined the royal orchestra in Stockholm as a violinist, becoming deputy leader in 1838 and leader in 1861; he also conducted operas and concerts. Between 1844 and 1864 he taught the violin at the Stockholm Conservatory, becoming professor in 1859. In 1858 he undertook a concert tour in France and Germany.

Randel's compositions include incidental music to about 20 plays, the best known being F.A. Dahlgren's *Värmlänningarne* (Stockholm, 27 March 1846), for which he wrote the overture and arranged many of the songs and dances. This piece was for many years the most popular of its kind in Sweden and is still performed. Among his other works are a *Jubel overture*, three violin concertos, two fantasias on Swedish folk melodies, three string quartets, violin solos, male voice quartets and solo songs. His works show the influence of French Romantic music and Swedish folk music.

AXEL HELMER

Randel, Don M(ichael) (*b* Edinburg, TX, 9 Dec 1940). American musicologist. He took the BA at Princeton University in 1962 and the PhD in 1967, studying under Oliver Strunk, Arthur Mendel, Lewis Lockwood, Kenneth Levy and Milton Babbitt. He taught at Syracuse University (1966–8) and then joined the faculty of Cornell University, where he was made professor of music in 1973 and Given Foundation Professor of Musicology in 1990. He has also served as chair of the music department (1971–6), associate dean (1989–91), dean (1991–5) and provost (from 1995) and was editor of the *Journal of the American Musicological Society* (1972–4).

Randel's principal fields of research are medieval plainchant, particularly Mozarabic chant, and Renaissance polyphony and theory, especially in Spain. His dissertation, one of the first studies in English on the Mozarabic rite, discusses in detail the relationship of music and liturgy in the responsorial psalm tones. His *Index to the Chant of the Mozarabic Rite* (1973) is a basic research tool not only for Mozarabic specialists, but also for students of liturgy and other branches of chant.

PAULA MORGAN

Randhartinger, Benedikt (*b* Ruprechtshofen, Lower Austria, 27 July 1802; *d* Vienna, 23 Dec 1893). Austrian composer, tenor and conductor. He was educated at the Kaiserlich-königliches Stadtkonvikt in Vienna from 1813 to 1819, where he made Schubert's acquaintance. He then studied law and philosophy at the University of Vienna, while continuing to take lessons with Salieri. In 1825 he was appointed private secretary to Count Louis Széchényi, whom he served until joining the Hofkapelle as tenor in 1832. He gradually established a reputation at court as a conductor, and in 1846 became deputy court Kapellmeister. In 1862 he succeeded Ignaz Assmayer as Kapellmeister, retiring four years later.

Randhartinger's prodigious output included several symphonies and string quartets, instrumental dances, the opera *König Enzio*, about 20 masses and many choral works. Though most of his 400 songs are pedestrian efforts, the best demonstrate a sympathetic appreciation of the poetry and a sure melodic touch that owes much to his early studies with Salieri. His friendship with Schubert has been the source of some controversy. Though he may well, as he claimed, have been the first to sing *Erlkönig* (at the Stadtkonvikt in 1815), the depth of their later relationship was probably exaggerated. Certainly, many of the anecdotes he recounted to Kreissle von Hellborn for his biography do not bear critical scrutiny. After Schubert's death, Randhartinger did much to keep his songs before the public and on two occasions was accompanied by Liszt. A vocal quartet, *Ins stille Land* (1830), was dedicated to Schubert's memory.

EWAN WEST

Randle, Thomas (*b* Hollywood, CA, 21 Dec 1958). American tenor. He studied at Los Angeles and in Germany, then began his career as a concert singer. A performance in Los Angeles of Tippett's *Songs for Dov*, conducted by the composer, led to his engagement at the ENO, where he made his operatic début in 1988 as Tamino. With the Los Angeles PO he has also given the US and world premières of works by Heinz Holliger and William Kraft. In 1989 he sang in Purcell's *The Fairy-Queen* at Aix-en-Provence and appeared as Monteverdi's Orfeo at Valencia. He has sung Ferrando in Brussels and for Scottish Opera, Pelléas (1990) at the ENO, Olympion in *The Ice Break* at the Royal Albert Hall (1990) and Tamino at Glyndebourne (1991). He created Dionysus at the ENO in Buller's *Bakxai* ('The Bacchae', 1992) and in 1994 sang in the première of Peter Schat's opera *Symposion* (based on the life of Tchaikovsky) with the Netherlands Opera, in *King Priam* with the ENO and *Gloriana* with Opera North at Covent Garden. The following year he sang in the première of Tavener's *The Apocalypse* at the Proms. An excellent actor and a musical singer, he has a strong, lyrical voice with a highly distinctive timbre. His recorded repertory is mainly Baroque (*The Fairy-Queen* with Les Arts Florissants, 1989, and Handel's *Esther* under Harry Christophers, 1995) and 20th-century (Tippett's *The Ice Break* with the London Sinfonietta, 1991, Britten's *War Requiem* with the BBC Scottish SO, 1995, and Nono's *Canti di vita e d'amore* with the Bamberg SO, 1997).

ELIZABETH FORBES

Randoll, William. *See* RANDALL, WILLIAM (i).

Randová, Eva (*b* Kolín, 31 Dec 1936). Czech mezzo-soprano. After teaching mathematics and sport she took singing lessons, making her début as Eboli at Ostrava in 1962; she learnt the main mezzo roles before joining the Prague National Theatre in 1968. She became a member of the Stuttgart Opera in 1971, made her Bayreuth début as Waltraute in 1973, and later had conspicuous success there as Ortrud, Kundry, and Fricka in the 1976 *Ring* directed by Chéreau. At Salzburg in 1975 she sang Eboli under Karajan, and in 1977 made her Covent Garden début as Ortrud. Her American début was at San Francisco, followed by the Metropolitan in 1981 as Fricka. She is renowned as the Kostelnička in *Jenůfa*, which she sang in Lyubimov's production at Covent Garden (1986) and in a recording under Mackerras (1982). Other recordings include the Fox in *The Cunning Little Vixen* (1981), Ortrud under Solti (1987), Vlasta in Fibich's *Šárka* (1988) and Lola in Schreker's *Irrelohe* (1989), which evince her dark-toned, firmly sustained voice, incisive diction and characterization.

NOËL GOODWIN

Rands, Bernard (*b* Sheffield, 2 March 1934). American composer of English birth. He studied with Smith Brindle at the University of Wales, Bangor, taking the BMus

(1956) and MMus (1958) degrees, and in Italy with Vlad and Dallapiccola. In 1960 he was appointed lecturer in music at the University of Wales, continuing his own studies during visits to Germany (conducting and composition with Boulez and Maderna) and Italy (composition with Berio). His study and subsequent friendship with these three composers exerted the greatest influence on his own development as a composer, marking him apart from his British contemporaries at an early stage. By 1963 his ensemble piece *Actions for Six*, having had a stormy première under Maderna at Darmstadt, had brought him to the attention of the musical world. Awarded a Harkness Fellowship in 1966, he spent a year each at the universities of Princeton and Illinois (USA), the second of these bringing him into contact with Cage, Gaburo, Martirano, Ben Johnson and Edwin London in an environment of bold experimentalism which was to have a powerful effect on his musical thinking throughout the following decade. In 1969 he returned to his native Yorkshire as Granada Fellow in creative arts at the University of York, and after a year was appointed lecturer there, a post which he held until 1975. From 1972 to 1973 he was fellow in creative arts at Brasenose College, Oxford, where he continued his association with the poet and novelist John Wain, whose poem *Wildtrack* was a source of inspiration for a number of Rands's pieces during the 1970s.

During this period he rapidly became one of the best known of the younger British composers, composing some 20 works in five years, seven of them for large forces. There were three commissions from the BBC SO under Boulez (*Wildtrack 1*, *Aum* for harp and orchestra, *Mésalliance* for piano and orchestra), and other works including *Wildtrack 2*, *Etendre* for double bass and chamber orchestra and *Metalepsis 2* for mezzo-soprano, amplified voices and ensemble based on Wain's *Hymn to Steel* from *Wildtrack*. *Agenda*, for youth orchestra, commissioned by the Department of Education and Science for the London Schools SO, was the last of a series of pieces composed during the 1960s for young musicians. *Sound Patterns 1–4* (1967–9) use graphic and time-space notation to elicit spontaneous creativity from young players, and have been widely used in the classroom. There are similar notational devices, however, in a number of his works for professional players, including *Memo 1* (1971), composed for Barry Guy, and *Scherzi* commissioned in 1974 by the newly formed Capricorn Ensemble. Theatrical gesture also features prominently in several of the works from this period, especially in the three *Ballad* pieces on texts by Gilbert Sorrentino. *Ballad 1*, for mezzo-soprano and small ensemble, evokes the atmosphere of a nightclub and, with hints of *Over the Rainbow* woven into the musical texture, is dedicated to the memory of Judy Garland. *Ballad 2*, for female voice and piano, is a satire on the lieder recital which quotes, more overtly, from Brahms, Cage, Satie, Schumann, Christian Wolff and others.

In 1975 Rands left York for the USA, where he became professor of music at the University of California, San Diego until 1985, meanwhile establishing himself as a major figure in American musical life. While elements of music theatre and aleatory qualities remained in works such as *Memo 2* for solo trombone, inspired by Samuel Beckett's play *Not I*, other pieces displayed a new directness of musical language. A landmark in this respect is *Madrigali* (1977) for chamber orchestra, based on Monteverdi's *Madrigali di guerrieri et amorosi*, in which the harmonic rhythm is slower and the melodic gesture less extravagant than in the earlier music. Now a latent lyricism came to the fore, though still contained within a structural and textural framework indebted to the radicalism of the Italian avant garde. *Canti lunatici* (1980), a song cycle for soprano and nine instruments, brings together 15 'moon' poems by various authors (including Blake, Joyce and Arp), in a carefully symmetrical structure full of internal cross-references. Its companion pieces, *Canti del sole* (1983–4) for tenor and 11 instruments, and *Canti dell'eclisse* (1992) for bass and 11 instruments, are similarly constructed, and share with *Canti lunatici* one poem, *Ed e subito sera* by Quasimodo, which begins the trilogy, closes the cycle of sun songs and stands at the heart of the eclipse cycle. These works also exist in a large orchestral version, in which the solo vocal lines are unchanged but the instrumental context is substantially transformed.

In 1984 Rands was awarded the Pulitzer Prize for *Canti del sole*, and shortly afterwards he became professor of music at Boston University and professor of composition at the Juilliard School in New York. In 1988 he was invited to Harvard University to become the Walter Bigelow Rosen Professor of Music. From 1989 to 1996 he was also composer-in-residence with the Philadelphia Orchestra, a particularly fruitful and fulfilling association for him. His orchestral music has always been characterized by a brilliance and high level of instrumental craftsmanship, and from the mid-1980s his thinking has increasingly been directed towards orchestral forces. The two suites *Le tambourin* (1984), each comprising three short movements inspired by technical features in the paintings of Van Gogh, are almost expressionistic in their intensity, while at the same time serving as models of orchestral clarity. Deployed on a larger canvas in *... body and shadow ...* (1988) and *Ceremonial 3* (1991), this orchestral technique is allied to a majestic and lyrical rhetoric to produce music of enormous dramatic power. At the same time, Rands's attraction to words and vocal setting has found expression in the chamber choir pieces *... among the voices ...* (1988) and *Canti d'amor* (1991), using Beckett and Joyce texts respectively, the authors who have been most influential upon him. The 15 songs of *Canti d'amor* represent a further stage in Rands's development away from the radicalism of Darmstadt and towards a more straightforward, though always intelligent, directness of expression. Subtly infused with references to popular Irish melodies (*Danny Boy*, *The Last Rose of Summer*), the material of *Canti d'amor* has also spawned an orchestral piece (*Canzoni per orchestra*, 1995) which suggests that this new-found directness holds significance for the future development of his musical expression, as borne out in the Cello Concerto (1996) and *Requiescant* (1996/7) for soprano, large chorus and orchestra.

Range [compass] (Fr. *étendue*; Ger. *Umfang*). The extent of an instrument or voice, from the lowest to the highest note; the interval between those notes. 'Range' is used particularly of the human voice, and in this context may be defined in several different ways: according to common practice ('the range of the soprano part in choral writing is usually from *c'* to *a''*'); in terms of a particular composition or repertory ('the range of the Schubert lied seldom exceeds a 10th'); or according to ability ('her voice had an unusually large range, extending from *a* to *d''''*'). 'Compass' is used particularly of an instrument, or of a vocal or instrumental part.

See also AMBITUS.

JULIAN RUSHTON

Rangs (Fr.). *See* COURSES.

Rangström, (Anders Johan) Ture (*b* Stockholm, 30 Nov 1884; *d* Stockholm, 11 May 1947). Swedish composer, conductor and critic. He studied composition with Lindegren (1903–4) and with Pfitzner in Berlin (1905–6), where he had singing lessons with Hey (1905–6), continuing these latter studies in Munich (1906–7). As a music critic he worked for the *Svenska dagbladet* (1907–9), the *Stockholms dagblad* (1910–14, 1927–30), the *Dagens nyheter* (1920–21), and the *Nya dagligt allehanda* (1938–42). In the decade after 1910 he was active as a singing teacher, and he was press adviser at the Swedish Royal Opera from 1930 to 1936. He made his conducting début in 1915 and was chief conductor of the Göteborg Orchestral Society (1922–5); later he made guest appearances with various orchestras. He was a founder of the Society of Swedish Composers (1918).

Rangström, whose music was deeply rooted in poetic and programmatic ideas, was stylistically one of the last heirs of the Swedish Romantic tradition. He also absorbed in his music traits from Baroque music as well as neoclassicism. It was after his period in Germany that he developed many of the characteristic features of his work: in particular, its primarily homophonic structure and sculpturally clear-cut form. In the symphonic works and operas these tendencies resulted in a kind of episodic collage-form (in which, for example, strongly rhythmic passages are juxtaposed with broad cantilenas), but he achieved concentrated passages of intense expression and pregnant form in the smaller works and in the incidental scores. Only in a few pieces did he attempt a polyphonic technique. Rangström is regarded as one of the most important Swedish song composers, showing a thorough knowledge of the expressive resources of the voice and influenced by Hey's theory of song as emerging from the spoken language. His settings were based on what he termed 'speech melody', a technique of deriving the vocal line from the intonation of an expressive reading. His reading of the texts was close to analytic, combined with a highly developed sense of lyrical as well as psychological nuances. Many of his songs are recitative-like, but there are also numerous exquisitely formed simpler pieces; particularly during the 1930s and 40s he produced several dramatically intense songs, somewhat in the manner of a free operatic arioso.

AXEL HELMER

Ranieri [Renieri], **Giovanni Simone** ['Mi fiolo'] (*b* Piedmont, 1590–92; *d* Naples, 1649). Italian composer and singer. In 1601 he was a boy soprano at the SS Annunziata, Naples. His voice broke in 1605, and Macque took charge of his instruction at the royal chapel. In 1609 he entered the chapel officially as a tenor. Dedicating his 1617 collection to Ascanio Carrafa he thanked him for making him *maestro di cappella* of Spirito Santo and its convent. In 1621 he was dismissed in the organizational reform of the royal chapel introduced by the viceroy, Cardinal Zapata. In an appeal to Philip IV of Spain for reinstatement he cited his long faithful service, his compositions and the fact that he had been *maestro di cappella* of several Neapolitan churches. He was readmitted to the chapel in 1624 and remained there for the rest of his life, except for an unauthorized visit to Lecce in May 1645. His villanellas all have two sections and generally four stanzas of three, four or six lines and are without refrains. Ranieri advised that they would sound better the faster they were sung.

KEITH A. LARSON

Ranieri, Salvador (*b* Arena, 19 Oct 1930). Argentine composer and clarinettist of Italian birth. He settled in Argentina in 1947. He studied clarinet with Ruggiero Lavecchia, composition with Juan Francisco Giacobbe, and piano with Dora Castro. He studied electronic music with Kroepfl at the De Tella Institute (1969–70), and in 1972 he furthered his studies in composition with Petrassi at the Conservatorio di S Cecilia in Rome. A prolific composer, his numerous symphonic and chamber works have won national and international honours, including the Wieniawski and Cristóbal Colón Prizes. Since 1990 he has been president of the organization Compositores Unidos de la Argentina. He was also a member of the Comisión de Música Sinfónica y de Cámara de la Sociedad Argentina de Autores y Compositores de Música (SADAIC), which awarded him its Grand Prize in 1989. As a concert clarinettist he has performed with major ensembles in Argentina. Ranieri's style has been described as leading 'to his dramatic inner world with deep, human vibration. He intends to reflect today's human loneliness. His is a tense, unmistakable style.'

WALTER AARON CLARK

Ranish, John Frederick (*b* 1692–3; *d* Cambridge, 13 March 1777). English flautist, oboist and composer, probably of east European origin (to judge by his name). The subscription list to his first set of sonatas for flute and continuo (London, *c*1735) contains 71 names, including the Musical Society at Cambridge and about 30 names associated with Cambridge colleges, suggesting that by that date he had lived long enough in the city to have achieved considerable standing as a musician. His obituary (*Cambridge Chronicle and Journal*, 15 March 1777, in a column headed 14 March) states: 'Yesterday died

aged 84, Mr Ranish, many years an eminent teacher and performer on the German flute in this town. He always supported the character of a gentleman, and was respected by all that knew him'. For illustration *see* HELLENDAAL, PIETER; in this engraving Ranish is depicted playing the oboe. He also appears as a flautist in J.T. Heins' painting, *A Musical Party at Melton Constable* (1734).

His known works comprise two sets of flute sonatas: op.1 (eight works) was dedicated to Jacob Astley; op.2 (12 works) was published in 1744. Ranish's sonatas are excellently written for the instrument, not difficult but effective, and although they do not possess much individuality they maintain a level of musical substance and do not resort to virtuoso padding. The layout of movements is fairly consistent throughout, being generally: 1. slow (Adagio, Andante etc.); 2. Allegro; 3. Giga or Minuet (sometimes both are included). In op.1 several sonatas have a slow movement between 2 and 3. The flute writing in the second set is rather more virtuoso, many pieces including short ad lib cadenzas for the soloist.

RICHARD PLATT

Ranisius [Ranisien], **Sigismund** (*b* early 17th century; *d* after 1653). German amateur composer and organist. In his publication of 1652 he stated that he received his first musical instruction from Heinrich Steuccius in the early 1630s (presumably in Naumburg, where Steuccius was living at the time). He was organist at the parish church at Pirna from 1639 to 1645. In his 1652 collection he described himself as a musical dilettante; and indeed from 1648 to 1653 he worked as a lawyer at Cottbus. The 1652 collection contains 16 sacred concertos for one to five voices and continuo, and some include obbligato parts for strings too. The final piece is an arrangement of Rovetta's *Anima Christi*, with a German text, to which he added three instrumental parts to the four vocal parts of the original, and composed an introductory sinfonia. Connections with Italian music or musicians are also suggested by the presence of Ranisius's motet *Veni, Sancte Spiritus* in a manuscript (*D-Bsb*) which consists mainly of motets by Monteverdi, Alessandro Grandi (i), Rovetta and other Italians. In this piece Ranisius cleverly exploited the contrasting timbres of the three voices, two violins, two flutes and continuo; it also includes some effective contrapuntal writing and shows a good sense of form. In his 1652 book Ranisius promised seven further publications: they were to include another set of sacred concertos and compositions for lute, organ and harpsichord but apparently none of them materialized.

WORKS

Zu dem allerheiligsten Lobe und Ehren Gottes ... Sprüche, Lieder und Psalmen, 1–5vv, insts, bc (Dresden, 1652); 1 piece, 4vv, ed. in Ameln, Mahrenholz and Thomas, 217

Veni, Sancte Spiritus, 3vv, 4 insts, in 1649[6]; also in *D-Bsb*

Sacred song, S, bc, in Geistliche Zion (Guben, 1674)

A. LINDSEY KIRWAN

Rank. In modern organ terminology, a complete set or row of pipes, usually of the same type, controlled by one stop-knob. Many kinds of stop have more than one rank, notably the compound or MIXTURE STOP; but so have some non-compound stops, such as the several undulating Piffaro stops of the 18th and 19th centuries, or the Principal/Diapason stops frequently doubled in the treble during the 15th–17th centuries. In English sources, 'ranks' was a term usually applied to the rows of pipes in a compound stop such as Sesquialtera or Cornet (e.g. the Talbot MS, *GB-Och* Music 1187, *c*1695; the Henry Leffler MS, *c*1810 (private collection); E.J. Hopkins, *The Organ*, 1855); 'stoppes or setts of pipes' (York Minster, 1632) and similar phrases were more usual for 'ranks' in a general sense.

See also ORGAN STOP.

PETER WILLIAMS

Rankett (i) (Ger.). *See* RACKET.

Rankett (ii) (Ger.). *See under* ORGAN STOP.

Ránki, Dezső (*b* Budapest, 8 Sept 1951). Hungarian pianist. He began piano lessons when he was eight, later studying with Klára Máthé at the Budapest Conservatory (1964–9) and with Pál Kadosa and Ferenc Rados at the Liszt Academy of Music (1969–73). In 1969 he won the Schumann International Competition, Zwickau, which led to appearances in Europe, the USA and Japan. He was awarded the Liszt Prize in 1973. His playing is notable for its unsentimental lyricism, rhythmic vitality and secure sense of style; his favoured repertory includes Mozart, Beethoven, the 19th-century Romantics and Bartók (he contributed substantially to the complete Hungaraton recording of Bartók's works). His appearances at international festivals have included those at Antibes, Helsinki, Lucerne, Menton, St Moritz, Paris, Prague and the Carinthian Summer Festival, where he played the solo piano part in Bernstein's *The Age of Anxiety* in 1975. He often plays in duet with Zoltán Kocsis. In 1976 he was appointed professor of the piano at the Liszt Academy of Music.

PÉTER P. VÁRNAI/JESSICA DUCHEN

Ránki, György (*b* Budapest, 30 Oct 1907; *d* Budapest, 22 May 1992). Hungarian composer. He studied composition with Kodály at the Budapest Academy of Music (1926–30) and was later concerned with folk music, working with Lajtha at the Museum of Ethnography in Budapest, and with composing for the theatre and cinema. For several years he was in London and Paris (at the Musée de l'Homme), studying Asian folk musics. He directed the music section of Hungarian radio in 1947–8, after which he gave his attention to composition.

Ránki's gift for the grotesque and unusual, the colourful and humorous, may be traced in part perhaps to his studies of non-Western music. His greatest successes have been stage works, above all the opera *Pomádé király uj ruhája* ('King Pomádé's New Clothes', based on the Andersen story), which draws most of its material from Hungarian folk music. South Asian influences are particularly evident in *Pentaerophonia* for wind quintet, which imitates gamelan effects. In some works he makes use of the Fibonacci series, following (presumably) Bartók; an example is the fantasy *1514* for piano and orchestra, which was based on wood carvings by Derkovits.

F. ANDRÁS WILHEIM

Rankl, Karl (*b* Gaaden, nr Vienna, 1 Oct 1898; *d* Salzburg, 6 Sept 1968). British conductor and composer of Austrian birth. He studied music in Vienna as a private pupil of Schoenberg and later of Webern. His first conducting appointment was at Liberec (1925), followed by Königsberg (1927) and the Kroll Oper in Berlin (1928–31), where he was associated with Otto Klemperer's advocacy of modern music. After a spell at Graz, he was appointed in 1937 director of the Neues Deutsches Theater in Prague, where in 1938 he conducted the first performance of Krenek's *Karl V*. At the outbreak of war he took refuge in England and became a British citizen.

Rankl's experience made him the right man to organize, as musical director, the new establishment of opera at Covent Garden set up in 1946. He recruited a company of British singers and persuaded international singers including Schwarzkopf, Welitsch and Silveri to join it and perform a wide repertory of German, Italian, Russian and English opera. By 1951 he had made the Covent Garden Company a going concern, but had also revealed, notably in his 1950 performances of the *Ring*, his limitations as a conductor – he was considered difficult with singers, orchestras and producers. He resigned and in the following year, 1952, became conductor of the Scottish National Orchestra, with which he remained for five years. In 1958 he accepted the post of director of the proposed Sydney Opera, but because of the delay in the completion of the opera house he never had the chance to take up the appointment.

His opera *Deirdre of the Sorrows* (based on J.M. Synge's play) won one of the prizes offered by the Arts Council for the Festival of Britain in 1951, but was not produced. He continued to compose symphonies, eight in all, which however, like his string quartet (first performed at Graz in 1936), remain unpublished.

FRANK HOWES

Ranlequin de Mol. *See* RAULIN.

Rans [Ranst], **van** [de] [Vanrans, Vanrrans]. The name of a number of Flemish musicians, active in Mechelen and Brussels in the 16th and 17th centuries. It is assumed that they were related.

Philips [Philippe] van Rans (i) (*b c*1541; *d* 17 Oct 1628) was a town musician at Mechelen from 1559 to 1572; about 1583 he became a bassoon player at the Brussels court. He was described as 'premier maistre joueur de fagot', which suggests that he may have been one of the first bassoon players in the south Netherlands. At the beginning of 1605 he was in receipt of a pension; references to a musician of that name in and after that year must therefore be to Philips van Rans (ii), who was active until at least 1628.

Aert van Rans, an instrumentalist, was a town player at Mechelen from 1570 to 1573.

Nicolas (de) Rans (i) (*b* before 1548) composed music for the lute. Dances by him survive in print and manuscript (RISM 1568[23], 1573[24] and *IRL-Dm* Z.3.2.13; see Ward; 1 ed. J. Bacher, *Alte Tänze für Laute*, Kassel, 1939, no.4).

Philips [Philippe] van Rans (ii) (*d* after 1628), Nicolas van Rans (ii) and Gaspar [Jaspar] van Rans (*d* 23 Dec 1641) were instrumentalists and regularly listed as 'ministril' in the accounts of the Brussels court chapel, 1605–18. They received payment for extra services in 1605 (including playing at the dance festivities in honour of the English ambassadors) and in 1611, at the official mourning at Brussels for Queen Margaret, wife of Philip III of Spain.

Aureliano van Rans was a singer attached to the Brussels court from 1641 to 1673.

Nicolas van Rans (iii) (*b* before 1640; *d* 1693) was an organist at St Jacques-sur-Coudenberg, Brussels, from 1653 to 1693 and was in the service of the Brussels court by 1655, probably as a singer. In 1684 he was assistant *kapelmeester* and in 1686 *kapelmeester*. A *Missa pro defunctis* ascribed to 'Van Ranst' (in *B-Bc*) is probably by him.

GODELIEVE SPIESSENS

Rant. A lively country dance. In contemporary English and Scottish folkdance it is a variety of the polka step in an anacrusic 6/8 or 2/4 rhythm which is hopped or skipped. Examples may be found in *The Scottish Country Dance Book* (vols. vii, x, xii) and in Douglas Kennedy's *English Country Dances of Today* (1948).

The term is first encountered in mid-17th-century instrumental publications by John Playford. A 'French Rant', an 'Irish Rant' and an 'Italian Rant' occur in his two volumes of lessons for the cittern and gittern of 1652, and a 'Porters Rant' in his *Musick's Recreation on the Lyra Viol* of the same year. Four are included in the 1657 and 1665 editions of his *The Dancing Master*, which included a supplement of 'Select New Tunes & Jiggs for the Treble Violin'. Two 'new' rants by Thomas Gibbes are printed in Playford's *Courtly Masquing Ayres* (1662) and there are others in his later instrumental publications. Matthew Locke included a rant in his *Melothesia* (1673) and dance-tunes entitled 'rant' continued to appear throughout the 18th and 19th centuries. Roger North (*Memoires of Musick*, 1728) wrote that John Jenkins composed many rants (several are in *GB-Lbl* Add.10445, all with the time signature ₵ which is usually associated with jigs and other vigorous dances). However, the assertions made by Rimbault and, hence, by Pulver and others that Jenkins wrote the 'Mitter Rant', 'Peterborough Rant' and 'Fleece Tavern Rant' are unsubstantiated (see J. Wilson: *Roger North on Music*, 1959, p.345, footnote 97). Several rants are extant in 17th-and 18th-century manuscripts of Scottish provenance (e.g. *GB-Lbl* Add.29371). Others are listed in J. Ward's 'Newly Devis'd Measures for Jacobean Masques' (*AcM*, lx, 1988, pp.111–42).

The suggestion that the word 'rant' is derived from the popular 17th-century dance the 'courant' is probably erroneous; the Oxford English Dictionary, and Scottish and English dialect dictionaries, all present definitions and usage involving vigorous dancing and singing. Ward (op. cit.) argued that it is misleading to describe the rant as 'a country dance of the jig variety emanating from the Scottish lowlands and northern England' (*Grove6*), preferring to classify it not as a type of dance but as a term 'expressive of character'. While the origins of the term as well as of the dance steps (if indeed they ever existed) are obscure, the existing musical examples are for the most part in binary form and in either simple duple or compound triple rhythm. Musically they are sprightly tunes that would certainly sustain vigorous dancing. Moreover, in the printed publications most appear together with other country dances.

The character of the rant (rightly or wrongly) is alluded to in the oft-quoted passage from Mrs Centlivre's play *The Platonick Lady* (1707), when, mistaking the dancing-master's request for a courant for a request for a rant, Mrs Dowdy says 'Hy, hy, do you call this dancing? ads heartlikins, in my thoughts 'tis plain walking: I'll shew you one of our country dances; play me a jig'.

MURRAY LEFKOWITZ

Ranta, Sulho (*b* Peräseinäjoki, 15 Aug 1901; *d* Helsinki, 5 May 1960). Finnish composer and teacher. He took the MA at Helsinki University in 1925 and studied composition in Helsinki (with Melartin) in 1921–4, in Berlin, Vienna (with Willner) and Italy in 1926, and in Berlin and Paris in 1930. Back in Finland he was active as a theatre conductor, teacher and music critic, also writing and editing textbooks on the theory and history of music, such as *Musiikin valtateillä* ('Essays on Music', Porvoo, 1942). From 1936 to 1956 he was vice-rector of the Sibelius Academy, Helsinki. As a composer he was one of the first to introduce into Finland such trends as Impressionism, Expressionism and the use of exotic materials (in his own work he drew on the music of China, Japan and various Finnish regions). But his composing was hindered by his diverse other activities and by the undeveloped state of Finnish culture in the 1930s and 40s, his most creative period. His best work is in the small-scale songs and chamber pieces.

ERKKI SALMENHAARA

Ranz des vaches (Fr.). A Swiss mountain melody sung or played on an alphorn by herdsmen in the Alps to summon their cows. The term is interchangeable with the German *Kuhreigen* or *Kuhreihen*. About 50 melodies survive, characterized by their improvisatory nature and reiterated short phrases with changes of tempo and accent. Theodor Zwinger quoted an example in his chapter 'De pothopatridalgia' on the effects of nostalgia (*Fasciculus dissertationum medicarum*, Basle, 1710); another was reproduced in J.-J. Rousseau's *Dictionnaire de musique* (Paris, 1768/*R*; Eng. trans., 1771), with the comment that the *ranz des vaches* 'was so generally beloved among the Swiss [mercenaries], that it was forbidden to be play'd in their troops under pain of death, because it made them burst into tears, desert or die, whoever heard it; so great a desire did it excite in them of returning to their country'. Surviving texts for the melodies are rare; Viotti is reported to have heard one performed in Switzerland by a woman singing in unison with an alphorn (see the texted Gruyère *ranz* in A.H. King: 'Mountains, Music and Musicians', *MQ*, xxxi (1945), 395–419). An early printed example of the famous Appenzell *ranz* melody occurs in Rhau's first book of *Bicinia gallica, latina, germanica* (RISM 1545[6]), where it begins with the words 'Lobet, o lobet' (from *loba*: 'cow'; hence *Lobetanz*); Meyerbeer used the same melody in his opera *Dinorah* (1859), and it also appears in the overtures to Grétry's and Rossini's operas *Guillaume Tell* (1791 and 1829). The lilting shepherd's piping that opens the last movement of Beethoven's Pastoral Symphony (1808) is directly modelled on the Rigi *ranz*; other more stylized imitations of the *ranz des vaches* occur in the 'Scène aux champs' in Berlioz's *Symphonie fantastique* (1830), Schumann's *Manfred* (1848–9), Liszt's *Album d'un voyageur* (1835–6) and at the beginning of the third act of Wagner's *Tristan und Isolde* (1865).

RAO [Russian Authors' and Composers' Society]. *See* COPYRIGHT, §VI (under former USSR).

Ex.1

Raoul de Beauvais (*fl* ?mid-13th century). French trouvère. He was from the region north and east of Paris. His songs appear only in sources containing the main trouvère repertory, and they are usually grouped with the works of poets active about the mid-13th century. Three of the six poems attributed to him are also attributed to Jehan Erart, but the confusion in this case seems to stem from the sources, and it is likely that all six are the work of Raoul. Although he appears to have composed few songs, and even these were not widely known, they show a refreshing variety of both poetic and musical form. Two of the six are *pastorelles*, and all employ some kind of refrain. *Deles un pre verdoiant* (ex.1, from *F-Pa* 5198, pp.208–9) exhibits characteristically imaginative handling of form. While the verse proceeds in paired lines with open cadences (on *b* or *d′*) in every line but the last (line four), the refrain (line five) is three lines long and employs closed cadences (on *c′* or *e′*) exclusively. This contrast is thrown into relief by the melodic similarity between the opening phrases of the verse and refrain, thus producing both a melodic and tonal symmetry.

ROBERT FALCK/JOHN D. HAINES

Raoul de Ferrières (*fl* 1200–10). French trouvère. A member of the Norman nobility from the département of Eure, he is named in a donation of 1209 to the Abbey of Noé. Among the 11 chansons ascribed to him, the most important is *Quant li rossignols* – probably the song of that name mentioned by Johannes de Grocheo as a cantus coronatus. (There is a conflicting ascription to the Chastelain de Couci.) It is in bar form, as are all the melodies except two readings of *Si sui du tout a fine Amour*, which may be late modifications. It begins at the upper octave and flows downwards, establishing a firm centre on *d* before concluding. The majority of melodies attributable to Raoul are in the D modes, while three are in the authentic G mode. There is a similar lack of variety in the poetic construction; with only one exception the first eight lines of all strophes rhyme *ABABBAAB*. Most are octosyllabic throughout, though *Quant ivers* and *Quant li rossignols* are heptasyllabic, and the contested *Quant il ne pert* has alternate eight- and seven-syllable lines. No melodies survive in mensural notation, and hints of regular rhythmic organization are at most sporadic.

THEODORE KARP

Raoul de Soissons (*b* ?1210–15; *d* 1270, or shortly thereafter). French trouvère. The second son of Count Raoul le Bon of Soissons, he became Sire de Coeuvres in 1232. He took part in three crusades, the first led by Thibaut IV in 1239. During his ensuing stay in Cyprus, Raoul married Queen Alix, thus becoming a claimant to the Kingdom of Jerusalem. He returned to France after 1243, but took up the crusade led by Louis IX (1248–54). In 1270 he embarked on the second crusade led by the French king. Since nothing further is known of him, it is assumed that he died on that venture. Raoul exchanged a jeu-parti (R.1393) with Thibaut IV, and dedicated *Rois de Navare* to him. In turn, Raoul's name appears in three envois by Thibaut (R.741, 1811 and 2095). He was the judge of a jeu-parti between Henri III, Duke of Brabant, and Gillebert de Berneville (R.491). In addition to R.1393 (of possible joint authorship), seven chansons are attributed to Raoul in various manuscripts, all but *E, cuens d'Anjou* being contested by other attributions, including four works (R.1267, 1978, 2063 and 2107) ascribed also to THIERRI DE SOISSONS, who may be identifiable with Raoul. The ascriptions of R.130 and 1885 to Raoul are undoubtedly erroneous. *Chançon m'estuet* and *Rois de Navare* each served as model for two others; *Quant voi la glaie* was particularly appreciated and provided the model for five other works. Three of Raoul's works comprise isometric, decasyllabic strophes, while the remainder are heterometric, using heptasyllabic lines mingled with shorter ones. All melodies are in bar form: *Quant voi la glaie* is unusual for the repetition (*DEFG DEFG*) constituting the cauda. No melodies survive in mensural notation, and there is no clear evidence of symmetrical rhythmic organization.

THEODORE KARP

Raoul le Vavasseur. *See* RAULIN DE VAUX.

Raoux. French family of brass instrument makers. They were noted especially for their hand horns, which they raised to a standard of design and workmanship rarely equalled in the history of the horn. The family business probably flourished from the late 17th century onwards (a trumpet 'Fait par Raoux seul ordinaire du Roy près de l'odiance du ministre à Paris, 1695' is mentioned by Chouquet, no.585), but the family's reputation rests on three members.

Joseph Raoux (*b c*1725; *d* Paris, before 1800) was established as a maker before 1759, for in that and the following year his name appears as a teacher of the horn in *Le tableau de Paris* (together with that of Carlin, another well-known maker of hunting horns). In 1776 Raoux's son Lucien-Joseph Raoux (*b* Paris, 1753; *d* Paris, 1821) left independent premises in rue Mercier to join his father, who moved shop from rue du Petit Lion (now rue Tiquetonne) to rue Froidmanteau (Place du Louvre), the address from which the name of Raoux achieved international renown. It is unlikely that Joseph continued to take an active part in the business after about 1794.

About 1780 Joseph Raoux brought out an improved version of the Hampl-Werner *Inventionshorn* with fixed mouthpipe and centrally inserted crooks in the keys of D, E♭, E, F and G (the most usual keys for solo playing). This instrument was accordingly known as the *cor solo* and was adopted by its designer Thürrschmidt and many leading virtuosos including LeBrun, Palsa, Punto and Puzzi. A pair of silver *cors solo* played by Thürrschmidt and Palsa attracted considerable attention at a London Salomon concert in 1786; the following year four in brass were ordered by the court at Trier. In 1794 the firm moved to 8 rue Serpente, where it remained until it was sold in 1857. In 1798 Lucien-Joseph made the *cor solo* presented to Dauprat by the Conservatoire. It is now in the Musée de la Musique and is of brass with silver mounts. Many of Lucien-Joseph's instruments have survived, both *cors solo* and terminally crooked *cors d'orchestre*; all show the highest order of workmanship.

The family business was taken over by Lucien-Joseph's son, Marcel-Auguste Raoux (*b* Paris, 21 Aug 1795; *d* Paris, 3 June 1871), who was both a performer and a maker. He entered the band of the imperial guard in 1813, and was reputed to have studied with Dauprat. After military service he joined his father in the workshop. In 1822 he was appointed second horn in the Théâtre-Italien and later first horn (a post which he held until his retirement in 1856). Gounod dedicated his *Six mélodies* for horn and piano (*c*1840–8) to him. In 1839 Raoux won an Exhibition silver medal for a *cor d'orchestre* and in 1844 and 1849 gold medals (in 1849 he became the first brass instrument maker to be awarded the title of Chevalier de la Légion d'honneur). After becoming involved, like many other Parisian instrument makers, in litigation with Adolphe Sax, his disillusionment was so great that he sold out to J.C. Labbaye in 1857. Marcel-Auguste fully maintained the Raoux tradition of superlative workmanship, and his hand horns, modernized by valves, were in great demand in France and England until supplanted by the coarser but more powerful German instrument. A fine *cor solo* by him, formerly owned by Puzzi, is now in the Victoria and Albert Museum.

For illustration *see* HORN, fig.7*b*.

HORACE FITZPATRICK/R

Rap. A predominantly African-American musical style that first gained prominence in the late 1970s. It is characterized by semi-spoken rhymes declaimed over a rhythmic musical backing, drawn from the sampling of pre-existing recordings and the use of DJ mixing techniques.

1. To 1985. 2. 1985–9. 3. 1990 onwards.

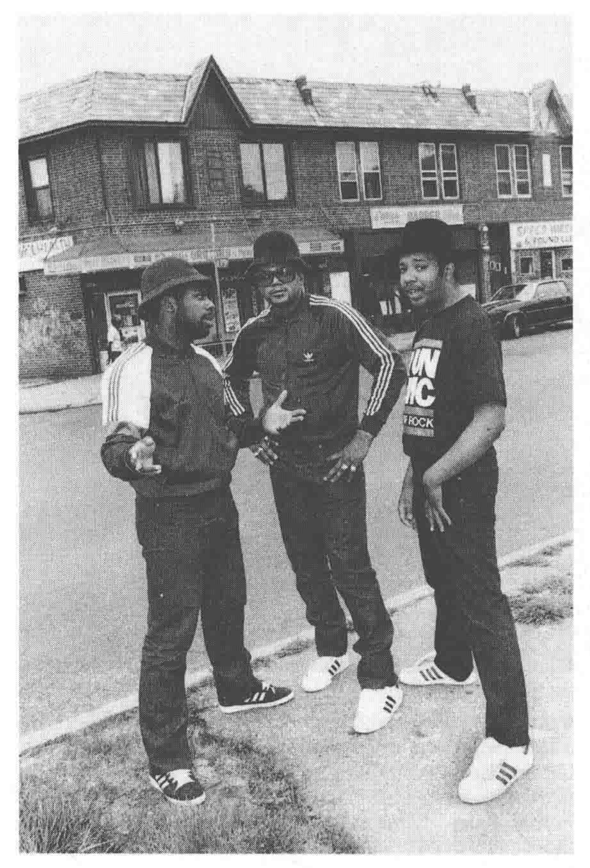
1. To 1985. Rapping first came to public attention in 1979 with the popularity of the Sugarhill Gang's single, *Rapper's Delight*, although there were many African-American antecedents for the style. In the late 1960s and early 70s, militant black poetry collectives such as the Last Poets in Harlem, New York and the Watts Prophets in Watts, Los Angeles had combined their poems with jazz or African-style percussion as a way of reaching a broader audience. Their lead was followed by Gil Scott-Heron, who matched radical polemic with soulful jazz backings. Other historical sources for rap could be found in black comedians like Pigmeat Markham and Moke and Poke, the fluid patter of jazz and rhythm and blues radio disc jockeys such as Dr Hep Cat, Dr Daddy-O and Douglas 'Jocko' Henderson, or the spoken soul raps of Isaac Hayes, Dr. Horse, Millie Jackson and Barry White.

Vernacular traditions had grown out of the valuation of linguistic competence within black American society. These included competitive verbal games such as the 'dozens', which traded humorous and sometimes surreal insults back and forth until one contestant conceded defeat, or the spoken narratives known as 'toasts', often

1. *Gil Scott-Heron*

stories about tricksters, folk heroes and historical events. Although the verbal fluency of African-American culture could be traced back to griot, or praise singing, traditions and other lyric forms of West Africa, the style of rapping that developed out of New York HIP HOP was distinctly different for its integration of words and music.

Hip hop began in the mid-1970s. A Jamaican born DJ named Kool Herc began playing the percussion or 'break' sections of funk records at Bronx parties in New York. As a reaction against the upmarket, exclusive appeal of disco, his choice of music made an immediate impact on young blacks in the Bronx. Other aspiring DJs realized that they owned similar records: Afrika Bambaataa and Grandmaster Flash became figureheads for hip hop culture, Bambaataa for his leadership qualities and inventive selections of music, and Flash for his technical inventions of collaged mixes and percussive SCRATCHING.



MCs, or rappers as they became known, had been added by DJs in order to present a more exciting and professional show to volatile audiences. Inevitably, as they developed their art, the rappers became a focal point of events held in school gymnasiums, clubs and parks. Although DJs, dancers and graffiti artists were considered as equal participants within hip hop culture, the release of the first rap records in 1979 shifted the balance in favour of vocalists. Few of the earliest hip hop stylists, including Grandmaster Caz, Jimmy Spicer, Spoonie Gee and Lovebug Starsky, managed to build a career that matched their unsung influence on later events. Soloists such as DJ Hollywood and Eddie Cheeba faded quickly from the scene, but their radio-DJ style of delivery inspired Kurtis Blow, the first solo rapper to be signed to a major label.

With the 1979 release of the first two rap records, the Fatback Band's *King Tim III (Personality Jock)* and the Sugarhill Gang's *Rapper's Delight*, many groups and soloists released recordings. Sylvia and Joe Robinson's Sugarhill Records in New Jersey, and Bobby Robinson's Enjoy label in Harlem, dominated the first era of rap recordings with energetic singles by Funky Four Plus One More, Sequence, the Treacherous Three and the Crash Crew. The most significant changes in hiphop style came from three releases: Afrika Bambaataa's all-electronic *Planet Rock* (Tommy Boy, 1981), which launched the trend of electro; Grandmaster Flash's *Adventures of Grandmaster Flash on the Wheels of Steel* (Sugarhill, 1981), which demonstrated the montage techniques of the hip hop DJ; *The Message* (Sugarhill, 1982), an indictment of inner city life by Grandmaster Flash and the Furious Five.

The lyrics of *The Message* set a new agenda for rap. The majority of raps composed before 1982 had been light hearted and self-aggrandizing, but after *The Message* a new tone of realism was established, typified by recordings such as Run DMC's *Hard Times*, *Criminal Minded* by Boogie Down Productions and Rammelzee's *Beat Bop*.

2. 1985–9. In 1985 a new wave of rap artists achieved prominence far outweighing the transitory success of the so-called 'old school'. Leading the field were those managed by entrepreneur Russell Simmons: Run DMC, L L Cool J and the Beastie Boys. Innovative producers such as Marley Marl, Full Force, Prince Paul and Rick Rubin emerged during this period, giving rap a harder, minimalistic sound. Rhymes during the mid-1980s were characterized by wars of words, whose answer-record scenario emphasized the historic significance of verbal contests like the 'dozens'. These contests were either personal, as between UTFO, the Real Roxanne and Roxanne Shante, or L L Cool J versus Kool Moe Dee, or they were territorial battles between New York boroughs. High standards were set for aspiring newcomers by the rhythmic virtuosity and verbal compexity of rappers like Rakim, whose partnership with DJ Eric B proved to be a continuing influence on later generations.

With Run DMC's partnership with Aerosmith for *Walk This Way* (1986), hip hop was accepted by MTV's satellite

2. Run DMC

broadcasting. Rap package tours were staged in stadiums, Hollywood films disseminated the music to cinema audiences and acts like DJ Jazzy Jeff and the Fresh Prince, Kid 'N Play, the Fat Boys and Salt 'n' Pepa appealed to pop listeners. Despite the success of pop rap, the medium was changing from party music to a serious vehicle of expression for young blacks. This process created a diversification of subject matter and tone of lyrics, ranging from KRS-1's 'Edutainment' raps to the Black Muslim inspired *Pure Righteousness* of Lakim Shabazz.

Chuck D's writing for Public Enemy was an intense assault upon institutionalized racism, counterbalanced by the court jester of the group, Flavor Flav, who answered Chuck D's polemic with exhortations filled with obscure slang. Regional styles asserted themselves as rap spread from the New York boroughs to other American states. As a means of using language within a popular music form, rap also appealed to disaffected youths in other countries, gaining ground particularly in Britain, France, Germany, Holland, Canada and Japan, though also spreading to China, India, Thailand, Scandinavia and parts of Africa.

The collectively interlocking vocal technique of rapping pioneered in the mid-1970s by Grandmaster Flash and the Furious Five, later by the Cold Crush Brothers, became a template for group rapping. In the late 1980s, their call-and-response could be heard in dynamic releases by UltraMagnetic MC's, Stetsasonic and NWA. NWA's first recordings, released in 1988, were inflammatory chronicles of gang life in Compton, Los Angeles. Sold on the strength of its word of mouth reputation rather than by radio play and television exposure, NWA's debut album, *Straight Outta Compton* (1988), proved that rap had become a multi-million dollar industry, strong enough to thrive without total dependence on the mainstream entertainment business.

The success of California based rappers such as Ice-T, Too Short, NWA and ex-NWA member Ice Cube challenged New York's pre-eminence in hip hop. As the subject matter of rap grew to be increasingly violent, materialistic and misogynistic, a reaction against this trend surfaced in New York, pioneered by the Jungle Brothers and De La Soul. Later forming the Native Tongues coalition with Queen Latifah, Monie Love and A Tribe Called Quest, these groups experimented with musical form and rapped in a thoughtful, reflective and humorous style that appealed to college radio listeners as well as the core rap audience. Long Island trio De La Soul's *3 Feet High and Rising* album (Tommy Boy, 1989), was particularly successful in both commercial and creative terms. Conceived as a series of skits by the group and their producer, Prince Paul, the album sampled fragments from a remarkable range of musical sources, ranging from the Detroit Emeralds and Johnny Cash to Otis Redding and the Turtles.

Failure to obtain permission for the use of a fragment from a record by the Turtles led to an expensive out-of-court settlement being imposed on the record label. This highlighted the increasingly contentious issue of SAMPLING in rap, the practice of using digital technology to capture small sections of existing records, then looping

3. De La Soul

these fragments to form the basis of a new musical track. Producers such as DJ Mark, the 45 King, had become experts in discovering obscure records from the past and transforming them into music that combined the spontaneity of the old with the technological impact of the new.

3. 1990 ONWARDS. As well established and lucrative in the 1990s as heavy metal, rap courted controversy on a number of fronts. Many musicians considered sampling to be an unmusical form of theft; the violent tenor and profane language of GANGSTA RAP lyrics were provoking calls for restraint from within and without the hip hop community; brutal misogyny endemic within many rap rhymes was giving strength to voices of censorship that included Tipper Gore's Parents' Music Resource Centre, a variety of politicians, black church groups, music retailers and the police. The obscene lyrics of the Miami group 2 Live Crew precipitated contradictory rulings through a number of court actions in Florida, while NWA's *Efil4Zaggin* (1991) was unsuccessfully prosecuted for obscenity in Britain. Even the most innocuous rap lyrics could be implicated in moral panics of the day, as when Tone Loc's *Wild Thing* was linked spuriously to the gang rape of a jogger in New York's Central Park.

Although few hip hop acts aligned themselves unequivocally to one camp, rap was now dividing into a number of opposing viewpoints. Alongside the MTV-friendly pop rap of Vanilla Ice and MC Hammer sat the positivism of Arrested Development, Queen Latifah, Dream Warriors and Disposable Heroes of Hiphoprisy. There was also the bohemian jazz rap of Gang Starr and Digable Planets, the experimentalism of New Kingdom and Gravediggaz, and the 'G-Funk' and Gangsta rap of Snoop Doggy Dog, Ice-T, Tupac Shakur, Dr Dre, Warren G and Tha Dogg Pound. Of all these disparate directions, Wu Tang Clan's 1993 debut, *Enter the Wu-Tang (36 Chambers)*, represented a consolidation of the music's potential with Wu-Tang Clan building an impressive empire of solo artists, group efforts and related business ventures.

Despite considerable global success enjoyed by the Fugees, a group whose positivism seemed to have grown from the Afrocentric, didactic rap of Arrested Development, a more malevolent mood prevailed. Bitter rivalry had flared between the East and West coasts of America, with artists represented by rival entrepreneurs Sean 'Puffy' Combs' and Suge Knight trading vicious threats and insults through the lyrics of their records. This war of words culminated in the fatal shootings of two of rap's biggest stars, Tupac Shaker and the Notorious B.I.G., plunging hip hop into a mood of crisis.

While artists such as DJ Shadow discarded rapping, returning to the turntable skills of Grandmaster Flash and Grandmixer D.ST to create instrumental music based around arcane samples, others looked back nostalgically to the 'old school', when hip hop seemed more innocent, less mired in a labyrinth of big business, gang rivalry and actual, as opposed to fantasized, violence. The nostalgia obscured hip hop's surprising longevity, however, along with its phenomenal commercial success, its continuing capacity to reinvent itself during periods of stagnation and its role as the voice of successive generations of young African-Americans.

DAVID TOOP

Rapee, Erno (*b* Budapest, 4 June 1891; *d* New York, 26 June 1945). American conductor, arranger and composer of Hungarian birth. He graduated from the National Conservatory in Budapest in 1909, then worked as a conductor at the Dresden and Kattowitz opera houses. After touring Mexico and South America performing as a pianist he became director of the Hungarian Opera Company in New York (1912). In 1917 he was appointed conductor at the Rialto Theater (the first New York film theatre with a symphony orchestra) and later at the Rivoli (1918) and Capitol theatres (1920), as well as the Fox Theater in Philadelphia (1923). In his determination to introduce music of a high quality to audiences for silent films, Rapee made popular arrangements of the classics. He spent the years 1924–6 conducting in Europe, but returned to New York in 1927 to conduct an orchestra of 110 musicians for the opening of the new Roxy Theater. He continued to arrange orchestral music for silent films but also began to write scores of his own: *If Winter Comes*, *A Connecticut Yankee*, *The Queen of Sheba*, *Robin Hood*, *Monte Carlo* and *Nero*. His scores for sound films include *What Price Glory?* (1926, with 'Charmaine'), *Seventh Heaven* (1927, with 'Diane'), and *Street Angel* (1928). He also instituted a series of weekly symphonic radio broadcasts from the Roxy Theater.

In 1930 Rapee went to California as general music director for Warner Bros. and First National Pictures, but returned to New York and was appointed general music director for NBC the following year. He was also guest conductor of the Philadelphia Orchestra for two summer seasons from 1932. With the opening of Radio City Music Hall in New York in December 1932 he was appointed music director, a position he held until his death. He was responsible for many condensed stage versions of operas and provided arrangements of works by such composers as Beethoven, Tchaikovsky, Mahler and Richard Strauss. He continued to conduct weekly radio broadcasts, now entitled 'The Music Hall of the Air', a programme that lasted until 1942. On 12 April 1942 he was awarded the Mahler Medal of Honor (bestowed by the Bruckner Society of America) for the first radio presentation of Mahler's Eighth Symphony, played at the 500th 'Music Hall' broadcast. Rapee also published *Motion Picture Moods for Pianists and Organists: a Rapid Reference Collection of Selected Pieces, Adapted to 52 Moods and Situations* (1924) and *Erno Rapee's Encyclopedia of Music for Pictures* (1925).

MARY A. WISCHUSEN

Rape guero. Stravinsky's term for the GÜIRO in his score of *The Rite of Spring*.

Raphael, Günter (Albert Rudolf) (*b* Berlin, 30 April 1903; *d* Herford, 19 Oct 1960). German composer. His father was director of music at the St Matthäus-Kirche in Berlin. After initial music studies with Arnold Ebel, Raphael attended the Hochschule für Musik in Berlin (1922–5). There he studied composition with Robert Kahn, organ with Walter Fischer and piano with Max Trapp. From 1926 he taught theory and composition at the State Conservatory and at the Kirchenmusikalisches Institut, Leipzig. He was particularly encouraged in his compositional efforts by Karl Straube, to whom he dedicated his Requiem (1927–8). As a result of being of half-Jewish origin, Raphael was one of a number of composers whose works were banned by the Nazi regime, and in 1934 he resigned his position at Leipzig and moved to Meiningen, and then to Laubach, Oberhessen, in 1945. He continued to compose and teach privately; in 1948 he was awarded the Liszt Prize by the City of Dresden. His return to academic life was in 1949, when he accepted a position in theory and composition at the Conservatory in Duisburg, remaining there until 1953. From 1956 to 1958 he taught at the Mainz Conservatory, and he also held a professorship at the Cologne Hochschule für Musik from 1957 until his death. In his later years Raphael worked on the new editions of Bach, Handel and Reger, and made numerous piano reductions for vocal scores of these composers' works, as well as those of Mozart and Gluck.

Opera was the only major genre to which Raphael did not turn his attention as a composer. He wrote much choral and organ music for liturgical use, but his more adventurous work is to be found in the chamber and orchestral pieces. Raphael's output may be divided into three periods. Until 1934 he wrote in a late Romantic style reminiscent of Brahms and, particularly as a result of the large amount of chromaticism, Reger. The Requiem op.20 is the masterpiece from this period; its five movements revolve around the keys of G major/minor and B major/minor and their dominants, with some of the movements exhibiting progressive tonality. The second period – that of the exile in Meiningen and Laubach – was a time of transition. Diatonicism, modality, rhythmic ostinatos and sparser textures began to appear in Raphael's music, and he reached further into the past for his models: to Bach (Solo Sonatas op.46) and Schütz (*Geistliche Chormusik*, 1938). Raphael's last 15 years may be considered a third period, in which the new style crystallized and expanded to include some use of 12-note technique. The series is usually found as an ostinato; for example, in *Gesang der Erzengel* op.79, the 12 notes are paired in an ostinato, while in the Viola Sonata op.80 the series serves as a theme in the first and third movements.

WORKS
(selective list)

ORCHESTRAL

5 syms.: no.1, a, op.16, 1926; no.2, b, op.34, 1932; no.3, F, op.60, 1942; no.4, C, op.62, 1942–7; no.5, B♭, op.75, 1953
Theme, Variations and Rondo, op.19 (1927); Vn Conc. no.1, c, op.21, 1929; Variations on a Scottish Folktune, E♭, op.23 (1930); Chbr Conc., d, op.24, vc, chbr orch, *c*1930; Divertimento, op.33, 1932; Smetana Suite from dances by Smetana, op.40 (1938); Org Conc., d, op.57, 1936; Sinfonietta, 1938

WILLIAM D. GUDGER/ERIK LEVI

Raphelengius. Flemish family of printers. They managed the Leiden branch of the publishing house founded by CHRISTOFFEL PLANTIN. Frans (*b* Lille, 17 February 1539; *d* Leiden, July 1597) managed the firm from 1585 until his death; his sons Christophe (*d* 1600) and Frans (*d* 1643) then took over the business, which continued until 1619.

□

Rappé, Jadwiga (*b* Toruń, 24 Feb 1952). Polish mezzo-soprano. After studying at Warsaw University and the Academy of Music in Wrocław, she won first prize at the International Bach Competition in Leipzig in 1980, followed the next year by the gold medal at the International Festival of Young Soloists in Bordeaux. In 1983 she made her stage début in Warsaw. While her repertory ranges from the Baroque to contemporary music, she specializes in large-scale concert works of the 19th and 20th centuries, for which her ample, noble and steady voice is ideally suited. Although she appears less frequently in opera, she has scored notable successes as Gaea in *Daphne* (in Amsterdam) and as a grave Erda in *Das Rheingold* and *Siegfried*, a role that she has sung at the Deutsche Oper in Berlin, the Warsaw Opera and Covent Garden. In addition to Erda (with Haitink), Rappé's recordings include Bach's B minor Mass, Beethoven's *Missa solemnis*, Mahler's symphonies nos.2, 3 and 8, Honegger's *Le roi David* and Penderecki's *Polish Requiem*.

ANDREW CLARK

Rappoldi. Austrian, later German, family of musicians.

(1) **Eduard Rappoldi** (*b* Vienna, 21 Feb 1831; *d* Dresden, 16 May 1903). Violinist, conductor and composer. He played both the violin and the piano in public at the age of seven but preferred the former, which he studied with Leopold Jansa, Georg Hellmesberger sr (Vienna Conservatory, 1851–4) and Joseph Böhm; he also studied theory and composition with Sechter and Hiller. He played in the Vienna court orchestra (1854–61), and was then leader of the orchestra in Rotterdam (1861–6), in Lübeck (1866), in Stettin (1867) and at the German Theatre in Prague (1869). Joachim took him to Berlin, where he stayed from 1871 until 1877, teaching at the newly founded Hochschule für Musik and playing in Joachim's quartet. He moved to Dresden in October 1877 to become leader of the court orchestra, joint leader of the opera orchestra (with Lauterbach) and professor of violin at the conservatory; of special interest were his historical concerts there (1877–9).

Rappoldi excelled as a teacher and chamber music player. Moser wrote that he had an astonishing left-hand technique 'which would have made him one of the greatest artists of his epoch were it not for the lack of freedom in his bowing ... he was one of the most musical persons I have ever met'. His popularity as a teacher was enhanced by his ability to play piano accompaniments. Only a few of his compositions were published, among them two violin sonatas, a piano sonata and some songs, including two settings of poems by Matthisson.

(2) **Laura Rappoldi** [née Kahrer] (*b* Mistelbach, nr Vienna, 14 Jan 1853; *d* Dresden, 1 Aug 1925). Pianist, wife of (1) Eduard Rappoldi. At the age of 11, after only one year of musical study, she played one of her compositions for the Empress Elisabeth, who underwrote her studies at the Vienna Conservatory (1866–9) in composition with Otto Dessoff, counterpoint with Bruckner and the piano with Joseph Dachs. In 1868 she won first prize in piano and composition and made her début assisted by Joseph Hellmesberger and David Popper. She studied in Weimar with Liszt in the summers of 1870 and 1873 and, in between, in St Petersburg with Adolf Henselt, who remained a lifelong friend and correspondent. In the summer of 1874 she studied the late sonatas of Beethoven with Bülow, who later wrote a testimonial praising her playing of the Hammerklavier Sonata. In 1874 she married (1) Eduard Rappoldi, with whom she had played in Prague four years before. Extended tours earned her a reputation as one of the finest pianists in Germany. After 1886 she limited her activities to Dresden, giving frequent sonata programmes with her husband and later with her son (3) Adrian Rappoldi. She taught the piano at the Dresden Conservatory for more than 20 years.

Niemann found stylistic characteristics of her three great teachers in her playing: the grand virtuosity of Henselt, the rhythmic energy, brilliance and plasticity of Liszt, and the structural clarity and objectivity of Bülow.

(3) **Adrian Rappoldi** (*b* Berlin, 13 Sept 1876; *d* Bamberg, 1949). Violinist, son of (1) Eduard Rappoldi and (2) Laura Rappoldi. He studied the violin with his father and composition with Felix Draeseke at the Dresden Conservatory, where he won first prize at the age of 14. In 1893 he became leader of the Bilse orchestra in Berlin; there he spent much time in the company of Joachim, who gave him the warmest of testimonials when he left (autumn 1894). After recovering from a serious hand ailment, Rappoldi was leader of the orchestras in Chemnitz, in Teplitz, at the German Theatre in Prague, and in Riga. Intermittent tours took him to Germany, Norway and Russia, where he appeared with Brahms, Grieg and Rimsky-Korsakov; he may have studied with Leopold Auer in St Petersburg. In 1912 he succeeded Henri Petri as professor of the violin at the Dresden Conservatory, and from 1915 he was one of its directors. He continued to make solo appearances, but his reputation

in Dresden was based primarily on his teaching ability and chamber music playing. He wrote a treatise on violin player's cramp and the origin, treatment and cure of occupational maladies of the violinist; he also co-edited a volume of orchestral studies for the violin.

Rappresentativo. *See* STILE RAPPRESENTATIVO.

Rappresentazione sacra [sacra rappresentazione]. A term used in the 15th and 16th centuries to designate a kind of religious play with music in the Italian language, cultivated chiefly in Florence. The texts, written mostly in *ottava rima*, were drawn mainly from the Bible or hagiography, but also include secular scenes and even comic elements. Among the best-known authors of the approximately 100 surviving texts were Feo Belcari, Castellano Castellani, Lorenzo de' Medici, Antonia Pulci and Bernardo Pulci. Boys in costume performed the *rappresentazioni sacre* on a stage with sets and in some cases elaborate machinery. Melodic formulae seem to have been used to intone most of the lines (Becherini, 1951), interspersed with *laudi*, frottolas, canzoni and (in the 16th century) madrigals. Most of the musical numbers in 16th-century *rappresentazioni sacre* belonged to the *intermedi*, dramatic interludes with music performed between scenes of a play for the sake of variety and to enlarge upon the events of the drama. The *rappresentazione sacra* is a significant forerunner of both opera and oratorio. Emilio de' Cavalieri's *Rappresentatione di Anima, et di Corpo* (1600) forms part of the tradition at the Roman Congregazione dell'Oratorio, extending from the late 16th century to the late 17th, of using young boys as actors in spiritual plays, which were usually given during Carnival (see Morelli, 82–7). Some such plays included musical insertions, others *intermedi*, and still others (like Cavalieri's) were sung throughout. One study argues that Cavalieri's *Rappresentatione* was the earliest 'moral opera' (Gianturco, 175–7).

During the second half of the 17th century in Vienna the term 'rappresentazione sacra' was often applied to the *sepolcro*.

HOWARD E. SMITHER

Rapsodia (It.). *See* RHAPSODY.

Rasa (Sanskrit: 'juice, essence, flavour'). The key concept of Indian aesthetics, applied originally to drama but later to all the arts, including music and dance (*see* INDIA, §III, 7). According to the *Nāṭyaśāstra* (early centuries CE), and the elaborate commentary of Abhinava-gupta (*c*1000 CE), the actor on stage portrays an emotional state of mind (*bhāva*) through the combination of action, words, singing and dancing, assisted by costumes, stage props and backstage musicians. The essential flavour (*rasa*) of the mood thus invoked is savoured by the connoisseur (*rasika*) and this enjoyment leads him or her in the direction of spiritual liberation (*mokṣa*). Eight *rasa* are distinguished in the *Nāṭyaśāstra*: love (*śṛṅgāra*), heroism (*vīra*), disgust (*bībhatsa*), anger (*raudra*), mirth (*hāsya*), terror (*bhayānaka*), compassion (*karuṇa*) and wonder (*adbhuta*). Abhinava-gupta added a ninth *rasa*, peace (*śānta*), subsuming the other eight.

To some extent a song, melody or *rāga* can be rendered in different ways to bring out different emotional facets: a particular *rāga* can be sung slowly and/or quickly, for example, or the words of a song can be interpreted through dance in many different ways. The assumption is axiomatic, however, that music and dance express emotion and that a given performance will have unity of expression despite the variety of its ingredients (Abhinava-gupta gives the analogy of spices in food contributing to a single overall flavour). Thus a performance of a *rāga* is devoted to the intensification of a particular aesthetic ethos, built up gradually over a long period and avoiding sudden changes or contrasts of mood.

RICHARD WIDDESS

Rasar [Raser, Rasor], **William** (*b* *c*1491). English church musician and composer. He was admitted a chorister to St George's Chapel, Windsor, in 1499, and was still there in 1504. On 1 March 1510 he became a clerk of the choir of King's College, Cambridge, and left between Michaelmas 1514 and Michaelmas 1515. A John Rasar, who from 1493 to 1496 was a chorister of King's College, may well have been of the same family. The only extant composition by William Rasar is the five-part Mass *Christe Jesu* (ed. in EECM, xvi, 1976) in the Forrest-Heyther Partbooks (*GB-Ob* Mus.Sch.E 376–81) and in the Peterhouse Partbooks (*Cu* Peterhouse 471–4; tenor lacking). The source of the title of this mass is unknown; no plainchant cantus firmus can be identified, and it is perhaps derived from some lost motet. The mass is unusual among English masses of this period in providing a complete setting of the text of the Gloria and Credo and also for being one of the earliest instances in England of a mass composed in duple metre throughout.

JOHN BERGSAGEL/ROGER BOWERS

Rascarini [Lascarini], **Francesco Maria** (*b* Reggio nell'Emilia; *d* Turin, July 1706). Italian singer and composer. He was a well-known contralto. In 1658, while employed at S Petronio, Bologna, he performed the male lead in the Bologna revival of P.A. Ziani's *Le fortune di Rodope e Damira*. He repeated the role at least three times in the following four years, and in 1659 and 1661 he sang in the Venetian premières of Cavalli's *Antioco* and Castrovillari's *Pasife*. From 1662 until his death (except for the period 1691–9) he was *contralto di camera* to the Dukes of Savoy at Turin, performing alongside the

famous castrato G.A. Cavagna; he had already sung at Turin in 1660 for the marriage of the Duke of Parma. He was a member of the literary Accademia degli Incolti at Turin. His popularity as an opera singer took him to Venice in 1666 (A. Cesti: *Tito* and *Orontea*) and 1667 (Cesti: *Dori*), Milan in 1670 (L. Busca, P.S. Agostini and Ziani: *Ippolita reina delle amazzoni*), and Piacenza (M. Uccellini: *Eventi di Filandro ad Edessa*) and Parma (Uccellini: *Giove d'Elide fulminato*) in 1677. His only surviving works are two cantatas for three voices (in *I-MOe*). The second, *Lasciatemi morire*, begins with a clear reference to Monteverdi's *Lamento d'Arianna*; it is in effect a continuo madrigal written in an expressive Monteverdian idiom. Faustini's papers (*Vas*) preserve some letters by and about Rascarini. Cazzati dedicated a motet to him in *Il quinto libro di motetti a voce sola* (Bologna, 1666).

LORENZO BIANCONI (with JENNIFER WILLIAMS BROWN)

Rasch, Johann [Rassius, Joannes] (*b* Pöchlarn, Lower Austria, *c*1540; *d* Vienna, ?1612). Austrian historian and composer. He was a boy chorister at the Benedictine monastery at Mondsee in Upper Austria. After two years' study at Wittenberg, he served again at Mondsee from 1561 to 1563 as clergyman. According to his own account, he then studied law. From 1565 he studied astronomy and mathematics at Vienna University and in 1567 he apparently began to study history there. He settled for a while in Neustadt an der Orla, and then in Munich, before becoming organist of the Schottenkirche in Vienna from 1570 to 1591. The Viennese taxation records of 1611 contain the last documented reference to him.

Known primarily as a compiler of material, Rasch wrote on the most varied topics including astronomy, genealogy and economics. His writings on wine cultivation (Vienna, 1589) bore influence as late as the 19th century. A history of the Schottenstift in Vienna published in 1586 includes biographical details, compiled by Rasch, of several well-known contemporary composers including Paul Hofhaimer, Heinrich Finck and Erasmus Lapicida, while a chronicle written by Rasch offers valuable insight into Viennese musical life in the late 15th century and the 16th. His musical works include several Latin motets and an edition of German Protestant hymns, all of which were printed in Munich by Adam Berg. The motets are not based on cantus firmi; they show much choral writing with very sparing use of polyphony. The German hymns show similar characteristics.

OTHMAR WESSELY/WALTER KREYSZIG

Rasch, Rudolf (Alexander) (*b* Borger, Drenthe province, 15 Dec 1945). Dutch musicologist. At the University of Amsterdam he studied musicology with K.P. Bernet Kempers, Jos Smits van Waesberghe and Chris Maas (1963–8) and psychology (1969–74). He took the doctorate in psychology from the University of Groningen (1981) with a dissertation on the perception of polyphonic music, and in musicology from the University of Utrecht (1985), with a dissertation on southern Netherlandish polyphonic Christmas carols and their use in the 17th century. He has lectured at the University of Utrecht since 1977 and in 1988 became senior lecturer in music history after 1600. He has been secretary of the Vereniging voor Nederlandse Muziekgeschiedenis (1981–6) and of the Huygens-Fokker Foundation for Microtonal Music (1986–95).

Rasch has undertaken research on the role of harmonic spectra and temporal properties in the perception of polyphonic music and has developed models to describe regular 12-note tunings and to calculate beats. He has also produced facsimile editions of theoretical works on tuning and temperament, and editions of microtonal music. However, the majority of his work is devoted to music in the Netherlands during the 17th century. His pioneering work in this field has led to publications on musical life, editions, printers and publishers, and music theory. He has also produced editions of 17th-century Dutch chamber music.

JOOST VAN GEMERT

Rascher, Sigurd (Manfred) (*b* Elberfeld [now Wuppertal], 15 May 1907). American saxophonist of German birth. After matriculating at the Stuttgart Musikhochschule in 1930, where he studied the clarinet, he decided to become a saxophonist. He taught in elementary schools and played in concert bands before being appointed to teach the saxophone at the Royal Danish Conservatory, Copenhagen (1933), and at the conservatory in Malmö, Sweden (1934); he held both posts until 1938. He made his American début in 1939, and has played with the Boston SO and the New York PO, the first saxophonist to appear as a soloist in a subscription concert given by either orchestra; he subsequently performed with more than 250 other orchestras worldwide. In 1969 he founded the Rascher Saxophone Quartet, which commissioned and recorded many works from such composers as Berio, Glass and Xenakis. The quartet has continued to function after Rascher left it in 1981. More than 140 works have been dedicated to him, by Glazunov, Ibert, Hindemith and Milhaud, among others. He taught at the Juilliard School, the Manhattan School and the Eastman School of Music. Rascher was distinguished for his brilliant agility, sweetness of tone and musical sensibility, and he extended the range of the saxophone by more than an octave above the conventional *f'''*.

GEORGE GELLES/PETER SCHMELZ

Raselius [Raesel], **Andreas** (*b* Hahnbach, nr Amberg, Upper Palatinate, *c*1563; *d* Heidelberg, 6 Jan 1602). German composer. From 1581 he studied at Heidelberg, and in 1583 became a teacher at the academy there. After taking the master's degree he left Heidelberg in 1584 for religious reasons and found work as an assistant master and Kantor at the Gymnasium Poeticum in Regensburg. In 1600 Friedrich IV, the Prince-Elector of the Palatinate, summoned him back to Heidelberg to serve as court Kapellmeister.

Raselius was among the most outstanding Protestant Kantors of the second half of the 16th century, who, with his extensive humanist cultural background, combined duties both as a pastor and as a teacher with very clear-sighted objectives. The works on music theory are characterized by a systematic approach and contain valuable collections of music examples; compositions range from the age of Senfl to Raselius's contemporary, Lassus. The title of the 1594 work, *Teutscher Sprüche auss den sontäglichen Evangeliis durchs gantze Jar*, reveals a secondary didactic aim even though the music itself was expressly designed for church use.

The two chorale collections of 1591 and 1599 were among the first to take up and continue the efforts initiated by Lucas Osiander in 1586 to present chorale settings suitable for congregational singing. Raselius's compositions in this form, however, are far superior artistically to those of Osiander, not only because they are mainly for five voices, but because of additional, though subsidiary, musical interest in the inner parts. In the 1591 collection the cantus firmus is normally in the tenor; in general it is prominent because of its notation in longer values than the accompanying voices.

Raselius's collections of motets based on texts from the gospels were the first in the German language to comprise, after the example of a corresponding collection in Latin by Johannes Wanning (1584 and 1590), a cycle for the whole year. Again the settings are often superior to similar works by other composers, even by later masters such as Vulpius, Johann Christenius and Melchior Franck; only Demantius may be considered an exception. In the five-part motets Raselius carefully underlined the emotional impact of the text, and skilfully contrasted repeated words and phrases by an expressive alternation of homophonic and polyphonic textures. Although Flemish and native German influences are most obvious in the 1594 collection, the larger compositions of 1595 show Raselius to have been a master of Italian polychoral techniques.

WALTER BLANKENBURG

Raser, William. *See* RASAR, WILLIAM.

Rasetti [Razetti, Razzetti], **Amédée** (*b* ?Turin, 7 April 1759; *d* Paris, 27 April 1799). French keyboard player and composer of Italian origin. According to Brenet, his father, the violinist Pierre Antoine Amédée Rasetti, was *ordinaire de la musique du Roi* and organized concerts at the Coliseum. His mother, from Piedmont, whose beauty was praised by Casanova in his *Mémoires*, arranged for him to study with the composer-harpsichordist C.-F. Clement. In 1780 he married Marguerite Victoire Degreneau, with whom he had at least four children.

In Paris Rasetti had a brilliant career as a harpsichordist, pianist and composer. On 31 December 1777, he announced the publication of his *6 sonates* op.1. He composed mainly for the harpsichord and the piano, and had great success around the turn of the century with his *3 trios* op.13 (the first of which includes the picturesque 'Il canto d'amore, ó Sia la Villanella'). While most of his works are in the *galant* style, his *Nouveau concerto arabe* for piano and orchestra op.14, which includes a *romanza* 'L'abenserage', is more modern in its aesthetic and anticipates Romantic virtuosity. It was described at the time as 'an original composition whose effects are remarkable' (*Correspondance des amateurs musiciens*, 19 March 1803).

WORKS

Kbd sonatas: 6 as op.1 (1777); 6 with vn ad lib, op.2 (1780); 3 with vn ad lib, op.3 (1783); 3 as op.4 (1785), lost; 1 with vn, vc obbl, op.6 in *Journal de pièces de clavecin*, no.48 (1787); 6 dans le style de Eckard, Haydn, Clementi, Cramer, Steibelt et Mozart, pf, op.7 (1792); 3 de diférents caractères, op.10 (*c*1795–6): 'La capricieuse', pf; 'La folle', pf, vn, b; 'La studieuse', pf, 2 vn, va, b

Other inst: Pf Qt, op.5 in *Journal de pièces de clavecin*, no.42 (1787); 3 pot-pourris, hpd/pf: no.1 in *Journal de pièces de clavecin*, no.91 (1791), no.2, op.9 (1794), no.3, acc. fl/vn, bn/vc ad lib, op.12 (1797); 3 trios, pf, fl/vn, b/bn/vc, op.13 (1799); Nouveau concerto arabe, pf, orch, op.14 (1800); 1 leçon in M. Corrette: *L'art de se perfectionner dans le violon* (Paris, 1782), 36–8; arrangements of works by Démar, Dizi and others

Vocal: airs incl. 'En vain raison tu t'obstine', 'Les soins de mon troupeau', 'Loin de toi ma Félicie', all pubd in *Feuilles de Terpsichore* (1785–94); romances incl. 1er recueil, 1v, acc. hpd/pf, op.8 (n.d.), 2e recueil, 1v acc. pf, fl ad lib, op.11 (1796), all lost (mentioned by Fétis and Gerber)

MICHELLE GARNIER-BUTEL

Rasgueado [golpeado] (Sp.; It. *battuto*; Fr. *batterie*). Term used to describe the technique of strumming the strings of the guitar in a downward or upward direction with the thumb, or other fingers of the right hand. The term *rasgueado* was used most commonly from the late 19th century, while, historically, the Italian term *battuto* or the Spanish *golpeado* was used in the 17th and 18th centuries.

Strumming has been an important component of guitar playing from at least the 16th century, when Juan Bermudo (*Declaración de instrumentos musicales*, Osuna, 1555, f.28*v*) mentioned, in reference to the four-course guitar, that *música golpeada* ('struck music') was old-fashioned. The exact nature of this 16th-century strumming technique is uncertain. However, by the beginning of the 17th century guitarists began to devise ways of notating it: the direction in which full five-course chords were to be strummed was shown by small vertical lines extending either above or below a single horizontal line – a downward line indicating a strum in a downward direction, and an upward line indicating an upward strum. Notes indicating exact rhythmic values of the strums were often added above the horizontal line. After the middle of the 17th century, when guitarists adopted a five-line staff for the notation of their works, strokes were indicated in two different ways depending on the type of tablature used: in Italian tablature, by small vertical lines extending either above or below the lowest line of the staff; in French tablature, by a note written within the staff, of which the value and direction of the stem indicated respectively the time-value and direction of the strum.

During the 17th and 18th centuries, strumming could be performed in a variety of ways. Upward strokes were generally executed by the index finger alone, although the use of several fingers in succession (beginning with the index) was possible on longer chords. Downward strokes were performed mainly with the backs of the nails of all or some of the fingers. A strum could be executed with all of the fingers striking the strings almost simultaneously, or in a spread or arpeggiated manner, depending upon artistic choice. The thumb was sometimes included in the strum; some composers even notated the special effect of a downstroke for the thumb alone, which produced a different tone-colour from the main type of downstroke. Descriptions of various ways of strumming may be found in the works of Pico (*Nuova scelta di sonate*, 1608), Milioni (1627), Foscarini (1640), Ruiz de Ribayaz (*Luz y norte musical para caminar por las cifras de la guitarra española*, 1677), Visée (1682, 1686) and Corbetta (1671). During the 19th century this technique became virtually obsolete in art music for guitar, surviving only in accompaniments of a popular nature. However, it was used in many 20th-century works for classical guitar, owing to its colouristic and evocative qualities, and it has also remained an integral part of flamenco guitar technique into the 21st.

ROBERT STRIZICH/JAMES TYLER

Rashīd, Ḥasan (Aḥmad) (*b* Cairo, 10 July 1896; *d* Cairo, 25 May 1969). Egyptian composer. As a boy in Cairo he played the violin, which he continued to study for many years, both in Egypt and in England, where his wealthy family sent him to be educated: he read agriculture at Durham University, also singing baritone and composing. In 1918 he returned to Cairo and married Bahīga Sidqī, the pianist and composer of children's songs. The Rashīds were among the most active members of the Egyptian Amateur Music Association, which they founded with others in 1942, the aim of the organization being to spread the appreciation of classical Western and new Egyptian music. Besides performing in the association's concerts, Rashīd began to compose vocal music to Arabic texts, an activity which culminated in his single opera *Antony's Death*, to the first part of Aḥmad Shawqī's *Cleopatra's Death*. This was the first opera composed by an Egyptian with an Arabic text and subject. Parts of it were produced in 1942 and again in 1973 (by the Egyptian Opera Troupe); the overture is sometimes played as a concert piece, and the aria 'Isis, O fount of tenderness' is also often performed separately. Rashīd was influenced by the Italian opera performed in Cairo, yet his melodic invention is not without originality. However, the Egyptian public found it difficult to accept the conventions of Western operatic style, particularly when associated with familiar poetry in Arabic, and Rashīd's opera has had few successors. He also composed numerous songs, of which the collection *Songs for Youth*, by him and his wife Bahīga, was published; *Isti'ṭāf* (Invocation) is one of the best examples of his style, also *Time*, with a piano part that has an essential role in creating atmosphere.

SAMHA EL KHOLY

Rasi, Francesco (*b* Arezzo, 14 May 1574; *d* Mantua, 30 Nov 1621). Italian composer, tenor, chitarrone player and poet. He was born into a prominent family, which later served the Medici and Gonzaga courts. In October 1592 he enrolled at the University of Pisa and in the summer of 1594 he was a pupil of Giulio Caccini. During the early 1590s he performed in Rome under the patronage of Grand Duke Ferdinando I of Tuscany. Emilio de' Cavalieri, in a letter from Rome dated 16 December 1593, reported Rasi's great success as a singer and chitarrone player and urged the grand duke to increase his salary, since he was being considered for other positions. In 1594 he may have entered the service of Gesualdo and subsequently travelled to Ferrara, Venice and Naples. He made a trip to Poland, returning to Italy by November 1597. In a letter of 17 November 1598 Cavalieri reported that Rasi had accepted an offer from the Duke of Mantua. He probably served the Gonzagas for the rest of his life.

Rasi was in Florence in 1600, when he sang in the first performances of Peri's *Euridice* (in the role of Aminta) and Caccini's *Il rapimento di Cefalo*. Both composers highly praised his artistry. At Mantua in 1607 he almost certainly created the title role in Monteverdi's *Orfeo* (see T. Carter and D. Butchart: 'The Original Orpheus' *MT*, cxviii (1977), 393, only [letter to ed.]). Later in 1607 his singing received great praise at a seaside resort near Genoa, where he had accompanied Ferdinando Gonzaga. In 1608 in Mantua he sang in the first performances of Marco da Gagliano's *Dafne* (in the role of Apollo) and Monteverdi's *Arianna*. Later in 1608 he was in France and the Low Countries. In early 1610 Rasi, along with accomplices, was sentenced in Tuscany to be hanged, drawn and quartered for the murder of his stepmother's servant and the near murder of his stepmother; he escaped Tuscany through the protection of the Gonzagas, who arranged for him to flee to Turin. The sentence was eventually annulled in 1620, with the condition that he never return to Arezzo. In early 1612 he was granted membership of the Accademia Filarmonica in Verona. Later that year he travelled to Prague to honour the new Emperor Matthias. During his return he dedicated to the Prince-Archbishop of Salzburg a manuscript of sacred and secular songs for one to three voices (now in *D-Rp*, copy by A. Einstein in *US-Nsc*); the solo songs were among the earliest Italian monodies north of the Alps. In 1614 at Mantua he published his first edition of poetry; it is in three parts (third part now lost) and contains *odi, madrigali, sonetti, canzoni, dialoghi e scherzi*. In 1617 he wrote an opera, *Cibele, ed Ati*, for the wedding of Ferdinando Gonzaga and Caterina de' Medici; however, it was not performed then, and the music is lost, although the text survives in his seven-volume collection of secular and spiritual poetry, *La cetra di sette corde* (Venice, 1619), along with another libretto, *Elvidia rapita*. Rasi published another volume of monodies between 1618 and 1620, now lost. In 1621 he revisited Florence, Rome and Savona, and on 4 September of that year he married Alessandra Bocchineri in Pistoia, but died less than three months later. His death was mourned in an undated poem by Chiabrera.

Rasi's two surviving collections of monodies, *Vaghezze di musica* (1608) and *Madrigali* (1610), contain 42 pieces, all but two for tenor: they comprise 24 madrigals, four sonnets, two ottavas, two settings of *terza rima* and ten strophic arias. The texts are attributed mainly to Rasi himself; in other cases they are by Petrarch, Chiabrera, Guarini, Marino, Bernardo Tasso, Giulio Strozzi or Alessandro Capponi. The style of the madrigals is generally similar to that of Giulio Caccini's. The lyrical vocal lines, with rhythms sensitive to the texts, are occasionally embellished at cadences and important words. Dissonances are restricted mainly to passing notes and suspensions. The short strophic arias, many labelled 'canzonetta', contain numerous sequential patterns and note-against-note movement between the voice and bass

line. The most imposing songs are those that are settings of more impressive texts: the sonnets *Che fai, alma, che pensi?* and *Ferma, Tersilla mia* contain more dissonances, vocal leaps and chromatic writing than usual; the two ottava settings, *Ahi fuggitivo, ben come si tosto* and *Vostro fui, vostro son*, are both elaborate variations on the Ruggiero formula, and the *terza rima* setting for bass, *Quel rosignuol che dolcement'a l'ombra*, is written in a similar virtuoso style with strophic variations.

The manuscript of 1612 contains four Latin motets, six strophic songs and a madrigal, all with continuo. The five pieces for solo voice are primarily syllabic settings and include one strophic recitative. In four of the duets the vocal lines alternate at times in dialogue fashion, at other times combine in parallel motion. The other two ensemble pieces, for two and three voices respectively, are strictly homophonic. The four dialogues in Rasi's *Dialoghi rappresentativi* (1620), on his own texts printed in 1614, are for three solo singers with continuo. In the first three the characters are successively introduced in declamatory recitatives, which are concluded by more lyrical refrains. Later in each dialogue recitative sections are mixed with short independent pieces for various combinations of voices, most of which are simple homophonic settings of strophic texts; but two of the duets (*Fra quanti mai, fra quanti* in the second dialogue and *Chi sprezzi l'empia sorte* in the fourth) include imitative passages and long embellishments. For the final sections of the first and second dialogues respectively Rasi used again the music of the duet *Bel mattin* and the trio *O del sol messaggia aurora* in the 1612 manuscript.

WORKS

SECULAR SONGS

for 1 voice, basso continuo, unless otherwise stated

Vaghezze di musica per una voce sola (Venice, 1608) [1608]; facs. in ISS, v (1986), 153–84; ed. M. Giuliani (Trento, 1997)

WILLIAM V. PORTER

Raskatov, Aleksandr Mikhaylovich (*b* Moscow, 9 March 1953). Russian composer. He studied composition with Leman and, as a postgraduate, with Khrennikov at the Moscow Conservatory. He joined the Composers' Union in 1979 and was an active member of the Moscow-based Association for Contemporary Music since its inception in 1990. In 1990 he was composer in residence at Stetson University, Florida. Although he studied with stalwarts of Soviet officialdom, he gravitated towards the circle of young composers that gathered around Denisov in the 1970s and 80s. But despite his initial attraction to powerful figures of the Russian avant garde such as Denisov and Gubaidulina, he has evolved for himself a distinctive, often meditative language based on incantatory repetition (though not quite minimalism) and an interest in complex proportions. Much of his most remarkable work is for chamber ensembles of one kind or another and often shows his interest in ancient ritual, folk music, pagan traditions and, more recently, the Jewish traditions of his own background. His music is usually highly coloured, of sophisticated structure and inclined to ritual rather than expression, qualities well seen in pieces like *Xenia* and the large-scale *I will see a Rose at the End of the Path* (1994) for string quartet. There are symbolic bases to several works.

WORKS

Op.: The Pit and the Pendulum (after E.A. Poe), 1990

Orch: Conc., ob, str, 1987; Commentary on a Vision, perc, orch, 1991; Xenia, chbr orch, 1991; Miserere, va, vc, orch, 1992;

GERARD McBURNEY

Rasmussen, Karl Aage (*b* Kolding, 13 Dec 1947). Danish composer, teacher and writer on music. He studied until 1970 at the Jutland Conservatory, Århus where, as well as taking courses in the theory and history of music, he studied composition with Nørgård and Gudmundsen-Holmgreen. After taking the music teachers' examination in 1971, he returned to the Conservatory as a lecturer, becoming professor in 1988. In 1975 he founded his own ensemble, the Elsinore Players, and in 1978 initiated the Århus NUMUS Festival, of which he acted as artistic director until 1985 and again from 1987. He has also served on the National Music Council (1976–9), and as chairman of the Music Committee of the National Arts Fund (1987–90). He won the Carl Nielsen Prize in 1991, and in the same year became artistic director of the Esbjerg Ensemble.

Rasmussen is one of the leading Danish composers of the generation after Nørgård and Gudmundsen-Holmgren. His compositional flair, combined with a well-formulated philosophical position, have made his works influential contributions to the post-serial reorientation. Since his earliest works, Rasmussen has distanced himself from the avant-garde aesthetic requirement for absolute originality of material. According to one writer, he seeks not sounds never previously heard, but 'connections never previously heard' (Jensen, 1969): this preoccupation manifests itself in works which aim to problematize issues of musical meaning through the reuse and reshaping of existing material. An early example of this is the *Symphony for Young Lovers* (1967), which combines elements from classical, jazz, and beat music. *Genklang* (1972) is made up of fragments drawn chiefly from the adagietto of Mahler's Fifth Symphony, while *Berio-Mask* (1977) uses material from the third movement of Berio's *Sinfonia*, itself a collage of musical quotations. *Encore VIII (Fuga)* builds note-for-note on the fugue from Beethoven's 'Hammerklavier' Sonata, but with different tempo relationships between the four voices. Similar explorations in musical time have absorbed Rasmussen's attention increasingly in recent years, for example in the monumental *A Symphony in Time* (1982) and the string quartets *Solos and Shadows* (1983) and *Surrounded by Scales* (1985).

The emphasis in his output on instrumental and, in recent years, chamber music, leaves its mark even on the longer works, such as the opera *Titanics Undergang* (1993) and the Violin Concerto (1996). Rasmussen is also active as a writer: his articles include portraits of composers (including Cage, Crumb and Feldman) and introductory texts on 20th-century music.

WORKS
(*selective list*)

Dramatic: Krapp's Last Tape (chbr op, 1), 1966; Jefta (chbr op, 2, P. Borum, after Bible: *Judges*), 1976; Majakovskij (scenic concert piece, 2, after V. Mayakovsky), 1977–8; Titanics undergang [The Sinking of the Titanic] (op, 7 scenes, H.M. Enzensberger, Dan. trans.), 1993

Orch: Symphony for Young Lovers, 1967; Anfang und Ende, 1973; A Symphony in Time, 1982; Phantom Movements, 1990; Vn Conc. 'Sinking Through the Dream', 1991–3, perf. 1996; Scherzo with Bells, 1996

ERIK H.A. JAKOBSEN

Rasmussen, Sunleif (*b* Sandur, 19 March 1961). Færoese composer, active in Denmark. He played rock music as a teenager, but did not receive any musical instruction until aged 16, when he was taught theory and the piano at a college in Oslo. This led to a period of study at the Norges Musikkhøgskole (1978–80). He then returned to Tórshavn, where he taught music and worked as a jazz pianist. A meeting with the Icelandic composer Atli Heimir Sveinsson in 1984 was the springboard for Rasmussen's career as a composer. He studied in Denmark with Bent Sørensen in 1988–9 (Ligeti's music was a major source of inspiration during this period), and in 1995 he took the final examination in composition at the Royal Danish Academy of Music, where he studied with Nørholm and then Ivar Frounberg, as Rasmussen was keen to work with electronic music. He does not cultivate this area alone but often combines it with acoustic instruments to expand their sound capabilities.

Although Rasmussen is melodically oriented (his output contains a considerable amount of vocal music, especially for choir), Faroese folk melodies are generally not quoted in his works to any audible extent. However, they are often a concealed point of departure in his extraction of a basic musical material according to serial and spectral principles, e.g. in *Landid* ('The Land', 1992–3, based on the Faroese national anthem), *Sum hin gylta sól* (1993), *Eitt ljós er kveikt* ('A Light has been Lit', 1993) and Symphony no.1 (Oceanic Days). Several of Rasmussen's works are inspired by Faroese poetry. *Landid's* outer movements are based on poems by Gunnar Hoydal and Rói Patursson, and *Eitt ljós er kveikt* quotes in its title the opening words of Heinesen's novel *Moder syvstjerne*.

THOMAS MICHELSEN

Rasor, William. *See* RASAR, WILLIAM.

Rasse, François (Adolphe Jean Jules) (*b* Helchin, Hainaut, 17 Jan 1873; *d* Ixelles, Brussels, 4 Jan 1955). Belgian composer and conductor. At the Brussels Conservatory he studied the violin with Ysaÿe and composition with Huberti, winning the Belgian Prix de Rome in 1899 with the cantata *Cloches nuptiales*. After his period in Rome, he took up a career as a chamber music player and conductor, notably at the Théâtre Royal de la Monnaie in Brussels. In 1920 he was appointed professor of harmony at the Brussels Conservatoire and he directed the Liège Conservatory from 1925 to 1938; in 1933 he was elected a member of the Belgian Royal Academy. He left a large quantity of music in a late-Romantic style; the many song cycles (the most noteworthy being *La chanson d'Eve*) reveal his sensitivity, while his opera *Soeur Béatrice* and his orchestral music display a considerable dramatic sense.

WORKS

HENRI VANHULST

Rassel (Ger.). *See* RATTLE.

Rassius, Joannes. *See* RASCH, JOHANN.

Rastell, John (*b* London, *c*1475; *d* London, June 1536). English playwright and printer. Active also as a lawyer, chronicler and adventurer, he was best known in the field of printing for his histories, law books, interludes, poetry and statutes, and in the 1520s became the first English printer of polyphonic music. In this field he was a pioneer of new technology; Rastell's music was the earliest to be printed by single impression using movable type, an advance over double-impression printing that revolutionized the economics of music publishing.

To judge from the few examples of Rastell's printed music that survive, his preferred format was the single sheet (or 'broadside') rather than the book. Two songsheets issued by him are extant, both fragmentary. Although they are undated, typographical evidence places one of them at about 1523. A third songsheet printed from Rastell's single-impression music type was in fact issued by his son, William Rastell, about 1533. The chance survival of these three ephemeral publications, separated in date by about ten years, hints at a much more extensive production, the full extent of which is unknown. Like other works printed by the Rastells, the songsheets were created for a local market rather than for export, since they feature English-texted songs at a time when English was barely spoken outside the British Isles.

'Tyme to pas with goodly sport', three-part song from John Rastell's play 'A New Interlude' (London: Rastell, c1520)

John Rastell's involvement with music, and especially song, was considerable. As a playwright, deviser of pageants and owner of a public stage (in Finsbury Fields, north of the city walls of London), he had regular contact with singers and other musicians. His play *A New Interlude and a Mery of the Nature of the IIII Elements*, published about 1520, includes a three-part song that parodies works by Henry VIII; it was printed in the play text using Rastell's music fount (see illustration). Rastell's daughter married John Heywood, whose career spanned music and drama. Ultimately Rastell's interest in Protestant propaganda also found musical expression: his music type passed into the hands of the printer John Gough, who used it to publish Myles Coverdale's Lutheran hymnbook, *Goostly Psalmes and Spirituall Songes*, copies of which were included among Rastell's 'goods and cattales' at the time of his death.

JOHN MILSOM

Rastrelli, Joseph [Gioseffo, Giuseppe] (*b* Dresden, 13 April 1799; *d* Dresden, 15 Nov 1842). Italian composer and conductor. A precocious musician, his first teacher was his father, Vincenzo, who in 1805 introduced his child-prodigy son to the public at a violin recital in Moscow. He continued his studies in Dresden under Poland (violin) and Fiedler (harmony), and in 1814 went with his father to Italy, where he completed his studies in counterpoint with Padre Mattei in Bologna. In 1816 he made his début as a composer at Ancona with the opera *La distruzione di Gerusalemme*. In 1817 he returned to Dresden, where his opera *La schiava circassa* was successfully performed in 1820, and in the same year he was made a violinist in the royal chapel. He had two more operatic successes, in 1821 and 1823. Given a royal grant he went to Italy, where his opera *Amina* had one performance at La Scala. On his return to Dresden Rastrelli devoted himself principally to teaching singing and composing sacred music, and he was made a Knight of the Golden Spur by the pope in 1828 in reward for two motets he had written for the Cappella Sistina. In 1829 he was appointed deputy music director under Morlacchi at the court theatre, and in 1830 royal *maestro di cappella*, together with Morlacchi and Reissiger. In 1832 he produced *Salvator Rosa, oder Zwey Nächte in Rom*, a Singspiel whose music reflected both German and Italian influences. This was

the first new opera performed in Dresden after the liquidation in that year of the Italian Opera, and it was followed by two others, also in German, in 1835 and 1839. Highly esteemed in Dresden, particularly as a conductor, Rastrelli declined in 1836 an advantageous offer from Moscow. With his death and that of Morlacchi, the Dresden dynasty of Italian musicians came to an end. In 1843 they were replaced at the Hoftheater and at the royal chapel by Wagner.

WORKS

OPERAS

performed at Dresden, Hoftheater, unless otherwise stated

La distruzione di Gerusalemme (dramma sacro), Ancona, 1816

La schiava circassa, ossia Imene e Virtù (op, 2, Celani), 26 Feb 1820, *D-Dlb*

Le donne curiose (dg, 3, Montucci, after C. Goldoni), 14 April 1821, *Dlb**

Velleda, ossia Il paladino mutolo (op magica, 4, Montucci, after A. von Kotzebue: *Die kluge Frau im Walde*), 15 Jan 1823, *Dlb*

Amina, ovvero L'innocenza perseguitata (op semiseria, 2, F. Romani), Milan, Scala, 16 March 1824

Salvator Rosa, oder Zwey Nächte in Rom (op, 2, P.J. Burmeister-Lyser, after E.T.A. Hoffmann: *Signor Formica*), 22 July 1832, *Dlb**, vs (Dresden and Leipzig, ?1832)

Bertha von Bretagne (romantische Oper, 3, Leonhardt-Lyser), 12 Sept 1835, *Dlb*

Die Neuvermählten (komische Oper, 2, Prinzessin Amalie von Sachsen), 10 March 1839, *Dlb*

Il trionfo di Nabucco il Grande, ossia Punizione di Sedacia (dramma serio per musica, 2), ?unperf., *Dlb*

OTHER WORKS

Other stage works: Intermezzi for W. Shakespeare: Macbeth, 1836; Der Raub Zetulbeus (ballet), *c*1836–7

Sacred, *Dlb**: Mass, 4vv, orch, 1829; Domine probasti me, 1831; Miserere, 1837; 4 Salve regina; 2 Regina coeli; 2 Ave regina; 2 Alma Redemptoris mater; 2 Litanie lauretane; Credidi; In exitu Israel; 3 Laudate pueri; 3 Laudate Dominum; 3 Beatus vir; 3 Dixit Dominus; In convertendo; 3 Mag; 3 Confitebor

Other works, mostly *Dlb*: arias; songs; choruses; Va Conc.; Va Concertino; 3 military marches; Les charmes de Dresde, rondo, pf (Dresden, n.d.)

ANDREA LANZA

Rastrelli, Vincenzo (*b* Fano, nr Pesaro, 1760; *d* Dresden, 20 March 1839). Italian singing teacher and composer. He completed his earliest musical studies in Fano, where at the age of 18 he became one of the most sought-after singing teachers. From 1780 he studied counterpoint with Padre Mattei in Bologna, becoming a member of the Società Filarmonica in 1786. After holding the posts of *maestro di cappella* at Fano Cathedral and, from 1793, of *maestro al cembalo* at the Teatro del Sole in Pesaro, he moved to Dresden as a teacher of singing and music to Count Marcolini. In 1795 he succeeded Franz Seydelmann in the post of composer to the court church. After four years in Moscow (1802–6) and a short stay in Italy, he returned to Dresden in 1807, reappointed composer to the court church. In 1814, on being refused permission by the provisional Russian government for a journey to Italy, he resigned his post and, on his return, lived as singing teacher to the royal family. Nevertheless, in 1824 his former appointment was restored to him until his retirement in 1831. Rastrelli wrote an oratorio, *Tobia*, a harpsichord concerto and a large amount of church music, much of it surviving in manuscript in Dresden (*D-Dlb*).

ANDREA LANZA

Rastrology. The study of the patterns of use of rastra. A 'rastrum' (from Lat.: 'rake') is a multi-nibbed pen – specially designed to rule staves in manuscript music. Rastra were evidently used in some manuscripts at least by the 14th century, both with five nibs for polyphony and with four for chant sources. (There is some evidence for their use in places in both the 'Worcester Fragments' and the Machaut manuscripts.) During the 16th century (and perhaps earlier) larger rastra were made for drawing more than one staff at a time. In 1553 the German writer Holtzmüller provided instructions for using a rastrum. Even though printed manuscript paper emerged during the 16th century, in Germany and then in England, much music paper continued to be ruled by hand for many more years. A number of rastra survive from the 18th and 19th centuries, including one for drawing two staves at a time. All of these are made of metal, though the appearance of the staves themselves in surviving manuscripts suggests that earlier rastra were not so rigidly constructed. There were also rastra designed to rule larger numbers of staves, up to ten or 12; the overall depth of the staves on a page (that is, the overall width of the rastrum used) has been used by Tyson and others to distinguish batches of paper that are otherwise identical. Evidence of the use of a rastrum can be seen in manuscripts by Liszt and Wagner, and even in the sketchbook used by Stravinsky at the time of composing his *Rite of Spring*.

The gauge (or spacing of the lines) of any individual rastrum was seldom identical to that of another; they often left distinctive patterns as they were lifted from the paper at the ends of lines, and they reacted differently to different inks and hand pressures. As a result, individual rastra can be identified on manuscripts as clearly as handwritings. Further, since each scribe tended to use a specific rastrum, and since that rastrum would deteriorate with time, rastrology often allows for detailed reconstruction of the order of work in a manuscript, or for evidence that several layers were prepared at different times or places. This is true even for music copied in a busy and well-ordered music scriptorium, which will have tried to establish a consistent layout for music on the page. (Modern mass-produced rastra with steel nibs will be much harder to distinguish.)

The unique character of every rastrum can provide solid evidence for the history of a manuscript. While papers circulated relatively widely, so that a watermark can indicate only an area of production for the paper, the rastrum, having been used by a single institution or person at a single time, may well demonstrate the actual home of a manuscript. For example, study of the rastra used for 18th-century Mannheim manuscripts has yielded evidence linking manuscripts now in libraries elsewhere with the Mannheim scriptorium.

STANLEY BOORMAN

Rasulov, Ulmas (*b* Denau, 1951). Uzbek *ghidjak* player and composer. He was blind from birth and learnt to play the *ghidjak* through oral tradition. From 1967 to 1971 he studied at the Bukhara College of Music with Aminjon Nasritdinov and Marufjan Tashpulatov, who was a pupil of the *ghidjak* player Hoja Abdurahman. In 1971 he entered the Tashkent State Conservatory, where he studied with Fakhriddin Sadyqov and Mahmudjan Muhammedov. Following his graduation in 1976, he began to teach the *ghidjak* at the Bukhara College of Music, and in 1983 he received first prize in a *makom* competition in Uzbekistan. In 1987 he returned to the Tashkent State Conservatory to teach his instrument, remaining there until 1994; from 1987 to 1994 he also worked for the Uzbek State Philharmonia as the leader of the traditional music ensemble Zeravshan, and from 1990 to 1991 he worked for Uzbek State Radio. He wrote the music for a set of historical films, *Bobur*, *Chu'lpon*, *Navoi* and *Ilohiy ohanglar*, and composed many songs, more than 50 of which were recorded for the archives of Uzbek State Radio. The Uzbek division of the Melodiya company also released several recordings of his performances. He became known principally for his skill in improvisation in Uzbek traditional classical music, but he also performed in other styles; in 1986 he took part in a jazz festival in Leningrad (St Petersburg). In 1993 he was awarded the title Honoured Artist of Uzbekistan, and in the following year he began teaching at Bukhara Folk University, developing his interest in *makom* and the Sufi tradition. In 1998 he toured Holland and France.

Rat, Le. *See* LE RAT.

Ratamacue. A technique of side-drumming. *See* DRUM, §II, 2.

Ratchet [cog rattle] (Fr. *crécelle*, *crécerelle*, *cresselle*; Ger. *Ratsche*, *Knarre*; It. *raganella*). A percussion instrument of indefinite pitch in the form of a scraped idiophone. It consists of a cogwheel which is either revolved by means of a handle against one or more stout tongues of wood or metal (see illustration), or twirled so that the tongues strike the cogs of the wheel. Instruments of the above type resemble the old type of watchman's rattle. A cog rattle up to 2 metres high, the *matraca*, has been used in Spain, Portugal and the New World, especially to summon worshippers to church.

Ratchet turned by a handle

Ratchets serve in the Orthodox Church; in Roman churches they replace the bells during Holy Week. They have served secular purposes over a long period of time: in Europe as the watchman's rattle, as an alarm signal and as a noise-maker at sports gatherings. They are used universally to scare birds and animals, and in a simpler form to amuse children.

With such exceptions as the *Ratsche* in Beethoven's 'Battle' Symphony (*Wellingtons Sieg*, 1813), where an instrument of the *matraca* class is used to represent rifle fire, a small cog rattle wound by a handle is used in the orchestra. It occurs for example in the 'Toy' Symphony (by Leopold Mozart, formerly attributed to Haydn); Strauss's *Till Eulenspiegel* (1894–5); Musorgsky's *Pictures at an Exhibition* (orchestrated by Ravel, 1922); the finale of Walton's First *Façade* Suite (1926); and in Respighi's *Pini di Roma* (1923–4) – here in a rhythmic pattern (ex.1). In the modern orchestra ratchets of various

Ex.1

sizes and weights are used, a *pianissimo* effect being achieved with a fishing reel.

Ratdolt, Erhard (*b* Augsburg, 1447; *d* Augsburg, late 1527 or early 1528). German printer. According to his own diary covering the years 1462–1523 (*A-Wn* 15473), he first went to Venice in 1462, after the death of his father. Returning there in 1474, he began printing with two German partners, Peter Löslein and Bernardus Pictor (whether 'Pictor' is a latinized version of the surname, 'Maler', or whether it refers to its bearer's profession of illuminator, remains uncertain). Following the departure of both partners in 1478 or 1479 and after a one-year interim, he resumed business by himself in 1480. In 1485 the diocese of Augsburg commissioned a breviary from

Ratdolt, which particularly pleased the bishop; efforts were made to persuade the printer to return to Augsburg, first by Bishop Johann von Werdenberg and, after his death in 1485, by his successor, Friedrich von Hohenzollern. He apparently did so shortly afterwards (his last Venetian publication is dated 18 March 1486) and continued printing until his retirement in 1522, although his son Georg officially took over the business in 1515.

Ratdolt was one of the major craftsmen of his time, known primarily, however, for publications outside the field of music. In Venice his efforts were devoted mainly to writings on astronomy and mathematics (about 50 works), but his Augsburg publications (over 70) are almost exclusively liturgical, principally consisting of missals, breviaries and obsequials for various dioceses in southern Germany, Austria and Switzerland (Augsburg, Brixen, now Bressanone, Chur, Konstanz, Freising, Passau, Regensburg and Salzburg). He introduced musical notes into his liturgical books in 1487, using wood blocks at first, in 1491 changing to movable type. Ratdolt was the first printer to employ decorated title-pages and the first to print in three, and even four, different colours, using woodcuts by such prominent artists as Hans Burgkmair and Jörg Breu. A proof sheet of 14 different type models, dated 1 April 1486 (made just before his return to Augsburg and apparently in connection with that offer), is extant (in *D-Mbs*).

MARIE LOUISE GÖLLNER

Rath, Felix vom (*b* Cologne, 17 June 1866; *d* Munich, 24 Aug 1905). German composer. While training as a pianist with Reinecke in Leipzig and Sgambati in Rome, he studied law at universities in Germany and abroad (1883–93). His early compositions, most of them songs, were written during this period. His greatest compositional inspiration came from his studies with Thuille, who considered him one of his most talented pupils. Financially independent, Rath became a member of the Munich circle surrounding Richard Strauss and Max von Schillings; he planned to publish a journal, the *Lisztzeitung*, with von Schillings, but it never appeared.

As a result of his stern self-criticism and self-doubt, Rath left only a small body of work. His early chamber music, featuring dense piano writing, is in the tradition of Brahms. The symphonic poem *Nachtstück* shows Thuille's influence in its moderate use of altered harmonies and its clear formal structure. His best-known work, however, is the single-movement piano concerto, written in emulation of Liszt. His songs, which set modern poetry matching his own melancholy disposition, display a wealth of melodic ideas, as do the lyrical piano miniatures, although his treatment of material in these works does not always match the quality of his melodic invention.

STEPHAN HÖRNER

Rathaus, Karol (*b* Tarnopol, 16 Sept 1895; *d* New York, 21 Nov 1954). American composer of Polish origin. In 1913 he moved to Vienna to enrol at the University and the Academy of Music, where he studied composition with Schreker. After service in the Austrian army during World War I, he made his début as a composer-pianist in Vienna in 1919, playing his op.1, the Variations on a Theme by Reger. When Schreker moved to Berlin in 1920, Rathaus and other young composers (including Krenek and Hába) joined him to form a select master class at the Hochschule für Musik. With a brief interruption in 1922 to receive a PhD at Vienna University, Rathaus remained in Berlin until 1932 and established himself as 'one of the strongest hopes of our new music' (Schrenk). Important premières of that decade included those of his Symphony no.2 at the Frankfurt Festival (1924), the Overture op.22 by the Berlin PO under Furtwängler (1928), the Suite op.29 at the Liège ISCM Festival (1930), and two works produced at the Berlin Staatsoper, the ballet *Der letzte Pierrot* (1927) and the opera *Fremde Erde* (1930). In 1931 Rathaus turned to the comparatively new medium of sound film and wrote the score to *The Brothers Karamazov* (directed by Otzep), considered a classic of its kind.

From 1932 to 1934 Rathaus lived in Paris, and from 1934 to 1938 in London, where the Ballets Russes staged *Le lion amoureux* at Covent Garden (1937). In 1938 he settled in the USA (he became a citizen in 1946); after a brief stay in Hollywood (1939) he moved to New York to become professor of composition at Queens College, a position he occupied until his death. There he developed a remarkable curriculum for creative musicianship and shaped the talents of many young composers. He served on the directorate of the ISCM (American section) and on the advisory board of the Fulbright Award. In 1952 the Metropolitan Opera commissioned him to rework the orchestration of *Boris Godunov* wherever the original was impracticable, a task he accomplished with exemplary

discretion. The Karol Rathaus Memorial Association (subsequently the Karol Rathaus Society), formed after his death, promotes his music by sponsoring publication, performances and recordings of his works, and underwrites awards for music students. In 1960 the new music building at Queens College was named Karol Rathaus Hall, and though the Aaron Copland School moved in 1991, Rathaus Hall remains a tribute to the composer's memory.

Rathaus's style has many facets not easily classified. Unmistakable is his affinity to the Polish tradition, both in rhythm and melody; the German expressionism of the 1920s coloured some of his earlier works, submerging the Viennese elegance, and in certain scores dealing with Jewish topics (e.g. the incidental music to *Uriel Acosta* for the Habimah Theatre), he drew on Judaic intonations, mixing East European and Near-Eastern influences. But essentially his music is not dominated by national or racial elements: he was in the mainstream of European music. He escaped late Romanticism by stressing rhythmic vitality and angular melodies, without sacrificing emotional appeal. Imagination and colour rather than dogmatic exigencies dominate his music. He skirted atonality but did not abandon the tonal centre, despite a bold use of dissonance. His style is improvisational, rhapsodic and declamatory. Especially noteworthy is his predilection for the piano (he was a masterly pianist) and his sonorous, vivid orchestration. In his chamber music he combined intimacy with intensity. A resurgence of interest in his music, beginning in the mid-1980s, has led to acclaimed performances, a recording in 1987 of solo piano and chamber music and songs, a performance of his opera *Fremde Erde* in 1991 by the Bielefeld Musiktheater, and the foundation in 1994 in Berlin of the Karol Rathaus-Gesellschaft. Further recordings of his symphonic works by the Deutsches-Symphonie-Orchester in Berlin and the LSO appeared in 1997.

BORIS SCHWARZ/DONALD PIRONE

Rathgeber, Johann Valentin (*b* Oberelsbach, nr Fulda, 3 April 1682; *d* Banz, nr Coburg, 2 June 1750). German composer. He received his earliest musical education from his father, who held the combined posts of village organist and schoolmaster. In 1701 he entered the University of Würzburg to study theology, and in 1704 became a schoolmaster and organist at the Juliusspital in Würzburg. He went to the Benedictine abbey of Banz early in 1707 as chamber musician and servant to the abbot, and by the end of the year had become a novice. In 1711 he was ordained, and about the same time was appointed choirmaster at Banz, a post which he held, with one interruption, for the rest of his life. In 1721 the Augsburg firm of Lotter issued the first of his many publications, a volume of masses. Eight years later, when he had established a considerable reputation as a composer of church music, he sought permission to leave Banz for a European tour; he was refused and left without it. He visited Würzburg, Augsburg, Bonn, Cologne, Trier and Benedictine houses in Swabia and around Lake Constance. One of his reasons for making this tour seems to have been to gather information about performance conditions and liturgical customs in the Catholic areas of Germany; in the preface to his op.9 Vespers he said that he had added settings of the Compline psalms as, though sung Compline was not customary in his part of Germany, it was more common in the Rhineland and he had been asked to provide music for it. He also turned his attention to secular vocal music. The first two volumes of the *Ohren-vergnügendes und Gemüth-ergötzendes Tafel-Confect*, a collection of popular songs which he edited and arranged, were published by Lotter in 1733 and 1737 respectively.

Although he was reinstated as choirmaster after his return to Banz and readmission to the community, Rathgeber produced no more church music after 1739. He continued to work on the *Tafel-Confect*, whose last volume appeared in 1746, and in 1743 his last original composition was published, a set of short and simple keyboard pieces. He died in 1750 after a long illness.

Rathgeber is remembered mainly in connection with the *Tafel-Confect*, but in his own time he was also an extremely popular and influential composer of church music. Lotter's catalogues show that southern Germany saw a boom in published church music for the average choir in the mid-18th century, and that Rathgeber was the most important and prolific composer in this field in the 1720s and 30s; his first two publications of masses, opp.1 and 3, had the rare distinction of achieving second editions. Moreover, it is likely that his works started the trend towards simple church music for parish choirs; his op.1 was almost certainly the first publication of its kind, for though some church music was published in Germany before 1720 it was nearly all too elaborate and lavishly scored to be practical for them.

Most of Rathgeber's sacred output is made up of mass settings and Vesper psalms, for which parish churches had the greatest demand; but he also provided for all other liturgical occasions with sets of offertories (general motets, to be used at this point in the Mass, in place of the Proper texts), litanies, hymns, antiphons, and settings of the *Miserere* and *Stabat mater*. Each publication contained a great deal of music; most of his mass volumes include eight or more complete settings of the Ordinary, and his Vespers ones at least four complete sets of psalms for Sundays and various categories of feasts, with *Magnificat* settings and antiphons. Except for the sacred arias of op.10, all his church music is scored for SATB solo and chorus, one or two violins and continuo, with optional trumpets and drums in certain pieces. However, some publications, such as the Vespers of 1736 were intended for country districts where choirs were often small and incomplete music could be performed with a minimum of two voices and organ, the other two voice parts and either one or both violin parts being optional.

Until about 1750, south German-published church music had a style distinct from that of the large-scale Catholic church music being written elsewhere and from that of the Lutheran composers of the north. The first extant publication in this style is Rathgeber's op.1. The style is compact and non-contrapuntal; as the words can be clearly heard and there is little repetition of them, the music is apt for liturgical use. Rathgeber had a considerable talent for writing good melodies, for chorus as well as solo singers, so that although the choral texture is simple, and the solo parts make no excessive demands, the music is not dull. Most of his mass movements and psalm settings are through-composed; he rarely divided them into sections, and, except for the Benedictus in the mass, seldom wrote self-contained solo arias. In his earlier publications he developed a technique of unifying long movements by means of short recurrent motifs, vocal and instrumental, in melody or bass. But Rathgeber's forms are not stereotyped, and even his settings of the longest and most amorphous psalm texts usually have a sense of structure. He was further helped by a charming and imaginative, if naive, use of word-painting. He showed in his arias of op.10 that he could also use the more common contemporary ritornello forms. Each is a da capo movement; but unlike later composers of sacred arias Rathgeber did not imitate the Italian style, and the vocal writing is hardly more elaborate than that in the solo passages of his larger-scale music.

Despite his cultivation of simple textures and attractive melodies, Rathgeber was not a progressive composer. His melodic and harmonic idioms, and his bass lines, are firmly rooted in the Baroque. This is true also of his instrumental music: the concertos of op.6 are concerti grossi, for various combinations of instruments; the keyboard pieces of op.22, all in binary form, are Baroque in idiom, though as they are not at all contrapuntal, and in only two parts, their effect is rather thin. The *Tafel-Confect* contains a large and varied selection of the popular songs of the period, including solos, duets and choruses, many of which are described as quodlibets. Some have instrumental accompaniments, others merely figured basses. The square, sturdy, often predictable tunes are similar to those of the songs published at about the same time by composers such as Telemann, though the words, often nonsense syllables or in Bavarian dialect, are less distinguished.

WORKS

all published in Augsburg

SACRED

op.	
1	Octava musica, 4vv, 2 vn, bc (1721, 2/1728), 8 masses (in 2nd edn 2 requiems added)

ELIZABETH ROCHE

Ratisbon. *See* REGENSBURG.

Ratisbonne, George de. *See* CHAMBRAY, LOUIS FRANÇOIS.

Raţiu, Adrian (*b* Bucharest, 28 July 1928). Romanian composer and musicologist. He studied with Chirescu (theory and solfège), Constantinescu (harmony), Negrea and Buicliu (counterpoint), Klepper (composition), Breazul (history), Comişel (folklore) and Rogalski (orchestration) at the Bucharest Conservatory (1950–56), and in 1969 attended the Darmstadt summer courses. He was editor of *Muzica* from 1959 to 1962, when he was appointed to teach harmony at the Bucharest Conservatory.

As a musicologist he has produced fine analyses of Romanian and other 20th-century music, and his theoretical ideas are important to his creative work. In early works, such as the Piano Pieces of 1957, he attempted a synthesis of hexatonic modality and serialism. He then passed through a phase of rigorous organization with frequent recourse to folk modes, as in the Oboe and Bassoon Concerto (1963), before reaching a free post-serial style including aleatory features, original timbres and, again, structures based on folk modality.

VIOREL COSMA

Ratner, Leonard G(ilbert) (*b* Minneapolis, 30 July 1916). American musicologist and composer. He took the MA from the University of California, Berkeley in 1939 and the PhD in 1947 with Bukofzer; his other professors included Schoenberg, Bloch and Frederick Jacobi. He taught at Berkeley from 1944. In 1947 he joined the faculty of Stanford University, where he was made professor of music in 1957. He retired in 1984.

Ratner has specialized in Classical and Romantic music, harmonic theory and analysis and investigations of musical form. His observations on these topics are contained in his two textbooks, *Music: the Listener's Art* (1957) and *Harmony, Structure and Style* (1962). His later writings explore the use of 'rhetorical' devices (described in terms of musical procedures such as scoring, harmonic colour and phrasing) to define musical idioms. Many of his compositions, which include an overture, a concertino for trumpet and string orchestra, quartets and sonatas, have been recorded.

PAULA MORGAN/R

Ratsche (Ger.). *See* RATCHET.

Ratti, Bartolomeo ['Il Moro'] (*b* Padua, 1565; *d* Padua, 21 April 1634). Italian composer, singer and organist. He attended the school attached to S Antonio, Padua, and studied composition with Costanzo Porta. On 30 October 1591 he became a tenor in the S Antonio choir. On 9 June 1593 he competed unsuccessfully for the post of player of the 'organetto dei concerti' there, but he was appointed to this position on 24 February 1594 and also continued as a singer. On 14 March 1594 he received permission to become *maestro di cappella* at Gemona del Friuli, whence he returned to Padua to become, on 13 December 1600, deputy to Porta at S Antonio. On 1 June 1601, after Porta's death, he succeeded him as *maestro di cappella*, a post he held until 1606. Having apparently been *maestro di cappella* briefly of S Francesco, Piacenza, he returned to his post at Padua in 1608. On 11 December 1613 he was dismissed for neglecting his duties, but he continued to live in the monastery attached to S Antonio until his death. He composed both sacred and secular music in a variety of styles current in his day.

REGINA F. CHAUVIN/R

Ratti, Cencetti & Comp. Italian music publishers. Giovanni Battista Cencetti ran a copying business at 8 Via Canestrari, Rome, established early in the 19th century, and began music publishing with Leopoldo Ratti, in 1821 (their first privilege was dated 19 October). The firm, originally styled Stamperia Litografica di Leopoldo Ratti e Gio: Batta: Cencetti, was first at 24 Via de' Spagnuoli. From about 1823 to 1830 it was at 23 Via della Posta Vecchia (also referred to as 23 Via de' Sediari), with additional premises at 17 Via della Croce (from *c*1828); in about 1830 the latter became its main address, with 154 Via di Ripetta also in use (*c*1830–32). Cencetti's name was dropped from the imprint in about 1835, but as Ratti & Comp. the firm continued in business until probably early 1844.

To judge by plate numbers (which appear to be chronological) the firm issued some 700 publications, almost all in lithography, mainly of excerpts from contemporary operas. It is best remembered, however, for the enterprising series of complete full scores of eight Rossini operas: *Mosè in Egitto* (*c*1825), *L'inganno felice* and *Semiramide* (*c*1826), *Il barbiere di Siviglia* (*c*1827), *Ricciardo e Zoraide* (*c*1828), *L'assedio di Corinto* (*c*1830), *Matilde di Shabran* (*c*1832) and *Guillaume Tell* (*c*1835). Although Rossini probably did not supervise their preparation, they were the first full scores of his operas to appear in Italy (five of them have never been republished in full score). They are landmarks in both Italian and in lithographic music publishing; only a few operatic full scores were published in Italy in the 19th century, and it was at this time exceptional for such large-scale works to be printed by lithography anywhere.

RICHARD MACNUTT

Ratti, Lorenzo (*b* Perugia, 1589/90; *d* Loreto, 10 Aug 1630). Italian composer and organist. He was a pupil of his uncle Vincenzo Ugolino and from 1599 to 1601 a choirboy in the Cappella Giulia at S Pietro, Rome. From 1 May 1614 to June 1616 he was organist of Perugia Cathedral and from 1616 to at least 1617 he was *maestro di cappella* of the Seminario Romano. Between 17 June 1619 and July 1620 he held the same office at the Collegio Germanico, Rome, and from 1 August 1620 to February 1623 he was *maestro* of S Luigi dei Francesi, Rome. He returned to the Collegio Germanico for a further period as *maestro*, which lasted probably from late March 1623 to about 1 December 1629. He directed music in the Oratorio del SS Crocifisso on the five Fridays of Lent in 1629. On 15 December in the same year he succeeded Antonio Cifra as *maestro di cappella* of the Santa Casa, Loreto, but he had to resign on 30 July 1630 because of ill-health. He was ordained to the priesthood little more than a month before he died.

The *Sacrae modulationes* contain his most important work: polychoral settings of the gradual and offertory as well as motets for the Elevation for every Sunday of the year; six of the offertories are substituted by short Latin dialogues based on the Gospel text of the day, the only early 17th-century dialogues to have served a liturgical function.

REGINA F. CHAUVIN/NOEL O'REGAN

Rättig. Austrian firm of music publishers. Theodor Rättig began his publishing activities in Vienna about 1877, working as a partner in the firm of Bussjäger & Rättig in 1878–80. In 1878 he was responsible for publishing the first edition of Bruckner's Third Symphony (1877 version) after hearing the work's première on 16 December 1877: he was almost alone among the Viennese musical establishment in his enthusiasm. He issued a full score and, shortly afterwards, a version for piano duet by the 18-year-old Mahler, the latter's first publication. By the end of 1880 Rättig was operating on his own. He continued his passionate advocacy of Bruckner's music with the publication of the *Te Deum* (1885), four *Graduale* (1886) and the revised 1889 version of the Third Symphony (1890). Other composers in his catalogue are almost all minor Viennese musicians. In the late 1890s the firm moved to Leipzig; it was taken over by Schlesinger (Lienau) in 1910.

NIGEL SIMEONE

Rattle (Fr. *claquette*, *hochet*; Ger. *Rassel*, *Schnarre*; It. *nacchere*). A shaken idiophone in a variety of forms and with numerous names (see illustration). Seven types of rattle are distinguished by Hornbostel and Sachs in their classification (*see* IDIOPHONE). A 'cog rattle', however, is classified as a scraped idiophone (*see* SCRAPER and RATCHET). In its simplest form a strung rattle consists of small hard objects such as seeds, shells or teeth bunched together; a gourd rattle is formed from a seed pod in which the dried seeds remain; or a calabash or clay vessel filled with seeds or small pebbles. Certain rattles (such as the beaded calabash) have seeds, shells or other rattling pieces outside as well as inside the gourd. The shells of gourd rattles, the beaded calabash and similar instruments are provided by the natural fruit. In some cases a handle and bowl are fashioned by tying the calabash fruit near its stalk. Modern rattles formed from natural fruit pods, or manufactured from wood or a plastic material, include maracas, the *chocalho* (a tube rattle) and the cabaca.

The rattle is the instrument with which we are usually first acquainted as children, and was among the earliest known instruments. Rattles dating from prehistoric times are known. From ancient Egypt rattles are of two main types: an instrument with a handle, looking like a distaff, and made of plaited straw, reed or papyrus; and terracotta instruments, shaped to represent a bird or animal and such fruits as the lemon or gourd. Terracotta rattles representing hens, bears, camels, pigs and other animals survive from the old Babylonian period in Mesopotamia (early 2nd millennium BCE), as do many 'pie-crust' rattles. Clay objects excavated in Costa Rica point to the use of rattles in prehistoric times. The strung rattle remains an important instrument in several cultures, for example those of New Guinea and Island Melanesia.

The belief in the instrument's ritual power is widespread. It is an important ritual item in sub-Saharan Africa and is used by North and South American shamans. Rattles are used by Korean priests, and to some Brazilians the rattle is believed to be the dwelling-place of a powerful deity. It is used to stress dancing, being shaken or hung from the ankle, leg, arm or neck of the dancer. Rattles of this description fashioned from the ears of springbok or dried hide, and containing small pieces of ostrich-egg shell or dried berries as rattling pieces, are found among the San of southern Africa. Early travellers to America found the rattle an important instrument in ceremonial dances including the *tupinamba* (ritual fire dance), and ceremonies connected with burial and sacrifice. In his *Generall Historie of Virginia* (1624) John Smith wrote of rattles made of gourds or pumeone shell which sounded 'Base, Tenor, Countertenor, Meane and Treble'.

Among the numerous elements used to make rattles are such objects as human skulls filled with pebbles, and the jawbone of an ass or zebra in which the loose teeth act as rattling pieces. This instrument survives in the Latin American dance orchestra as the *quijada*, as do gourd rattles (maracas), and instruments such as the cabaca. Among the forms of rattle used in Latin America are ones of animal bones and nails, threaded on fibre, used among the Shuar of Ecuador; rattles made of a thin, cylindrical

Examples of rattles: (a) turtle-shell rattle (kanyáhte' ká'nowa') of the Seneca Indians, New York State; (b) iron rattle, West Africa; (c) bronze rattles, Luristan, Iran; (d) wooden rattle of the Kitksan Indians, British Columbia, Canada; (e) ivory stick rattle, Nigeria; (f) bronze sistrum, Central Anatolia (c2100 BCE); (g) bamboo rattle (angklung), Java; (h) nut-shell belt, South America; (i) basket rattle, Democratic Republic of the Congo; (j) gourd rattle

tree trunk filled with seeds, stones and nails, used by African Ecuadorians; and the rattle cross, used by African Cubans, in which small gourds containing seeds or stones are affixed to the ends of two crossed sticks. Among northern Amerindians turtle-shell rattles and split-stick rattles (known as *pak'papa*) are known. Many rattles in America and Africa are based on gourds, often with external rattling devices (such as a net into which beads, shells or pieces of wood may be woven). Other types of rattle are the SISTRUM found in the Middle East and Ethiopia (particularly in Christian traditions) and the Javanese ANGKLUNG, a bamboo rattle.

Rattles of various descriptions are scored for in modern Western art compositions, outstanding examples being the works of Orff (*Weihnachtsspiel*, 1960 and *Antigonae*, 1949); Varèse (*Ionisation*, 1931 – maracas, high and low); Henze (*Ode an den Westwind*, 1953); Britten (*The Prodigal Son*, 1968 – here a conical gourd rattle is used to produce two distinct tones); and Berio (*Circles*, 1960), written for the Mexican bean, a pod with dried seeds inside). In certain cases composers are not explicit, and fail to define whether rattle or ratchet is intended.

JAMES BLADES, JOHN M. SCHECHTER

Rattle, Sir **Simon (Denis)** (*b* Liverpool, 19 Jan 1955). English conductor. After displaying early musical talents, he played percussion with the National Youth Orchestra and Royal Liverpool PO before studying the piano, percussion and conducting at the RAM (1971–4). In 1974 he won the John Player International Conductors' Award, as a result of which he was appointed assistant conductor of the Bournemouth SO and Bournemouth Sinfonietta. He made his professional début conducting the Nash Ensemble at the Queen Elizabeth Hall in February 1975, and the following year conducted the New Philharmonia Orchestra at the Royal Festival Hall – at 21, the youngest conductor ever to appear with the orchestra. From 1977 to 1980 he was both associate conductor of the Royal Liverpool PO and assistant conductor of the BBC Scottish SO. From 1978 to 1983 he was principal conductor of the London Choral Society and from 1979 to 1998, of the CBSO, of which he was music director from 1990.

Rattle's commitment to contemporary music was evident in a relationship with the London Sinfonietta that began in 1976, with a Promenade concert at the Round House, London (he was, at that time, the youngest conductor ever to appear at the Proms). He also made his mark early in opera, prominent débuts including that at Glyndebourne (1977) with *The Cunning Little Vixen*, the work with which he belatedly first appeared at Covent Garden in 1990 and subsequently recorded. In 1979 he made his débuts with the Los Angeles PO and Chicago SO. Other notable débuts include those with the Concertgebouw Orchestra (1986), Berlin PO (1987) and Vienna PO (1993). He was appointed principal guest conductor of the Orchestra of the Age of Enlightenment in 1992 and was knighted in 1994.

Rattle's two-decade tenure of the CBSO, during which he raised the orchestra's status immeasurably, demonstrated a number of characteristic traits. Declining more prestigious appointments and innumerable guest conducting opportunities to hone his and his orchestra's skills in wide-ranging repertory, he developed a partnership, based on mutual respect, unique in British musical life. Rattle's commitment to Birmingham, together with the local council's urban regeneration programme, transformed

Simon Rattle, 1995

the city's musical facilities over that period. The acoustically exemplary Symphony Hall, which was designed by Artec of New York, the splendid resources of the CBSO Centre, vastly improved audience attendance figures and players' contracts are all legacies of the Rattle years. Above all, he harnessed his abundant energies and charisma in inspirational performances and recordings of a broad repertory, ranging from Haydn to Henze, Mahler to Maw, the *War Requiem* to *Porgy and Bess*, Sibelius symphonies to works by Szymanowski. Common to all his conducting is a pulsating dynamic charge channelled into scrupulously articulated, unerringly calibrated musical structures. Few conductors communicate such joy in their music-making, and he has the ability to galvanize players and audiences alike.

Rattle's reputation as one of the leading conductors of his generation was sealed by his appointment as chief conductor and artistic director of the Berlin PO, effective from 2002. Although the core 19th-century German repertory was not hitherto one with which he was especially identified, he had already begun to give it more attention, notably with performances and recordings of the complete Beethoven symphonies and piano concertos with the Vienna PO. (N. Kenyon: *Simon Rattle: the Making of a Conductor*, London, 1987)

BARRY MILLINGTON

Rattle drum. A drum (membranophone) indirectly struck by pendants, pellets or similar objects. *See* DRUM, §I, 3.

Ratz, Erwin (*b* Graz, 22 Dec 1898; *d* Vienna, 12 Dec 1973). Austrian musicologist. In addition to his musicological studies under Adler at Vienna University (1918–22), he became a private pupil of Schoenberg in 1917 and remained an active supporter of his teacher's work. After organizing the concert series 'Ten Public Rehearsals of the Chamber Symphony op.9' in 1918 (conducted by Schoenberg), he founded the Verein für Musikalische Privataufführungen (1918–21) with Berg and Paul A. Pisk. The activities of the society prepared for the founding of the ISCM in 1922. When Schoenberg went to Berlin (late 1925) Ratz continued his composition studies with Webern; they were close friends until Webern's death. Ratz's ability in music analysis led to his appointment to teach theory at the Musikakademie, a post he held until his death. His research into the analysis of musical form is demonstrated in his *Einführung in die musikalische Formenlehre* (1951).

In 1955 Ratz became president of the International Gustav Mahler Society and editor of the complete critical Mahler edition. In connection with this he established a collection of literary and recorded documents. He also prepared critical editions of Beethoven's piano variations and Schubert's piano sonatas. From 1953 to 1968 he was president of the Austrian section of the ISCM.

RUDOLF KLEIN

Rauch. German or Alsatian family of musicians.

(1) Johann Georg Rauch (i) (*b* Sulz, nr Strasbourg; *d* Strasbourg, 21 July 1710). Organist and composer. He is first heard of in June 1687 when he was appointed organist of Strasbourg Cathedral; about the same time his first extant publication, a volume of motets, was published in Augsburg. Since his subsequent publications appeared at Strasbourg, it may be that his previous appointment had been in the Augsburg region. Though three further publications appeared in the next ten years, Rauch's applications for the post of Kapellmeister were never successful. When Sébastien de Brossard, for whom Rauch had sometimes deputized, left in 1699 he was eventually replaced by Thomas Bourgeois, and when the latter left in 1707 Rauch was again passed over.

Rauch's published church music displays a great variety of textures and a familiarity with all the contemporary styles of church music, from the flowing melodious duet to the massive ceremonial concertato style. It is typical of the Italian-influenced church music favoured by many German composers of the time.

WORKS

Novae sirenes sacrae harmoniae, motets, 2–8vv, insts, op.1 (Augsburg, 1687)

Novae sirenes sacrae harmoniae, motets, 3–7vv, insts (Strasbourg, 1690)

Harmonicus missarum concentus, masses, 4–8vv, 5 inst pts, op.3 (Strasbourg, 1692)

Cithara Orphei duodecim sonatorum, 4 pts (Strasbourg, 1697), lost

(2) Joseph Michel Rauch (*b* Strasbourg, *c*1685; *d* Strasbourg, 10 April 1738). Organist and composer, son of (1) Johann Georg Rauch (i). He is first heard of in 1708, when the authorities of Strasbourg Cathedral gave him a bursary to study the organ and composition in Paris. By 1710 he was back in Strasbourg, taking over the post of cathedral organist in September, after his father's death. Unlike his father, he also obtained the post of Kapellmeister; but from a non-musical point of view, he does not seem to have been a very satisfactory employee, as the cathedral frequently had to pay his debts, and he spent six weeks away in Reims without permission in 1725. His death in 1738 was preceded by 12 years of illness, and though he officially held his posts to the end of his life, much of the work was done by his younger brother, (3) Johann Georg Rauch (ii).

Rauch had a considerable reputation as an organist, but was less well regarded as a composer. None of his compositions, which include a number of masses and a *Te Deum* for the wedding of Louis XV, is extant.

(3) **Johann Georg Rauch (ii)** (*b* Strasbourg, 1702; *d* Strasbourg, 1 July 1779). Organist, son of (1) Johann Georg Rauch (i). He became organist at Strasbourg Cathedral in 1738 on the death of his elder brother, (2) Joseph Michel, for whom he had been deputizing since 1726. He does not seem to have succeeded to his brother's other post of Kapellmeister; in the last years of his life it was held by F.X. Richter, who wrote a funeral motet for him.

(4) **Johann Baptist Rauch** (*fl* 1779–96). Organist; his relationship to the earlier members of the family is not known. He succeeded (3) Johann Georg Rauch (ii) as organist at Strasbourg Cathedral in 1779, and still held the post in 1796; no other details of his life are known. He is said to have composed a mass, which is not extant.

ELIZABETH ROCHE

Rauch, Andreas (*b* Pottendorf, 1592; *d* Ödenburg [now Sopron], 1656). Austrian organist and composer. He was organist at the Protestant churches at Hernals (1621–5) and Inzersdorf (1627) in the Lutheran region of Lower Austria. Following the expulsion of Protestants from Austria under the Edict of Restitution in 1629 he settled in Ödenburg, where he was the organist of St Michael's until his death.

Rauch employed both old and new stylistic means as he needed them in his compositions. The motets of the *Thymiaterium* (1625) – the title, meaning 'censer', is a play on the composer's name ('smoke' or 'incense') – present pseudo-polyphonic harmonic writing reminiscent of Johannes Eccard, the secular three-part songs (1627) are related stylistically to Italian ballettos, and the influence of Monteverdi is evident in the small-scale sacred works of 1641 and 1651. The polychoral compositions of 1635 and 1648 are assured examples of the 'colossal Baroque' style which blend the Austrian predilection for large vocal and instrumental groupings with the concertato writing of northern Italy. They are all political concertos, each dedicated to an emperor of the Habsburg line, and are set for between two and four obligatory groups of singers and/or instrumentalists with continuo, together with an optional 'capella' (usually of voices and strings) which either adds new material at the tuttis, or performs unadorned versions of the obligatory parts. The direction, included for the last eight pieces, for trumpets and timpani to sound the 'SIGNAL "L'arma"' (together with musket salvos and cannon volleys) provides evidence of the non-musical panoply of Habsburg high ceremony.

WORKS

Symbolum peccatoris resipiscentis, 4vv (Nuremberg, 1621)
Thymiaterium musicale, 4–8vv, bc (Nuremberg, 1625)
Musicalisches Stammbüchlein, 3vv (Nuremberg, 1627); edns of 3 secular songs in *Das frühdeutsche Lied*, ed. W. Vetter, ii (Münster, 1928); 1 sacred and 2 secular songs in Antiqua-Chorbuch, ed. H. Mönkemeyer, i, ii (Mainz, 1951)
Zwey christlische musicalische Gesänglein, 4vv (Nuremberg, 1627)
Concentus votivus sub ... Ferdinandi II (Attollite portas principes), 9–17vv, insts, bc (Vienna, 1635)
Missa, vespera et alii sacri concentus concertati, 2vv, hpd (Nuremberg, 1641) [includes his portrait 'aet. suae 49']
Currus triumphalis musici, 8–14vv, insts, bc (Vienna, 1648) [incl. Attollite portas principes in reduced scoring]
Newes Thymiaterium, 3–4vv, insts (Vienna and Lucerne, 1651)
Resonet in laudibus, motet [listed in *EitnerQ* copied from print]

HELLMUT FEDERHOFER/PETER DOWNEY

Rauch, Caspar (*b* Ulm, 1558; *d* ?Breslau [now Wrocław], after 1617). German composer. He is known to have been a citizen of Breslau about 1618, for he referred to himself thus when he published his only known work, *Ein Schatz-Kasten voller Clainodien von allerley schönen Trostsprüchen auss Heyliger Schrifft dess alten und newen Testaments*, in Königgrätz (now Hradec Králové) in that year (RISM, BVIII 1618[06]). In this publication there is mention of an extensive collection of songs, although only eight appeared in the appendix in settings for one to five voices; most of the songs deal with the subject of death. The work has also a secondary, didactic purpose, in that Rauch intended the pieces to be used in schools.

WALTER BLANKENBURG

Rauch, František (*b* Plzeň, 4 Feb 1910; *d* Prague, 23 Sept 1996). Czech pianist. He studied the piano with Hoffmeister (1929–31) and composition with Novák (1936–7) in Prague, made his début with the Czech PO in 1932 and then played in most European centres and, after World War II, in India, Japan and Brazil. Rauch specialized in Czech music, Beethoven, Chopin and the German Romantics. An excellent chamber player, he formed duos with the violinist Zika, the cellist Sádlo and the pianist Hubička. He was a member of the Prague Trio, originally with Bělčík (violin) and F. Smetana, then Sádlo (cello); later with Etlík (clarinet) and Tylšar (horn). From 1939 he taught at the Prague Conservatory and from 1946 at the Prague Academy (AMU) where his pupils included Růžičková, Boldocká and Eben. He occasionally wrote reviews and articles for *Hudební rozhledy* and composed for piano and chamber ensembles.

ALENA NĚMCOVÁ

Rauche, Michael (*fl* London, second half of 18th century). English instrument maker and dealer in instruments and music. His extant instruments include two 13-course Baroque lutes. One, a large ivory and ebony instrument

in the Victoria and Albert Museum, London (no.9–1871) is dated 1762 and bears Rauche's address in Chandos Street. The other, in a private collection in Switzerland, is much smaller, of multi-rib construction, and is dated 1767. There are also English guitars by Rauche; one dated 1770 is in the Ashmolean Museum, Oxford. Rudolf Straube's *Three Sonatas for the Guittar* (1768) are for such an instrument and were 'Printed for and Sold by, ML RAUCHE, in Chandois Street'.

LYNDA SAYCE

Raucheisen, Michael (*b* Rain am Lech, 10 Feb 1889; *d* Beatenberg, 27 May 1984). German pianist. He was taught the flute, violin and piano by his father at home and composition and conducting by Felix Mottl in Munich. After playing the violin in the orchestra of the Staatsoper in Munich and in chamber groups, and the organ in most of Munich's principal churches, he began to coach singers at the Staatsoper and soon afterwards to accompany them in recitals. He then moved to Berlin, where he inaugurated a series of recitals with many of the leading singers and instrumentalists of the day, among them Elena Gerhardt and Fritz Kreisler, with whom he toured abroad. Recording with many of the famous pre-war singers in Germany, he enhanced his knowledge of lieder, and during the war he created a memorable Lied Edition for Berlin Radio, where he had been put in charge of chamber music and song. The recitals were preserved on tape, and in the 1970s and 80s almost the entire edition appeared on LP discs, covering, in addition to familiar repertory, such lesser-known lied composers as Marschner, Weber and Pfitzner. Among the artists taking part were Berger, Müller, Patzak, Völker, Anders, Hotter and the young Elisabeth Schwarzkopf; each singer was carefully matched to the song in hand. The Lied Edition remains a unique achievement and a tribute to Raucheisen's industry and his ability to surmount wartime exigencies. He resumed his career briefly in the postwar era before retiring.

ALAN BLYTH

Rauch von Schratt. German family of recorder makers. Three recorder makers, all named Hans Rauch von Schratt, were active in Schrattenbach from the mid-15th to the mid-16th centuries. The first, Hans Ruch (Rauch) (*d* 1526) married in 1490, declaring himself to be 'Hanns ruhe der pfeiffenmacher von Schrattenbach'. The second Hans made a recorder dated 1535 which survives in Salzburg; the third Hans is known from a document of 1595 as 'Pfeifenmacher'. The two surviving instruments (in the Museum Carolino Augusteum, Salzburg, and Bayerisches Nationalmuseum, Munich) which bear the name Hans Rauch have the maker's mark engraved on an ornamental brass fitting, with the additional mark of a double trefoil stamped on the wood.

Caspar Rauch (*fl* Schrattenbach, *c*1540) was a maker of recorders who is known to have owned an area of woodland in Schrattenbach during the late 1530s. His relationship to the eponymous makers discussed above is unknown. In July 1772 Charles Burney (*BurneyGN*) noted in the 'Oosters Huys, or Easterlings house' in Antwerp a set of woodwind instruments, 'between 30 and 40 of the common-flute kind, but different in some particulars . . . and all are of one sort of wood and by one maker: 'CASPER RAVCHS SCRATENBACH' was engraved on a brass ring, or plate which encircled most of these instruments'. Their case 'when filled with these instruments requires eight men to lift it from the ground'. Burney believed these instruments to have been made in Hamburg. Two instruments known to have been members of the Oostershuis set – an alto columnar recorder and a bass – survive in Brussels (at the Conservatory of Music); another a unique 3-keyed contrabass recorder, survives in Antwerp (Vleeshuis museum).

WILLIAM WATERHOUSE

Raugel, Félix (*b* St Quentin, 27 Nov 1881; *d* Paris, 30 Dec 1975). French choir director and musicologist. He studied at the Lille Conservatoire (1899–1900; *premier prix* for viola in 1900 under Charles Queste), then at the Schola Cantorum in Paris (1900–09), where he was taught the organ by A.M. Decaux, composition by d'Indy and counterpoint by Roussel; he also studied harmony under Libert. Raugel's many posts during his long career were mainly those of organist and choir director: *maître de chapelle* at St Eustache (1911–28) and at St Honoré d'Eylau (1928–40); founder and director of the Handel Society (1909–14), the Chorale Française (1922–4), the Société des Etudes Mozartiennes (1930–39) and the Chorale Félix Raugel (1931); finally choir trainer for French radio (1934–47) and conductor of the Société Philharmonique in Reims (1926–62).

Raugel wrote some 20 papers on the organ (instruments, organists and makers) and on aspects of choral music. He also made editions of organ works (by Handel, Scarlatti and Buxtehude) and vocal works (by Péchon, Steffani and Brossard). His writings include contributions to several reviews (*Tribune de Saint-Gervais, Monde musical, L'orgue*) and important encyclopedias. He was musical director of the Anthologie Sonore (1949–59) and vice-president of the Société Française de Musicologie (1944–59).

CHRISTIANE SPIETH-WEISSENBACHER

Raulin (*fl* late 15th century). Franco-Flemish composer. He is known from the ascriptions of three songs in a Florentine manuscript (*I-Fn* Magl.XIX.176): a four-part setting of the monophonic song *Je suis trop jeunette* (ed. in MRM, ii, 1967) and the three-voice virelais *Veu que tant* (also in *F-Pn* fr.15123) and *En elle croi*. He may be the same as the 'Roelkin' (often misread as 'Roellrin') to whom three works are ascribed in the Segovia manuscript (*E-SE* s.s.): the Dutch songs *Zart reyne frucht* for four voices and *Vrucht ende moet* for three, and a florid two-part setting of *De tous biens plaine* (also in *I-PE* 1013, *PL-Wu* 2016) – this last particularly notable for the two-and-a-half-octave range of the added voice. It is less likely that he should be identified with the 'Ranlequin de Mol' to whom the four-voice motet *Ave decus virginum* (ed. in EDM, 1st ser., xxx, 1960) is ascribed in the Apel codex (*D-LEu* 1494). 'Frere Raulin Franquet', chaplain at the court of René of Anjou in 1449–53, is always recorded separately from the singers, so he is probably not the composer. Bonda has suggested that Raulin might be identified with the musically proficient humanist RUDOLPH AGRICOLA, at least once referred to as 'Roelof'.

DAVID FALLOWS

Raulin de Vaux (*b* ?Vaux-sous-Laons, nr St Quentin; *fl* *c*1420). French composer. He is known only by the three-voice rondeau *Savés pour quoy suy sy gay* (ed. in CMM, xi/2, 1959), a May song, in the eighth fascicle of *GB-Ob* Canon.misc.213. An additional, shorter line of verse appears with the same music after both main sections of the refrain. Raulin may be the same as Raoul le Vavasseur, a chaplain at the Burgundian court chapel in 1418.

PAULA HIGGINS

Rault, Félix (*b* Bordeaux, 1736; *d* Paris, 1800 or later). French flautist, teacher and composer. A pupil of the flautist Michel Blavet, he acquired great skill in his early youth. He obtained a part-time position in the Paris Opéra orchestra in 1754 and when Blavet retired from this orchestra in 1758, Rault became his full-time successor. He was also employed in the Concert Spirituel orchestra from 1765 to about 1776 and in the royal chapel from 1768 until its dissolution in 1792. In 1781 Rault left the Opéra with a pension and began to devote more time to solo performances. The flute concerto and numerous chamber works that he wrote for these occasions reflect the typical *galant* style of the time, but show little imagination or depth. The cancellation of pensions at the Opéra during the Revolution caused Rault to take a post in the orchestra of the Théâtre de la Cité; when the theatre closed in 1800 he fell into desperate financial straits, and he reportedly died shortly thereafter.

Rault is historically important mainly as a flute teacher; he figured strongly in the evolution of the French school of flute playing from the late Baroque to the Romantic periods. As the most noted pupil of Blavet, he became the principal transmitter of the early 18th-century French tradition. His most outstanding pupil, Jean-Georges Wunderlich, was one of the first flute professors at the Paris Conservatoire and co-author (with Antoine Hugot) of the official *Méthode* used by the Conservatoire for many years.

SHERWOOD DUDLEY/R

Raum [née Hodges], **Elizabeth** (*b* Berlin, NH, 13 Jan 1945). Canadian composer and oboist of American origin. She graduated from the Eastman School in 1966 with a degree in oboe performance. During the period 1968 to 1975 she was the principal oboist of the Atlantic SO, Halifax, Nova Scotia and beginning in 1975 held a similar position in the Regina SO. In 1984 she received the MM in composition from the University of Regina with her opera *The Garden of Alice* (1983) whose production in 1985 quickly established her as a major composer.

Raum's music is neo-romantic in style and has been described as well-crafted, sophisticated and expressive. Her lyrical expressiveness and sophisticated command of idiomatic writing – particularly for string and wind instruments – have resulted in a continuing flow of commissions. Tuba players throughout the world are relishing her growing list of compositions for their

instrument. Although much of her music is written for traditional ensembles, her output includes a number of works, including multimedia compositions and film scores, that use experimental effects. Having a strong programmatic sensibility, she is able in her multimedia music to appropriately complement and subtly increase the impact of the images concerned. Notable among her stage works is the ballet, *The Green Man*, which won the Can Pro Gold Award in 1994; she also won the award for Best Musical score at the Saskatchewan Film and Video Showcase '98 for *Sparkle* (directed by Jeff Beesley), which used music from Raum's 1993 work *A Prairie Alphabet Musical Parade*. (*EMC2*)

ELAINE KEILLOR

Raupach. German family of musicians and writers.

(1) **Christoph Raupach** [Veritophilus] (*b* Tondern, 5 July 1686; *d* Stralsund, 1744). Organist, composer and writer on music. He studied the harpsichord, organ and violin with his father Georg Raupach (*b* Kauffung, nr Liegnitz [now Legnica]; *d* Tondern, 1700), an organist at Zittau and Tondern; in 1701 he went to Hamburg to study composition with Georg Bronner. On 30 April 1703 he was appointed organist at the Nikolaikirche in Stralsund, where he remained until his death. Several compositions, including keyboard suites, oratorios and cantatas (among them *Danket dem Herrn* and *Wünschet Jerusalem Glück*, *B-Bc*), are mentioned in his autobiography (in *MattbesonGEP*). He also wrote essays on music, most notably 'Veritophili deutliche Beweis-Gründe, worauf der rechte Gebrauch der Music beydes in den Kirchen und ausser denselben beruhet' (in F.E. Neidt: *Musicalischer Handleitung*, iii, Hamburg, 1717).

(2) **Hermann Friedrich Raupach** (*b* Stralsund, 21 Dec 1728; *d* St Petersburg, 11/23 Dec 1778). Harpsichordist and composer, son of (1) Christoph Raupach. On 24 February 1755 he was engaged as deputy harpsichordist in the court orchestra at St Petersburg, and in 1758 succeeded Araia as Kapellmeister and court composer; he was the only non-Italian musician to conduct the Italian opera in St Petersburg during the 18th century. In the same year he produced his first opera, *Al'tsesta* ('Alceste'). This *opera seria* is remarkable for being composed to a Russian libretto (Raupach had mastered the language of his adopted country perfectly) and for its stylistic anticipation of the classical severity of Gluck. On 18 January 1762 Raupach was replaced as Kapellmeister by Vincenzo Manfredini; he then went via Hamburg to Paris, where he met the young Mozart and had some sonatas for violin and keyboard published. Four movements from Raupach's sonatas were arranged by Mozart in his keyboard concertos K37, 39 and 41. In 1768, after Tommaso Traetta had been appointed Kapellmeister, Raupach returned to St Petersburg as deputy harpsichordist and in 1770 was promoted to deputy Kapellmeister. In this post he was required to write ballet music and other stage works; his Singspiel *Dobrïye soldatï* ('The Good Soldiers') was performed posthumously. The work combines Russian colouring with a basically Italian idiom, and was one of the most frequently performed operas in Russia, with productions as far afield as Tobol'sk and Irkutsk. Raupach became the director of the music department at the Academy of Fine Arts in St Petersburg in 1777, his students including Ye.I. Fomin.

WORKS

Stage: Al'tsesta [Alceste] (os, 3, A. Sumarkov), St Petersburg, 28 June/12 July 1758, *RUS-SPtob*; Siroe, re di Persia (os, 3, P. (3) **Ernst Benjamin Salomo Raupach** [Hirsemenzel, Lebrecht] (*b* Straupitz, 21 May 1784; *d* Berlin, 19 March 1848). Dramatist. He studied at the University of Halle; in 1804 he moved to Russia as a tutor, and from 1816 he taught in the philosophy department of St Petersburg University, where he was appointed professor of history and German literature in 1817. He left Russia in autumn 1822; after travelling to Italy he returned to Germany, settling in Berlin in autumn 1824. He wrote a number of opera librettos, including *Agnes von Hohenstaufen* (set by Spontini, 1829) and *Die drei Wünsche* (Carl Loewe, 1832); his play *Der versiegelte Bürgermeister* (1828) was adapted by Richard Batka and A.S. Pordes-Milo for Leo Blech's opera *Versiegelt* (1908). Other writings by him inspired music by Mendelssohn, K.L. Blumer, H. Proch, F. Hiller, Wagner and Spohr. A four-volume edition of his comedies (Hamburg, 1829–35) and 16 volumes of his serious works (Hamburg, 1835–43) were published.

GEOFFREY NORRIS/KLAUS-PETER KOCH

Rauscher (Ger.: 'rustle'; Fr. *batterie*). An 18th-century term for rapid, broken accompaniment figures.

Rauschpfeife [rausspfeife, Rhawschpfeiffe, russ pfeife, russ pfeif, ruuspip, ruyspyp] (from medieval Ger. *rusch*, also Middle High Ger. *rus*: 'reed', 'cane', and *pfeife*: 'pipe'; Dut. *rietpyp*, *rytpyp*). A word used in the late medieval period in Germany and the Low Countries for woodwind instruments, particularly the shawm both with and without a wind cap. It was sometimes used by non-musicians – in town or court accounts, for example – where musicians might have used specific instrument names. An order for instruments placed by the Nuremberg town council in 1538 mentioned 'a large *Bommart* and associated *Rauschpfeiffen*'; the use of the word here suggests other sizes of *Pommer* (shawm). Following their delivery, however, the instruments were itemized as 'a large *pumhart*, a *vagant*, two tenors and two altos ... three small *pumhart*', recorders, flutes and cornetts; this implies that 'Rauschpfeiffen' refers to woodwind instruments in general. Further evidence supporting this interpretation is supplied by a similar order from the Prussian court at Königsberg in 1541. The same conclusion may be drawn from Virdung's illustration of a small recorder with four finger-holes which he calls 'russ pfeif'.

One of Hans Burgkmair's woodcuts (1512–19) for *Triumphzug Maximilians* (published 1526) shows wind-cap shawms, which are referred to in the accompanying text as 'Rauschpfeiffen'; the Baden-Baden court inventory of 1582 used the same term in a context suggesting wind-cap shawms (*see* HABSBURG, fig.2). With the exception of these two cases, however, there are no instances of the use of 'Rauschpfeife' to refer specifically to wind-cap rather than open-reed shawms. On the sole basis of *Triumphzug Maximilians*, Sachs believed that 'Rauschpfeife' was a specific name for the wind-cap shawm, and he applied it to the set of instruments of that type in Berlin (Staatliches Institut für Deutsche Musikforschung), which are now identified as examples of the SCHREYERPFEIFE. The word is also applied to an ORGAN STOP.

See also WIND-CAP INSTRUMENTS.

Rauschquint [Rauschwerk] (Ger.). *See under* ORGAN STOP (*Rauschpfeife*).

Rautavaara, Einojuhani (*b* Helsinki, 9 Oct 1928). Finnish composer. He studied musicology at the University of Helsinki, graduating in 1952, and composition at the Sibelius Academy with Aarre Merikanto (diploma 1957). On Sibelius's recommendation he was awarded a Koussevitzky Foundation scholarship in 1955; he studied in New York and at Tanglewood with Aaron Copland, Persichetti and Sessions and, in 1957–8, in Ascona with Wladimir Vogel and Cologne with Rudolf Petzold. He was appointed successively lecturer at the Sibelius Academy (1966–76), artist professor (1971–6) and professor of composition (1976–91).

Rautavaara's student ideals are reflected in the neo-classicism of his early works and the influence of Stravinsky, especially in *A Requiem in Our Time* (1953), for which he won first prize in the Thor Johnson Competition. He went on to win 14 more first prizes. As well as exhibiting meticulous craftsmanship and extensive imagination, Rautavaara writes naturally for varied resources in many situations. The piano suite *Pelimannit* ('The Fiddlers', 1952), composed in the spirit of Bartók, uses Ostrobothnian folk melodies, and Rautavaara later returned periodically to folk sources. The voice in *Ikonit* ('Icons', 1955) for piano is that of a mystic whose religious interests extend well beyond the Evangelical-Lutheran tradition. Neo-classicism is manifest mainly in motor rhythms and 4th-based harmonies. Another typical feature is the cumulative superimposition of triads.

Rautavaara has also displayed a keen interest in new international trends, beginning in the early 1950s with the advent of serialism in Finland. Typically, this brought out his blend of modernism with the traditional and romantic. The symmetry concealed in serial construction extends in *Praevariata* (1957) for orchestra to the predetermined rhythm and form, and in *Arabescata* (1963) to the entire texture. In the latter work Rautavaara carried variable form and serialism (applied to intervals, rhythm, timbre and dynamics) further than any other Finnish composer. But the other strand in his composition, which he calls 'non-atonal dodecaphony', also produced some romantic works: the Second String Quartet (1958) and the opera *Kaivos* ('The Mine', 1957–60) were conceived in the spirit of Berg, whereas the fully tonal Third Symphony has a Brucknerian grandeur.

The 'new romantic' period (better termed 'stylistic pluralism') that began in the late 1960s and was manifested most clearly in a preference for tonality and a striving to combine modern with traditional techniques suited Rautavaara. In the comic 'opera-musical' *Apollo ja Marsyas* (1970) jazz represents the more profane side of the musical world. This is the only opera for which Rautavaara, himself a skilled writer, did not create his own libretto. The cantata *True and False Unicorn* (1971) also incorporates jazz, the swing of American musicals, a collage of national anthems and a taped interlude. The popular and impressionistic *Cantus arcticus*, a concerto for (taped) birdsong and orchestra (1972), uses modal melodies and mediant triad harmonies, aleatory counterpoint and tape, all typical devices in Rautavaara's work of the 1970s. His versatility is further illustrated by his adoption of archaic liturgical chant in several choral works, beginning with the Orthodox *Vigilia* (1971–2). *Elämän kirja* ('A Book of Life', 1972), with texts in five languages, gives expression to his eclectic philosophy, while *Marjatta matala neiti* ('Marjatta the Lowly Maid', 1975) and *Runo 42: Sammon ryöstö* ('Canto 42: The Rape of the Sampo', 1974), both based on the Finnish national epic the Kalevala, are cast in a dramatic mould: in addition to narrating the action the chorus paints sweeping soundscapes. The texts of these and most of

his other choral works are compiled or written by Rautavaara.

His principal works for solo instruments include the piano sonatas of 1969–70 (subtitled *Kristus ja kalastajat*: 'Christ and the Fishermen' and *Tulisaarna*: 'The Fire Sermon'), in which chorales are punctuated by ebullient outbursts. Rautavaara's enthusiasm for concerto writing is sparked by its inherent drama, the symbolic conflict between the individual and the community reflecting his own individualism. His experiments in timbre and the aleatory have sometimes been taken to great length, as in the organ concerto *Annunciations* (1976) and Music for Upright Piano and Amplified Cello (1976).

Typical textures in the orchestral works are dense webs of quick (often aleatory) repeated figures on *divisi* strings or woodwind. These expand into dramatic waves or into impressionistic mists from which hymn-like brass triads emerge. Even in multi-layered textures the movement is uniform (for the most part unhurried), and tonal structures are discernible in the background. Often the texture thins out into lyrical-nostalgic homophony in the upper register. These features are particularly marked in the 'angel trilogy' (*Angels and Visitations*, 1978, the double bass concerto *Angel of Dusk*, 1980, and the Fifth Symphony, 1985), whose visionary, colourful and narrative character speaks to a wide audience.

The striving for synthesis that began in the late 1970s is seen most clearly in the 'angel trilogy', the Seventh Symphony (*Angel of Light*, 1994), and in the opera *Thomas* (1982–5), where medieval Catholicism combines with the supernatural of the Kalevala in a work that makes use of elements ranging from Gregorian chant to serialism and aleatory webs. *Thomas* proceeds in broad sweeps like a sacred oratorio, whereas the drama of *Vincent* (1986–7), on the life of Van Gogh, arises from its depiction of madness and excess. This opera led to the Sixth Symphony, *Vincentiana* (1992): the borrowing or reworking of sometimes lengthy extracts from earlier works has always been a feature of Rautavaara's compositional approach. His smaller-scale operas are *Auringon talo* ('The House of the Sun', 1990), a story of Russian emigrants, the television opera *Tietäjien lahja* ('The Gift of the Magi', 1993–5), and *Aleksis Kivi* (1995–6), on the first great Finnish writer.

MIKKO HEINIÖ

Rautenstein, Julius Ernst (*b* Lauenburg, nr Hamburg, *c*1590–95; *d* ?Stettin [now Szczecin], after 6 March 1654). German composer and organist. An illegitimate descendant of Duke Franz I of Saxe-Lauenburg, he was an organist at Kroppenstedt, near Magdeburg, until 1617, when he moved to Halberstadt to take up a similar post at the church of St Martin. From 24 February 1626 to 1636 he was organist at two churches at Quedlinburg and was also employed during this period in nearby Magdeburg. He then moved north, probably because of hardships caused by the Thirty Years War, and became organist at Bremen Cathedral, where he was acquainted with Jacob Praetorius (ii) and Heinrich Scheidemann, and which he left in 1642. He finally settled in Stettin and in the occasional compositions that he published there was described as court organist.

Rautenstein enjoyed a considerable reputation as a composer in his day, although little of his apparently large output now remains: he appears mainly to have written occasional works, both with and without continuo. There are three German sacred duets by him in the *Fasciculus secundus geistlicher Concerten* (1637), a war-inspired collection which he may well have been partly instrumental in compiling, for the contents of its two volumes, including music by some of the most famous composers of the time, had been the repertory of a group of amateur musicians at Nordhausen, not far from Quedlinburg. His duets show a real understanding of the medium. The continuo is totally independent of the voices, has its own rhythmic interest and is figured in great detail. The vocal writing is mainly imitative, with short contrasting motifs including dotted melismatic passages, and his treatment of the words is expressive.

WORKS

4 wedding motets, 5, 8vv (Halberstadt, 1617–19), lost
Freuden Gesangk, 3vv, bc (Elbing, 1645)
8 motets for burials, other occasions, 4–12vv (Stettin, 1647–54)
3 motets, 2vv, 1637[3]
Ich sucht des Nachts, *D-Dlb*

A. LINDSEY KIRWAN/LOTHAR HOFFMANN-ERBRECHT

Rautio, Nina (*b* Bryansk, 21 Sept 1957). Russian soprano. She studied at the Leningrad Conservatory before being engaged by the Kirov from 1981 to 1987. She then joined the Bol'shoy Opera, with whom she appeared at the Metropolitan and the Edinburgh Festival in 1991, as Tatyana and Oxana (*Christmas Eve*). In 1992 she made her début at La Scala as Manon Lescaut and appeared as Aida at both the Savonlinna Festival and the Opéra Bastille. Since 1994 her roles at Covent Garden have included Amelia in *Un ballo in maschera* (her début role), Aida, Lisa and Desdemona. In 1994 she made her Vienna Staatsoper début, also as Manon Lescaut, and appeared at the Metropolitan as Aida. Rautio's other roles include Abigaille, Lady Macbeth, Leonora (*La forza del destino*) and Maddalena (*Andrea Chénier*). On the concert

platform she makes a speciality of the Verdi Requiem, which she has recorded along with Manon Lescaut, arias by Puccini and songs by Tchaikovsky. All reveal her firm, piquant, typically Russian timbre, secure technique and emotional commitment.

ALAN BLYTH

Rautio, Matti (Olavi) (*b* Helsinki, 25 Feb 1922; *d* Tampere, 22 June 1986). Finnish composer and teacher, brother of Erkki and Paavo Rautio. He studied at the University of Helsinki, graduating in 1945, and studied composition at the Sibelius Academy in Helsinki with Madetoja and Merikanto. He then worked at the Academy as librarian, piano teacher, lecturer in folk music at the University of Tampere (1974–86). The editor of much education music, he chaired the Association of Finnish Music Teachers between 1961 and 1971.

Rautio was Merikanto's only pupil to remain faithful to neo-classicism. The *Suita per piano* (1951) is based on 'white-key music', seasoned with accidentals to add punch and pungency. Also characteristic of him is the simple elegiac quality of the suite's Intermezzo and the Toccata's motor-like drive and form, derived from angular two-, four-, or six-beat periods and their repetitions. His best-known work, the *Divertimento* for cello and orchestra (1955), displays his characteristic humour in the cancan. His most significant work, the miniature ballet *Sininen haikara* ('The Blue Stork', 1957), is dominated by ostinatos while the timbres vary from bright, naive bell sounds to Stravinskian boisterousness. Delicate and robust moods also alternate in the piano suite *Hanoniana* and the Piano Concerto (both 1971). Other works include *Tanhumusiikkia* ('Folkdance Music', 1960), radio scores, solo and choral songs, and small pieces for piano.

MIKKO HEINIÖ

Rauzzini, Matteo (*b* Camerino, nr Rome, 1754; *d* Dublin, 1791). Italian composer and singing teacher. He followed his more successful brother Venanzio to Munich, where his two comic operas *Il kam cinese* and *Le finte gemelle* were produced in 1772. Hearing the latter, Burney described the music as 'common, but pretty and in good taste'. He was later active in Venice, where he wrote two comic operas and two oratorios for which the librettos name him *harmoniae magistro* of the Incurabili. He passed his last years as a singing teacher in Dublin where *Il re pastore*, his only *opera seria*, had been performed in the season 1783–4.

WORKS
music lost

OPERAS

Il kam cinese (dg, G. Fioroni), Munich, Residenz, 1772
Le finte gemelle (ob, 2,? G. Petrosellini), Munich, Residenz, 1772; also as I finti gemelli
Li due amanti in inganno [Act 2] (dg, 3), Venice, S Cassiano, carn. 1775 [Acts 1 and 3 by G. Rust]
L'opera nuova (dg, 2, G. Bertati), Venice, S Moisè, carn. 1781
Il re pastore (os, 3, P. Metastasio), Dublin, Smock Alley, carn. 1784

ORATORIOS

KATHLEEN KUZMICK HANSELL

Rauzzini, Venanzio (*b* Camerino, nr Rome, bap. 19 Dec 1746; *d* Bath, 8 April 1810). Italian soprano castrato and composer. After early studies in Rome and possibly also in Naples with Porpora, he made his début at the Teatro della Valle in Rome in Piccinni's *Il finto astrologo* (7 February 1765). His first major role was in Guglielmi's *Sesostri* at Venice during Ascension Fair 1766. In the same year he entered the service of the Elector Maximilian III Joseph at Munich, where he remained until 1772. He first appeared there in Traetta's *Siroe* (Carnival 1767) and later that year was given leave to perform in Venice and in Vienna, where Mozart and his father heard him in Hasse's *Partenope*. Burney, visiting Rauzzini in August 1772, praised his virtuosity and the quality of his voice, but was most impressed by his abilities as a composer and harpsichordist. His last known operatic performance in Munich was in Bernasconi's *Demetrio* (Carnival 1772). According to Michael Kelly he was forced to leave because of difficulties with noblewomen engendered by his good looks.

Rauzzini performed for two more years in Italy before moving permanently to England. Engaged for Carnival 1773 at Milan, he was primo uomo in Mozart's *Lucio Silla* (26 December 1772) and in Paisiello's *Sismano nel Mogol* (30 January 1773). In January Mozart wrote for him the brilliant motet *Exultate, jubilate* K165/158*a*. Later that year he sang at Venice and Padua, and in 1774 at Turin (Carnival) and Venice (Ascension Fair).

From November 1774 to July 1777 Rauzzini sang regularly at the King's Theatre in London, making his simultaneous début as singer and composer in the pasticcio *Armida*. Bingley reported that his acting in Sacchini's *Motezuma* (7 February 1775) greatly impressed Garrick. Both Burney and Lord Mount Edgcumbe, however, deemed his voice sweet but too feeble, a defect Burney ascribed to Rauzzini's devoting too much time to composition. Indeed, Rauzzini contributed arias to four other pasticcios in the season 1775–6 and wrote a comic opera, *L'ali d'amore*. *Piramo e Tisbe*, his best-loved opera, was first staged in London on 16 March 1775 (and probably not in Munich, 1769, as claimed in many biographical sketches); it was revived there in three other seasons and performed at many continental theatres. In the following years many of his works, both vocal and instrumental, were published in London. Rauzzini's singing also gradually won over London audiences. For his last London appearance in 1777 he composed an *Address of Thanks*, presumably the cantata *La partenza* 'sung by him and Miss Storace'.

In the autumn of 1777 Rauzzini took up residence in Bath, where he managed concerts by many renowned performers, among them his pupils John Braham, Nancy Storace, Charles Incledon, Mrs Billington and Mme Mara (for illustration *see* MARA, GERTRUD ELISABETH). At Dublin in 1778 he met and taught Michael Kelly and

Venanzio Rauzzini: portrait by John Hutchinson, 1778 (Victoria Art Gallery, Bath)

promoted his career with advice to study in Naples. In the spring of 1781, again in London, Rauzzini sang in concerts with Tenducci and others and wrote the second act of the opera *L'omaggio di paesani al signore del contado*. He was intermittently in London during the next three seasons to stage his operas *L'eroe cinese*, *Creusa in Delfo* and *Alina, o sia La regina di Golconda*, which was heavily criticized by the *Public Advertiser* (10 May 1784). Ballets with music by him were performed at the King's Theatre in the season 1783–4, and he also directed the production of Sarti's *Le gelosie villane* (15 April 1784). During this period a scandal arose over his claim that certain arias in Sacchini's operas were his own. He was not in London when his incidental music for Reynold's *Werter* (originally performed at Bath) was used at Covent Garden on 14 March 1786, and after the London première of his unsuccessful opera *La vestale* (1 May 1787) he remained permanently at Bath in his handsome town house and sumptuous country villa in Perrymead. Among his many guests was Haydn, who wrote the canon *Turk was a faithful dog and not a man* during a visit from 2 to 5 August 1794. Near the end of his life Rauzzini published a set of 12 vocal exercises with an introduction summing up his ideas on the art of singing and reflecting his own tasteful execution.

WORKS

STAGE

first produced in London, King's Theatre, unless otherwise stated

Armida (os, pasticcio, 3), 19 Nov 1774, Favourite Songs (London, *c*1774)

Piramo e Tisbe (azione tragico, 2, R. Calzabigi, after M. Coltellini), 16 March 1775, *A-Wn*, *F-Pn*, *I-Bc*, arias (London, 1775) and in A Select Collection of the Most Admired Songs, Duetts &c (Edinburgh, 1779)

La sposa fedele (opera comica, pasticcio, 3, P. Chiari), 31 Oct 1775, Favourite Songs (London, *c*1775)

Didone abbandonata (os, pasticcio, 3, P. Metastasio), 11 Nov 1775, Favourite Songs (London, *c*1775)

The Duenna, or Double Elopement (comic op, pasticcio, 3, R. Sheridan), London, CG, 21 Nov 1775; aria, By him we love offended [= Fuggiam dove sicura], in The Duenna (London, c1775) and A Select Collection of the Most Admired Songs, Duetts &c (Edinburgh, 1779)

L'ali d'amore (opera comica, 3, C.F. Badini), 29 Feb 1776; rev., 13 March 1777, Favourite Songs, op.3 (London, *c*1777) and in A Select Collection of the Most Admired Songs, Duetts &c (Edinburgh, 1779)

Astarto re di Tiro (os, pasticcio, 3, G. Bottarelli), 2 Nov 1776, Favourite Songs (London, *c*1776)

L'omaggio di paesani al signore del contado (os, 3), 5 June 1781; only Act 2 by Rauzzini

Ezio (os, pasticcio, 3, Metastasio), 17 Nov 1781, Favourite Songs (*c*1781)

L'eroe cinese (os, 3, Metastasio), 16 March 1782, arias (London, 1782)

Creusa in Delfo (os, 2, G. Martinelli), 29 April 1783; aria, Spiegar non posso (London, ?*c*1783)

Alina, o sia La regina di Golconda (os, 3, A. Andrei, after M.-J. Sedaine), 18 March 1784, ov. and arias (London, *c*1784)

La vestale, o sia L'amore protetto dal cielo (os, 2, Badini), 1 May 1787, 3 arias *GB-Lbl*

The Village Maid (comic op, pasticcio, 3), lib (London, 1792); aria, Silent I tread, *Cpl*

Incid music: Werter (F. Reynolds after J.W. von Goethe), Bath, 3 Dec 1785, revived London, CG, 14 March 1786, Epithalamium, lost; Cymbeline (W. Shakespeare), Bath, before 1797, Dirge (London, n.d.) and in A Periodical Collection of Vocal Music (1797)

Doubtful: Astarto (os, 3, A. Zeno and P. Pariati), Munich, Residenz, sum. 1769/72; Pompejo (os, 3), Munich, Residenz, 1773

Spurious: L'eroe cinese, Munich, 27 April 1770 [by Sacchini]

CANTATAS

La partenza, London, King's, 5 July 1777; as op.4 (London, 1777)

La sorpresa, London, 1779; 2 arias, *Lbl*

Il tributo, Fonthill, home of W. Beckford, 29 Sept 1781, music lost

Old Oliver, or The Dying Shepherd (P. Pindar), Bath, *c*1796 (London, *c*1796)

OTHER VOCAL

Requiem, London, Little Haymarket, 1801; 2 numbers, *Lbl*

12 Italian Duettinos, 2vv, bc, op.5 (London, 1778)

4 Favourite Italian Duets, 2vv, hpd/pf, also 4 Easy Airs, 1v, hpd/pf/hp, op.13 (London, 1784)

6 Italian Canzonets, 1v, pf (London, *c*1785)

A Periodical Collection of Vocal Music (Bath, 1797, 2/1800)

A Set of 12 Solfeggi or Exercises for the Voice (London, 1808)

Miscellaneous Eng. songs and It. arias, pubd singly and in 18th-century anthologies

Miscellaneous It. arias: *A-Wgm*; *B-Bc*; *GB-Lbl*, *Cpl*; *I-PAc*, *Rc*, *Tn*

INSTRUMENTAL

thematic catalogue in Reindl (1961)

15 sonatas, pf/hpd, vn acc.: 6 as op.1 (London, 1777), 6 as op.8 (London, 1781), 3 as op.15 nos.1–3 (London, 1786)

12 str qts: op.2 (London, *c*1777), op.7 (London, *c*1778)

6 qts, pf/hpd, 2 vn, vc, op.6 (London, *c*1778)

4 duets, pf/hpd 4 hands: 3 as op.12 (London, 1783), 1 as op.15 no.4 (London, 1786)

Sinfonia, D, *D-W*

Miscellaneous dances, sonatas and lessons pubd in 4 contemporary anthologies

KATHLEEN KUZMICK HANSELL

Raval [Ravalle], **Sebastián** (*b* Cartagena, *c*1550; *d* Palermo, before 27 Oct 1604). Spanish composer, friar and soldier, active in Italy. As a young man he began a military career, serving in the Spanish army in Flanders and Sicily. In July 1579 he was gravely wounded at the capture of Maastricht and entered the Capuchin order, only to find it too onerous for a man in his nearly crippled condition. According to his own statement in a contemporary document (printed in Casimiri), he sought, at first unsuccessfully, to join another mendicant order and at last was accepted in 1592 by the order of St John of Jerusalem (also known as the Knights of Malta), and obtained the appropriate dispensation from the Holy See.

During the period of his petitions, he apparently worked as a musician at the Urbino court of Duke Francesco Maria II della Rovere. In 1592 he went to Rome to receive his knighthood in the order and shortly afterwards brought out his first musical publications: a book of motets, another of canzonets and one of madrigals, all within five months. In the dedication to the madrigals he mentioned that they had been written at Urbino and he referred to the musicians before whom he had performed in Rome, including Cavaliere del Liuto, Scipione Dentice and Marenzio. Other publications from Rome include a book of Lamentations and a set of madrigals, mostly for three voices, which includes compositions intended for the great Florentine *virtuosa* Vittoria Archilei, for Cavalieri and for Gesualdo. At that time he promised the imminent publication of masses for five and eight voices with canons for eight and 16 voices, but the work seems never to have appeared. So great was Raval's self-esteem that he challenged Giovanni Maria Nanino and Francesco Soriano to a musical competition, but was quickly and resoundingly defeated. Shortly after this humiliation, he left Rome for Palermo in the service of a Sicilian nobleman, Giovanni Battista Tagliavia, Duke of S Giovanni and Count of Cammarata. On 28 April 1595 he took the post of *maestro di cappella* at the royal chapel of S Pietro in Palermo, now the Cappella Palatina. He enjoyed great favour among the Spanish viceroys there, partly, it seems, because of his Spanish origins, and he received regular bonuses and salary increases; at his death, the salary reverted for his successor to its original level.

While in Sicily Raval challenged another musician to a competition, a young *maestro di cappella* of Caltagirone, ACHILLE FALCONE of Cosenza. The adjudicator decided in favour of Falcone, whereupon Raval appealed to the viceroy and demanded a new examination. The second time Spanish favouritism apparently decided the victory for Raval, but Falcone prepared to appeal to Nanino and Soriano for still another competition in Rome, which, however, never came to fruition, owing to the death of Falcone. In 1603 Falcone's father, Antonio, published the compositions written by Raval and Falcone in the first competition; these included a madrigal, a motet, various canons and a ricercare. Raval's post at Palermo was filled by Vincenzo Gallo on 27 October 1604, suggesting that Raval had died only a few days previously.

Ex.1

Raval's music aimed at contrapuntal complexity; he favoured canonic devices that seem rather old-fashioned for his period. His conservative attitude is apparent in the 'corrections' he made to a madrigal by Falcone, of which 'both words and music were improvised at the request of a friend'. Raval's version, according to Antonio Falcone, was 'composed at great expense of time and effort', in order to 'emend the above work of Achille'. The opening of the two pieces (ex.1) shows that Raval disliked Falcone's unusual upbeat beginning and preferred a more normal attack on a strong beat; he also rewrote the quaver passage (*) to avoid an accented passing-note dissonance. Nevertheless, his version is heavier and lacks the freshness of Falcone's piece.

STEVEN LEDBETTER

Ravalement (Fr.). A term for the alteration and extension of the disposition and range of keyboard instruments. It is most often applied to the rebuilding of instruments by

the Ruckers family in the 18th century. A harpsichord with a compass of *C/E–c‴* might have been modified to make the compass chromatic *C–d‴*; this could have been carried out within the existing case width by making a new keyboard and slides and repinning the bridges. Bemetzrieder (1771) termed this 'à ravalement'; a more extensive modification to a five-octave compass involved widening the case and was called 'à grand ravalement'. The type of modification depended on the prevailing musical requirements in the country in which it was carried out.

DENZIL WRAIGHT

Ravanello, Oreste (*b* Venice, 25 August 1871; *d* Padua, 2 July 1938). Italian organist and composer. After studying composition and the organ in Venice with Girardi, he embarked on a career as an organist at S Marco, becoming the senior organist in 1895. From 1898 he was *maestro di cappella* at the church of S Antonio in Padua. He taught the organ at the Venice Conservatory (from 1902) and was the director of the Istituto Musicale Cesare Pollini; Padua (from 1912). An active supporter of the Cecilian movement for the reform of Roman Catholic church music, he sat on the committee instituted by Pope Pius X for renewal of sacred song. Alongside his work as a performer he also edited the periodical *Il repertorio pratico dell'organista liturgico*. As a composer he achieved his best results in the field of liturgical music, drawing inspiration from the austere form of expression for which Pius X had called. Following the example of Marco Bossi and Perosi, he put his talents to finest effect in his series of masses, including the *Messa di S Cáterina da Siena* and *Missa in honorem Sancti Joséphi Colasantii* (1903), and motets. His instrumental works and his organ pieces such as the *Tema e variazioni* and *Adorazione* display little originality.

VIRGILIO BERNARDONI

Rāvaṇhatthā [rāvaṇahatthā, rāvaṇhattho, rāvaṇahasta]. Spike fiddle of Rajasthan and Gujarat, north-west India. The resonator is half a coconut shell (about 10 cm in diameter), covered with a single or double skin, nailed or braced by fabric-covered hoops and cord lacing; it is sometimes open below and capped by a truncated brass cone. The hollow bamboo handle and the shell are held together by a heavy iron spike (about 25 cm long) piercing both and serving as string holder.

The ordinary *rāvaṇhatthā* of this area, used principally by itinerant mendicants to accompany their own singing of devotional songs (*bhajan*), is smaller. The bamboo neck is thin and about 40 to 50 cm long. One or two pegs are inserted vertically, from the back, in the top of the neck. The first string is of horsehair, the second of plaited metal; they are usually tuned an octave apart, and they pass over a small narrow bridge on the table. The instrument is held in inverted position against the chest

Rāvaṇhatthā (spike fiddle) played by a Bhopā (religious singer) of the god Pābujī, Jodhpur, Rajasthan

by the left hand, which stops the first string by touching it with the balls of the fingers on the proximal side. The bow, steeply arched, often has small pellet bells (*ghuṅgrū*) attached.

The instrument played by the Bhopā (religious singers) is larger (see illustration). The thick bamboo neck, over 70 cm long, bears at its top end from 3 to 16 pegs for thin steel sympathetic strings, which pass down the front of the neck through holes below the blade of the bridge to the inferior string holder. The two main pegs are here lateral, placed one on each side, and the first, main string passes up at an angle to the bridge along the side of the neck. The Bhopā not only accompanies his own singing, but also dances and tells stories, using a painted scroll, from the epic of Pābujī.

Similar spike fiddles of the area are also known variously as *nārelī* ('coconut'), *gujrī* ('of the Gujars') and also *sāraṅgī* or *hāraṅgī* (*see also* SĀRAṄGĪ). Similar instruments are distributed throughout the subcontinent, including the *kokā* (Maharashtra), the *tenkaya burra* (Andhra), the *pena* and *lha* (Manipur and Nagaland) and the *vena* (or *rāvaṇa vīṇā*, Sri Lanka); in some areas they are designated by the wider generic terms *cikārā* (Rajasthan) or *kendrā* (the *majhi kendrā* of Orissa). These are all played in inverted position, as are the fiddles of the east-central Ādivāsī belt (such as the *bana*, *banam*, KENDRĀ and *kikir*), most of which, like the *pena* and *lha*, have no tuning-pegs.

Sachs (1914) showed a picture of a similar type (but played semi-vertically, with the top of the neck resting against the left shoulder) as found in Tamil and Telugu 19th-century picture-books, which he called *rāvaṇahasta* ('Ravana's hand'): the top of the neck is carved in the shape of a hand. This association with Ravana occurs in areas as far apart as Rajasthan, South India and Sri Lanka. Older European sources also show similar types called *rāvaṇa* or *rāvaṇāstra*. Many of these fiddles appear to be associated with bardic traditions, or with mendicants.

ALASTAIR DICK/R, NEIL SORRELL/R

Rave. A sub-genre of dance music in the UK from the early 1990s, derived from acid house. It consists of simplistic, anthem-like electronic melodies over very high tempo, electronic techno backing. Like acid house, it was dance music initially for illegal rave parties, often held in secret locations such as warehouses or fields. Despite condemnation from the mass media (many rave parties and musicians thrived on the use of the drug ecstasy), it enjoyed mass commercial success through artists such as Altern 8, Praga Khan and the Prodigy. Unlike other electronic genres, rave artists also had a strong visual sense from dance to fashion accessories (many inspired by rave drug culture) to club decoration. This commercial success was helped by a string of novelty rave singles, such as Smart E's *SesamE's Treat* and Mark Summer's *Summers Magic*, both of which sampled themes from children's television. Several rave artists have achieved longevity including Moby, 808 State and Cappella. Rave music has continued as 'happy hardcore' but lacks its former commercial appeal. Live events have also been driven further underground following the introduction in the UK of the Criminal Justice Bill, which included clauses written especially to outlaw large outdoor parties.

IAN PEEL

Raveau, Alice (*b* 1884; *d* Paris, 1951). French contralto. She studied at the Paris Conservatoire and made her début at the Opéra-Comique in 1908, singing the role which was to remain most closely associated with her: Gluck's Orpheus. She was still singing it at the company's revival in 1924, and in 1936 she took part in the first complete recording, a performance that continues to impress, as much by its intensity of feeling and care for words as by the beauty and noble power of the voice. She sang the title role in the world première of Gaston Salvayre's *Solange* (1909) and the leading female role of Diana in Samuel-Alexandre Rousseau's *Léone* (1910). At Monte Carlo in 1913 she sang Eurycleia in the world première of Fauré's *Pénélope* and created the title role in *Yato* by Marguerite Labori. She was also a noted Charlotte in *Werther* and in 1929 sang Delilah at the Opéra. In later years she became well known as a recitalist, particularly in association with the composer and conductor Henri Tomasi. Though her fine art and rich voice can be heard in many recordings, the *Orphée* remains her most memorable achievement for the gramophone.

J.B. STEANE

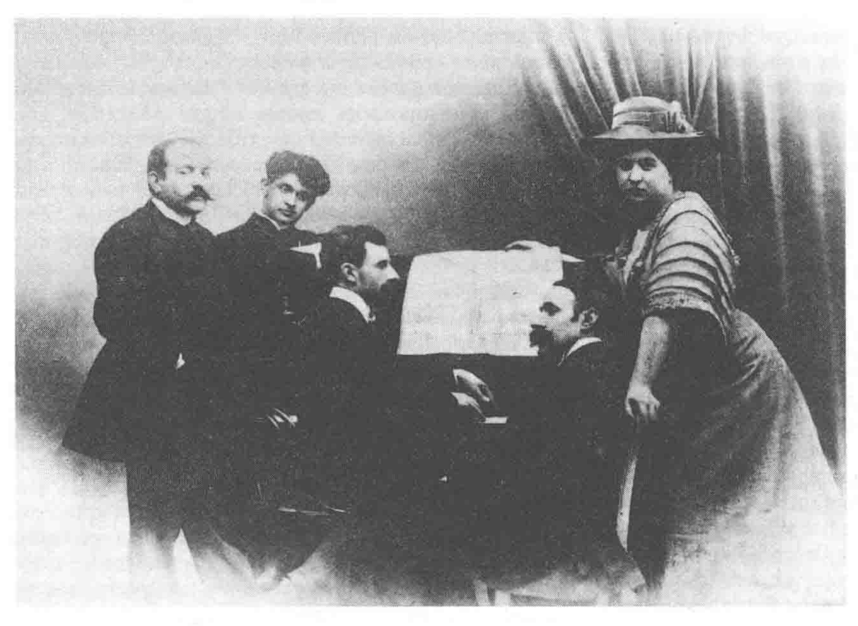
Ravel, (Joseph) Maurice (*b* Ciboure, Basses-Pyrénées, 7 March 1875; *d* Paris, 28 Dec 1937). French composer. He was one of the most original and sophisticated musicians of the early 20th century. His instrumental writing – whether for solo piano, for ensemble or for orchestra – explored new possibilities, which he developed at the same time as (or even before) his great contemporary Debussy, and his fascination with the past and with the exotic resulted in music of a distinctively French sensibility and refinement.

1. 1875–1905. 2. 1905–18. 3. 1918–37. 4. Artistic preoccupations. 5. Style.

1. 1875–1905. Ravel was the first child of Pierre Joseph Ravel and Marie, née Delouart. Three months after his birth in March 1875 in the Basque village of Ciboure, the family moved to Paris. His father was Swiss, his mother Basque; despite a Parisian upbringing, Ravel always felt close to his Basque heritage, and by extension, to Spain. Pierre Joseph Ravel, an engineer and amateur pianist, encouraged his son's early musical inclinations. In 1882 he was sent to his first piano teacher, Henri Ghys, and in 1887 began studying harmony with Delibes' pupil Charles-René, producing his earliest attempts at composition, including variations on a chorale by Schumann, variations on a theme from Grieg's *Peer Gynt* and a sonata movement.

In 1889 he received piano lessons from Emile Decombes, a professor at the Conservatoire, and in November of the same year he gained admission to Eugène Anthiôme's preparatory piano class at the Conservatoire. After winning first prize in the 1891 piano competition, Ravel progressed to Charles-Wilfrid Bériot's piano class and Emile Pessard's harmony class. Although he made

reasonable progress and was encouraged by Bériot, he failed to win any prizes and was dismissed from his classes, leaving the Conservatoire in 1895. At this stage he seems to have decided to devote himself to composition, writing the *Menuet antique*, the *Habanera* (the first of the *Sites auriculaires*), *Un grand sommeil noir* and *D'Anne jouant de l'espinette* in 1895–6. Ravel returned to the Conservatoire in 1897, studying composition with Fauré and counterpoint with Gédalge; he later described both teachers as crucial influences on his technique and musicianship. Although he produced some substantial works during this period, including the overture *Shéhérazade*, *Entre cloches* (the second of the *Sites auriculaires*) and a Violin Sonata, he won neither the fugue nor the composition prize and was dismissed from the composition class in 1900. He remained with Fauré as an auditor until he left the Conservatoire in 1903.



These failures pale in comparison with his five attempts between 1900 and 1905 to win the Prix de Rome, in what became known as the first 'Affaire Ravel'. In 1900 he was eliminated from the competition in the preliminary round after submitting a fugue and a choral work, *Les Bayadères*. The following year his cantata *Myrrha* won third prize, but in 1902 and 1903 his cantatas *Alcyone* and *Alyssa* failed to impress the juries. Finally, having reached the age limit, Ravel competed for the last time in 1905, but was eliminated in the first round, having written a fugue containing parallel 5ths and ending with a chord containing a major 7th. Despite these obvious musical transgressions, public opinion felt that Ravel had been wronged. Even critics normally hostile to him, in particular Pierre Lalo, and observers such as Romain Rolland were shocked that a composer who had established himself at the Société Nationale de Musique with works such as *Jeux d'eau* and the String Quartet had been barred from competing in the final round of this prestigious student award. More disturbing was the revelation that all the finalists were students of Lenepveu, who was on the jury. After the scandal had been taken up by the press, Dubois resigned as director of the Conservatoire and was replaced by the reforming and tolerant Fauré.

Ravel's failure to win the Prix de Rome was indicative of his uneasy relationship with authority. Ravel was unable to conform to the expectations of the Conservatoire despite his desire to succeed. Although he managed a convincing parody for the Prix de Rome in 1901, the further his own style departed from that required of him, the more elusive this official recognition became. Ravel was also unpopular with Dubois on account of his independent spirit, manifested in his openness to a range of musical and literary stimuli. For example, the 1889 Paris Exhibition had a lasting impact on Ravel, as it had on Debussy. He too was struck by the Javanese gamelan and the performances of Russian music given by Rimsky-Korsakov. In addition, Ravel and his Spanish pianist friend Ricardo Viñes shared a thirst for musical and literary knowledge, score-reading and playing four-hand arrangement of works by composers including Schumann, Mendelssohn, Franck, Rimsky-Korsakov, Balakirev, Borodin, Glazunov, Chabrier, Satie and Debussy, and reading and discussing the latest literature of Poe, Rimbaud, Huysmans, Villiers de l'Isle-Adam, Mallarmé, Verlaine and Bertrand. Ravel admitted the influence of Satie, Chabrier and Debussy in his 'Autobiographical Sketch' (*ReM*, 1938) and he drew on texts by Verlaine, Mallarmé, and on Bertrand for *Un grand sommeil noir*, *Sainte* and *Gaspard de la nuit*. In about 1902 Viñes and Ravel became part of the group of literary, musical and artistic contemporaries known as LES APACHES ('The Ruffians'), which included the critic M.-D. Calvocoressi, the artist Paul Sordes, the composers Falla, Schmitt and Stravinsky (in 1909), the writers Léon-Paul Fargue and Tristan Klingsor (pseudonym for Arthur Justin Léon Leclère), and the conductor Inghelbrecht. The group met regularly to share ideas on contemporary literature, music and art. Thus Ravel's education not only reached out beyond what was on offer at the Conservatoire, but was also very much rooted in *fin-de-siècle* French culture, as Ravel himself admitted in 1931: 'Naturally, I fully realize that the influences which I underwent are partially related to the time in which I grew up. I am keenly aware that the works I love best have occasionally become outdated' (see Orenstein, 1990, p.394).

2. 1905–18. By 1905 some of Ravel's works had received performances at the Société Nationale; Fauré had exerted his influence to secure a première for *Sites auriculaires* in 1898. Several of his first performances caused a stir, in particular the *Shéhérazade* overture (in 1899) and *Histoires naturelles* (in 1907), the latter on account of its radical text-setting. Ravel was attacked, both by the Schola Cantorum faction, which dominated the Société Nationale and which regarded Ravel as an outsider, and by critics such as Pierre Lalo and Gaston Carraud, who drew unfavourable comparisons with Debussy. Lalo's public feud with Ravel centred round the younger composer's indebtedness to Debussy; Ravel, in an open letter to the editor of *Le temps* in 1907, objected to Lalo's attempts to divide the two composers, a view he reiterated in his article of 1913 on Debussy's *Images*. Lalo responded by publishing a private letter which Ravel had written to him in 1906, which claimed that he, rather than Debussy, should be given credit for initiating, in *Jeux d'eau*, a new kind of piano writing. While Ravel acknowledged his admiration for Debussy in his writings and in acts of homage throughout his career, such as his transcriptions of *Nocturnes* (1909) and *Prélude à l'après-midi d'un faune* (1910), the dedication of the Sonata for violin and cello (1920–22) and orchestrations of the *Sarabande* and *Danse*, he refused to be regarded as an imitator. Debussy at first admired Ravel's talent, notably in the String Quartet, but later grew cool towards his younger compatriot, largely as a result of controversies in the press and among their respective supporters.

Ravel's increasing willingness to speak out on important issues led to his taking a prominent role in founding the Société Musicale Indépendente in 1909. In January 1909 he wrote to Koechlin announcing his decision to start a new society, open to performing French and foreign works regardless of genre or style, thus signalling his bid for independence from the authority of the Schola Cantorum. Fauré was appointed president of the SMI (a position he held in addition to his presidency of the Société Nationale); the inaugural concert took place on 20 April 1910 and included first performances of Fauré's *Chanson d'Eve*, Debussy's *D'un cahier d'esquisses* (played by Ravel) and *Ma mère l'oye*. Ravel exerted his new-found influence by promoting Satie's music in a concert on 16 January 1911.

Ravel embarked on a number of theatrical projects during this period. In 1907 he began setting *L'heure*

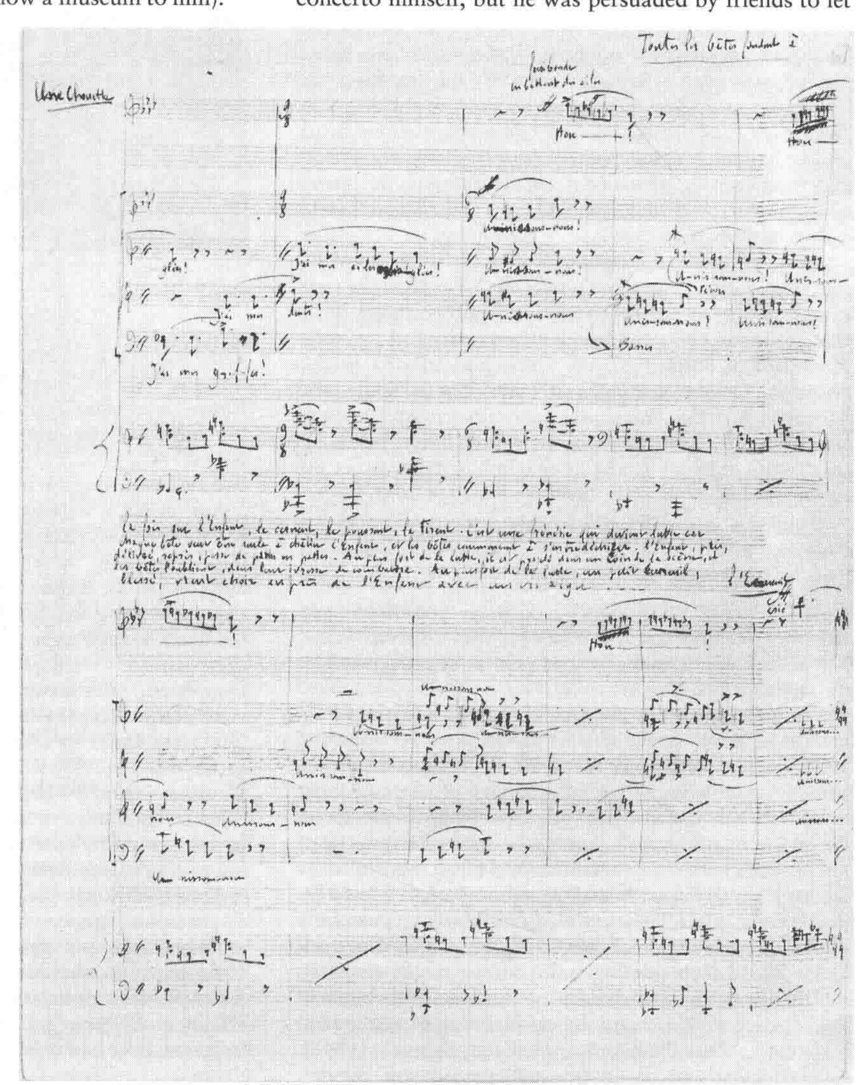
espagnole, hoping that its production would please his ailing father, who died the following year. Although Albert Carré accepted it for the Opéra-Comique in 1908, he delayed performance until 19 May 1911 because he considered the subject to be risqué. Another important theatrical opportunity came in 1909 when Diaghilev commissioned *Daphnis et Chloé* for the Ballets Russes. In the same year Ravel met Stravinsky, who had already orchestrated works by Grieg and Chopin for Diaghilev and whose ballet *The Firebird* was to be performed in Paris in 1910. The two became close, above all during their 1913 stay at Clarens, Switzerland, where they collaborated on an orchestration of Musorgsky's *Khovanshchina*, also for Diaghilev. Stravinsky showed him the *Three Japanese Lyrics*, inspired by the instrumentation of Schoenberg's *Pierrot lunaire*, which in turn influenced Ravel's choice of instrumentation in his *Trois poèmes de Stéphane Mallarmé*. Ravel also saw the score of Stravinsky's *The Rite of Spring* and anticipated that it would cause a reaction similar to *Pelléas*. Ravel was slow in completing *Daphnis et Chloé*, in part because his conception of the ballet differed fundamentally from that of his collaborator, Fokine. The performance on 8 June 1912 was not a success, partly owing to lack of rehearsal, but also because it was overshadowed by the production ten days earlier of Debussy's *L'après-midi d'un faune* with Nizhinsky's shocking choreography. Ravel also transformed two of his piano works into ballets: *Ma mère l'oye*, written in 1908–10 as a piano duet for the Godebski children, was orchestrated (and expanded) in 1911 for Jacques Rouché, and *Valses nobles et sentimentales*, orchestrated for the ballet troupe of Natasha Trouhanova, was performed as *Adélaïde ou Le langage des fleurs* in April 1912.



According to his letter to Roland-Manuel of 1 October 1914, Ravel was working on the Piano Trio when war broke out and he completed the work in five weeks before volunteering for service. His letter also notes other projects, including *Zazpiak-Bat* (a piano concerto based on Basque themes), two operas, *La cloche engloutie* (based on a text by Gerhart Hauptmann) and *Intérieur* (after Maeterlinck), a symphonic poem, *Wien*, and two piano works, a 'French suite' and *Nuit romantique*. However, only the piano suite, *Le tombeau de Couperin*, and the symphonic poem, renamed *La valse*, came to fruition. He also composed the text and music for an unaccompanied choral work, *Trois chansons*, in the manner of a French Renaissance chanson. Ravel's renewed interest in traditional forms and in the French past, apparent in several of his works written during the war, parallels Debussy's more public concern for French tradition. Ravel's desire to serve his country was acute and is evident in his letters to Roland-Manuel and Jean Marnold. He made several attempts to enlist in the air force as a pilot, but was refused on health grounds. Finally, in March 1916, he became a driver in the motor transport corps, naming his vehicle *Adélaïde* after his ballet. His letters describe some of the dangerous missions he undertook, but he soon became frustrated at not being able to compose. He was also concerned about being so far from his mother. In September 1916 he became ill with dysentery and while he was recuperating in Paris his mother died suddenly in January 1917. With his emotional bedrock gone, Ravel was desolate. There has been speculation about Ravel's private life, but it seems certain that his relationship with his mother was the closest emotional attachment he ever experienced.

3. 1918–37. The effects of war, sickness and his mother's death took their toll on Ravel's creativity. The short piano work *Frontispice*, written immediately after the war, captures Ravel's confused emotional and creative state in its lack of a clear structure or tonal centre. *La valse* was only completed because of a commission from Diaghilev, although the impresario subsequently rejected it as unsuitable for a ballet. Between 1920 and 1924 Ravel produced three works in homage to predecessors: a Duo in memory of Debussy, the *Berceuse sur le nom de Gabriel Fauré* and *Ronsard à son âme*. While the setting of Ronsard continued his antique style, the Duo, which became his Sonata for violin and cello, followed on from the pre-war Piano Trio in adhering to classical forms, but with a new austerity and rigour. A preoccupation with economy of means and ensemble combinations was

followed up in *Chansons madécasses* (written as a result of a commission from Elizabeth Sprague Coolidge) and in the Sonata for violin and piano. His collaboration with Colette between 1918 and 1925 on the opera *L'enfant et les sortilèges* touched on an enduring preoccupation with childhood and fantasy and gave him the opportunity to experiment with a range of styles. The work was finally completed under pressure of a deadline from the Monte Carlo Opera.

After Debussy's death in 1918, Ravel was generally regarded as France's leading composer. Recognition by the French state led to his being offered the Légion d'Honneur in 1920, a decoration he publicly refused. But this new-found status had the result of alienating him from some of his colleagues, in particular from Satie and the younger generation, including some of Les Six. Nor did it bring him closer to his old detractors at the Société Nationale, as the failed rapprochement between the Société Nationale and the Société Musicale Indépendente in 1917 testifies. Ravel emphasized his isolation by moving 50 km west of Paris, to 'Le belvédère' in Montfort-l'Amaury, where he lived with his cats and was looked after by his housekeeper until his final illness (his house, with its original furnishings, is now a museum to him).

Ravel's success abroad helped to consolidate his reputation at home. Although he had first visited Britain in 1909, most of his tours took place in the 1920s and early 1930s. The four-month North American trip in 1928 was arguably the most successful. It was organized by the New York agency Bogue-Laberge, under the auspices of Pro-Musica, and supported by the Association Française d'Expansion et d'Echanges Artistiques in Paris. The gruelling itinerary involved stops throughout the United States and Canada. Ravel conducted, performed, gave numerous interviews and delivered an important lecture, 'Contemporary Music', at the Rice Institute in Texas. G.W. Hopkins has observed (*Grove6*) that Ravel tended to visit countries after he had composed the works they might have inspired, and indeed Ravel's newest piece to be performed in North America was the Sonata for violin and piano, which included a slow movement entitled 'Blues'. Ravel's enthusiasm for blues and jazz elicited considerable comment in the American press. In 1932 Ravel undertook another tour, this time around Europe with Marguerite Long, to perform his new Piano Concerto in G. Ravel originally intended to play the concerto himself, but he was persuaded by friends to let

2. *Part of the autograph vocal score of Ravel's 'L'enfant et les sortilèges', composed 1920–25 (US-NYpm)*

Long give the première and opted to conduct the work instead. This change of plan upset his prospective hosts in Berlin and Vienna, and the performances went ahead only after diplomatic intervention. Although Ravel refused most French honours, he received recognition abroad, including the honorary doctorate from Oxford University in 1928, and various diplomas from Spain, Belgium, Italy and Scandinavia.

In 1929–30, at the request of the one-armed pianist Paul Wittgenstein, Ravel composed his Piano Concerto for the Left Hand, without allowing Wittgenstein's physical limitations to restrict the work's technical demands and expressivity. Other projects included his commission from Ida Rubinstein in 1928 for a ballet with a Spanish character. Ravel intended to orchestrate parts of Albéniz's *Iberia*, but he discovered that the exclusive rights to this piece had been given to the Spanish composer Enrique Arbós. Instead, Ravel composed *Bolero*, which he described wryly as 'a masterpiece. . .without any music in it' (see A. Honegger, *Incantation aux fossiles*, Lausanne, 1948, pp.91–2). Ravel was also asked to write music for a film based on Cervantes and starring Chaliapin. Although this collaboration never materialized, Ravel wrote *Don Quichotte à Dulcinée*, the last composition he was to complete. In an interview of September 1933 Ravel discussed his plans for the opéra-ballet *Morgiane*, based on the tale of Ali Baba and the 40 thieves from the *Thousand and One Nights*, and for an opéra-oratorio, *Jeanne d'Arc*. Both works had taken shape in his head, and he had made some sketches for *Morgiane*, consisting, characteristically, of melody and figured bass. If *Jeanne d'Arc* had materialized, it would have constituted Ravel's only overtly patriotic work.

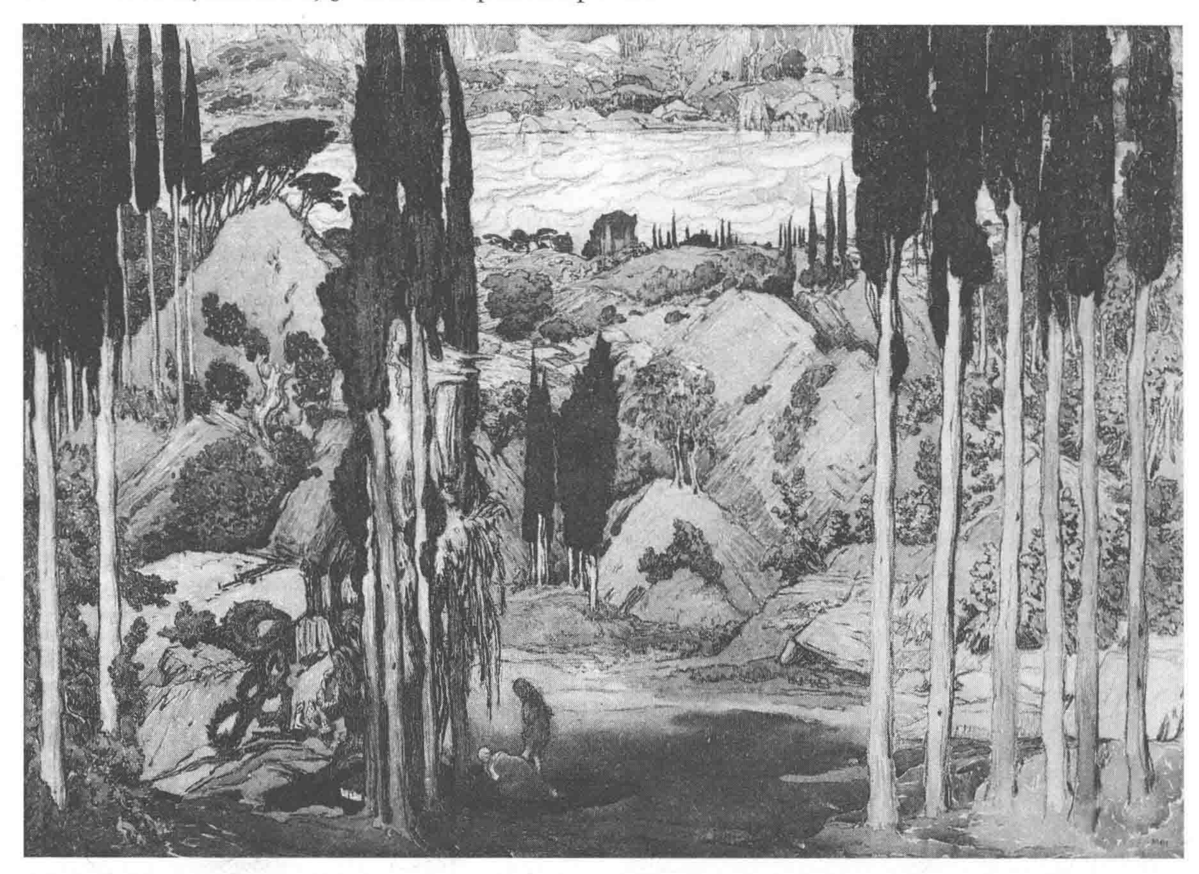
Ravel suffered from insomnia after the war, complaining frequently of 'cerebral anaemia'. In 1932 he was involved in a car accident and was slightly injured. From that moment his condition worsened, and he was diagnosed as suffering from ataxia and aphasia (Pick's Disease). Despite resting and travelling to Spain and Morocco in 1935, Ravel was sometimes unable even to sign his name. A few laboriously written letters reveal his frustration at being incapable of committing to paper the music in his head. His brother Edouard and friends continued to visit him and to take him to concerts. He died in Paris on 28 December 1937, nine days after undergoing a brain operation.

4. Artistic preoccupations. Critical opinion of Ravel has often emphasized craftsmanship over expressiveness. Ravel declared: 'conscience compels us to turn ourselves into good craftsmen. My objective, therefore, is technical perfection. I can strive unceasingly to this end, since I am certain of never being able to attain it' (see Orenstein, 1990, p.38). Although the craft of composition was something he valued highly in his own works and those of others, this did not preclude emotional involvement, which he regarded as the expressive core of any work of art. Ravel's views on craftsmanship were influenced by the writings of Edgar Allan Poe, whom he considered his third teacher after Fauré and Gédalge. He was particularly drawn to Poe's notion of conceiving the totality of a work in his head before writing it down, and to his emphasis on the process of composition and on the kind of deliberate, calculated and logical planning he outlined in his essay 'The Philosophy of Composition' (1846). Similarly, Poe's preoccupation with proportion, brevity,

3. *Maurice Ravel*

and the goal of beauty and perfection had resonances with Ravel's own thinking. He once commented to Poulenc that his orchestration of the *Habanera* in the *Rapsodie espagnole* was flawed because 'the orchestra is too large for the number of bars' (see Nichols, 1987, p.118).

Ravel regarded orchestration as a task separate from composition, involving distinct technical skills. Roland-Manuel recalled that although Ravel's students never saw him composing, they watched him orchestrating on a number of occasions. He was always careful to ensure that the writing for each family of instruments worked in isolation as well as in the complete ensemble. While he disapproved of tampering with his own works once completed, orchestration gave him the opportunity to view works such as *Ma mère l'oye* and the *Valses nobles et sentimentales* in a different context. Most of Ravel's orchestrations of works by other composers were commissions – from Diaghilev and Koussevitzky, for example – yet he generally considered the task an act of homage. In the case of Chabrier's *Le roi malgré lui*, he contemplated improving the orchestration, but the project never materialized. Although not wishing to interfere with the essence of a composer's style, Ravel left his mark on his orchestrations; his version of Musorgsky's *Pictures at an Exhibition* is characterized by a dazzling array of instrumental colour and he adds a distinctive rhythmic vitality to Debussy's *Danse*. Ravel also arranged works for piano four hands, including Debussy's *Nocturnes* and *Prélude à l'après-midi d'un faune*, as tributes to his older



colleague. In fact he undertook a similar process of reduction in his student exercises: his analysis of Saint-Saëns's *La jeunesse d'Hercule* consists of a piano reduction and figured bass.

Learning from the example of his predecessors was central to Ravel's compositional practice. In an important statement he reveals the delicate balance between imitation and influence on the one hand, and originality on the other: 'if you have nothing new to say, then you cannot do better, while waiting for the ultimate silence, than repeat what has been well said. If you do have something to say, that something will never be more clearly seen than in your unwitting infidelity to the model' (see Nichols, 1987, p.143). Rather than advocating mere imitation, Ravel is here acknowledging his own practice of studying scores in preparation for particular projects: Rimsky-Korsakov's *Sheherazade*, for instance, left an imprint on the concluding 'Danse générale' of *Daphnis et Chloé*, Mozart and Saint-Saëns on the Piano Concerto in G. He viewed influence as inevitable, declaring that a composer who does not admit influence should stop composing. However, imitation was only part of the learning process; originality was important to his thinking, just as it was to Poe's. Thus while he recognized his debt to his immediate predecessors, he decried the 'excessive influence of Chabrier' (see Orenstein, 1968, 2/1991, p.22) in the *Pavane pour une infante défunte* and resisted charges that he was merely an imitator of Debussy. Ravel's attachment to 19th-century French music did not diminish his interest in a wider European tradition, as his enthusiasm for Mozart, Weber, Schumann, Mendelssohn, Liszt, Chopin, Bellini, Richard Strauss and Puccini indicates. In several writings he declared himself national in music but not in politics: this non-chauvinistic attitude is borne out by his refusal in 1916 to join the Ligue Nationale pour la Défense de la Musique Française, which sought to ban the performance of German and Austrian music not yet in the public domain. He was equally forthnight in his defence of the pianist Jean Wiéner (in *Le courrier musical* in 1923) who was under attack for organizing a concert series including Schoenberg, Stravinsky and Billy Arnold's Jazz Band.

Ravel's many imaginative excursions into the past began early in his career. In the *Menuet antique*, the cadential flattened 7ths, sequential writing and bare 5ths suggest an imagined, rather than a specific past. Similarly, in *D'Anne que me jecta de la neige* from the *Deux épigrammes de Clément Marot*, Ravel responds to the 16th-century text with bare 5ths, parallel octaves and 'agréments'. The second song, *D'Anne jouant de l'espinette*, is less antique than Baroque in its treatment of piano semiquavers. However, Ravel's more recent predecessor, Chabrier, is also evident in these works: in the approach to piano writing in the *Menuet antique* and the *Sérénade grotesque*, and in the parallel writing two octaves apart in the first of the *Deux épigrammes*. Such a mix of retrospective elements is combined here and in *Le tombeau de Couperin* with Ravel's characteristic deployment of 7ths and 9ths. The Sonatine for piano is similar to the *Menuet antique* in terms of its modality and ornamentation. At the same time, it is Classical in character, not only in its use of sonata form and the minuet, but in its melodic clarity, regular phrasing and cadences. The *Menuet sur le nom d'Haydn* (1909), based on a musical adaptation of Haydn's name (B–A–D–D–G), continues in this tradition. Ravel displays his technical prowess by transforming the fixed subject into a Classical melody with accompaniment. However, the semitonal clashes, appoggiaturas, added 7ths, localized chromaticism and use of the tritone indicate that he was viewing his Classical subject from a 20th-century vantage point.

In *Le tombeau de Couperin* Ravel's contemporary harmonic vocabulary, Romantic pianistic gestures (especially in the Prélude and Toccata), and prominent use of the major 7th (notably in the refrain of the Forlane) are superimposed onto 18th-century forms, rhythms, cadences and ornamentation. In preparation for composing the suite, Ravel transcribed a forlane from Couperin's *Concerts royaux* in the spring of 1914, and there are clear musical parallels between it and the corresponding movement in *Le tombeau*. This perhaps weakens the claim that the work is more of a homage to 18th-century French music in general than to any particular work of Couperin, though no specific models have been found for the other movements. In celebrating Couperin, Ravel was responding to a more general resurgence of interest in the golden age of Louis XIV. He also turned to 18th-century France for inspiration for the ballet *Daphnis et Chloé*. In his 'Autobiographical Sketch' Ravel declared that *Daphnis* was 'less concerned with archaism than with fidelity to the Greece of my dreams which is close to that imagined and painted by the French artists of the 18th century' (see Orenstein, 1989, pp.45–6). Ravel's depiction of Greece by way of his understanding of another period indicates a certain ease with 18th-century culture, and also a desire for distance from his subject. Ravel also drew on the past in *Ma mère l'oye*, which is based on stories by Charles Perrault (1628–1703), the Comtesse d'Aulnoy (*c*1650–1705) and Marie Leprince de Beaumont (1711–80), and *Chansons madécasses*, a setting of poems by Evariste-Désiré de Parny (1753–1814). *Gaspard de la nuit* was inspired by Aloysius Bertrand's work, *Histoires vermoulues et poudreuses du Moyen Age*.

As well as historical distance, Ravel often created a sense of geographical distance by indulging his fascination with other cultures. Early works such as the *Habanera*, the *Shéhérazade* overture and the *Shéhérazade* songs reveal his preoccupation with the exotic. Ravel's identification with Spanish music was rooted in his mother's Basque and Spanish origins, and in this respect his evocations of Spain differ from his treatment of other exotic subjects. Falla described Ravel's Spanish music as 'subtly genuine' (see Nichols, 1987, p.79) – this in spite of the fact that most of it was written long before he visited the country for the first time in adulthood in 1924. The Spanish elements in Ravel's music are filtered through a distinctly cosmopolitan musical awareness. Even the *Rapsodie espagnole*, his first work consisting entirely of Spanish-style movements (built around an orchestration of the early *Habanera*), draws on a diversity of sources, including Rimsky-Korsakov in the orchestration of the 'Malagueña' and the octatonicism of the 'Prélude à la nuit', and Debussy in the ostinato textures of the first two movements. (Stravinsky, meanwhile, is foreshadowed here in the treatment of wind and brass). While the *Habanera* loses its incisiveness in this orchestral guise in favour of a muted sensuality, the *Rapsodie*'s final movement, 'Feria', is the most overtly Hispanic, capturing the incessant and repetitive rhythmic quality so striking too in *Alborada del gracioso*. In the opera *L'heure*

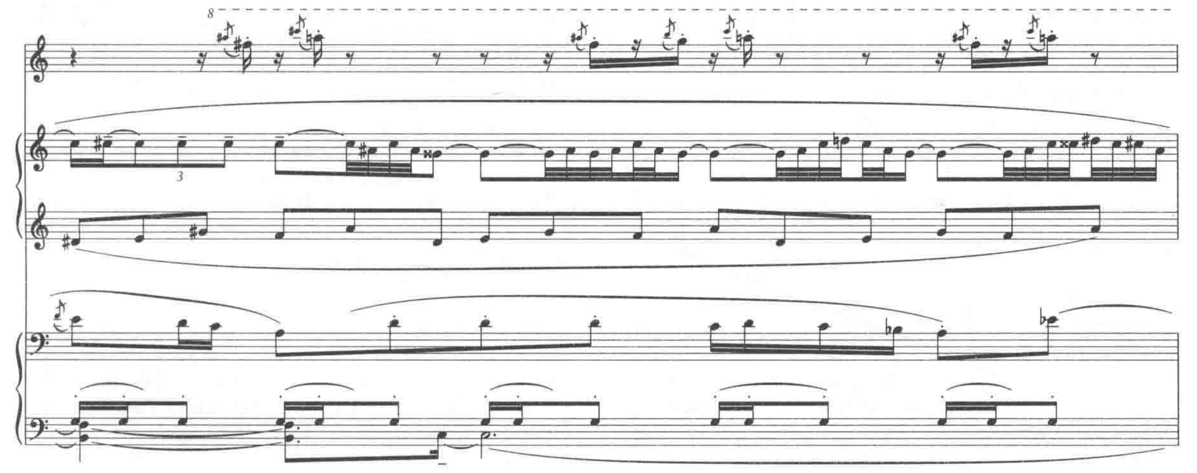
4. Design by Léon Bakst for Act 1 of Ravel's 'Daphnis et Chloé', Théâtre du Châtelet, Paris, 1912 (Musée des Arts Décoratifs, Paris)

espagnole, Ravel ridicules the poetic but ineffective Gonzalve, assigning to him the most stereotypically Spanish traits, such as extended melismas, decorative flourishes and modal inflections. Rhythm plays a crucial role in the Spanish works, in short, repetitive and often syncopated patterns. Ravel took this to an extreme in *Bolero*, allowing only the changing instrumentation to colour the obsessive dance rhythm.

Russia had a less personal hold on him, though he recognized the affinity between French and Russian culture in general, and the liberating impact that recent Russian music had had on his generation. The acknowledged influences of Rimsky-Korsakov and Debussy on his *Shéhérazade* overture are evident in his indulgent use of whole-tone scales, Lydian 4ths and flattened 7ths, evoking a sound world that was both familiar and exotic. Indeed, he admitted that this exoticism was the aspect of Russian music he appreciated, while Tchaikovsky he found less interesting by comparison.

The restraint that Ravel shows when evoking a past style within the Western musical tradition gives way to a more open sensuality in his exotic works, when fantasy rather than homage is involved. In the first of the *Shéhérazade* songs, Ravel seems to share the poet Tristan Klingsor's craving for the East and its material and sensory pleasures, reflected at the opening by the languorous repeated setting of the word 'Asie'. The poems of the first and third of the *Chansons madécasses* project an archetypal Western image of the Oriental woman, at once both mute servant and enigmatic object of desire; the sensuous atmosphere is established at the opening of the first song by the weaving flute line and the oscillating minor 2nds in the vocal part. But that Ravel was not entirely blind to the political realities of colonialism is suggested by his choice, for the second song, of a text dealing with the extermination of a treacherous settler who had tried to destroy the Madagascan people and their customs. His identification with the poem, denounced by one member of the audience at the première as unpatriotic, is evident from the violence of the setting. Ravel here drops his usual reserve: 2nd and 7th dissonances are freely employed, along with sections of bitonality, while the word 'aoua', an addition Ravel made to the text himself, is used as a refrain throughout, almost in the manner of a war cry. Other sets of songs further demonstrate Ravel's skill at imitating vernacular styles: Calvocoressi praised the way in which he captured the appropriate folk idiom in the *Cinq mélodies populaires grecques*, while the sensitivity of his *Deux mélodies hébraïques* led some to assume mistakenly that he was Jewish. This empathy Ravel extended to children, whom he often preferred to the adults in a household. In the opera *L'enfant et les sortilèges*, he revealed his sensitivity to the world of childhood, capturing the imagination, frustration and need for love which are so fundamental to childhood.

Ravel's tendency to create distance between himself and his subjects indicates a need for emotional and artistic control. Ravel asked Calvocoressi: 'Doesn't it ever occur to those people that I can be "artificial" by nature?' (see Nichols, 1987, p.180). The attention he paid to perfecting his public image as a dandy from his student days onwards



5. Ravel with two dragonflies from the original production of 'L'enfant et les sortilèges', Opéra-Comique, Paris, 1926

caused some to find him aloof. Ravel's biographers have noted that in Montfort-l'Amaury, he surrounded himself with bibelots, mechanisms and fakes, and inhabited an environment where even the garden reflected his control over nature. In several of his writings and letters, most notably 'Finding Tunes in Factories' (1933), he expressed his wish to combine composition with the mechanized world of the factory. Stravinsky's famous description of him as a 'Swiss watchmaker', although not intended as a compliment, contains some truth in it. Ravel's predilection for rigidly patterned movement, such as sustained and repeated notes, is particularly evident in works depicting clocks, bells and water formations, such as the tolling bells represented by the B♮ pedal in the early *Ballade de la reine morte d'aimer*, and the B♭ pedal in 'Le gibet' (*Gaspard de la nuit*). In *Jeux d'eau*, *La vallée des cloches* (*Miroirs*) and *Frontispice* (ex.1) Ravel sets up repetitive ostinato patterns that appear independent of the surrounding material. The fixed ostinato elements in the Sonata for violin and cello and the Sonata for violin and piano exist within a controlled contrapuntal environment. Ravel's most famous musical mechanism is *Bolero*, which he once declared he wanted performed in a factory. In *L'heure espagnole*, meanwhile, people are compared to clocks: the punctuality and efficiency of the muleteer are valued over the poetic indulgences of Gonzalve, clocks and marionettes are brought to life, and people, Concepcion especially, are described as mechanisms. However, Ravel's treatment of these automations is far from static; by avoiding excessive repetition, he breathes Spanish colour and diversity into his subject. It is easy to see how this world order created by Franc-Nohain appealed to Ravel, whose preference for the constructed and fabricated is clear from his life and musical choices.

5. STYLE. Although a progression is discernible in Ravel's work, influenced by important events in his life, his musical character developed early. His harmonic language is firmly diatonic and his use of figured bass in sketches and teaching confirms his attachment to functional tonality. Ansermet recalled a conversation between Ravel and Stravinsky in which they discussed the construction of a major/minor chord. Ravel insisted that such a chord would be possible as long as the minor 3rd was placed above the major 3rd, while Stravinsky declared: 'If this arrangement is possible, I don't see why the contrary shouldn't be possible too: and if I will it, I can do it' (see E.W. White: *Stravinsky: the Composer and his Works*, London, 2/1979, pp.556–7). Such comments indicate revealingly the way in which the two composers differed in their attitudes towards common practice. Ravel rarely obscured his bass lines; the first waltz from *Valses nobles et sentimentales* constitutes a textbook instance of bass-line clarity in its deployment of the circle of 5ths. His use in these waltzes of pedal points to control tonal direction can be discerned in other works, such as *Menuet antique*, with its opening F♯ tonic pedal, and the first movement of the Piano Trio. The *Habanera* features instead an incessant dominant pedal (C♯) in a way that looks forward to Debussy's use of the same device in *La soirée dans Grenade*. The introduction of the Concerto for the

Ex.1 *Frontispice*

Left Hand is based on the secondary dominant pedal E, which resolves to A at the piano's entry before reaching the tonic D major.

Extended chords, 9ths and 11ths especially, are integral to Ravel's harmonic language. He acknowledged his indebtedness to Chabrier for this trait in his pastiche *A la manière de . . . Chabrier*, by transforming the 7ths of Gounod's model into 9ths to create a richer texture replete with arpeggio movement, pauses and rubato. He also favoured the diminished octave or major 7th, for example in the opening and closing chords of *Jeux d'eau*, the first five bars of *Alborada del gracioso* and the refrain figure from the Forlane of *Le tombeau de Couperin*. Ravel used parallel 4ths and 5ths in *Entre cloches* and *Ronsard à son âme*, to create an antique effect, and in the opening of *L'enfant et les sortilèges* (outlining the pentatonic scale) to evoke a mock-oriental sound. Parallel triads abound in works as disparate as *Noël des jouets*, 'Petit poucet' (*Ma mère l'oye*), the eighth waltz of *Valses nobles et sentimentales* and the Satiesque ending of *Frontispice*. His frequent use of both simple and compound octaves, often in treble and bass registers, such as in 'Petit poucet', the *Habanera*, the *Pavane pour une infante défunte* and the first movement of the Piano Trio, again betrays the influence of Chabrier (appropriately he also employed this device in *A la manière de . . . Chabrier*). Ravel used the tritone for colouristic purposes; in the *Shéhérazade* overture and the first movement of the String Quartet it occurs within the context of the whole-tone scale. In the cadenza of *Jeux d'eau*, the juxtaposition of F♯ major and C major triads even gives a suggestion of bitonality.

Ravel's use of chromatic passing notes and unresolved appoggiaturas resulted in what could be regarded as localized bitonality. In the seventh waltz of *Valses nobles et sentimentales* the right hand outlines E major and the left hand a 6-5 chord on F. In a note to Lenormand, Ravel argued that this passage could be reduced to the left hand chord, the right hand consisting of unresolved appoggiaturas (ex.2). Ravel's experimentation with bitonality was more explicit in some postwar works: in the second movement of the Sonata for violin and cello, in the second song of *Chansons madécasses* (*Aoua*), in sections of *L'enfant et les sortilèges* and in the piano concertos. Although he often notated passages with separate key signatures, they can still be analysed in terms of unresolved appoggiaturas and unresolved conventional feminine endings. In the *Trois poèmes de Stéphane Mallarmé* Ravel, under the influence of Schoenberg and Stravinsky, challenged functional tonality in the second and third songs, but suspended it only in the latter, generally avoiding harsh dissonance through delicate instrumentation.

In some of his piano music Ravel blurs the boundary between harmony and melody. In works such as *Jeux d'eau*, *Une barque sur l'océan* (*Miroirs*) and 'Ondine' (*Gaspard de la nuit*), melody emerges from the arpeggio figures, resulting in a melodic pace that is slower than the surface movement (ex.3). He also conveys a sense of space in his use of pedal notes, ostinatos and changes of register, revealing his absorption of Liszt's model. The layered ostinato textures of *Entre cloches*, *La vallée des cloches* and the third movement of the Sonatine create a similar effect. This tendency is in sharp contrast to the artless simplicity characteristic of much of Ravel's melodic writing. He achieved this through modality combined with arch-shaped and sometimes expansive phrasing.

Ex.2 *Valses nobles et sentimentales*

This fragment is based upon a single chord:

which was already used by Beethoven, without preparation, at the beginning of a sonata [op.31 no.3]:

The E [*(a)* and *(b)*] does not change the chord. It is a passing tone in both cases.

Ravel's partiality for the Dorian mode (with the second and seventh degrees missing) was identified by Roland-Manuel in a range of works including the *Menuet antique*, *D'Anne jouant de l'espinette*, *Daphnis et Chloé* and the Piano Concerto in G. In the *Ballade de la Reine morte d'aimer*, the Dorian, folklike melody dominates the

Ex.3 'Ondine' (*Gaspard de la nuit*)

descriptive, mock-archaic accompaniment. A similar lyricism and repetitiveness has accounted for both the accessibility of the *Pavane pour une infante défunte* and its dismissal by some critics. The simplicity of *Ma mère l'oye* was a studied evocation of childhood; the influence of Satie's *Gymnopédies* on the 'Pavane de la belle au bois dormant' and 'Les entretiens de la belle et de la bête' is striking both for its melodic naivety and its repetitive bass movement. Such writing was not confined to his early works; Ravel captured a similar mood in the languorous E major piano melody from the slow movement of his Piano Concerto in G.

Ravel often opted for a static, recitative-like vocal style, like that often associated with Debussy, which is sensitive to the subtle accentation of the French language. Early songs, such as *Un grand sommeil noir*, *Si morne!* and *Sainte* display a dark introspection with the piano dominating the texture. The rhythmic fluidity of the vocal line in *Sainte*, whole-tone phrases and an augmented 4th in the first line of *Si morne!*, and parallel alternating chords in *Un grand sommeil noir* all betray Debussy's influence. However, in *Histoires naturelles* and *L'heure espagnole*, Ravel took his treatment of language a stage further than Debussy: in the song cycle he achieved a rare expressivity and dramatic quality which is more akin to the verve of Chabrier's animal songs. Contemporary commentators, including Pierre Lalo, the Schola establishment and Debussy himself, were shocked by Ravel's compression of feminine endings in the manner of natural speech and music-hall settings. Ravel's accompaniments complement the easy style of the vocal writing, taking on the character and preoccupations of the various creatures. The majestic dotted quavers, in the manner of the French overture, seem to empathize with, rather than ridicule, the peacock's pre-marital preparations. The piano also supplies a commentary on the details of the cricket's activities, with delicate grace notes and a dramatic use of silence.

In 1913 Ravel and Debussy set two of the same Mallarmé songs. Ravel was the first to obtain permission from the poet's son-in-law, Edmond Bonniot, for his *Trois poèmes de Stéphane Mallarmé*; he then intervened to persuade Bonniot to allow Debussy to publish his own settings, so as not to exacerbate their already strained relationship. The songs reveal the composers' different approaches to text-setting, such as Ravel's tendency to contract syllables. In *Soupir* for example, he elides the final syllable of 'fi-dè-le' with 'un', while Debussy separates the two words with rests. In *Placet futile* Ravel assigns only two syllables to the first word 'Princesse', while Debussy allocates the more usual three. In *Placet futile*, both composers have a motif associated with the repeated text 'Nommez nous', Debussy's rising a 4th while Ravel's drops a 5th followed by a tone. Both employ recitative style, although Ravel's lines are uncharacteristically angular with frequent leaps, which perhaps reveal Schoenberg's impact. Ravel's accompaniment of two flutes, two clarinets, string quartet and piano, allows him considerable scope with instrumental combinations and colour.

Although extra-musical ideas were often closely bound up with the conception of Ravel's works, he liked to write about his compositions in formal terms, as his printed note detailing the sonata-form structure and key scheme of his *Shéhérazade* overture indicates. Similarly, his statements about *La valse* tend to focus on abstract, rather than on extra-musical elements. Ravel placed a strong emphasis in his own work and teaching on adherence to traditional forms. He was drawn to Classical genres in the String Quartet, the Piano Trio, the Sonatine, and the sonatas and piano concertos, and had a particular fondness for the minuet. In addition to sonata form, Ravel also employed cyclic structures in the String Quartet, the Piano Trio and the Sonata for violin and cello. In many other works, he favoured *ABA* forms; early examples include the *Menuet antique* and *Entre cloches*. An exception to this quest for formal coherence is *Oiseaux tristes*, which he explained was an attempt to free himself from *Jeux d'eau*. Ravel had a lasting preoccupation with the dance, which he considered significant not only from a structural point of view, but also as an important source of rhythmic invention. He paid homage to numerous dance traditions, both Western and non-Western, including French (pavane and forlane), Central European (minuet, waltz and passacaglia), Spanish (habanera,

bolero and malagueña), and Malay (pantoum). In a letter to Jean Marnold in 1906 he declared that he valued 'the joie de vivre expressed by the dance far more deeply than Franckist puritanism' (see Orenstein, 1990, p.80).

Gide's idea that a classical work is only beautiful by virtue of its suppressed romanticism ('romantisme dompté') can aptly be applied to some of Ravel's works, though not all of his textures have the transparency of the *Ballade de la reine morte d'aimer* or *Ma mère l'oye*. In certain works he reveals his more romantic nature, noted by his piano teacher Bériot and described by Viñes. Sometimes he indulges in highly complex piano writing (for example, in 'Scarbo' from *Gaspard de la nuit*), and exuberant orchestral textures (notably in the *Rapsodie espagnole*, *Daphnis et Chloé*, *La valse* and the Concerto for the Left Hand). Ravel declared that in writing 'Scarbo', he wanted to make a 'caricature of Romanticism – an orchestral transcription of the piano', adding 'perhaps it got the better of me'. Nichols has detected a suppressed Romanticism in the *Introduction et allegro*, which is, in some respects, a showpiece for the harp; Ravel here experiments with orchestral timbres within a limited sphere and within a clear harmonic and formal scheme. In the *Valses nobles et sentimentales* he creates a powerful tension between the Romantic idiom and classical restraint; he selfconsciously claimed that he was aiming for 'a style that is simpler and clearer, in which the harmony is harder and the lines of the music are made to show up' (see Orenstein, 1989, p.45). In Ravel's works, as in those of a number of his contemporaries, this restraint became increasingly evident after 1911, for example in the *Trois poèmes de Stéphane Mallarmé*. However, despite their chamber instrumentation, these settings retain an orchestral quality and a dramatic dimension beyond the confines of the poetic text.

The aftermath of the war and his mother's death marked a period of uncertainty for Ravel, both personally and musically. Even his tiny *Frontispice* (written to preface Ricciotto Canudo's poem *S.P. 503 Le poème de Vardar*, in which the author reflects on his war experiences) reveals this apparent confusion, particularly with regard to phrasing and form. Instead of creating a defined structure, Ravel sets in motion five independent lines: an ostinato figure, a repeated melodic phrase that loses any sense of direction, a syncopated line with demisemiquaver flourishes, a bass line with alternating open 5ths on C and B♭ and strictly repeated rhythm on the note G, and fragmented interjections in a high register suggestive of birdsong (see ex.1 above). Most striking is the lack of any vertical cohesion until the final chords; this work reveals a new interest in linear motion, different from the formal counterpoint of the *Passacaille* in the Piano Trio and the Fugue in *Le tombeau de Couperin*.

Ravel's Sonata for violin and cello continues his growing interest in contrapuntal writing. He considered the Sonata to be a turning-point: 'The music is stripped down to the bone. The allure of harmony is rejected and increasingly there is a return of emphasis on melody' (see Orenstein, 1989, p.46). Its dedication to Debussy's memory is apt in that he absorbed Debussy's notion of 'depouillement' (economy of means), in which the music is reduced to its essentials. This austerity is also evident in the Sonata for violin and piano and in the *Chansons madécasses*, where the voice is treated as one of the five heterogeneous instruments. These preoccupations with counterpoint, economy and unusual instrumental combinations were shared by Stravinsky, Satie and the postwar generation of composers.

In Ravel's postwar works a greater eclecticism is often evident within the context of single works. *L'enfant et les*

Au Nouvel-Ambigu

L'OMBRE

3 actes, de Dario NICODÈMI

Si M. Nicodèmi était un romancier psychologue, je dirais qu'il a commis l'erreur de porter à la scène une œuvre qui exige l'analyse des tergiversations d'une âme amoureuse et tourmentée. Le théâtre, rapide en ses moyens, laisse inacceptables une série de situations que le livre eût expliquées, et nous avons eu le regret d'enregistrer ce résultat : pendant trois actes une héroïne ne cesse de souffrir, physiquement et moralement, de crier, de pleurer, d'être déchirée sans parvenir à nous émouvoir comme il nous eût semblé normal de l'être, et cela

(ph. H. Manuel)

« Opéra-Comique » : *L'Enfant et les Sortilèges.*
L'Enfant (Mlle GAULEY) n'est pas sage et Maman (Mme CALVET) le gronde... Et les sortilèges vont bientôt effrayer l'enfant taquin !

affolé, l'enfant pousse le cri de tous les enfants : Maman !

Et toutes les choses reprennent leur place tandis que l'enfant devient sage.

On pense bien avec quelle œuvre difficile à chanter et délicate à jouer.

Bravo ! pour la direction nouvelle qui a accueilli cette fantaisie de notre plus grand écrivain féminin : Colette !

gnier ont fait connaître le jeune talent Claude Dazil qui partage son temps en la pharmacie et la littérature.

Mlle Claude Dazil s'est attaquée à sujet vieux comme le monde et cepend toujours nouveau : l'Amour !

La Princesse aux cheveux d'or

6. *Scenes from Ravel's 'L'enfant et les sortilèges', Opéra-Comique, Paris, 1926: from 'Minerva' (28 February 1926)*

sortilèges, for instance, incorporates 18th-century pastiche, mock-oriental writing and ragtime, alongside American music hall and operetta styles, while in the Piano Concerto in G, the classicism of Mozart and Saint-Saëns is offset by jazz in a striking juxtaposition of past and present. Many parallels have been drawn between Ravel, neo-classicism and the younger generation of French composers. However, although he shared a number of their musical concerns, Ravel was firmly rejected in the 1920s by Milhaud, Poulenc and Auric. They regarded his work, particularly *La valse*, as aesthetically outmoded, concurring with Satie's view that Ravel was essentially an establishment figure. Stravinsky and Ravel, having shared a similar outlook from their meeting in 1909 until World War I, had grown apart, Ravel being unable to accept some of Stravinsky's neo-classical experiments, in particular *Mavra*. Ravel differed from his younger compatriots in the extent to which his style was rooted in the immediate past. While Milhaud and Poulenc presented their return to counterpoint, economy, clarity and forms from the past as a reaction to the generation of Debussy and Ravel, Ravel justified his use of the same traits as rooted in Saint-Saëns, Chabrier and Debussy. While Stravinsky forced together disparate elements to create what T.S. Eliot described as 'new wholes', Ravel drew unconsciously from his heritage, incorporating new elements into an essentially diatonic and modal framework, without overthrowing or dislocating the past.

Although Ravel was not at the forefront of Modernism, his advocacy of certain principles, notably those of economy and objectivity, and his openness to jazz and bitonality, lent these preoccupations a certain respectability on account of his own secure status. Unlike Debussy or Schoenberg, Ravel did not have any disciples, encouraging his few students, notably Roland-Manuel, Delage, Manuel Rosenthal and Vaughan Williams to develop their own musical characters. While Hopkins has suggested that 'Ravel's fascination with mechanical precision and perfection anticipated the cogs and springs of later composers' (*Grove6*), such as Ligeti and Riley, parallels can also be found in Messiaen's interest in birdsong, modality and clear structures.

Roland-Manuel did much to establish Ravel's reputation, promoting his teacher's music and ideas during his lifetime and assessing his contribution in the first full-length biography of Ravel in 1938. There was an upsurge of interest around the time of Ravel's centenary with important studies by Nichols and Orenstein. In the 1990s Ravel's collected letters and writings became available in print for the first time in French and English, encouraging a further revaluation of Ravel's distinctive genius.

WORKS

only those published and/or performed

for details of others see Orenstein (1975, 2/1991), 219ff

OPERAS

L'heure espagnole (comédie musicale, 1, Franc-Nohain), 1907–9, Paris, OC, 19 May 1911
L'enfant et les sortilèges (fantaisie lyrique, 1, Colette), 1920–25; Monte Carlo, 21 March 1925

BALLETS AND ORCHESTRAL

Shéhérazade, ouverture de féerie, 1898
Une barque sur l'océan, 1906 [after pf work]
Rapsodie espagnole, 1907–8: Prélude à la nuit, Malagueña, Habanera [after pf work], Feria
Daphnis et Chloé (symphonie chorégraphique, 3 parts, M. Fokine and Ravel, after Longus), 1909–12, Paris, Châtelet, 8 June 1912
Pavane pour une infante défunte, 1910 [after pf work]
Ma mère l'oye (ballet, Ravel), 1911, Paris, Arts, 29 Jan 1912 [after pf work, with additional movts, Prélude and Danse du rouet et scène, and interludes]
Fragments symphoniques (Suite no.1), 1911: Nocturne, Interlude, Danse guerrière [from Daphnis et Chloé]
Valses nobles et sentimentales, 1912 [after pf work]; score used for Adelaïde, ou Le langage des fleurs (ballet, Ravel), Paris, Châtelet, 22 April 1912
Fragments symphoniques II (Suite no.2), 1913: Lever du jour, Pantomime, Danse générale [from Daphnis et Chloé]
Alborada del gracioso, 1918 [after pf work]
Le tombeau de Couperin, 1919 [after nos.1, 3, 5 and 4 of pf work]; score, excluding no.1, used for ballet (choreog. J. Borlin and R. Maré), Paris, Champs-Elysées, 8 Nov 1920
La valse, poème chorégraphique, 1919–20; score used for ballet (choreog. B. Nizhinska, designed A. Benois), Paris, Opéra, 23 May 1929
Tzigane, rapsodie de concert, vn, orch, 1924 [after work for vn, pf]
Fanfare (for ballet L'éventail de Jeanne, Y. Franck, A. Bourgat), 1927, collab. Ferroud, Ibert, Roland-Manuel, Delannoy, Roussel, Milhaud, Poulenc, Auric, F. Schmitt; private perf. at home of Jeanne Dubost, Paris, 16 June 1927; Paris, Opéra, 4 March 1929
Bolero (ballet, choreog. Nizhinska, designed Benois), 1928; Paris, Opéra, 22 Nov 1928
Menuet antique, 1929 [after pf work]
Piano Concerto for the Left Hand, 1929–30
Piano Concerto, G, 1929–31

VOCAL

solo voices with orchestra or ensemble

Myrrha (cant., F. Beissier), 3 solo vv, orch, 1901
Alcyone (cant., E. and E. Adénis), 3 solo vv, orch, 1902
Alyssa (cant., M. Coiffier), 3 solo vv, orch, 1903
Manteau de fleurs (P. Gravollet), 1v, orch [after song with pf]

BARBARA L. KELLY

Ravelo, José de Jesús (*b* Santo Domingo, 21 March 1876; *d* Santo Domingo, 2 Dec 1951). Dominican composer and educationist. He studied solfège, music theory and the clarinet with Juan Francisco Pereyra; his compositional style was later influenced by his study and passionate following of Verdi. Director of the Banda Pacificador from 1894, he resigned in 1900 when Eugenio María de Hostos introduced choral singing into school education and appointed him music educationist. His influence as a teacher was extensive. He taught music at the private high schools of Santo Tomás (where he founded the country's first youth band in 1908) and Salomé Ureña; in that year he also founded the Liceo Musical, a government-sponsored conservatory, which he directed until 1942, when it became the National Conservatory. Among his activities as a conductor he directed the Octeto del Casino de la Juventud from its foundation in 1904; by 1932 it had grown to 60 members and was renamed the Sociedad de Conciertos. He conducted the municipal band of Santo Domingo for 25 years, also conducting and playing clarinet for visiting companies that presented operas and zarzuelas in the La Republicana and Colón theatres. He presided at the first Dominican Congress of Music (1928); he was appointed artistic director of HIX, the capital's official radio station (1931). His study of the country's three national anthems (1934) led the government to adopt the work by José Reyes and Emilio Prud'Homme.

Many of Ravelo's compositions, over 250 principally religious works mainly for organ solo and for voices with organ or orchestra, date from the late 1930s and after. The work he considered his best, the Requiem, was first performed posthumously in his honour in 1952 in the cathedral in Santo Domingo. His best-known work, the oratorio *La muerte de Cristo*, was performed every Good Friday for 19 years after its première (1939), a custom re-established in the 1990s. His children's songs for schools were collected by Ramón Emilio Jiménez in *La patria en la canción*. Ravelo's music is the primary link between late 19th-century Romanticism and the beginnings of a Dominican national school.

WORKS
(*selective list*)

Choral-orch: Misa en sol, 1915; Misa solemne, 1939; La muerte de Cristo (orat), 1939; Requiem, 1940; La Resurrección de Cristo, 1942; Misa brevis, 1945; 2 anthems, 4 Salve Reginas, *c*16 other works
Vv, org: Letanías, 1923; Gozos a la Altagracia, 1923; Misa a San José, 1949; *c*13 other works
Motets: 19 for 1v, orch; 16 for 1–3vv, insts; 2 for 2vv
Orch: 2 valses, minuet, scherzo, intermezzo
Band: 22 pasodobles, 22 marches, mazurka, gavotte, funeral song
4 chbr works; 41 works for pf; 21 works for org; 12 works for 1v, pf; 25 school songs

MARTHA ELLEN DAVIS

Ravenna chant. With Milan and Aquileia, Ravenna was a major ecclesiastical centre of northern Italy during the last centuries of the western Empire and the period immediately following. Ravenna is approximately 160 km south of Venice, a short distance inland from the coast; it came into prominence with its selection as the imperial capital by Honorius in 402. It fell successively to the Goths in 493, the Byzantine Empire in 540, the Lombards in 751 and the Franks in 754; Pepin bestowed it upon Pope Stephen III and thus founded the temporal power of the papacy.

Ravenna reached the heights of its political power and artistic eminence during the 5th and 6th centuries: these are stunningly reflected in combinations of builder's stone and mosaic tile which include the mausoleum of Galla Placidia (*d* 450), the Orthodox and Arian baptisteries, the

archiepiscopal chapel, the tomb of Theodoric and the churches of S Vitale, S Apollinare at the nearby town of Classe, and S Apollinare Nuovo.

Very little remains of Ravenna's liturgical music. Where Milan preserves the full repertory of its medieval liturgical chant (*see* AMBROSIAN CHANT), the early chant dialect of Ravenna has all but disappeared. The city's importance as a liturgical centre up to the mid-8th century, though perhaps exaggerated in Gamber's proposal that the mixed Gelasian sacramentaries originated at Ravenna, suggests that its chant repertory may to some extent have developed independently. Two chants from the Easter Vigil Mass for neophytes can be regarded as possible survivors from this period: an alleluia with verses from Psalm cxxxv, the first of which is *Confitemini Domino quoniam*, and *Qui in Christo baptizati estis* (?offertory), related musically to it. The text and music of the latter are derived from a Byzantine baptismal *troparion*, *Hosoi eis Christon*, which was adapted musically in other ways in the Beneventan, Old Roman and Gregorian melodic traditions. These two Ravenna chants reveal an elegance of centonate structure (*see* CENTONIZATION) not matched elsewhere in the West except among the more sophisticated chants of the Gregorian tradition.

Two other unusual chants found at Ravenna are known also in manuscripts from the Beneventan region of southern Italy (*see* BENEVENTAN CHANT), in the central Italian provinces and in the intervening backwater of the Abruzzi; there is no trace of them in manuscripts reflecting Roman practice. Like parts of southern Italy, Ravenna, during the Byzantine Exarchate (540–751), was a natural point of entry into Italy and the West for chants of Eastern Orthodox Origin; one such chant, the Greco-Latin antiphon *Hote tō staurō*/*O quando in cruce*, is both musically and textually a borrowing of an Eastern hymn for the Good Friday Hours, attributed to Sophronius, Patriarch of Jerusalem (634–8). The other chant is a hymn or *versus* in hexameters (*Lux de luce Deus tenebris illuxit averni*) whose presumably original form, with a single musical pattern repeated for each verse, is found only in the Ravenna sources. It is thought that both of these chants were in use before the mid-8th century, for at that time the Byzantine link between Ravenna and southern Italy was effectively broken by the Lombard conquest of the north. Whether they were introduced in the north before the south, however, is uncertain, but a northern origin is probable at least for *Lux de luce*.

Other survivals of the characteristic Ravenna practice may be distinguished among the Proper chants (in particular, the alleluias, offertories and sequences) for saints venerated locally, particularly Apollinaris, Vitalis, Agricola and Fusca. The alleluia with the verse *Accipe spiritum sanctum* for St Apollinaris is an example of a chant composed later (though before the 11th century) at Ravenna. Although no early antiphoners of the Office from Ravenna survive, there are three fine versions of the *antiphonale missarum* from this region, dating from the 11th and 12th centuries: *US-BAw* W.11 (a *missale plenum*); *I-Pc* A.47; and *MOe* 0.1.7. Fragments of Ravenna office-books survive in *I-Rvat* lat.4750 and perhaps *Rvat* lat.85.

Another important possible source of the early Ravenna chant repertory may be the liturgy of Milan. During the late 5th century and the early 6th, the Milanese bishops took refuge from the Lombard occupation of Milan at Genoa, which was at that time strongly influenced by Byzantium by way of Ravenna. There are many chants of eastern origin in the Milanese liturgy which, it has been suggested, were originally introduced under the contemporary influence of Ravenna.

By the early 11th century – and perhaps much earlier – most traces of the older local chants had been extinguished at Ravenna as they had throughout Europe. When St Romuald (*c*951–1027), a native of the city and sometime abbot of the Benedictine monastery at Classe, founded the Camaldolese order, he seems to have drawn on the monastic rite in use at Classe, which had already been influenced by the Cluniac reform (see PalMus, 1st ser., ix, 1906/*R*, p.13). In the late 11th century, however, there was a local renewal, for which St Peter Damian (1007–72) seems to have been largely responsible; he was himself the author of a number of hymns. A noted Mass Proper for St Apollinaris and a noted Office for St Silvester, appended to an early collection of Peter's works (*I-Rvat* lat.3797, dating from *c*1100), contain some local material; this may represent a genuine early survival, or perhaps the introduction of new compositions in an archaic style.

KENNETH LEVY/R

Ravenscroft, John (i) (*d* before 1709). English composer. He was resident in Rome in the late 17th century and published two sets of sonatas ([12] Sonate a trè, 2 vn, vle/archlute, org, op.1 (Rome, 1695); [6] Sonatas or Chamber Aires, 2 vn, bc, op.2 (London, *c*1708)). It is assumed that he was a pupil of Corelli, but this is supported only by a manuscript copy of his op.1 now held in Vienna, which bears the inscription 'Inglese allievo d'Arcangelo Corelli'. Correspondence concerning the dedication of the Roman edition to the Grand Duke of Tuscany, Ferdinando III, is preserved in the court archives in Florence. The title-page refers to 'Giovanni Ravenscroft, alias Rederi Inglese', while in the note to the reader he describes himself as a 'dilettante', and as such he may have associated with the fashionable society of English amateurs who sojourned in Rome during their Grand Tour. Two editions of his op.2 sonatas (both *c*1708) mention his death, and since they appeared in London it

is possible that by then he had returned to England. This set was also reprinted in Amsterdam (*c*1710).

Le Cène's partial reprint of op.1 as Corelli's op.7 (*c*1735) incensed Hawkins into singling out Ravenscroft in a damning judgment of the vogue for Corellian pastiche: 'the natural and familiar style of Corelli's music, and that simplicity which is one of its characteristics, betrayed many into an opinion that it was easily to be imitated . . . but the experiment has been made, and has failed'. Ravenscroft's op.1 was among the first Roman collections to adopt Corelli's slow–fast–slow–fast sequence of movements that had previously never figured prominently in indigenous compositions. Movement types also closely follow the Corellian mould: expressive *grave* introductions, fugal movements, internal slow movements often in triple metre, and compound metre finales. His facile over-reliance on sequences, based on stereotyped harmonic formulas, so apparent in the fugue of Sonata no.1, replaced the much more subtle systems of melodic metamorphosis in Corelli's op.3. The op.2 dance suites even conclude with a 'Ceccona', no doubt a deliberate reference to Sonata no.12 of Corelli's op.2.

PETER ALLSOP

Ravenscroft, John (ii) (*fl* 1730). English violinist. He was a member of the band at Goodman's Fields Theatre, probably from its opening in October 1729, and received benefit performances there in the 1729–30 and 1730–31 seasons. He seems to have been replaced by 1735. According to Hawkins he was also a wait of Tower Hamlets. Hawkins further stated that Ravenscroft was a good player, much in demand for balls and dancing parties. He seems to have composed mainly hornpipes and other dance-tunes, though two songs, *Foolish woman* and *Lucinda, say* (both published *c*1725) are probably his. A collection of *Thirty Eight Favorite Hornpipes* by him was published after his death. Hawkins printed two of these in his *General History*, one of which had been included in *The Delightful Pocket Companion for the German Flute*, ii (*c*1750). Volume iii of *The Dancing Master* (*c*1727) contains a further hornpipe by Ravenscroft and another, entitled *Ravens Hornpipe*, which may also be his (*HawkinsH*, ii, 893–4).

MARGARET LAURIE

Ravenscroft, Thomas (*b* ?1592; *d c*1635). English editor, composer and theorist. Although his parentage is still unknown, he was most probably a member of the Flintshire branch of the Ravenscroft famliy. His year of birth is implied by the prefatory poem to the *Briefe Discourse* (1614), which states that he was then aged 22; the claim that he was a son of Roger Ravenscroft, canon of Chester Cathedral, is not supported by this evidence, as the canon's son was baptized in 1598 (not 1592 as is stated in *The Family of Ravenscroft*, London, 1915). If the early birth-date is correct, the Thomas 'Raniscroft' who was a chorister at Chichester Cathedral in 1594 cannot be identified with the composer. Ravenscroft was a chorister at St Paul's Cathedral under Thomas Giles (both their names appear in a list of the choir included in the report of Bishop Bancroft's visitation, 1598); he was still there in 1600 when Edward Pearce became organist and choirmaster.

His appointment coincided with a renewal of activity by the St Paul's company of child actors which, like the children of the Chapel Royal, catered for more sophisticated tastes by including in their plays specially written songs to be performed by trained voices and instrumentalists. Ravenscroft wrote some of the music for these productions and was probably also active as an instrumentalist or actor-singer. We learn from the *Briefe Discourse* that he was a student at Gresham College; the book is dedicated to the 'most worthy and Grave Senators' of that institution. Fellowes and others gave the date of Ravenscroft's Cambridge MusB as 1607, but no-one graduated with the MusB in that year. The University Book of Supplicants, however, shows that a 'Thomas Rangcraft' from Pembroke Hall took the degree in 1605. The Cambridge Grace Book E states that Ravenscroft received his degree on 21 June 1605, after ten years of study. If he was indeed 22 in 1614, however, he would seem to have been considerably younger than most other known recipients, who can be shown to have been at least 21. Also, a marginal note in the *Briefe Discourse* states that he proceeded MusB when he was 14. Unlike degrees in Arts, however, the MusB degree entailed no systematic course of instruction or residence requirement, merely the completion of a composition; and Ravenscroft would not have been the only youthful candidate, for Matthew Godwin (*d* 1586), organist of Canterbury Cathedral (1584–6), was certainly only 16 when he took the Oxford BMus in the year before his death. There are few details of Ravenscroft's activities between 1605 and the time when he was music master at Christ's Hospital (1618–22), but it is likely that he continued his association with the theatre.

In 1609 he edited *Pammelia*, which is the earliest English printed collection of rounds and catches, some having sacred texts in English or Latin. There are also vendors' cries, sol-faing pieces, tavern songs and traditional ballads. Some of the songs suggest his continued association with the theatre; for example, three (nos.62, 85 and 100) were sung in Francis Beaumont's *The Knight of the Burning Pestle* (1608). There are further play songs in *Deuteromelia* (also 1609): no.7, for instance, comes from *The Knight of the Burning Pestle*, and no.17 is sung in *Jack Drum's Entertainment* (1601). Also included are *Three Blind Mice* and the catch *Hold thy peace knave* sung in *Twelfth Night*. *Melismata* (1611) comprises 23 settings of which nine are 'Citie' and 'Countrey' rounds; the others are short madrigalian pieces which attempt to express the 'humour' of the text. Sabol tentatively suggested appropriate dramatic contexts for four of the songs; no.12, however, can definitely be identified with Audrey's song in Act 4 scene v of Thomas Middleton's *A Trick to Catch the Old One*.

Whereas the music of these collections is anonymous, 12 of the songs appended to the *Briefe Discourse* (1614) to illustrate Ravenscroft's theoretical ideas are ascribed to him; six others are by John Bennet and two others are by Edward Pearce. The book itself, despite its impressive array of authorities, is an ambiguous discussion of the

contemporary misuse of mensuration signs and an attempt to impose order on the chaos by advocating a return to medieval practice. The music, with the exception of a few madrigalian numbers, is of the consort song variety and includes four play songs (nos.6, 8, 9, 15) and a jig-like cantata in which Hodge Trillindle woos Malkyn in a broad West-Country dialect (nos.17–19; see illustration). The value of his *Treatise of Musick* is negligible. Ravenscroft's *The Whole Booke of Psalmes* (1621), with its 105 settings, is one of the most important psalters of the period, though it contains much music from the earlier publications of Day, Parker, East and Barley. The melodies are in the tenor and are named. The new contributors include John and Thomas Tomkins, Peerson, Palmer, the elder John Milton, Ward, Stubbes, Cranford, Harrison and Ravenscroft himself. The publication *Musalia* (1613), mentioned in a letter to the *Musical World* in 1840 (see King), is fictitious.

Ravenscroft's extant compositions show him to have been a man of great versatility, though of slender talents. His fantasias are foursquare and mechanical, and the same criticism can be made of his madrigals and much of his sacred music, which is variable in quality. The weakest sacred work is the full anthem *Behold now, praise the Lord*, with its clumsy part-writing, though the other full anthem, *O woeful ruins*, like the five-part Latin motets, has moments of great power. Most of his verse anthems have viol accompaniments marked by a curious angularity of line and disregard of academic rules, but many also have effective passages. *Ah, helpless wretch* and *All laud and praise* are strongly influenced by the metrical psalm while others are more expansive. Perhaps *O let me hear thy loving kindness* was his most popular anthem: it was still in use at Durham Cathedral in June 1680 and its accompaniment exists in versions for both organ and viols. It is possible that the six-part verse anthem *O clap your hands* was his MusB exercise. His collections of rounds and partsongs are historically important in that they afford an insight into the popular music-making of the day, as well as preserving a number of play songs that would otherwise have been irrecoverably lost. The composer was highly regarded by his contemporaries.

Part of 'Hodge Trillindle to his Zweet hort Malkyn', from Thomas Ravenscroft's 'Briefe Discourse' (London: Allde, 1614)

DAVID MATEER/IAN PAYNE

Raverii, Alessandro (*fl* Venice, early 17th century). Italian music printer. His father Constantin Raverii was a member of a minor printing family and married one of the Bindoni family, famous as Venetian printers though little associated with music. Through them he became related to the Gardane family. Alessandro Raverii printed music only between 1606 and 1609, during which time he printed a large number of volumes of which over 50 are extant. He appears to have had close ties with Angelo Gardano, for many of Raverii's titles are clearly no more than reprints of volumes from Gardano's house after

1588. Raverii also printed three titles (by Severo Bonini, Giulio Caccini and Jacopo Peri) which he seems to have taken from Giorgio Marescotti in Florence.

STANLEY BOORMAN

Ravina, Jean Henri (*b* Bordeaux, 20 May 1818; *d* Paris, 30 Sept 1906). French pianist and composer. He received his early musical instruction from his mother and then, after his first public appearance in 1826, from the violinist Rode. At the age of 13, he entered the Paris Conservatoire and studied with P.-J.-G. Zimmermann, obtaining a *premier prix* in piano in 1834, and in harmony and accompaniment in 1835. He became assistant professor at the Conservatoire on 24 November 1835, but gave up the post two years later to pursue a career as a virtuoso and composer, making successful tours of Russia in 1858, and Spain in 1871. He became a Chevalier of the Légion d'Honneur in 1861.

Ravina wrote more than 110 works, mainly for piano. These include ten sets of études, works for four hands (including transcriptions of all of Beethoven's symphonies), works for six and even 12 hands, a *rêverie* for the left hand alone (op.92), 100 *préludes* (op.110) and a piano concerto (op.63). Many of the earlier works show the influence of his patron Rode; his later works, in particular the *Etudes de concert* and the *Etudes caractéristiques*, were clearly influenced by Chopin.

NATHALIE FROUD

Ravina [Rabinowitz], **Menashe** (*b* Russia, 1899; *d* Tel Aviv, 1968). Israeli critic, choral conductor and composer of Russian birth. In 1925, soon after his emigration to Palestine, he was appointed music critic of the newly founded socialist daily *Davar*, a position he retained throughout his life. He changed his surname from Rabinowitz to the more Hebrew Ravina in 1930. His frequent and detailed reviews, which insisted on a high standard of performance and programming, and sought a genuine Jewish musical style, were highly influential. In an attempt to bring music to the people, he collaborated with David Shor on an ambitious education project that included public lectures, the publication of popular music appreciation booklets and song anthologies, and the establishment of a nation-wide network of amateur choirs. He was also a strong supporter of contemporary music in Palestine. His many songs (around 60), mostly written for young children, were intended as part of a newly composed folksong repertory.

JEHOASH HIRSHBERG

Ravinale, Irma (*b* Rome, 1 Oct 1937). Italian composer. She studied composition with Petrassi at the Conservatorio di S Cecilia in Rome (1957), and attended masterclasses with Boulanger in Paris (1961) and Stockhausen in Cologne (1963). She also graduated in piano, conducting and choral conducting. Her composition awards include the Città di Trieste prize (1976) for the orchestral *Spleen*. Previously head of the S Pietro a Majella Conservatory in Naples, in 1989 she was appointed the director of the Conservatorio di S Cecilia in Rome. Deeply influenced by Petrassi, Ravinale developed language which combines a strong sense of structure with refined aural imagery. Her accessible style has led to frequent performances in Italy and abroad. In her leading role in education, she has increasingly played an outspoken role in defence of classical music in general and women composers in particular.

Ravizza, Victor (*b* St Gallen, 19 Jan 1941). Swiss musicologist. He studied at Berne University (1960–67), with a year at Florence University (1965) and gained the PhD (1967) with a dissertation on the Italian instrumental ensemble 1400–1550. He completed the *Habilitation* at Berne University in 1977 with a work on the *coro spezzato* and became an *ausserordentlicher Professor* in 1988. His main areas of interest are music from the Italian Renaissance and Viennese music 1870–1930, with a particular focus on Brahms, Mahler and the Schoenberg School.

Ravn, Hans Mikkelsen [Corvinus, Johannes Michaelii] (*b* nr Grenaa, Jutland, *c*1610; *d* Ørslev, Zealand, 10 Aug 1663). Danish educationist, scholar and music theorist. He was educated at the grammar school at Slagelse, where the foundations of his interest in music were laid. He read theology at the University of Copenhagen from 1631 to 1634, after which he was appointed to Herlufsholm public school. In 1640 he was called back to his old school at Slagelse as rector. From 1652 until his death he was parish priest at Ørslev. As a scholar he was interested in history, poetry, the Danish language and music. His most important literary work is his *Heptachordum danicum seu Nova Solsisatio* (Copenhagen, 1646/*R* 1977 with commentary and source studies), which, as he observed in his dedication, was the first attempt at a complete and thorough presentation of the art of music in Denmark. The work begins with a lengthy prolegomena, in which he reviewed the history of music, discussed Danish folksongs and hymns and described ancient instruments. This is followed by a short section on musical notation ('De notatione'), then the main body of the work ('De modulatione'), a presentation of music theory in two parts as it concerns both monophonic and polyphonic music, for which his principal authorities seem to have been Lippius, Crüger, Mersenne, Praetorius and Demantius. Finally, there is a section on the rules governing the behaviour of choirboys, drafted by a Copenhagen rector (Olaus Theophilus) in 1573, supplemented by pedagogical advice to choirmasters, suggesting that Ravn intended his book for use in grammar schools. As the title of the work declares, he advocated the seven-note scale, adding the syllable *si* to the hexachord, the introduction of which into Denmark he attributed to Gregorius Trehou. He also subscribed to Zarlino's syntonic scale, as opposed to the diatonic scale of Pythagoras, and presented the triadic system in such a way as to pave the way for an acceptance of the concepts of major and minor tonalities.

JOHN BERGSAGEL

Ravvivando (It.: 'bringing back to life'; gerund of *ravvivare*, 'to revive'). As *ravvivando il tempo*, a direction indicating that the pace of a piece of music is to revert at a given point to a faster tempo at which it had moved earlier. *Ravvivando* alone, without *il tempo*, may also indicate a return to a livelier mood, but even so a faster pace is nearly always implied.

See also TEMPO AND EXPRESSION MARKS.

ERIC BLOM/R

Rawlings [Rawlins]. English family of musicians.

(1) Thomas Rawlings (*b c*1703; *d* London, 1767). Instrumentalist and possibly singer. He was a pupil of Pepusch and a member of Handel's orchestra (probably as a violinist) in both opera and oratorio performances. It is likely that he is the same Thomas Rawlins who entered the Queen's Chapel as a singer in 1737. On 14 March 1753 he was appointed organist at Chelsea Hospital.

(2) Robert Rawlings (*b* London, 1742; *d* London, 10 Oct 1816). Violinist, son of (1) Thomas Rawlings. He was a pupil of his father and of the Italian theorist Barsanti, who was then living in London. He may have held an early appointment as organist to Chelsea College. At the age of 17 he was appointed musical page to the Duke of York, with whom he travelled on the Continent until the duke's death in 1767. Rawlings then returned to England and was appointed personally by George III as violinist in the king's band; he was also elected to the queen's private band. By 1783 he was playing in the King's Theatre orchestra and in 1784 he took part in the Handel Commemoration concerts at Westminster Abbey. He also participated in the Professional Concert.

(3) Thomas Augustus Rawlings (*b* London, 18 Nov 1774; *d* London, 19 Jan 1849). Violinist, cellist, pianist and composer, son of (2) Robert Rawlings. He was a pupil, first of his father, then (1788–95) of Joseph Diettenhofer, an Austrian theorist who had settled in London in 1780. During these years he had some of his music played at the Professional Concert and met Haydn. He performed as violinist and cellist for all the London concert organizations, including the Opera and the Ancient Concerts, and he taught piano, violin and thoroughbass in London. Fétis said that he met Rawlings in London in 1829.

Rawlings's major works seem to belong to the earlier part of his life. After 1800 he poured out a long succession of songs, marches and piano pieces for the salon. According to Brown and Stratton the well-known song *Isle of Beauty* generally attributed to him was by a Major C.S. Whitmore; Rawlings was merely the arranger.

WORKS
all published in London

3 Sonatas, hpd/pf, vn acc., op.1 (*c*1793)
6 New Waltzes, pf, tambourine and triangle acc., op.2 (*c*1794)
A Cantata on the Death of the Late Unfortunate Marie Antoinette, Queen of France (*c*1794)
A Grand Military March in Score, pf (*c*1795)
Concerto, pf, fl, 2 vn, va, vc, in Concerto da camera, no.4 (*c*1800)
Numerous songs and pieces for pf pubd singly and in 19th-century anthologies; most in *GB-Lbl*

PETER PLATT

Rawsthorne, Alan (*b* Haslingden, Lancs., 2 May 1905; *d* Cambridge, 24 July 1971). English composer.

1. LIFE. Rawsthorne did not turn to the serious study of music until he was 19, having made false starts in both dentistry and architecture. In 1925 he entered the Royal Manchester College of Music, where he was a pupil of the pianist Frank Merrick and the cellist Carl Fuchs; his piano studies were continued abroad, notably under Egon Petri. On his return to England in 1932 he taught at Dartington Hall School and also composed music for the associated School of Dance Mime. Yet even though he moved to London in order to devote himself primarily to composition, it was not until the 1938 ISCM Festival in London that he achieved wide recognition with the Theme and Variations for two violins. At the 1939 festival, in Warsaw, a far more ambitious score, the Symphonic Studies, demonstrated his mastery of orchestral resources, while in the same year the First Piano Concerto (in its original version, with strings and percussion) confirmed the achievement of a highly individual language and certain structural predilections; both were to remain remarkably constant throughout the rest of his career.

Rawsthorne rescored the concerto in 1942, by which time he was doing military service; despite this he was able to complete the two contrasted overtures of 1944 and 1945. With the end of the war, however, he was at last able to devote all his energies to composition, and to be confident of receiving performance: within some five years he had produced four concertos, a symphony, several chamber works and a body of film music, and was thus already among the more prolific instrumental composers of an English generation that included Walton and Tippett. The chamber cantata *A Canticle of Man* (1952) was the first substantial evidence of an interest in setting words that was to culminate in the large-scale *Carmen vitale* of 1963; yet vocal writing never displaced instrumental as the basis of Rawsthorne's musical thinking. Two further symphonies (1959 and 1964) and four more concertos head an impressive list of orchestral scores produced in the last two decades of his life, most of them written to commission.

However, the emergence of a younger generation of composers with different ideals tended to draw public interest away from a composer so steadfast in his established path and so scornful of 'novelty value'; though Rawsthorne first performances remained notable occasions, they were too little followed up, especially in the recording studio. Beginning with the Concerto for ten instruments, written for Cheltenham in 1961, he showed a heightened interest in chamber orchestral writing and in pure chamber music, the predominant genre in his last years. In 1967 he produced his biggest piano work, the Ballade written for John Ogdon, and in the same year he also wrote two works for youth orchestra (*Overture for Farnham* and Theme, Variations and Finale). Rawsthorne was made a CBE in 1961, and was awarded honorary doctorates by the universities of Liverpool, Essex and Belfast.

2. WORKS. From the earliest published scores it can be seen that Rawsthorne was never attracted towards the tasteful 'higher diatonicism' that distinguished much of the composition taught in English conservatories in the 1920s. The finale of the Viola Sonata (1935) openly declares a strong debt to Hindemith, yet in the rest of the work the influence has been assimilated, together with that of Walton's Viola Concerto, and the most prominent traits are Rawsthorne's own. Still more is this true of the Theme and Variations, all that remains of the String Quartet no.1 (1939), and of the piano Bagatelles (1938). As with Hindemith, a music that appears 'chromatic' in its 12-note repertory is in fact built from the constant juxtaposition of melodic phrases that individually have clear (but tonally differing) diatonic origins. Their phraseology, though flexible, is essentially traditional, depending much on rhythmic, and sometimes melodic, sequence, and often approaching Baroque ideals of patterned figuration. As in Hindemith's music, too, the harmony appears to be regulated by the convergence of strong linear movements in each strand, yet its avoidance of intense dissonance shows a considered restriction of chord structures. But whereas Hindemith deployed his range of chord types in a hierarchy so as to create intensifying and relaxing harmonic movements that clarify long-term tonal designs, Rawsthorne uses his favoured aggregates with extreme consistency, sustaining over long spans a sensation of tonal ambivalence. The 'false relation' he seems to have admired in Walton may not only create a simultaneous major–minor mode, but be built around by the absorption of its 3rds into conflicting triadic structures (e.g. from an A–C–C♯ source can spring superimposed triads of F major and A major–minor; if the A now moves to G♯, the complex has become F minor – C♯ minor–major; and so on). The prevalence, to the point of mannerism, of the augmented triad in Rawsthorne's harmony becomes clear, for its tonally contradictory major 3rds form the basis of this method.

In many works two particular tonal emphases may stand out as almost evenly weighted (one of them ultimately proving the more fundamental), but Rawsthorne avoided the fatuous tone of so much systematic bitonality by fluid movement between harmonies that offer a wide range of subsidiary ambiguities. This constant suspension of tonal commitment does limit the range of mood that Rawsthorne's music can encompass. A certain elegance of finish is never lacking, but this reinforces at times a somewhat impassive, even grey, tone. Yet enigmatic restraint can give way to a resigned pathos, and even an acute anguish; more affirmative or optimistic (as opposed to merely energetic) moods are not so surely caught, except where a less equivocal diatonic stance is adopted.

Such a harmonic method can be used to shape paragraphs, but is not easily magnified so as to shape movements; the classical sonata thesis, for example, is likely to lose much of its original point when argued in these terms. Rawsthorne's early music shows a marked

preference for variation structures and for composite movements that largely avoid problems of balancing a single expansively continuous span. Even so, the Symphonic Studies demonstrate impressive powers of organization across and within five linked movements; this is a remarkable first orchestral score by any standards. The colour is highly characteristic, with a steely edge not at all like the sound of Hindemith's *Mathis* symphony – to mention the work most obviously suggested by the agile figuration – and the derivation of so much material from the opening epigram gives the cogency of a set of extended variations. Significantly, it is the central chaconne that remains most memorable in the First Piano Concerto. In the postwar concertos, the sonata principle continues to be sidestepped or modified, by the use of composite movements (Violin Concerto no.1, 1948), or an introductory theme whose recurrence is more crucial than those within the allegro (Oboe Concerto, 1947). Even works that acknowledge the sonata's duality of material still exhibit a palpable economy of basic motivic shapes. And when the classical exemplars seem most pertinent, as in the Second Quartet (1954), with its 'second subject' clearly in the dominant, they are likely to be abandoned: the theme's tonic return is vestigial, merging into transition to the following movement. Both this quartet and the Second Violin Concerto (1956) still find an important place for variation structures in their finales.

In both violin concertos the treatment of the orchestra is warmer and more gentle than in the piano concertos, where it matches a brittle, percussive pianism. This warmth, and the strain of ardent lyricism it accommodated, can be seen as a general development of Rawsthorne's style in the 1950s. The first extended vocal work, *A Canticle of Man* (1952) is one pointer, the title Four Romantic Pieces (1953) another; most striking of all is the use of a soprano soloist in the finale of the Second Symphony (1959). This work, later called *A Pastoral Symphony*, is far more openly committed emotionally than was its predecessor, and suggested that Rawsthorne could acknowledge the English tradition of reflective lyricism without relapse into an amorphous modal rhapsodizing. From the same period, the Violin Sonata proved to be his most distinguished chamber work so far, covering his entire expressive range yet firmly organized, with the conflict of tonal fields, now the semitonal relationship D–E♭, made a central issue. Also from these years are *Practical Cats* (1954), settings for speaker and orchestra of poems from Eliot's *Old Possum*, and the ballet score *Madame Chrysanthème* (1955); though neither has acquired general currency, both helped to direct towards more specific (and genial) ends a musical speech sometimes discouragingly aloof.

Rawsthorne's two principal works using voices are the *Medieval Diptych* (1962) for baritone and orchestra and *Carmen vitale* (1963) for soprano, chorus and orchestra. His vocal lines often meet their instrumental counterpoints on little more than equal terms and melisma does not always take wing from the text; nonetheless, there is an effective independence of verbal and metrical stress, while a dense network of purely musical connections ensures that medieval texts do not prompt woolly archaism. By this time, all of Rawsthorne's works grow from a very restricted store of motifs, handled with more than the traditional variation and multiplication techniques of his early scores. In the *Medieval Diptych*, for example, a shape of eight different pitches is subjected to serial orderings and conflated into harmonic units of a new complexity. Yet his characteristic chord structure, resolving itself into two or more traditional units in conflict, is preserved or extended into a wholly symmetrical chord-building (the 'Alla ciacona' of the Third Quartet of 1964); the old fastidiousness of spacing ensures that in this late style aggregates of eight and more pitches retain an extreme luminosity.

That certain late pieces (movements more often than works) develop their material from a 12-note set is no more than a rationalization of tendencies long apparent in Rawsthorne's style. The relation to Schoenbergian serial practice is tenuous. Even a movement like the third of the Quintet for piano and wind (1962–3), which is unusually persistent in serial device, contains extensive patterning that disregards 12-note propriety, while the finale abandons the 12-note operations of its introduction for an allegro that is vehemently scalic (faintly casting the shadow of Bartók, to be detected elsewhere when Rawsthorne uses variable scales); and the first movement's manipulation of a nine-pitch shape is rather more inventive than either. The Oboe Quartet (1970) uses a single set in all three movements, conflating it at the finale opening into a spiky two-part counterpoint that had become a favoured texture. If some of this last harvest has a slightly dry flavour, the biggest orchestral scores, the Symphony no.3 (1964) and the Cello Concerto (1965), are achievements at least equal to those that made the composer's name. The concerto revitalizes the lyrical impulse of the previous decade, and shows a new refinement of orchestral colouring. In the Third Symphony, Rawsthorne's recourse to pitch serialism is simply one aspect of a developmental process that is ubiquitous. First and last movements, though sectional structures in matters of tempo, are sustained by concentrated musical thinking: comparison with the Symphonic Studies shows how far Rawsthorne had escaped from neat structural frames. The sarabande and scherzo round out sharply defined moods across big spans, the sarabande's obsession with its initial E emphasizing a tonal centre to which the whole symphony is subject with a direct force unusual in Rawsthorne.

The lesser orchestral and chamber works are rarely notably inferior in craftsmanship to the major scores. Indeed, the very consistency of Rawsthorne's sizable output perhaps encouraged its almost uniform neglect during his last years, but in a historical perspective of 20th-century English composition this unostentatious yet finely wrought music deserves an honourable place.

WORKS

DRAMATIC

Madame Chrysanthème (ballet, choreog. F. Ashton), 1955
Scores for 22 films and 4 plays, all unpubd

PETER EVANS

Rawsthorne, Noel (*b* Wirral, Cheshire, 24 Dec 1929). English organist. He studied the organ with Harold Dawber at the RMCM and in 1959 with Dupré in Paris. In 1949 he became assistant to Henry Goss-Custard at Liverpool Cathedral, succeeded him as organist in 1955 and retired from the post in 1980, at which point he became for four years Liverpool's city organist at St George's Hall, with its famous Willis organ. He has won a high reputation as a recitalist with an exceptional gift of improvisation, and has toured the USSR and made frequent European visits. He is at his finest in the interpretation of 19th- and 20th-century French and British organ music and has made numerous recordings. He was a senior lecturer in music at St Katharine's College of Education, Liverpool, from 1954 to 1993, and an examiner and councillor of the Royal College of Organists for many years. Since his retirement from Liverpool Cathedral Rawsthorne has devoted much of his energy to composing, mainly music for liturgical use; his works include several widely used books of hymn tune reharmonizations. In 1993 Liverpool University conferred upon him an honorary PhD.

STANLEY WEBB/PAUL HALE

Raxach, Enrique (*b* Barcelona, 15 Jan 1932). Dutch composer of Spanish descent. He studied composition, analysis and counterpoint in Barcelona with Nuri Aymerich (1949–52), and independently undertook research on Spanish Renaissance music. After hearing lectures by Jolivet and Le Roux and works by Messiaen and Boulez he left for France in 1958 to meet Boulez. He continued his studies in Munich, Zürich and Cologne where he stayed till 1962; he also attended the Darmstadt summer courses. His only 12-note composition, *Metamorphose III* for 15 instruments, was performed in Utrecht in 1961 at the annual Gaudeamus competition for composers. In 1962 he moved to Holland, becoming a Dutch citizen in 1969. In 1977 he was awarded the City of Barcelona's composition prize for *Metamorphose I*.

Raxach seeks to provoke by asking for a conscious reliance on the listener's imagination. In *Paraphrase* (1969) the orchestra is divided into three different groups around the singer who, in an ironical parody on communication problems, encourages the musicians through the use of abstract phonetics. The string quartet *Fases* consists of 64 microstructures varying in duration and intensity. Raxach's orchestral works are of great complexity and tension, but other works have a more relaxed and transparent chamber music quality.

HUIB RAMAER

Ray. The supertonic of a major scale or fourth degree of a minor scale in TONIC SOL-FA.

Raichev, Aleksandar (*b* Lom, 11 April 1922). Bulgarian composer. In 1947 he graduated from the composition class of Vladigerov at the Sofia State Conservatory, and in 1949–50 attended the Budapest Academy, where his teachers were Ferencsik (conducting), Viski and Kodály. Appointed associate professor of harmony and composition at the State Conservatory in Sofia in 1951, he subsequently became full professor (1962) and served as rector (1970–78). In 1980 he was elected president of the Union of Bulgarian Composers. Raychev has written in all genres. His *Khaydushka pesen* ('Khaidouk Epic'), written in 1952, was the first postwar Bulgarian ballet. The subject matter of his vocal-orchestral works is based upon ideas from the present age. Of the symphonies, most of which are programmatic, the second is considered among the most significant Bulgarian works of the 1960s.

WORKS

MAGDALENA MANOLOVA

Raye, Martha [Reed, Margaret Teresa Yvonne] (*b* Butte, MT, 27 Aug 1916; *d* Los Angeles, 9 Oct 1994). American actress and singer. Born into a vaudeville family she sang with dance bands in her youth, experience which served her well in her feature film début, the Bing Crosby vehicle *Rhythm on the Range* (1936). Other films included *The Big Broadcast of 1937* (1936), *Double or Nothing* (1937), *The Big Broadcast of 1938* (1938) and *Jumbo* (1962). With her energetic personality Raye was one of the first female comics in film, and her forceful singing added to her screen persona. In addition to her film work Raye was a popular singer in nightclubs, theatres and on television, where her programme, 'The Martha Raye Show', ran from 1954 to 1956. She was a popular entertainer for American military troops during World War II, the Korean conflict and the Vietnam war. She was also the first female recipient of the Jean Hersholt Humanitarian award (1969), and received a Lifetime Achievement award from the Screen Actors Guild (1974). With her large voice and her tremendous capabilities for the belt style of vocal production, Raye never had problems being heard in the theatre. Her ability to deliver a song, whether comic or sentimental, established her reputation as a performer.

WILLIAM A. EVERETT, LEE SNOOK

Rayleigh, John William Strutt, 3rd Baron (*b* Langford Grove, nr Maldon, Essex, 12 Nov 1842; *d* Witham, Essex, 30 June 1919). English scientist. He was educated at Cambridge University, where he was Cavendish Professor of Experimental Physics (1879–84); later (1887–1905) he held the professorship of natural philosophy at the Royal Institution, London, and in 1905 he became president of the Royal Society. He received jointly with Sir William Ramsay a Nobel Prize for the discovery of argon.

Rayleigh was perhaps the most versatile of British physical scientists from about 1850 to 1930 and, like Helmholtz, he covered almost all branches of physics and ventured into other disciplines. His monumental *Theory of Sound* (1877–8/*R*), written over five years, is often termed the 'bible of acoustics' and remains a standard treatise. Among Rayleigh's contributions to acoustics was his extension of Helmholtz's resonator theory. He also made more precise the corrections for open and closed resonating tubes, and gave a theoretical explanation of heat-maintained vibrations in pipes (the 'Rijke sounding-tube' effect). Additionally he carried out investigations on singing and acoustic sensitive flames and gave a more detailed explanation of 'whispering galleries', attributing the effect of the St Paul's Cathedral gallery to the slight inward slant of the circular containing walls. He also investigated the binaural effect in sound and developed the phonic motor, of considerable value for frequency measurement. Rayleigh's collected papers, which number over 400, were published in 1922.

R.W.B. STEPHENS/MURRAY CAMPBELL

Raylton, William (*b* Canterbury, bap. 3 Aug 1688; *d* Canterbury, bur. 20 March 1757). English organist and composer. The son of a glazier and nephew of a Canterbury Cathedral singing-man, he became a chorister at the cathedral in March 1698, a 'substitute' (by this time a second-class singing-man) in December 1707, and a lay clerk in July 1720. He studied with William Croft in 1713–14 according to several payments by Canterbury's dean and chapter and an inscription which reads: 'The organ book of William Raylton when under Dr. Croft's tuition'. An organ manuscript (*J-Tn* N-3-35) headed 'William Raylton his Book g[iven] b[y] y[e] M.C. March ye 31 170[?]' was, however, more probably a gift from the 'Master of the Choristers' Daniel Henstridge than one from 'Mr Croft', as has been claimed. Raylton apparently served as apprentice to, and music copyist for, Henstridge, whom he succeeded as master of the choristers and organist at Canterbury in all but name on 5 December 1718 and formally on Henstridge's death in 1736. Raylton was a close associate of William Gostling at the cathedral and also in public concerts in Canterbury, for which he supplied singers. He was held in high esteem by William, 3rd Lord Cowper, who patronized those concerts and mentioned him frequently in his letters to Gostling. A collection of Italian motets (*GB-Lbl* Add.31477) was copied by Raylton in tandem with Gostling. Raylton also copied music (in *GB-Ob* Mus.c.58) for the Canterbury minor canon John Gostling, and other Raylton copies exist (in *GB-CA*, *Lbl* and *Ob*).

Raylton's music is polished, professional and thoroughly in the style of William Croft and his comtemporaries. Nearly all of it can be dated from the Canterbury

manuscripts. His setting of the opening funeral sentences was published as an appendix to volume 4 of Vincent Novello's edition of Purcell's sacred music (London, 1828–32). Mistaking Raylton for an earlier figure, Novello thought Purcell's *Thou knowest Lord* from the funeral music for Queen Mary to be intended to supplement Raylton's. It is quite plausible, however, that Raylton (and his teacher Croft) were completing Purcell's work in a solemn but modern style by writing additional portions of the funeral sentences. Raylton's services in A and E♭ remained in use at many cathedrals into the 19th century, and at Canterbury into the 20th.

WORKS

all MS, in GB-CA

Services: A (TeD, Jub, Ky, Cr, Mag, Nunc); E♭ (San, Ky, Cr, Mag, Nunc); G (TeD, Jub, Mag, Nunc)

Funeral sentences, initial portions; ed. V. Novello, *Purcell's Sacred Music* (London, 1828–32), iv, appx

8 anthems

ROBERT FORD

Rayman, Jacob (*b* Faulenbach, Füssen, before 1596; *d* ?London, after 1657). British violin maker of Tyrolean birth. He originated in Füssen, an important centre for stringed instrument making during the 16th century; craftsmen trained there were influential in establishing lute- and later violin-making workshops in many of the major cities of Europe. Rayman arrived in London in about 1620 and seems to have been active there until about 1658. He was succeeded by his son Jacob, who is recorded as a violin maker in London in 1691.

Instruments by Rayman are now rare, but it seems that he enjoyed a high reputation among early writers, many of whom referred to the sale of Thomas Britton's collection in 1714, which contained four separate lots described as 'an extraordinary Rayman'. James Fleming noted in 1883 that his instruments are 'neither scarce nor dear'. The only reliable surviving records of his work are the back and sides of a violin, bearing an authentic label stating 'Jacob Rayman dwelling in Blackman Street Long-Southwark 1641', and another violin with his label dated 1650. Other accounts record later labels with the address 'at ye Bell Yard in Southwark'. The photographic records of W.E. Hill & Sons provide further evidence of his working style, which was typical of other Tyrolean craftsmen; his instruments were rather stiff and inelegant in outline, often profusely ornamented with purfling laid in geometrical patterns, and with intricately carved scrolls. The close similarity to the work of more sought-after Brescian violin makers probably explains the rarity of authenticated Rayman violins and violas, since in all likelihood most have been relabelled and sold under Italian names. His contribution to the craft of violin making in Britain is most apparent in the instruments of Thomas Urquhart and other early 17th-century makers, whose style was almost certainly adopted from him.

JOHN DILWORTH

Raymond [Raimond, Raymont], **B. Louis** (*fl* 1785–1806). French composer and librettist. He was among the composers whose works were most frequently performed at the Théâtre des Beaujolais in Paris during the last years of the *ancien régime*; he became conductor of its orchestra in 1787. In 1789 Raymond was conducting the orchestra of the Théâtre de Lille, and subsequently returned to Paris as prompter at the Théâtre des Délassements-Comiques, for which he wrote several librettos. According to Wild (1989), his works were performed at two small theatres founded under the Revolution, the Théâtre des Jeunes Artistes and the Théâtre des Jeunes-Elèves; he was conductor at the Jeunes-Elèves when it opened in 1799. The only work by Raymond which has survived is the libretto for *L'amateur de musique*.

WORKS

in one act and first performed in Paris, Théâtre des Beaujolais, unless otherwise stated; texts by Raymond unless otherwise stated

Anacréon (after Colomb de Seillans), 12 May 1785

L'amant écho, 27 May 1785

L'amateur de musique (comédie), 3 July 1785

L'armoire, ou La cachette (C. J. Guillemain), 6 Sept 1785

La vraie ruse d'amour, 1785

Le braconnier (cmda, Rauquil-Lieutaud), 11 July 1786

Le Français à Constantinople, ou Le chevalier de Sérigny (comédie lyrique, 3), 26 May 1787

Jean-Jeannot (opéra bouffon, J. B. Radet), ?1787, collab. others

La faillite réparée, ou L'école des fils (cmda), Lille, 6 Sept 1789

La muette (opéra bouffon), Paris, Montansier, 16 Oct 1790

MICHEL NOIRAY

Raymond, Fred [Vesely, Raimund Friedrich] (*b* Vienna, 20 April 1900; *d* Überlingen, Germany, 10 Jan 1954). German composer. Self-taught in composition, he worked as a bank official and began composing songs; in 1924 he became a professional cabaret entertainer, accompanying himself at the piano in his songs. The songs *Ich hab' mein Herz in Heidelberg verloren* (1925) and *In einer kleinen Konditorei* achieved outstanding popularity, and he continued to compose for revues and for a series of operettas, having meanwhile settled in Berlin. Of the operettas, *Maske in Blau* (Berlin, Metropoltheater, 27 September 1937) and *Saison in Salzburg* (Kiel, Stadttheater, 31 December 1938) have retained their popularity in Germany, as has a further hit song *Es geht alles vorüber, es geht alles vorbei* (1942), but his postwar compositions were less successful. (*MGG1*, E. Nick)

ANDREW LAMB

Raymundi, Daniel (*b* Liège, *c*1558; *d* Liège, 25 Jan 1634). Flemish composer. He came from a long-established Liège family of churchmen and magistrates. He was a *duodenus* at Liège Cathedral and was awarded a bursary to assist his studies at Leuven University; this was withdrawn, however, on 31 April 1578. He was probably a succentor at Liège Cathedral, for on 28 July 1581, despite his relative youth, he was one of three candidates recommended by the cantor for the post of singing master. The chapter chose, however, in favour of Henri Jamaer.

Raymundi nevertheless remained a succentor there for several years longer, and on 27 July 1588 he provided some compositions for the choir for which he was later paid 30 florins. He was particularly interested in ecclesiastical administration and he rapidly advanced his position in the church, obtaining increasingly remunerative benefices: on 30 March 1601 he was appointed canon of St Materne. A year previously the Liège chapter had decided, though with no great enthusiasm, to undertake the revision of the Liège Breviary. They entrusted this work to Raymundi, but no-one, it seems, was particularly anxious to comply with instructions from Rome, and the work progressed slowly. In 1619 he demonstrated the results of his work to the chapter and the Reformed Breviary was finally adopted in September 1619. On 23 June 1632 he was declared a Jubilee Canon; his will was made out on 3 April 1633 in favour of his brother Abacuc and his sons.

Raymundi's qualities as a humanist are evident in a quite different field: he made several transcriptions of early chronicles, in which his concern for precision shows a certain critical acumen. To judge from his few extant works, he was an able composer with a certain gift for melody. Three motets of his, for eight voices and continuo, *Ecce panis angelorum*, *Homo quidam* and *Tantum ergo* are extant in the *Grand livre de choeur de Saint-Lambert* (*B-Lc*) and one five-part motet, *Fiat cor meum*, is edited by J.A.L. de Lafage in *Diphtérographie musicale* (Paris, 1864), 487.

JOSÉ QUITIN

Raynero de Scarsellis. *See* SCARSELLI, RINIERI.

Rayskin, Iosif Genrikhovich (*b* Kuybïshev [now Samara], 4 Sept 1935). Russian musicologist and critic. He graduated from the Leningrad Electrotechnical University in 1957, and from the Leningrad Conservatory in 1975. Rayskin is one of the most active and authoritative critics and writers on music in St Petersburg. He has worked for the editorial board of the journal *Iskusstvo Leningrada* (later *Ars*), and became head of the newspaper *Pro musica* in 1995. His numerous articles and reviews have been published in the national and local press, as well as in specialized newspapers and journals, reference works and encyclopedias.

Rayskin's range of interests is extremely broad. It covers the works of Myaskovsky, Prokofiev, Shostakovich, Slonimsky and Tishchenko, questions surrounding the performance of music, and the organization of concerts and theatre productions.

ERA BARUTCHEVA

Razetti, Amedeo. *See* RASETTI, AMÉDÉE.

Razumovsky, Count **Andrey Kirillovich** (*b* St Petersburg, 22 Oct/2 Nov 1752; *d* Vienna, 23 Sept 1836). Russian patron of music. He entered diplomatic service in 1772 and was Russian ambassador to Vienna, 1792–9 and 1801–6. In 1788 he married Countess Elisabeth of Thun, sister of Princess Lichnowsky. After her death in 1806 he married Countess Constanze of Thürheim. Razumovsky was handsome, witty and well educated, and was known throughout Europe for his patronage of the arts. An amateur violinist, he knew Haydn, Mozart and Beethoven through the musical and aristocratic circles of Vienna and was one of Beethoven's first Viennese patrons: he subscribed to Beethoven's op.1, purchased tickets to his concerts and put the professional string quartet that he established in 1808 (led by Ignaz Schuppanzigh) at Beethoven's disposal. His name is associated primarily with the three quartets op.59, which contain two Russian folksongs; Beethoven's fifth and sixth symphonies were dedicated jointly to both Razumovsky and Prince Lobkowitz. Although Razumovsky had already retired as ambassador, he was Russia's main representative at the Congress of Vienna in 1814. For this he was subsequently made a prince. But on the last day of that year, in preparation for one of his most lavish parties, a fire broke out and ravaged his palace, library and art collection. Despite offers of help, he was forced to discontinue his way of life. In 1816 the quartet was disbanded and pensioned. Some of the catalogues of the Razumovsky family music collection, dated 1785, survive in the Vernadsk National Library of Ukraine, Kiev.

ELLIOT FORBES/WILLIAM MEREDITH

Razumovsky, Dmitry Vasil'yevich (*b* Tula province, 26 Oct/7 Nov 1818; *d* Moscow, 2/14 Jan 1889). Russian musicologist. As a young seminarian in Tula (1834–9) and as a student at the Kiev Theological Academy (1839–43), Razumovsky displayed an interest in Russian church music. From 1843 to 1852 he taught physics, mathematics and natural science at the Spaso-Vifanskaya (now Sergiyev Posad) Seminary near Moscow. He took the Master of Philosophy degree (1845) and also taught Hebrew. In 1850 he was ordained priest, and in 1852 transferred to Moscow as a parish priest in the church of St George, where he remained active until his death. In 1858 he was appointed a member of a committee for the inspection and correction of church music publications, and in 1862 he was invited to study photographs of a few select pages of music manuscripts photographed in 1858 by Sevastyanov in the monastic libraries of Mt Athos. In 1863 Razumovsky delivered a public lecture on *Staffless Musical Manuscripts of Church Chants*, which was published in the same year and marked the beginning of his scholarly investigation of the origins of Russian chant. In 1866, when the Moscow Conservatory was founded, Razumovsky was invited to become the first teacher of Russian church music, becoming a professor in 1871, a position he held to the end of his life. His carefully edited lecture notes were published in three parts (1867–9) and represent the first systematic survey of the history of chanting in Russia. His subsequent publications, though few in number, remain as important documents of his scholarship. In 1916 Razumovsky's collection of some 120 music manuscripts (mostly from the 17th century to

the 19th) and his archives and extensive correspondence were deposited in the former Rumyantsev Museum in Moscow (they are now in the Russian State Library, Moscow). An excellent catalogue of this collection was published in 1960, and contains the best survey of his life and activities and a bibliography.

MILOŠ VELIMIROVIĆ

Razzazi, Naser (*b* Sanandaj [Sina], Iran, 21 June 1955). Kurdish singer and composer. He began singing Kurdish songs at the age of 11. His first public performance a few years later established him as a singer, and by the late 1970s he had appeared on local television. He was jailed for performing political and nationalist Kurdish songs just before and after the 1979 Iranian revolution and later joined the Kurdish autonomist movement as a *peshmarga* (freedom fighter). Living in 'liberated areas', he began composing political songs and performing to live audiences and on clandestine radio stations. In 1984 Razzazi, his wife Marziya Fariqi (also a singer) and their children resettled as refugees in Sweden; he continued to perform in the expanding Kurdish diaspora and on the first Kurdish satellite television channel, Med-TV, which was launched in Britain in 1995.

By early 2000 Razzazi had composed about 60 songs, including the first Kurdish birthday song, *Be Pîroz*, and had produced 33 cassette tapes and four compact discs. Most of these recordings were *goranî*, popular songs of love, dance, political struggle and entertainment. He is one of the few singers to perform in different dialects of Kurdish. During the 1990s he conducted research on Kurdish music and musicians as well as teaching Kurdish in Swedish schools, translating and writing on Kurdish topics.

AMIR HASSANPOUR, STEPHEN BLUM

Razzetti, Amedeo. *See* RASETTI, AMÉDÉE.

Razzi, Fausto (*b* Rome, 4 May 1932). Italian composer. He studied in Rome with Rina Rossi (piano; diploma 1955) and Goffredo Petrassi (composition; 1957–9). From 1958 to 1968 he was first assistant and then successor to Saraceni as conductor of the Rome University Choir. In 1966 he began teaching, eventually becoming professor of composition at the Pesaro Conservatory. His honours include honourable mentions from the composition competition of the Italian section of the ISCM (1963, 1965) for *Die helle Stimme* and *Improvvisazione* respectively, and prizes from the Prague Spring Festival (1966) for *Tre pezzi sacri* and from the Milan Angelicum (1969) for *Musica*. In 1976 he founded the vocal ensemble Recitar cantando, which specializes in the performance of polyphonic music and early monody. In 1983 he gave up teaching to devote himself to composition and choral conducting.

Razzi's early works show the influence of the Second Viennese School, particularly the music of Webern, and a tendency towards pointillistic writing; this is particularly apparent in *Quartetto* (1958), five pieces for string quartet, the last of which employs 12-note technique. His exploration of vocal possibilities, linked to his work as a choral conductor, is another aspect of his early output. *Improvvisazione III* (1967) demonstrates his experimental vocal and graphic approach and also includes passages of controlled aleatory writing. From 1968 to 1970 with a series of pieces entitled *Musica*, Razzi arrived at a technique of durational canons which would become the basis of his compositional conception. His fondness for the abstract found ideal scope for development in electronic music, a genre in which he produced *Progetto per una composizione elettronica* (1971–3), *Progetto II* (1980) and *A voi che lavorate sulla terra* (1982). In the 1980s Razzi became interested in music theatre through his encounter with the poetry of Edoardo Sanguineti. *Protocolli* (1989–92) and *Smorfie* (1997) on Sanguineti texts reflect the writer's militant position in avant-garde poetry, striking a chord with Razzi's own enduring political commitment.

RAFFAELE POZZI (with CLAUDIO ANNIBALDI)

Razzi, Giovanni [Serafino] (*b* Marradi, nr Florence, 13 Dec 1531; *d* Florence, 8 Aug 1611). Italian theologian, writer, music editor and composer. He and his brother received a thorough humanistic education; on 28 June 1549 he entered the Dominican monastery of S Marco, Florence, as a novice and adopted the religious name of Serafino. His early career was mostly spent in preaching, and in 1558 he was ordained to the priesthood. Apart from his time at S Marco he spent important periods at S Domenico, Perugia, and later at S Maria Novella, Florence; his numerous appointments and substantial reputation took him to many places both within and outside Italy. His travels in France are described in *Fra Serafino Razzi: la prima parte de suoi viaggi fatti dal 1572–78* (MS, *I-Fc* Palat.37); he also left an account of his visit to the Abruzzo (*Viaggi in Abruzzo*, ed. B. Carderi, L'Aquila, 1968).

Razzi made a considerable contribution to Counter-Reformation literature; more than two dozen tracts, sermons and biographies of Dominican saints were published during his lifetime, and a number of other works including a biography of Savonarola, to whose memory he was greatly attached, remained in manuscript. He was also active in the musical sphere; he assembled, edited and published two collections of *laude*, namely *Libro primo delle laudi spirituali ... le quali si usano cantare in Firenze nelle chiese doppo il vespro o la compieta* (Venice, 1563[6]/*R*) for one to four voices, and *Santuario di laudi ... per le feste di ciaschedun santo ... con eziando delle feste mobili* (Florence, 1609[8]). These, with Animuccia's first book (1563), were the first collections of *laude* published since those of Petrucci. The *Libro primo* contains about 70 anonymous compositions, many of which reappeared in the *Santuario*; this consists mostly of *laude* texts but contains 31 one- and two-voice settings in a music supplement of 24 pages. There are some textual concordances with 15th-century sources, and many of the texts not by Razzi himself are by his contemporaries at S Marco. In addition to the two printed collections, four books of *laude* assembled by Razzi survive in an autograph manuscript (*I-Fc* Palat.173). He originally collected three books of settings of his own texts, to which he then added a fourth book containing *laude* by other authors. The dedication of the first book is dated 15 July 1590 while the second and third are dated 1586 and 1588. The fourth book is dated 17 March 1596 and concludes with an imprimatur of 11 December of the same year, though it is not known to have been published in this form. The first three books contain about 130 compositions, mostly melodies only, some of which also appear in his published collections. Many are accompanied by commentaries and annotations, usually non-musical.

The melodies of some of Razzi's *laude* derive melodically from secular songs of the earlier part of the century. Jeppesen, D'Accone and Slim have pointed out melodic relationships between Razzi's *laude* and madrigals by Francesco de Layolle and Verdelot. Macey has identified other models, including 15th-century Florentine carnival songs and a number of mid-16th-century *villotte* (among them, Giovan Domenico da Nola's *Tre ciechi siamo*). A small number of his *laude* have distinct Savonarolan overtones and were presumably sung in the Piagnoni communities with which he was associated, such as the convent of S Vincenzo in Prato.

Besides Razzi's extant works, Negri referred to a publication of 1567 containing *laude* (but this is probably an incorrect citation of the *Libro primo*) and to theoretical writings on music.

IAIN FENLON

RCA Electronic Music Synthesizer. An electronic composition machine (not a synthesizer in the current sense of the word). It was developed by Harry F(erdinand) Olson (*b* Mount Pleasant, IA, 28 Dec 1902; *d* Princeton, NJ, 1 April 1982) and Herbert F. Belar at the RCA Laboratories in Princeton in 1951–2, but not publicly demonstrated until 1955; a second, expanded and improved model was constructed in 1957. *See* ELECTRONIC INSTRUMENTS, §IV, 5(i).

□

RCA Victor. American record company. It was established as the Consolidated Talking Machine Co. in 1900 by Eldridge R. Johnson to launch his own improved version of the gramophone disc invented by Emile Berliner who was a close associate. Initially the discs were seven inches in diameter and recorded on only one side, but they bore the innovation of paper labels. After various name changes the company was reorganized as the Victor Talking Machine Co. with Johnson as President and Berliner as a principal stockholder.

Early repertory consisted of popular songs and novelties but, determined to raise the phonograph's status, Victor invested in operatic recordings, with such stars as Enrico Caruso (1903), Pol Plançon (1903), Nellie Melba (1904),

Ernestine Schumann-Heink (1906), Geraldine Farrar (1907) and Luisa Tetrazzini (1908), also recordings of the violinist Mischa Elman (1908). These premium priced discs were given a special red label called 'Red Seals'. Popular performers such as Len Spencer, Billy Murray, Ada Jones, Henry Burr, Collins and Harlan, Harry Macdonough and the Peerless and American Quartets generally sold more records, but it was the classical artists who built Victor's reputation. The firm advertised heavily, using the logo of a fox terrier (Nipper) peering quizzically into the horn of an old gramophone seeking 'His Master's Voice'. By the early 1910s, when cylinders began to decline, Victor was America's leading label.

It was also a major manufacturer of phonographs, and in 1906 revolutionized the industry with the introduction of the first mass-produced phonograph with an enclosed horn, the Victrola. From 1903 to 1912 it also operated a lower-priced subsidiary label, Zonophone. In 1908 Victor reluctantly introduced double-faced discs, following the lead of their main rival, Columbia. Standard disc sizes were now ten-inch (three minutes) and 12-inch (four minutes), the latter for dance music and 'extended' selections. Their additional artists included Fritz Kreisler, Alma Gluck, John McCormack and Amelita Galli-Curci, as well as the stage celebrities Nora Bayes, Joseph Cawthorn and Blanche Ring. Large orchestras were first recorded in 1917, beginning with the Boston SO and the Philadelphia Orchestra. Only a few black Americans recorded during this era, notably the Fisk Jubilee Singers (1909), James Reese Europe's Society Orchestra (1913) and the Tuskegee Institute Singers (1914).

Jazz entered the mainstream with Victor's release of the Original Dixieland Jazz Band (1917), followed by a flood of 'name' orchestras during the 1920s including those of Paul Whiteman, Fred Waring, Ben Selvin and Duke Ellington – although many dance hits were by a studio orchestra led by recording director Nat Shilkret. Victor's first country records, by fiddler Eck Robertson, were released in 1923; later recordings by Jimmie Rodgers and the Carter Family (1927) solidified its position as the leading country label. Blues came somewhat later, in the late 1920s. The industry changed radically with the introduction of electrical recording in 1925; within two years virtually the entire acoustic catalogue had been deleted, and a quarter of a century of recorded history disappeared. In December 1926 Eldridge Johnson sold the company to a consortium of bankers, and in January 1929 they in turn sold it to the Radio Corporation of America. This allowed Victor to survive the virtual collapse of the record industry during the Depression because it was under the wing of radio-fuelled RCA.

The next great era for Victor began with the rise of big band swing in the late 1930s. It had most of the top band leaders – Glenn Miller, Tommy Dorsey, Benny Goodman, Duke Ellington, Artie Shaw and Lionel Hampton – either on the flagship Victor label or on the budget subsidiary Bluebird (founded in 1932). Victor continued to dominate during the post-World War II era with vocalists Perry Como, Eddie Fisher, Kay Starr and, in the country field, Eddy Arnold and Hank Snow. The label name was changed to RCA Victor in January 1946. 45 r.p.m. singles were introduced in 1949 and LPs in 1950. During the mid-1950s Victor expanded its roster by launching a number of subsidiary labels including Groove (1954), 'X' (1954) and Vik (1956); only the budget LP label Camden (1954), named after the city in which Victor long had headquarters, survived.

Victor was hard hit by the arrival of rock music. Even though it had the biggest rock star of all, Elvis Presley (1956), it found few other successes in the field, relying instead on LP artists such as Harry Belafonte and Henry Mancini, and movie soundtracks including *South Pacific* (1958) and *The Sound of Music* (1965). It retained an important position in country music, however, with artists including Porter Wagoner, Hank Locklin, Jim Reeves, Chet Atkins, Charlie Pride and Waylon Jennings. Technical changes included the introduction of stereo recording in 1958 and flexible 'Dynaflex' LPs in 1973. By the 1970s Victor was known primarily for its country recordings and its reissues of older artists (such as Elvis Presley and Glenn Miller). From the 1970s it began to assert itself more aggressively in pop and rock, although it never regained the market dominance it had earlier enjoyed. Among its leading artists from this period were John Denver, Hall and Oates, Rick Springfield, Kenny Rogers and Alabama; and in the country field, Dolly Parton, Ronnie Milsap, Earl Thomas Conley, Clint Black and Restless Heart. On 15 April 1986 the company was acquired by the German conglomerate Bertelsmann, which divided the label according to repertory: RCA for pop and rock, RCA Nashville for country music and RCA Victor for all other material, including classical.

TIM BROOKS

Re. The first degree of the Guidonian HEXACHORD; *see also* SOLMIZATION, §I. In TONIC SOL-FA, the sharpened supertonic of the prevailing Key (or, if this is minor, of its relative major). In French (as ré), Italian and Spanish usage, the note D; *see* PITCH NOMENCLATURE. (For non-Western usages, *see* Appendix A.)

Reaching over [superposition, overlapping] (Ger. *Übergreifen*). In Schenkerian analysis (*see* ANALYSIS, §II, 4), the juxtaposition of two or more descending lines in such a way that the resultant line appears to climb from an inner voice to the upper voice; each of the descending lines is called a reaching-over progression (*Übergreifzug*). The opening theme of Beethoven's Piano Sonata in C op.2 no.3 (ex.1*a*) demonstrates reaching over as a method of PROLONGATION whereby two notes that are conceptually simultaneous (ex.1*b* shows both *d′* and *g′* to be part of the same dominant chord) are heard in succession, the higher note following the lower (ex.1*c*). In this, its simplest form, reaching over enables the upper voice to maintain its registral position by falling by step (from *e′* to *d′*), leaping (from *d′* to *g′*), and falling again by step (*g′*–*f′*–*e′*).

Schenker showed how reaching over could be extended to give the effect of an ARPEGGIATION (*Der freie Satz*, 1935, fig.101/5), and also how it could be used to change tonal centre, as shown in his analysis of the first movement of Mozart's G minor Symphony (*Das Meisterwerk in der Musik*, ii, 1926, p.121). The vast majority of examples in the Schenkerian literature show that the reaching over progressions descend, and do so by step. However, leaps

may sometimes be employed (Schenker, 1935, fig.101/3) and there are instances of ascents in some analyses (see, for example, Schenker, 1926, pp.110ff and fig.1*c*–*d*).

English-language writings on Schenkerian analysis have seen a succession of translations of *Übergreifen*. In the glossary compiled for the American reprint (1969) of Schenker's *Fünf Urlinie-Tafeln* (1932), Salzer defined it as a 'technique of shifting tones', by analogy with *übergreifen*, 'to shift' (when playing a string instrument). The term was translated as 'superposition' in Salzer's *Structural Hearing* (1952) and in essays that appeared in *The Music Forum* under his editorship, as 'overlapping' in A. Forte and S. Gilbert's *Introduction to Schenkerian Analysis* (New York, 1982), and as 'reaching over' in E. Oster's translation of *Der freie Satz* (New York, 1979) and in the English translation of *Das Meisterwerk in der Musik* (Cambridge, 1994–7).

WILLIAM DRABKIN

Read, Daniel (*b* Attleborough, MA, 16 Nov 1757; *d* New Haven, CT, 4 Dec 1836). American composer and tune book compiler. He was one of the most active and successful American composers of psalmody during the 18th and early 19th centuries. A farm-worker and possibly a surveyor in his youth, he served as a private in the Continental Army, and before the Revolutionary War was over had settled in New Haven, where he spent the rest of his life. There he worked as a comb-maker, operated a general store, and carried on an active career as a musician.

Read was composing by December 1774, and made his début in print in Simeon Jocelin and Amos Doolittle's *Chorister's Companion* (New Haven, 1782). Shortly afterwards he became the first American musician after William Billings to bring out a collection devoted entirely to his own music: *The American Singing Book* (New Haven, 1785). The next decade established Read's prominence as a composer of psalmody in the new nation. Such works as *The Worcester Collection* (Worcester, MA, 1786), *The Federal Harmony* (Boston, 1790), Nehemiah Shumway's *American Harmony* (Philadelphia, 1793) and *The Village Harmony* (Exeter, NH, 1795) borrowed freely from his tune books, though not necessarily with his approval, and a small group of his tunes was established by 1800 as part of the core repertory of American psalmody.

Read is commonly considered the most prominent of a group of Connecticut sacred choral composers who helped to fashion a unique musical idiom during the late 1770s and early 1780s. Rooted in the *a cappella* tradition of the American singing school, this idiom developed free from the influence of European thoroughbass practice and its attendant network of functional harmonic relationships. There is considerable evidence that the vocal lines of the unaccompanied three- and four-voice tunes and anthems of Read and his New England contemporaries were composed sequentially, with relatively little attention paid to chord structures and progressions. This music is distinguished by a straightforward, folklike melodic style, often with a modal tinge; a fondness for incomplete triads, such as perfect intervals unsoftened by 3rds; a certain tentativeness about chord connections, especially in mid-phrase and frequent clashes between voices on weak beats. Some of Read's most popular tunes – 'Russia', for example, or 'Greenwich', 'Windham' or 'Sherburne' – are exemplars of the idiom.

Most of the 94 pieces that Read composed and published date from the 1780s and early 1790s. He composed less after 1795, the later pieces reflecting his increased interest in imitating European composers. In fact, although he had pioneered the musical idiom of American psalmody, Read was not moved to defend that idiom when, beginning in the last years of the 18th century, it came under increasingly heavy criticism from musical reformers who considered it inferior to the devotional music then in vogue in Britain. A letter that Read wrote in his 72nd year explains that although he was no longer publishing music, he had continued to study it, had during the last two decades become familiar with the works of prominent Anglo-American authorities and their standards of 'scientific' music, and had found his own 'ideas on the subject of music ... considerably altered'. A measure of Read's 'altered' ideas appears in *The New Haven Collection of Sacred Music* (Dedham, MA, 1818), a tune book he compiled for a religious society in that city. The work carries six of Read's better-known tunes, three of them marked 'Corrected by the Author'.

Read's own musical publications span a quarter of a century. *The American Singing Book* was remarkably successful for a collection of original music (2/1786, 3/1787 with suppl., 4/1793, 5/1796). *The Columbian Harmonist*, a larger work, was first issued in separate parts, each devoted to a different repertory. Part i (New Haven, 1793) carried 'new psalm tunes of American composition'; part ii (New Haven, 1794) contained the most popular psalm tunes of the day, most of them American but with some British favourites included as well; part iii (New Haven, 1795) was given over mostly to larger works: 'anthems and set-pieces ... chiefly new'. Bound together and consecutively paged, the three parts made a comprehensive whole; they were also available separately. After 1800 Read brought out three more editions of *The Columbian Harmonist*, now a single typeset volume rather than the three engraved pamphlets of the first edition, and now issued from large Massachusetts print shops (2/1805, 3/1807, 4/1810; another issue, 3/1806, was pirated by Joel Read, Daniel's brother, and the printer Herman Mann). He also published *An*

Introduction to Psalmody (New Haven, 1790), a pamphlet containing instructional dialogues without music. In collaboration with Doolittle, Read compiled and published *The American Musical Magazine* (12 numbers, New Haven, 1786–7), the earliest American music periodical. Read's journal, numerous letter drafts, music manuscripts and portrait are at the New Haven Colony Historical Society; the music manuscripts contain many pieces that were never published. His collected works have been edited by K. Kroeger (Music of the United States of America, iv [RRAM, xxiv], 1995).

RICHARD CRAWFORD/NYM COOKE

Read, Ernest (*b* Guildford, 22 Feb 1879; *d* London, 9 Oct 1965). English educationist. At the RAM he studied the piano with Matthay and conducting with Henry Wood (1896–1906); he also made a close study of eurhythmics, working under Jaques-Dalcroze (1912–13, 1920–21), becoming director of the London School of Dalcroze Eurhythmics and, later, chairman of the Dalcroze Society (1943–65). He was principal of the Watford School of Music (1913–20), lecturer and professor in conducting and aural training at the RAM (1919–50) and a member of its management committee (1924–44), a founder council member of the Northern School of Music (1943–65) and president of the Music Teachers' Association (1943–65).

Read was a pioneer of the youth orchestra movement, founding the London Junior and Senior Orchestras (1926, 1931), a choir (1943), the Ernest Read Children's Concerts (1944) and annual orchestral and chamber music summer courses (1949), all subsequently administered by the Ernest Read Music Association (founded 1960), which his wife Helen Read (*b* London, 28 March 1902; *d* London, 23 Dec 1988) directed after his death (she was made an OBE in 1972). He had a particular talent for communicating the enjoyment of music-making to the young and to amateurs. His publications include *Aural Culture Based on Musical Appreciation* (1912, rev. 2/1953) and other textbooks written with Stewart Macpherson, and numerous arrangements for female voices of choral works by Bach, Handel, Haydn etc. He was made a CBE in 1956.

In 1977 the London Junior and Senior Orchestras were renamed the Ernest Read Youth Orchestra and Ernest Read Symphony Orchestra respectively.

LYNDA MACGREGOR

Read, Gardner (*b* Evanston, IL, 2 Jan 1913). American composer and writer on music. He grew up surrounded by music, and after an early encounter with a recording of Debussy's *Prélude à l'après-midi d'un faune* he resolved to become a composer. By the time he graduated from high school in 1932 he was already an accomplished musician, having completed four years of intensive musical study supplemented by private instruction at Northwestern University (1930–32). Of his more than 20 student compositions, many had received public performances, often with the composer conducting. In the autumn of 1932 Read accepted a scholarship to the Eastman School of Music, where he studied with Bernard Rogers and Howard Hanson (MusB 1936, MusM 1937). Later he worked with Copland, Pizzetti and Sibelius. Recognition came early when, in 1934, a prize-winning student work, *Sketches of the City*, was performed by the Chicago SO under Frederick Stock. Another student work, the Symphony no.1 in A minor, won first prize in the American Composers Contest and was first performed by the New York Philharmonic under Barbirolli in 1937. Prizes, honours, grants and awards have continued throughout his career, including a Cromwell Travelling Fellowship and residencies at Tanglewood, the MacDowell Colony and the Huntington Hartford Foundation. Academic positions have included heading the theory and composition departments at the St Louis Institute of Music (1941–3), the Kansas City Conservatory (1943–5) and the Cleveland Institute of Music (1945–8). In 1948 he became professor of music and composer-in-residence at the University of Boston, where he remained until his retirement in 1978. Read is the author of numerous articles and reviews. His exhaustive and meticulous research in the areas of musical notation, orchestral devices and instrumental techniques has produced nine books, constituting a monumental contribution to musical scholarship.

It is difficult to characterize the style of Read's music because each work is approached differently. But whether it be neo-Baroque, neoclassical, neo-Impressionistic or avant-garde, there is always a pervasive spirit of Romanticism. He is a brilliant orchestrator whose fascination with sound has led him to investigate and extend the technical and tonal resources of each instrument. Working from an encyclopedic palette of techniques, he has produced a kaleidoscopic variety of styles, forms and media. Because of his penchant for exploring different timbral possibilities, many of Read's more than 150 opus numbers appear in multiple versions. A distinctive blend of structure and expressivity, this intensely personal music has never felt the need to bow either to convention or to current musical fashion.

WORKS
(*selective list*)

Op: Villon (3, J. Forsyth), op.122, 1965–7

Orch: Sketches of the City, op.26, 1933; Sym. no.1, a, op.30, 1936; Fantasy, op.38, va, orch, 1935; Prelude and Toccata, op.43, chbr orch, 1936–7; Suite, op.33a, str, 1937; Pan e Dafni, op.53, 1940; Night Flight, op.44, 1942; Sym. no.2, e♭, op.45, 1942; Ov. no.1, op.58, 1943; Vc Conc., op.55, 1945; Bell Ov., op.72, 1946; Pennsylvaniana, op.67, 1946–7; The Temptation of St Anthony, dance sym., op.56, 1947; Sym. no.3, op.75, 1948; Arioso elegiaca, str, op.91, 1951; Sym. no.4, op.92, 1951–9; Toccata giocosa, op.94, 1953; Vernal Equinox, op.96, 1955; Sonoric Fantasia no.2, vn, chbr orch, 1965, arr. vn, pf; Pf Conc., op.130, 1977

Vocal: 4 Nocturnes (H. Conkling, G.W. Russell, D.H. Lawrence, W.H. Davies), op.23b, A, chbr orch, 1934; The Golden Journey to Samarkand (J.E. Flecker), op.41, chorus, soloists, orch, 1939; The Prophet (K. Gibran), op.110, A, Bar, nar, chorus, orch, 1960; Haiku Seasons (M. Basho, T. Buson, K. Issa, M. Shiki), op.126, 2 female spkrs, 2 male spkrs, inst ens, 1971; Epistle to the Corinthians (Bible: *Corinthians* i.13), op.144, SATB, brass, org, timp, 1985; Nocturnal Visions (J. Stuart, R. Tagore, J. Joyce), Bar, pf, op.145, 1985

Chbr: Pf Qnt, op.47, 1945, arr. as Music for Pf and Str, op.47, 1946; De profundis, op.71, hn/trbn, org, 1946; Sonata brevis, vn, pf, op.80, 1948; Str Qt no.1, op.100, 1957; Los dioses aztecas, 6 perc, op.107, 1959; Galactae novae, op.136, org, perc., 1978; Phantasmagoria, op.147, ob + oboe d'amore + eng hn, org, 1988; 5 Aphorisms, op.150, vn, pf, 1991

Kbd: Passacaglia and Fugue, d, op.34, org, 1935–6, arr. 2 pf as op.34b, 1938–40; Driftwood Suite, op.54, pf, 1942; Sonata da chiesa, op.61, pf, 1945; Suite, op.81, org, 1949; 8 Preludes on Old Southern Hymns, op.90, org, 1950; . . . and there appeared unto them tongues as of fire, op.134, org, 1976

Incid music, transcrs., arrs. of works by Bach, Billings, Padre Martini, Palestrina

Recorded interviews in *US-NHoh*

MARY ANN DODD

Reade [Read], **Richard** (*b c*1555; *d* Oxford, 1616). English singer and composer. He is probably the Richard Read who took the BMus from Christ Church, Oxford, on 7 July 1592. Anthony Wood wrote: 'Richard Read, who had studied the musical faculty for 22 years, was admitted the same day. He hath composed certain Church Services, and other matters for instruments, which are scattered in several books' (*Fasti oxoniensis*, 1691). From 1588 to 1616 he was a 'singing-man' at Christ Church; the college disbursement books contain his signature alongside that of Matthew Holmes, copyist of the Cambridge Consort Books (*GB-Cu*), the principal source of his instrumental music. His will, which included the bequest of a bass viol, was proved at Oxford on 5 April 1617.

Reade's music for mixed consort of violin, recorder, lute, cittern, bandora and bass viol includes several pieces conceived in terms of the specific instruments which made up this distinctive English ensemble. So far as it is possible to tell from their fragmentary surviving state, they are engagingly written, featuring much antiphonal play between groups of instruments, though they perhaps lack the flair of their counterparts by Allison and Bacheler.

DIANA POULTON/WARWICK EDWARDS

Reading, John (i) (*b* Lincoln, *c*1645; *d* Winchester, 1692). English composer and organist. He was admitted junior vicar and poor clerk of Lincoln Cathedral in 1667, and in 1670 was appointed Master of the Choristers. He received regular payments for paper and strings and for repairing viols. He left Lincoln and was on 4 January 1675 appointed organist, 'Shirburn Clerk' and Master of the Choristers at Chichester Cathedral. On 20 March 1675 he applied for a licence to marry Ann Micklethwayte of Lincoln, describing himself as a widower of about 30 years. On 25 November of the same year he became organist and Master of the Choristers at Winchester Cathedral. From December 1681 to the time of his death he was organist of Winchester College. It was at Reading's request that the 20-year-old college organ by Thomas Harris was rebuilt by his son Renatus Harris. Reading set the college's Latin graces as well as the school song *Dulce domum*. He was always described as a gentleman, perhaps to differentiate him from others of the same name.

An organbook compiled by him and finished by Daniel Roseingrave, his successor at Winchester Cathedral, survives (*US-BEm*); it contains several sacred works of his composition. He was also the composer of some fine songs, of theatre music and of catches which appeared in many collections and editions. A ground with divisions, called 'Mr. Readings Ground', published in several editions of Playford's *The Division Violin* (1684/*R*), is almost certainly by Valentine Reading.

Several other musicians have been confused with John Reading (i), notably John Reading (ii) and (iii) below; a John Reading (1588–1667), prebendary of Canterbury, wrote a sermon defending church music.

SUSI JEANS

Reading, John (ii) (*b* ?1685; *d* London, 2 Sept 1764). English composer and organist, probably son of JOHN

READING (i). He was educated at the Chapel Royal under Blow until 1699, when his voice broke. Though never officially appointed, he served as organist of Dulwich College from March 1700 to 26 September 1702. He then became junior vicar and poor clerk at Lincoln Cathedral (from 21 November 1702), and later (5 October 1703) Master of the Choristers until 1707. On 28 January 1708 he returned to London as organist of St John's, Hackney, where, despite a threat of dismissal in December 1719, he remained for nearly 20 years. The parish records refer to certain 'irregularities relating to the execution of his Office as Organist' and, in particular, his 'playing the Voluntary too long, and using persistently too light, Airy and Jyggy Tunes, no ways proper to raise the Devotion Suitable for a Religeous Assembly'. Reading promised to mend his ways, but on 4 April 1727 he was given three months' notice, and on 29 July forbidden 'either in person or by Deputy [from] playing any more upon the Organ belonging to the Parish'. Later that year he was appointed organist of the combined parishes of St Mary Woolnoth and St Mary Woolchurch Haw in the City of London, and in 1731 organist of St Dunstan-in-the-West, holding both posts until the end of his life.

A founder-member of the Royal Society of Musicians (1738), he collected, transcribed and arranged a great deal of music, 12 volumes of which he bequeathed to Dulwich College; three of these, together with one other, which was originally part of the same set but is now in Manchester Central Public Library, form one of the most important sources of early 18th-century English organ music. As a young man Reading was much influenced by Italian music, and in the preface to his own *Book of New Songs (after the Italian Manner)* (1710) he expressed the hope that its contents 'wou'd incite our Great Masters to improve ye Design to such a perfection yt our English Composers might be inspir'd wth ye utmost delicacy of a *Roman Genius*'. His own music is of no particular interest; however, the many different 'givings-out' of and interludes to all the standard psalm tunes of the period to be found in the four Dulwich College organbooks are interesting as a record of contemporary liturgical practice (see Burchell). There is a portrait of Reading in the Dulwich Picture Gallery.

WORKS

A Book of New Songs (after the Italian Manner) with Symphonies (London, 1710)
A Book of New Anthems . . . with Proper Ritornels (London, *c*1715)
2 voluntaries, org/hpd, in Ten Voluntarys . . . by Dr Green . . . Reading and Kuknan (London, 1767)
Songs pubd singly and in 18th-century anthologies

12 MS vols., *GB-Ldc**, 2 vols., *Mp**, *J-Tn**, incl.: Divine Harmonie, or Choice Collection of Anthems Composed by Several Masters, 1717; Mr Reading's Great Book of Lessons, hpd; Reading's Book of Lessons, hpd, 1727; arrs. of operatic arias, songs, sacred vocal and kbd music by numerous comps., incl. Reading

Reading, Valentine (*fl* London; *d* ? by 1704). English violinist and composer. A collection of 16 anonymous suites for scordatura violin and continuo (*GB-Och* Mus.940) can be attributed to one of the Readings active in Restoration England, as some of the movements were copied by Thomas Britton into the manuscript *Lbl* Add.22098 and attributed to 'Mr Reading'. The last piece, a chaconne with 50 variations, was also printed in a mangled form as *Mr Readings Ground* in *The Division Violin* (London, 1684/*R*, 2/1685[10]) and became quite popular. It has been attributed to the organist John Reading (i), but the Valentine Reading who was paid for attending James II at Windsor with a group of court string players in summer 1686 is a more likely candidate. He has often been confused with the Balthazar Reading who played the bass violin in James II's Private Music. He may have died by 1704, for one of the *Letters from the Dead to the Living* attributed to Tom Brown, who died in that year, has Henry Purcell writing to Blow from the 'infernal shades' that 'Poor Vol Redding' is 'quite tired with his Lyre-way-Fiddle, aand has betaken himself to be a Merry-Andrew to a Dutch Mountebank'. Violin scordatura had previously been used in England by Davis Mell and Thomas Baltzar, but *Och* Mus.940 is the first collection to explore the device in depth: it requires no fewer than 12 tunings. The suites are well written for the instrument and merit revival. Valentine may also be the author of a three-part suite attributed to 'Mr. Redding' (*US-NH* Filmer 9). Lot 45 in the sale of Thomas Britton's library was 'Six sets of books of Redding's Lyra, 2 violins, &c. and divers authors'.

Real answer. In FUGUE, an ANSWER that reproduces exactly the notes, rhythms, and intervals of a subject. An answer in which certain intervals are altered for the sake of the fugue's key is called a TONAL ANSWER. Two famous examples of real answers are to be found in J.S. Bach's Toccata and Fugue in D minor, BWV565, and the same composer's 'Little' Fugue in G minor, BWV578.

PAUL WALKER

Realism. *See* VERISMO.

Real World. British record company. It was founded in 1989 by the British singer and songwriter Peter Gabriel and the organizers of the WOMAD (World of Music, Arts and Dance) festivals. Inspired by the success of WOMAD in introducing musicians from around the world to European audiences, Real World aimed to provide such musicians with access to state-of-the-art recording facilities and to listeners beyond their own geographical region. Most of its recordings have been made at Gabriel's Real World studios near Bristol. Annual recording weeks featuring WOMAD performers began to be held there in 1991, when 75 artists and producers from over 20 countries participated. These occasions have stimulated cross-cultural collaborations such as those of the Afro-Celt Sound System and Jam Nation.

The first five Real World titles featured musicians from the Caribbean (Orquesta Reva from Cuba), Pakistan (the *qawwālī* singer Nusrat Fateh Ali Khan) and Zaïre (Democratic Republic of the Congo) (the so-called 'soukous' of Tabu Ley Rochereau; *see* CONGO, DEMOCRATIC REPUBLIC OF THE, §III, 4) as well as Gabriel's music for Martin Scorsese's film *The Last Temptation of Christ* (1988). In its first decade the company issued over

80 albums featuring musicians from every continent. Among its biggest-selling releases were albums by the Ugandan singer and songwriter Geoffrey Oreyema and the singer Sheila Chandra, and a collaboration between Nusrat Fateh Ali Khan and the producer Michael Brook. Real World also promoted such important artists as Youssou N'Dour (Senegal), Papa Wemba (Democratic Republic of the Congo), Remmy Ongala (Tanzania), Ashkabad (Turkmenistan) and Yungchen Llamo (Tibet).

DAVE LAING

Reaney, Gilbert (*b* Sheffield, 11 Jan 1924). English musicologist. He studied music and French at Sheffield University (1942–3, 1946–52; BA 1948, BMus 1951), taking the MA in 1951 with a dissertation on the ballades, rondeaux and virelais set by Machaut. After studying at the Sorbonne (with a grant from the French government) on the Roman de Fauvel (1950–53) he was a research fellow at the universities of Reading (1953–6) and Birmingham (1956–9); he was also active in preparing early music conferences and programmes for the BBC and gave concerts with his London Medieval Group, which visited the Continent. He then spent one term as visiting professor at the University of Hamburg (1959–60) before being appointed associate professor (1960) and professor (1963) at the University of California at Los Angeles. Having worked for many years in close contact with Carapetyan, he became assistant editor of *Musica disciplina* (1956) and general editor of the series Corpus Scriptorum de Musica of the American Institute of Musicology (1966); since Carapetyan's death he has continued both duties, sharing the work for *Musica disciplina* with d'Accone. He retired from UCLA in 1997.

Reaney's main research interests were medieval and Renaissance music, theory and literature. The range and importance of his outstanding contribution to musicology are demonstrated by his editions of Vitry's and Franco's treatises as well as the nine other volumes he prepared for Corpus Scriptorum de Musica, the seven volumes of *Early Fifteenth-Century Music* (1955–83), and particularly the two RISM volumes on sources of polyphonic music from the 11th century to the 14th (1966), which comprise the first complete survey of this material. Many of his most significant findings are contained in his specialized articles; both these and his comprehensive general studies are marked by characteristic objectivity, clarity of argument, a concise style and thorough knowledge of widely varying subjects.

URSULA GÜNTHER

Rebana [rabana, rebano]. A term for a frame drum and a conical drum in Malaysia and Indonesia. The *rebana* frame drum has a goatskin head laced with rattan or tacked to a wooden frame, and is often tautened by pressing a piece of rattan into its inner rim. Some rebana have an additional cane hoop at the base end of the body and several wood wedges which are inserted between the body and the hoop to tauten the drum head. *Rebana* may vary from 12 cm to 45 cm in diameter. The frame drum with a tacked drum head is also called *kompang* in Malaysia, while the type with a tacked head and jingles inserted in the wooden frame is called *hadrah*, *rebana kercing*, *tar*. In some areas of Sumatra frame drums are called *rapa'i*; in Java they are called *terbang*. *Rebana* frame drums are most often played in ensemble, in an interlocking style, to accompany the singing of *zikir* (songs in praise of God and the Prophet Muhammad) and religious and ceremonial processions. In Malaysia they are also found in various theatrical ensembles such as *mekmulung* and the Islamic-derived vocal forms known as *hadrah*, *dabus*, *rodat* and *rebana kercing*.

The *rebana riba* (*redap*) is a frame drum with a cowhide membrane which has the same basic construction as the usual *rebana*. Formerly it was used in the *main puteri* healing ceremony, but has been replaced by the double-headed *gendang* (barrel drum).

The *rebana besar* ('large') of West Malaysia is the largest of the conical drums, with a head of at least one metre in diameter and a height of 1·2 metres. The body is made of *merbau* hardwood and the buffalo- or cowhide head is braced by a cane hoop and laced with rattan thongs, attached to a separate cane hoop at the base end of the body, while 15 or more wooden tuning wedges are inserted between the base of the body and the cane hoop. The drum is suspended with the head in a vertical position and played by two players, using their hands. Found only in the state of Kelantan, this drum primarily accompanies the singing of *zikir*. The *rebana kecil* ('small') or *rebana anak* ('child') is identical in construction, but smaller in size and may be used on ceremonial occasions.

The *rebana ubi* (for illustration *see* MALAYSIA, fig.2), originating in Kelantan, Malaysia, is similar to the *rebana besar* in construction but is made in several sizes, all slightly smaller than the *rebana besar*. The tuning wedges vary in number from 11 to 15 or more. The wedges, rattan laces and the rim of the drum head are painted in bright colours and with geometric patterns. The drum, usually played by two players, is placed on the ground with the drum head in a vertical or horizontal position and is beaten with a padded beater or with the players' hands in an interlocking style. A typical ensemble consists of at least six to eight drums. *Rebana ubi* are played for entertainment after the rice harvest and in urban settings on festival and ceremonial occasions. They are probably best known in Kelantan for their use in drum competitions between villages and towns. (P. Matusky: 'An introduction to the Major Instruments and Forms of Traditional Malay Music', *AsM*, xvi (1985), 133–6)

JACK PERCIVAL BAKER DOBBS/PATRICIA MATUSKY

Rebec [rebeck, rebecke, rebekke] (Fr. *rebec*, *rebecq*, *rebecquet*, *rebet*; Ger. *Rebec*; It. *rebeca*, *ribeca*; Lat. *rebeca*, *rebecum*; Sp. *rabé*, *rabel*, *rebequin*). A bowed instrument with gut strings, normally with a vaulted back and tapering outline. Derived from the Byzantine *lūrā* and the Arab RABĀB, rebec-type instruments have been known in Europe under different names and in various shapes from the late 10th century or early 11th to the present day, but their use in art music was chiefly during the Middle Ages and Renaissance. In the Hornbostel-Sachs classification system the rebec is classed as a bowed lute (or fiddle).

A detailed account of the rebec with its various spellings from the 13th century onwards is given in Downie's dissertation (1981). For the purposes of this article the term 'rebec' is applied to any instrument covered by the definition above, including its forebears of the 11th and 12th centuries. (Some instruments which have a vaulted back and visible corners are described by certain writers as rebecs and by others as fiddles.)

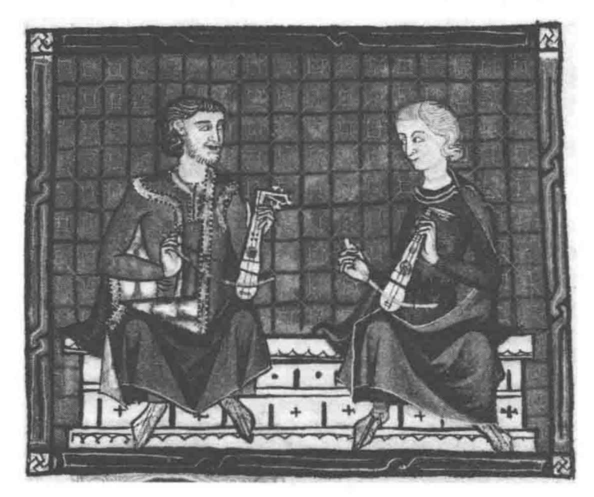
1. Terminology. 2. Structure and development. 3. History. 4. Repertory.

1. TERMINOLOGY. The terminology of early European rebecs reflects their Byzantine and Arab origins. Martin Gerbert, in his *De cantu et musica sacra* (St Blasien, 1774/*R*), reproduced a drawing from a 13th-century manuscript (since destroyed) from the monastery of St Blasius. It shows a pear-shaped instrument with one string and a bow, clearly labelled 'lyra'. A related instrument in the slightly earlier *Hortus deliciarum* of Herrad of Landsberg (formerly in *F-Sm*, but now also destroyed) was described as a 'lira'. Hieronymus de Moravia, in his *Tractatus de musica* (after 1272), gave a tuning for the 'rubeba', which from its description seems to have been similar to the Moorish *rabāb*. From about this time onwards, other words of the same derivation were apparently used to describe instruments of the rebec family, including the French 'rebebe', 'reberbe' and 'rebesbe', and the English 'ribibe', 'ribible', 'rubebe' (although this term was sometimes also used for the jew's harp), 'rubible' and 'rybybe'. 'Gigue' appears frequently in literature of the 13th and 14th centuries (leading to 'Geige' in German), and is thought to have applied in general to rebec-type instruments, although it may sometimes have referred also to the medieval fiddle (*see* GIGUE (ii)). Its players (*gigatores*) were, however, listed separately from fiddlers (*vidulatores*) in many Latin sources, although in the early 14th-century poem *Der Busant* 'fedele' and 'gige' are used for the same instrument, thus emphasizing the generic use of the word 'fiddle' for any instrument played with a bow. The 'fiðelere' mentioned in the *Glossary* of Aelfric, Abbot of Eynsham (*d* *c*1020) may well have been one of the earliest players of a rebec-type instrument in England.

The word 'rebek' is found in an early 12th-century list of Arabic and Latin terms (*F-Pn* lat.14754, f.244*v*) but variant forms of that spelling do not become frequent until the 14th century. (The well-known 'rebecam' cited in a poem by Aimeric de Peyrac, Abbot of Moissac – see §2 below – does not, as often stated, date from *c*1300, as

he lived from *c*1340 to 1406.) Tinctoris (*De inventione et usu musicae*, *c*1481–3) stated that the 'rebecum' was sometimes called the 'marionetta'. As medieval instruments were not standardized, there was inevitably a great deal of overlap among their names. A visual example of the rebec's being denoted by the generic use of the word 'fiddle' occurs in Lydgate's *Pilgrimage of the Life of Man* (1426, *GB-Lbl* Cotton Tiberius A.vii, f.79*v*), translated from Deguilleville's *Le pélerinage de la vie humaine* (1355), where 'ffedle' in the text is illustrated by an unmistakable rebec in the margin. Conversely, John Palsgrave's *Lesclarissement de la langue francoyse* (1530) uses French cognates of 'rebec' to describe not only the rebec, but also the 'fyddell' and 'croude'. Virdung (1511) and Agricola (1529) described rebecs as 'clein [kleine] Geigen', while Praetorius (1618) included them among the 'kleine Poschen'; he used the diminutive 'Rebecchino' for a violin. From the 16th century onwards the rebec was often called by the various names of its offshoot, the Kit.

2. Structure and development. The vaulted back of the rebec is generally carved from one piece of hard wood and the instrument tapers in such a way that there is often no visible distinction between the body and the neck. The fingerboard, when one exists, is a raised part of the narrowing soundboard or is fixed to it from above (sometimes with a wedge as on early violins), but this does not change the frontal outline of the instrument. It is thought that early rebecs had no soundpost, but soundposts are found on similar instruments made since the Renaissance, such as the Bulgarian *gadulka* and the Greek *lira*. The design of the soundholes, peg-holder, pegs, tailpiece or other string-holder, bridge, strings and bow varied during the Middle Ages, presumably according to the function the instrument was to perform, and on the same lines as the medieval Fiddle. As on the fiddle, the bridge was either flat, so that all the strings could be sounded together, or else made in such a way that each string could be bowed separately. If the bridge was not curved, other devices included grooves for the strings being set at different levels, or studs of different heights set into the tailpiece, as can be seen in fig.1.



In the first four centuries of its history there were two main types of rebec (figs.1 and 2): the completely wooden pear-shaped instrument terminating in a flat peg-holder (similar to the modern Greek *lira*), and the skin-bellied, narrower instrument with its right-angled pegbox (the latter may be the 'rabé morisco', mentioned by the 14th-century writer Juan Ruiz in his poem *El libro de buen amor*, which has survived in the *rabāb* of North Africa). While continuing their separate existences, both contributed to the traditional type of European rebec that appeared in the late 13th century and became established in the 14th. This type, occasionally fretted, was approximately pear-shaped, with a wooden soundboard, a sickle-shaped pegbox, usually ending in a scroll or carved head, and a tailpiece (fig.3). It seems to have coincided with the general appearance of the word 'rebec', and may have been that type of 'rebecum' which, according to Tinctoris, was invented by the French. Meanwhile experiments continued, and the right-angled pegbox, hitherto used mainly in southern Europe, now spread to the north.

Just as the shape varied, so did the size of the instrument and the number of strings. Although the average was three, any number from one to five was quite usual;

1. Rebec with tailpiece studs at different heights: illuminated initial from an English Bible, c1130 (GB-Lbl Roy.1.C.VII, f.92)

occasionally there were more. Sometimes they were grouped in pairs, each pair tuned to one note, and a lateral drone was not unusual before 1300 (fig.4). Instruments of the *rabāb* type seem to have kept on the whole to two strings which, according to Hieronymus de Moravia, were tuned in 5ths, to *c* and *g* (or notes relative to those). Aimeric de Peyrac indicated a high pitch by comparing the sound of the rebec to women's voices ('Quidam rebecam arcuabant muliebrem vocem confingentes') in his poem *Lamentacio cantorum* (see Bec, 1992, p.139). The Italian poet Simone Prodenzani referred in a sonnet of *c*1400 to 'rubebe', 'rubecchette' and 'rubicone', suggesting three different sizes of rebec. In 1532 Hans Gerle gave tunings for 'kleynen Geigleyn' in four sizes. These were notated in a type of German lute tablature

2. Rabāb-type rebecs with right-angled pegboxes: miniature from the Cantigas de Santa María, Spanish, c1270–90 (E-E b.I.2, f.118r)

3. Angel with fully developed European rebec: detail from 'Virgo inter virgines' ('Virgin and Child Enthroned with Female Saints') by Gerard David, before 1509 (Musée des Beaux-Arts, Rouen)

4. Pear-shaped rebec with lateral drone string: miniature from an English psalter, early 13th century (GB-Ob Ashmole 1525, f.102r)

and the pitches were unspecified; Downie (1981) has suggested the following: discant *g–d′–a′*, alto and tenor *c–g–d′* and bass *C–G–d–a*. Agricola's tunings of 1545 were specified as discant *g–d′–a′*, alto and tenor *c–g–d′* and bass *F–G–d–a*. This last example shows that tuning only in 5ths cannot have been universal; indeed, those rebecs that had three or more single strings sounding together needed a tuning suitable for regular drones. As the medieval fiddle was often tuned in 5ths, 4ths and octaves, and possibly also the pear-shaped but plucked gittern, it seems reasonable to assume that this tuning may sometimes have applied to the rebec as well. Many continental representations show instruments which could have been plucked or bowed, but this rarely occurs in English iconographical sources.

From the time of their appearance, there has been a tendency for instruments of the rebec family in southern Europe and northern Africa to be played down in the lap, with the bow gripped from below. This is clearly seen in the *Cantigas de Santa María* manuscript (fig.2) and in the Psalter of Alfonso V of Aragon (*GB-Lbl* Add.28962, f.82*r*; fig.5). However, Giovanni di Nicola's *Virgin and Child Enthroned* (Museo di S Matteo, Pisa) is one of several pictures where rebecs of the *rabāb* type are played up at the shoulder. It seems that the latter position was usual in northern Europe, the downward position in the south; also that in the north the strings were pressed down by the fingers and in the south they were touched from the side by the fingernails. However, such generalizations reflect only tendencies and not fixed rules, and everywhere there was considerable variety in the manner of performance. The downward position seems to have been virtually unknown in England.

Of the few rebecs which survive from the Middle Ages, one typical of the *lira* type was excavated in Novgorod on the site of a house which was destroyed by fire in May 1368, and is now, together with fragments of other such instruments, in the Institute of Archaeology of the Russian

5. Rebec played in the lap: miniature from the Prayer Book of Alfonso V of Aragon, Italian or Spanish, c1442 (GB-Lbl Add.28962, f.82r)

Academy of Sciences, Moscow (see Crane, 1972, p.16 and fig.11). Other rebec-type instruments survive in museums but they are mainly either later imitations and forgeries or folk instruments. (These are described by Downie, 1981, as are former 'rebecs' now believed to have been plucked.)

3. HISTORY. Although for some time bowing was not fully accepted in the higher social circles of Asia, it was widely adopted in Europe after the bow's establishment there in the 10th and 11th centuries. Instruments of the rebec family were deemed by Romanesque artists worthy to be played by the Elders of the Apocalypse and by David's minstrels, and at the Portada de las Platerias at the Cathedral of Santiago de Compostela David himself is depicted playing one. During the Middle Ages and Renaissance, the rebec was a recognized instrument of professional minstrels who, dressed in special livery, played in royal courts or were attached to a town or noble household. Such was the rebec player carved on the Minstrels' Pillar at St Mary's Church, Beverley, Yorkshire, during its rebuilding after the tower collapsed in 1520. In the *Knight of La Tour Landry* (before 1450) the 'ribible' is referred to as one of the instruments 'as longithe to a mynstralle'.

In rustic society the rebec was prominent at village revels, and as such can be seen carved, together with a pipe and a horn, round a 14th-century window in St Mary's Church, Lawford, Essex. While wind instruments were more usual in the fields, the undated French poem *Bellefoiere* describes the 'hoarse rebec of the cowherds' being played with the bagpipes. Its bucolic associations are many. In Lydgate's *Pilgrimage of the Life of Man* people are taught 'to revelle at taverne on rebube and on symphonie', while in Langland's *Vision of Piers Plowman* Gluttony goes into a tavern and finds there 'a rybibour and a ratoner, a rakere and hus knave'. In 1628 Parisians were forbidden to play any form of violin in taverns, but the rebec was allowed to remain, and it was still known in such situations in the 18th century.

Processions, whether sacred or secular, often included rebecs. The 14th-century Tickhill Psalter shows David, holding the head of Goliath, being escorted by musicians singing and playing two rebecs, a citole, fiddle and four trumpets (fig.6). Gentile Bellini's *Procession of the True Cross in the Piazza S Marco* (1496) shows two groups of musicians, one playing trumpets, shawms and sackbuts,

6. David, with the head of Goliath, escorted by musicians singing and playing two rebecs (left), a citole, fiddle and four trumpets: miniature from the Tickhill Psalter, 14th century (US-NYp MS Spencer 26, f.17r)

and the other, nearer to the Cross, playing a rebec, lute and harp (*see* CHORUS (i), fig.3). In 1536 the mystery play *Les actes des apôtres* at Bourges was preceded by a parade round the town: one of the floats represented Heaven, and on it were 'two ... little angels, singing hymns and canticles, who joined with players of flutes, harps, lutes, rebecs and viols, walking around Paradise'. A painting (1615) by Alsloot of a float in an *ommegang* procession at Brussels shows the Muses playing a lute, harp, viola, rebec (? or kit), flute, ?cittern, bass violin, triangle and tambourine, while Apollo plays a harp (*see* BRUSSELS, fig.1).

The use of rebecs at feasts, dances and entertainments of the nobility has been widely documented. Johannes de Garlandia listed the 'giga' among other instruments to be seen in the houses of rich Parisians in the 13th century. Edward I had among his minstrels three *gigatores* from Germany, who took part in the celebrations at Westminster on Whitsunday 1306. The French poet Eustache Deschamps wrote that 'at royal courts everyone wants to play the trumpet, gittern and rebec'.

At the court of Henry VIII rebec players (listed in the accounts) included John de Severnacke, Thomas Evans and Great Guilliam, and the types of occasion on which they played were described by court scribes and visiting foreigners; these included a feast where, according to the Venetian visitor Sagudino, 'in the centre of the hall there was a stage on which were some boys, some of whom sang, and others played on the flute, rebeck and harpsichord' (see Stevens, 1961). In the Revels Accounts of 1513 Richard Gibson described a pageant he had produced. Called the 'Ryche Mount', it was an elaborate replica of a mountain, decorated with symbolic plants (such as broom for Plantagenet) and drawn into the hall by two 'myghty woordwossys or wyld men'. Six minstrels stood on it, playing rebecs and 'tambourines' (probably pipes and tabors in this context) while lords and ladies descended from it to dance. At the wedding in Florence in 1539 of Cosimo I, Duke of Florence, to Eleonora of Toledo, the elaborate *intermedi* ended with the appearance of 20 *bacchantes*, eight of whom played disguised instruments, one being a stag's head containing a 'ribecchino'. When Mary Queen of Scots returned to Edinburgh from France in August 1561 and was trying to sleep, 'five or six hundred scoundrels of the town serenaded her with wretched violins and small rebecs, of which there is no lack in this country; and they began to sing psalms than which nothing more badly sung or out of tune could be imagined' (Brantôme; see Boyden, 1965, p.59).

4. REPERTORY. The rebec dates from the period when music was seldom written for specified instruments but was played on whatever was available and suitable for the occasion, and although it survived into the Baroque era it did not at that time normally appear in art music. This apart, the earlier ways in which it was used are broadly those described for the medieval fiddle; it was particularly used for dance music and the accompaniment of songs. From the 16th century onwards several pieces of music specify rebecs of different sizes. Gerle left pieces in four parts, based on German songs, to be played on a whole consort of 'kleynen Geigleyn' (reproduced in Downie, 1981, pp.547–50). Florentine carnival songs include the *Canto di lanzi sonatori di rubechine* (reproduced in McGee and Mittler, *EMc*, 1982). This describes

German mercenaries in Florence playing the small 'rubechine', which were held on the arm, could be played while dancing and gave a sound of 'divine sweetness', and the 'rubechaze', which were played on the knees and were therefore too large for their performers to dance at the same time. The rebec's appearance in a broken consort is exemplified by the above-mentioned piece from the Florentine wedding. Composed by Corteccia in four parts to the words 'Baccho, Baccho, e u o e', its voices would have been doubled by the instruments (probably playing divisions), and as the rebec was a small one it may have played the top line.

Certainly the music played on the rebec depended to a great extent on the tone of each individual instrument, and as there was no standardization of structure each one's sound must have been very different. Indeed, this is evident not only from modern reconstructions but also by comparison of the 'hoarse rebec' in *Bellefoiere* with the instrument described by Tinctoris:

> And I am similarly pleased by the rebec, my predilection for which I will not conceal, provided that it is played by a skilful artist, since its strains are very much like those of the fiddle ['viola']. Accordingly, the fiddle and the rebec are my two instruments; I repeat, my chosen instruments, those that induce piety and stir my heart most ardently to the contemplation of heavenly joys. For these reasons I would rather reserve them solely for sacred music and the secret consolation of the soul, than have them sometimes used for profane occasions and public festivities.

MARY REMNANT

Rebel. French family of musicians. They held court and stage appointments for three generations, from about 1661 to 1775.

(1) **Jean Rebel** (*b* Paris, *c*1636; *d* Versailles, 1692). Singer. The son of Antoine Rebel, a shoemaker, he entered the royal chapel as a tenor in 1661. In 1672 he combined this post with that of *chantre ordinaire de la reine* and was described as a countertenor. He also took part in court ballets (*Ballet royal des muses*, 1666; *Suite du carnaval*, 1668; *Divertissements de Chambord* and *Ballet royal de Flore*, 1669; *Le bourgeois gentilhomme*, 1670). He sang and conducted the orchestra in the *Ballet des ballets* (1671) and participated in the first performances of Lully's early *tragédies lyriques*, *Cadmus et Hermione*, *Alceste* and *Isis*. In April 1683 he took part in a competition for posts at the royal chapel, but failed on the second test. He was married to Anne Nolson and had five children: Louis-François, Marie-Thérèse, Jean-Fery, Anne-Renée and another daughter who became a nun at Saint-Cyr. When his wife died he married Françoise Cantais, who bore him six children: Jean-Thomas (1675–1718), who became *symphoniste de la chambre*, Louis, Hélène, another Louis, Arnoult and Marie-Anne. His third wife, Nicole Michelet, bore him another daughter, Marie-Thérèse. His brother Robert was an *ordinaire de la musique du roi*.

(2) **Anne-Renée** [Renée Anne] **Rebel** (*b* Paris, bap. 6 Dec 1663; *d* Versailles, 5 May 1722). Singer, daughter of (1) Jean Rebel. At the age of ten she sang in Lully's *Cadmus et Hermione* and in *Alceste*, and she then received the title of *ordinaire de la chambre*. On 9 July 1684 she married Michel-Richard de Lalande. Their two daughters Marie-Anne (1686–1711) and Jeanne (1687–1711) also became proficient singers.

(3) **Jean-Fery Rebel** [le père] (*b* Paris, bap. 18 April 1666; *d* Paris, 2 Jan 1747). Violinist, harpsichordist, conductor and composer, son of (1) Jean Rebel. He showed talent for music by the age of eight. Having attracted the notice of Lully, he became his pupil in violin and composition. The *Mercure galant* mentioned him in December 1700 as one of the 'instrumentalists from the Opéra' who accompanied Philippe of Anjou to Spain. From 18 August 1705 he was one of the 24 Violons du Roi and then became *batteur de mesure* in that ensemble and in the Opéra orchestra. On 30 March 1718 he obtained from Michel-Richard de Lalande rights of reversion to the post of chamber composer to the king, and he duly succeeded his brother-in-law in this post on Lalande's death (see illustration). He and his son François were also musicians in the royal chapel. Rebel had powerful patrons, to whom he dedicated some of his works, including the sonata *La Terpsicore* to the wife of John Law, the financier, and *Les élémens* to Prince Carignan. He married Claude-Catherine Couty and had six children: François, Madeleine-Angélique, Jean-Charles, Hélène-Julie, Louise-Anne and Anne-Louise. As he grew older he gradually gave up his various posts in favour of his son François.

Apart from some *Leçons de ténèbres*, now lost, Jean-Fery Rebel's works are secular. His earliest pieces are trio sonatas and sonatas for violin and continuo, the latter composed about 1695 and published in 1712. All these sonatas have titles: *Le tombeau de Monsieur de Lully* is a superb tribute to the dead master. Rebel is thus one of the first composers of sonatas in France, along with Charpentier, François Couperin (ii), Elisabeth Jacquet de La Guerre and Sébastien de Brossard. He published two other collections of chamber music: *Pièces pour le violon avec la basse continue, divisées par suites de tons, qui peuvent aussi se jouer sur le clavecin et sur la viole* (1705) and *Sonates à violon seul mellées de plusieurs récits pour la viole* (1713). At the age of 36 he composed his only opera, *Ulysse*, which proved unsuccessful when performed at the Académie Royale (it had only '5 or 6 performances' according to a note on one of the extant copies). A fragment (Act 3 scene v) was revived in *Télémaque, ou Les fragments des modernes* by Danchet and Campra, performed in 1704.

Jean-Fery Rebel: engraving by Jean Moyreau after Valeau, after 1725

Rebel's dance music, on the other hand, was extremely successful. His first such work was a *Caprice* choreographed for the famous Mademoiselle Prévost. The work was revived several times between its composition and 1749. *Les caractères de la danse*, a highly original piece, was performed by the most famous women dancers of the period, Françoise Prévost, Marie Sallé and Marie-Anne Cupis de Camargo. It was even staged in England in 1725. The work is a kind of potpourri of the various dances in fashion at the time. *La fantaisie* and *Les plaisirs champêtres* were also very popular. Rebel's last work was *Les elemens*, preceded by a movement called *Cahos* ('Chaos'). The two pieces were originally composed and performed separately in 1737 and 1738, and then published and played together, *Cahos* serving as an introduction to the suite of dances making up *Les elemens*. Its harmonic daring, its orchestral colouring and the originality of its conception make *Cahos* a masterpiece of 18th-century French instrumental music. Rebel was the first French composer to give dance a place of its own outside dramatic spectacles. As well as being innovative, these choreographed pieces bear witness to Rebel's art, with their play of orchestral timbres, their nuances, their contrasts produced by the juxtaposition of dances in different moods and their outstanding rhythmic effects.

WORKS

all printed works published in Paris

INSTRUMENTAL

Pièces . . . divisées par [3] suites de tons (vn, bc)/hpd/viol (1705)
Recueil de 12 sonates à II et III parties (2 vn, b viol, bc)/hpd (1712)
[12] Sonates, vn, bc, . . . mellées de plusieurs récits, b viol (1713)
Choreographed 'symphonies': Caprice, 3 vn, vc, bc (1711); Boutade (2 vn, viol, bc)/hpd (1712); Les caractères de la danse, fantaisie, 2 vn, bc, with opt. fl, ob, bn in some movts (1715); La Terpsicore, sonate, vn, fl, bc (1720); Fantaisie, 5 fl, 2 vn, bc, with opt. vc, tpt, timp in some movts (1729); Les plaisirs champêtres, 2 vn, bc, with opt. fl, ob, bn in some movts ([1734]); Les elemens, simphonie nouvelle (2 vn, 2 fl, bc, with opt. va, ob, bn, hn, vc in some movts)/hpd ([1737–8]), ed. C. Cessac (Paris, 1993); La petite Drôt, 2 vn, b viol, bc, *D-Dlb*
3 pieces in collections of airs by Lalande

VOCAL

Ulysse (tragédie lyrique, prol, 5, H. Guichard), Paris, Académie Royale, 23 Jan 1703 (1703)
[6] Leçons de ténèbres, perf. Concert Spirituel, lost, collab. M.-R. de Lalande
19 airs in Recueils d'airs sérieux et à boire (1695–1708)

(4) **François Rebel** [le fils] (*b* Paris, 19 June 1701; *d* Paris, 7 Nov 1775). Violinist, theorbo player,conductor, composer and opera director, eldest son of (3) Jean-Fery Rebel. In 1714 he entered the orchestra of the Académie Royale and on 22 August 1717 obtained the reversion of his father's position in the 24 Violons. In July 1723 he went to Prague with his friend François Francoeur to see the coronation of Emperor Charles VI, and while there heard Fux's opera *Costanza e Fortezza*, in company with Tartini and Quantz. From then on the careers of Rebel and Francoeur were indissolubly linked. They played

violin duets together at the Concert Spirituel in 1726, and produced their first joint work, the *tragédie lyrique Pirame et Thisbé*, known as 'L'opéra des enfants' because of the youthfulness of its authors. Rebel was the sole composer of a *Pastorale héroïque* performed at the Académie Royale on 24 January 1733, given by the plenipotentiary ambassadors of Spain to celebrate the birth of the dauphin.

On 23 July 1733 Rebel married Anne-Auguste de Valjolly, daughter of the dancer Françoise Prévost. On his first wife's death he married Anne-Jeanne-Léonarde de la Martinière, and a month later succeeded André Cardinal Destouches as *surintendant* of the royal chamber music. On 25 December 1734 he was appointed head of the Concert Spirituel, and was *inspecteur* of the Académie Royale, together with Francoeur, from 1743 to 1753. He also succeeded his father as conductor at the Opéra from 1739 to 1748. Finally, in 1757, the king granted Rebel and Francoeur the licence of the Opéra for a period of 30 years. On 22 September 1753 he nominated Pancrace Royer to the reversion of his post as *maître de la musique de la chambre*. He concluded his career heaped with honours: he was ennobled by Louis XV in May 1760, and was made a Chevalier of the Order of St Michel. However, grave financial, administrative and aesthetic difficulties (the last-named in connection with the Querelle des Bouffons) brought his licence of the Opéra to an end on 1 April 1767. During the ten years of its duration over 30 operas had been performed at the Académie, including the works of Rebel and Francoeur themselves, and Rameau's *Dardanus*, *Les Indes galantes* and *Castor et Pollux*. In 1772 the king asked Rebel to return to the Opéra in the position of *Administrateur général*, which he left a few months before his death.

The output of Rebel and Francoeur consists mainly of works for the stage (operas, ballets and divertissements). It is difficult to distinguish between the two men's shares in these compositions, and when questioned on the subject they used to reply, 'This piece is by both of us'. La Borde, however, wrote that the 'morceaux de force' were Rebel's and the 'morceaux de sentiment' were by Francoeur. Rebel and Francoeur remained supporters of the French operatic tradition of Lully and Rameau. Their works were popular, as can be seen from the 33 consecutive performances of *Scanderberg* and the new edition of 1779, in which 'most of the divertissements are newly revised'. Rebel composed few works on his own, and is remembered chiefly for his brilliant career as a theatre director.

WORKS

STAGE

Music for many stage works written in collaboration with François Francoeur

Pastorale héroïque de la fête des ambassadeurs plénipotentiaires – d'Espagne à l'occasion de la naissance de Monseigneur le Dauphin (ballet, 1, J.-L.-I. de La Serre), Versailles, 24 Jan 1730, *F-Pa,Po* (pts)

CATHERINE CESSAC

Rebello [Rebelo, Rabello, Rabelo], **Manuel** [Manoel] (*b* Aviz, *c*1575; *d* Évora, 1647, before 6 Nov). Portuguese composer. He studied with Manuel Mendes and about 1596 became *mestre de capela* of Évora Cathedral, a post he held until his death in spite of efforts to dismiss him because of old age. In 1644 he was rated by the poet Manuel de Faria e Sousa at Madrid as one of the four best Portuguese composers, the other three being Mendes, Manuel Cardoso and Duarte Lobo. On 16 April 1647 João IV rewarded him with a dowry for his niece. The catalogue of João IV's library (1649) lists by him a 12-part *Missa primi toni*, a *Miserere* on the 4th tone for three choirs, two settings of *Ave regina coelorum*, for four and eight voices respectively, *Ave virgo gratiosa* for six voices, an eight-part psalm, two funerary motets, and seven vilhancicos (one in a negro dialect) for three to eight voices. His even-verse *Magnificat primi toni* for four voices is extant (in *P-EVc* Choirbook 3 ascribed to 'Manoel Rebelo'); the Sanctus of his five-part mass in the same choirbook is transposed Dorian music of considerable power and expressiveness (ed. in Alegria, *História*, 1973).

ROBERT STEVENSON

Rebelo [Rebello, Rabelo, Rabello], **João Lourenço** or **João Soares** (*b* Caminha, 1610; *d* Quinta de Santo Amaro, nr Lisbon, 16 Nov 1661). Portuguese composer. In 1624 he became a boy servant in the *capela* of the Duke of Bragança at Vila Viçosa, where his brother Padre Marcos Soares Pereira was employed as a singer (and from 1641 as *mestre de capela*). Rebelo probably studied with the *mestre de capela* Roberto Tornar at the Colégio dos Santos Reis Magos adjoining the chapel. Tornar also taught music to the young duke and future King João IV and, despite the fact that he was six years his junior, Rebelo became a good friend of the duke and apparently helped in developing his musical inclinations. In 1640 he and his brother Marcos accompanied the new king to Lisbon. He seems to have suffered from a mental disorder for which he was treated by order of the king, and in 1646 he was made a Commander of the Order of Christ and granted several other benefits. João IV dedicated his essay *Defensa de la musica moderna contra la errada opinion del obispo Cyrilo Franco* (?Lisbon, ?1650) to his lifelong friend, lavishing praise on his works and confessing that he had been helped in his endeavours by Rebelo's achievements. Two days before his death in 1656, João IV made provision in his will for a collection of Rebelo's sacred works to be published, stating that the composer should leave a dozen copies in the Royal Library and have the rest distributed in Spain, Italy and other places. The printed edition, in 17 partbooks, was published in Rome the following year; most of the compositions bear dates between 1636 and 1653. The library of João IV, destroyed in the Lisbon earthquake of 1755, contained several other vocal works by Rebelo, including 17 villancicos. In its massive polychoral effects, instrumental writing and vocal ornamentation, Rebelo's music represents an early Baroque tradition obviously influenced by the privileged access he must have had to João IV's rich music library and by the freedom inherent in his condition of amateur composer, in contrast to the more conservative and austere traditions dominant in Portuguese cathedral music of his time. In 1652 Rebelo married the daughter of a judge by whom he had three children. His portrait is in the ducal palace of Vila Viçosa and two lines of music identified with his initials are painted on the ceiling of one of the music rooms there.

MANUEL CARLOS DE BRITO

Rebequin (Sp.). *See* REBEC.

Reber, (Napoléon-)Henri (*b* Mulhouse, 21 Oct 1807; *d* Paris, 24 Nov 1880). French composer and teacher. Intended by his family for a career in industry, he already had a thorough scientific grounding when he found his vocation for music and began learning the piano and flute and composing on his own. At the age of 21 he entered the Paris Conservatoire to study harmony under Reicha and composition under Le Sueur, but was dismissed from their classes with an undistinguished record. His earliest works are chamber pieces dating from about 1835; his music to Act 2 of the ballet *Le diable amoureux* (the rest composed by Benoist) was performed at the Opéra-Comique on 23 September 1840. In 1851 he was appointed professor of harmony at the Conservatoire, and in 1853 the success of *Le père Gaillard* resulted in his election to the Institut as Onslow's successor. Soon after this he gave up writing for the theatre and returned to chamber music. He also began to write on music, and in 1862 he succeeded Halévy as professor of composition at the Conservatoire; from 1871 he was also inspector of the Conservatoire's branches. He was made a Chevalier of the Légion d'Honneur in 1855, and an Officier in 1870.

Reber is remembered almost entirely for his *Traité d'harmonie*, which was first published in 1862 and (with additions to the first reissue by Théodore Dubois) went through many editions. His musical output was small, but was distributed throughout his career. It gives a true reflection of its creator, who might be called a belated classicist having small regard for the masters of his own century, except perhaps for Schubert. In spite of the considerable success of his theatrical works and the fact that some of his best music is contained in his vocal *mélodies* (carefully polished and thus a rarity at a time when the *romance* had reached its lowest ebb), his enduring chief interest was in instrumental music. His piano trios were given their first performances by Saint-Saëns, with Dien and Batta; Saint-Saëns, who knew him well, wrote:

> With his predilection for the past and his exquisite courtesy of manner, he evoked a bygone age; his white hair looked as though it were powdered; his frock-coat had an air of period dress about it; he seemed like a forgotten man from the 18th century, wandering through the 19th as a contemporary of Mozart might have done, surprised and somewhat shocked by our music and our ways.

FRÉDÉRIC ROBERT

Rebet (Fr.). *See* REBEC.

Rebetika (Gk.). The *rebetika* are Greek songs associated with an urban low-life milieu frequented by *rebetes*, or *manges*, streetwise characters of shady repute, many of whom smoked hashish. The genre occupies a similar place in Greek culture to that of the tango in Argentina or to flamenco in Spain. The origins of the term remain obscure. It first appears as a description of certain Greek popular songs recorded in the USA and Turkey in the early decades of the 20th century. Influenced by the popular music of the late Ottoman Empire the *rebetika* are considered to have reached their characteristic form after a massive influx of refugees following the exchange of populations at the end of the Turkish-Greek war of 1919–22.

The songs performed in the so-called *kafé-amán* of Athens from the 1890s to the 1920s were at first indistinguishable from the popular music of Istanbul or Izmir. Instruments used in the ensembles included the *outi*, *santouri*, *kanonaki* and violin. Women singers were as popular as men and included stars like Rosa Eskenazi, Rita Abadzi and Marika Papagika. Among the better known male singers were Panayiotis Toundas, Adonis Dalgas and Kostas Skarvelis.

By the 1930s when commercial recording studios were established in Athens, a new style of music evolved incorporating elements of the Turkish style with Greek popular song. The BOUZOUKI, its miniature cousin the *baglama* and the guitar became the most common instruments of the *rebetika* ensemble. The Piraeus Quartet, who recorded a number of successful songs during the 1930s, were the prototype for such an ensemble. Two members of the quartet, Anestis Delias and Stratos Payoumdzis were from Turkey. Yiorgos Batis was from Piraeus. The fourth member of the group, MARKOS

Rebetes and refugees in the fish-market at Piraeus in 1937; the instrumentalist on the left is the brilliant saz-player, Iovan Saouz, and beside him is Mathesis

VAMVAKARIS became known as the 'father of *rebetika*'. The quartet established an earthy, spontaneous style of performance that reflected the tough conditions of the Piraeus underworld and the pleasures of sharing an *arghilé* (water-pipe) in one of the many hashish dens in the area.

Most *rebetika* songs were composed in one of three dance rhythms: the *zeibekiko*, a solo male dance (2 + 2 + 2 + 3); the *hasapiko*, or 'butcher's dance', in 2/4 or 4/4; and the *tsifteteli*, or 'belly dance', in 2/4 or 4/4.

The imposition of censorship in the late 1930s, the German occupation of Greece during World War II and the Greek civil war of 1947–9 combined to change the character of the *rebetika*. The musician credited with transforming the *rebetika* into a more broadly based genre referred to simply as *laïko traghoudi* ('popular song') is VASSILIS TSITSANIS. Tsitsanis's claim to have created a new genre was probably motivated by a desire to survive in the politically turbulent world of post-war Greece and to distance himself from the songs he had composed in the 1930s. The songs written for his partner Marika Ninou and for the legendary singer SOTIRIA BELLOU are still regarded as among the finest of the *rebetika* repertory.

The late 1950s saw the rise of the so-called *arhondorebetes* (*bouzouki* players and singers who became wealthy performing in nightclubs where Athenians paid high prices to dance and smash plates). The *rebetika* were recognized for their musical potential by the classically trained Greek composers Mikis Theodorakis and Manos Hadzidakis, both of whom began incorporating elements of the music into their own work during the 1960s. It was not until the 1970s that the original songs were revived and became popular with young audiences. From then on there has been a steady demand for the music, with new groups continuing to emerge and record companies reissuing many original *rebetika* songs.

GAIL HOLST-WARHAFT

Rebhuhn [Rephuhn], **Paul** (*b* Waidhofen, *c*1500; *d* Oelsnitz, after 10 May 1546). German teacher, dramatist and composer. Although details of his formal education have not been established with certainty, he is known to have been active in Zwickau from about 1526 to 1529 as a singer and teacher in the Latin school. After serving as Rektor in the school at Kahla, he returned to Zwickau in 1535 and became Konrektor. On the recommendation of Luther in 1542, he was made superintendent of the parishes in the vicinity of Oelsnitz. Rebhuhn was among the vanguard of German writers who used the current Latin school dramas as a prototype and converted them into the vernacular. His German biblical play *Susanna* (1536, published Wittenberg, 1537) contains his own two-voice choruses, which were sung to conclude four of the five acts of the play. He also composed eight bicinia with German and Latin texts published by Rhau in his *Secundus tomus biciniorum* (RISM 1545[7]).

CLEMENT A. MILLER

Rebikov, Vladimir Ivanovich (*b* Krasnoyarsk, 19/31 May 1866; *d* Yalta, 4 Aug 1920). Russian composer. He graduated from the philological faculty of Moscow University, receiving his musical education in Moscow under the guidance of Klenovsky and then in Berlin under K. Meyerberger and G. Müller. In 1893 he began teaching at music schools in Moscow, Kiev and Odessa, and in 1897 in Ciş̧inău where he organized a music school and a branch of the Russian Music Society. During these years he made trips to Vienna and Munich, where he familiarized himself with new schools of painting. In the years 1901–9 he made successful concert tours around Russia, and also to Vienna, Berlin, Paris, Leipzig and Florence. From 1909 onwards he lived in Yal'ta.

Rebikov's artistic strivings find parallels with contemporary trends in the symbolist movement; this is demonstrated by his use of sources from the literature and art

popular in those years. His *Ėskizï-nastroyeniya* ('Sketch-Moods') op.10 and a number of other piano cycles are imbued with the atmosphere of the painting of Arnold Böcklin and others. A long-lasting friendship linked Rebikov with the symbolist poet Valery Bryusov, whose words Rebikov set in the vocal scenes opp.16, 18 and 20.

At the end of 1900 Rebikov came forward with his manifesto on 'musical psychography', which he based on Tolstoy's thesis that 'music is the shorthand of the feelings'. According to this principle, his musical language achieved a great deal of freedom from the pre-established norms. From around this time he became increasingly experimental; this elicited conflicting reactions from his contemporaries. Rebikov was among the pioneers of whole-tone music in Europe, and frequently made use of parallel chordal movement and quartal harmonies.

The syncretism characteristic of his way of thinking and his practice of turning to extra-musical sources led Rebikov to create new genres, such as his rhythmodeclamations, melomimics and meloplastics. Rebikov's principles of reform were realized most fully in his musico-psychological dramas. Dissatisfied with the traditional aesthetics of opera, he filled his psychodramas with symbols and allegories in the spirit of mystery theatre (*Tea* ('Thea'), 1904; *Al'fa i Omega* ('Alpha and Omega'), 1911). On the other hand, when describing the feelings and actions of his characters, he also filled them with 'psychographic' specificity (as in *Bezdna* ('The Abyss'), after a story by Leonid Andreyev, 1907). Among Rebikov's better-known operas are *Yolka* ('The Christmas Tree'), after Andersen and Dostoyevsky (1900), and *Dvoryanskoye gnezdo* ('The Gentry's Nest'), which was after Turgenev (1916).

TAMARA NIKOLAYEVNA LEVAYA

Rebillé, Philbert [Philibert]. *See* PHILBERT.

Rebop. *See* BOP.

Rebotier, Jacques (*b* Paris, 7 Sept 1949). French composer, writer and stage director. He studied composition at the Paris Conservatoire (1966–71), while also pursuing courses at Paris University and the Ecole pratique des Hautes-Etudes (1967–72). He taught composition and analysis at the Sorbonne (1971–81), while simultaneously holding an advisory post in Sarcelles, in suburban Paris. He was principal inspector of music at the Ministry of Culture 1982–9. His creative processes readily feed on the relationship with spoken language, borrowing from oral poetry and the theatre of everyday life. The result is very free music, characterized by a personal approach to the organization of musical time and form.

JEAN-NOËL VAN DER WEID

Recapitulation (Ger. *Reprise*). The third and last main division of a movement in SONATA FORM, in which the thematic material introduced in the first section (the exposition), either in the tonic or in a contrasting key, is restated, normally all in or around the tonic.

Reception. A term applied both to the history of social responses to art, and to an aesthetic that privileges those responses.

1. History. 2. Aesthetics.

1. HISTORY. Well before the term 'reception' came into general use in art histories, musicologists attempted to

generalize about people's awareness of, and attitudes towards, particular repertories. Such generalizations have long played a key role in social histories of music, where the objective is above all to illuminate music's functions within society. Occasionally this has involved repertories that are remote historically or geographically, as in the reception of Bach and Palestrina by 19th-century composers, or the reception of East Asian traditions by contemporary European composers. In such cases the investigation approaches a familiar terrain of the ethnomusicologist, who is frequently concerned with the reception of repertories by alien cultures, for example, Indian classical traditions in Britain, Central Asian maqam traditions in Israel, or western popular music in the Middle East. And this in turn highlights a feature common to almost all reception histories. They are concerned less with individual responses, which are properly the subject of a cognitive psychology of music, than with collective, intersubjective responses based on determinate groups of listeners, whether these are defined by nationality, social class, cultural milieu or profession (composers, for instance). The premise, then, is that there exist certain stabilizing factors (*mentalités*) which influence the responses of particular cultural communities, establishing the frameworks within which individual acts of perception take place.

One reason for a growing interest in questions of reception has been a gradual change in our perception of familiar Classical and Romantic repertories, as musicology, like other disciplines, reacted to the caesura of modernism by allowing those repertories to acquire a certain historical distance, and thus an 'afterlife'. In its afterlife a work threads its way through many different social and cultural formations, attaching itself to them in different ways, adapting its own appearance and in the process changing theirs. The work remains at least notionally the same object – at any rate it is the product of a singular creative act – but its manner of occupying the social landscape changes constantly. In locating and describing these changes, a reception study can light up the ideology concealed in the corners of music history. And it can expose in the process some of the vested interests at work in the promotion, dissemination, influence and evaluation of musical works. In the course of such a study, the historian may collect and examine multiple data – concert programmes and advertisements, critical notices, musicological and other writings, editions, recordings, and even musical works by later composers. However, the more astute scholars are careful to focus the examination of this data in clearly defined ways. Reception histories should be more than just supposedly neutral opinion-collecting.

A further motivation for reception studies was the model provided by German literary scholarship, where the term 'Rezeptionsästhetik' was first used and an accompanying methodology developed. The seminal text here was Hans Robert Jauss's lecture *Literaturgeschichte als Provokation* of 1967 (see Jauss, 1982). But Jauss's was by no means an isolated voice. German reception aesthetics contributed to a much more widespread tendency in literary criticism since the war to demote authorial intentions, embracing, among others, American New Criticism (Wimsatt and Beardsley, 1946), French post-structuralism (Barthes, 1977), and so-called Reader-Response criticism (Suleiman and Crosman, 1980). In their very different ways, these approaches challenged an assumption that had often been implicit in earlier criticism, namely that authors might hold a monopoly over the signification of their work, or at least that they might own a privileged reading of it. Barthes put the counter-argument stridently. By stressing that the text is a 'tissue of quotations' from innumerable centres of culture, he released it from a single 'theological' meaning. At the same time he argued that its multiple origins and connotative values are focussed in one place only, and that place is the reader. As he put it, 'the birth of the reader must be at the cost of the death of the author'.

This shift in perspective was registered by musicology from the late 1960s onwards, above all in response to the German literary movement. Specialized reception histories began to appear with increasing frequency in the work of scholars with a leaning towards the sociology of music, notably Hans Eggebrecht, Zofia Lissa and Tibor Kneif. Eggebrecht's classic study of Beethoven reception provided one model for an approach which sets out to demonstrate the social construction of musical meanings, and to uncover the ideology that informs them. Yet where Eggebrecht focussed synchronically on certain unchanging themes (e.g. notions of suffering, the will and overcoming), implicitly reinforcing a characteristic identity for the music, Lissa, in her account of Chopin reception, adopted a rather different approach. By pointing out that the music was heard 'with a different ear' in particular countries and particular periods, she highlighted just how susceptible music can be to appropriation, and how easily its identity can slip away from us. Lissa set out to firm up some of the preconceptions and prejudices that condition response, and in doing so offered us an insight into what she called the 'socially formative' qualities of musical works. More recent German scholarship has tended to seek a middle road between Eggebrecht's work-centred approach and Lissa's sociology. The key figures have been Hermann Danuser and Friedhelm Krummacher, and their symposium *Rezeptionsästhetik und Rezeptionsgeschichte in der Musikwissenschaft*, held in Hanover in 1988 (published as Danuser and Krummacher, 1991, with an opening chapter by Jauss), was an event of seminal importance for reception studies in music.

Within Anglo-American scholarship a growing interest in reception was very soon part and parcel of the so-called 'new musicologies' developed in the 1970s and 1980s. Part of the mission of these musicologies, after all, was to undermine any assumption of an autonomous character for the musical work, and reception studies offered one route to this objective. Beethoven has been the paradigmatic composer for scholars from all traditions (Wallace, 1986; Geck and Schleuning, 1989; Sipe, 1992; Burnham, 1995). Chopin has also been widely explored (Carew, 1992; Chechlińska, 1992; Ballstaedt, 1994; Samson, 1994), so too has Bach (Herz, 1985; McClary, 1987; Finscher, 1989; Nowak, 1991), and of course Wagner (Zuckerman, 1964; Beckett, 1979; Turbow, 1984; Millington, 1992). Indeed reception is now so much a part of the tool-kit of historical research that it finds a place routinely in series such as the Music Handbooks issued by Cambridge University Press. Characteristically, the term is understood fairly broadly here (embracing reception by critics, composers, editors, scholars and performers), and it is usually explored as one part of a larger narrative. But at least one of the handbooks (Cook, 1993)

is tantamount to a reception study and little else. It should be added, moreover, that the subject matter of reception histories has now been extended well beyond canonic composers to include so-called *Trivialmusik* of the 19th century, as well as today's popular music; and that it has been further extended methodologically through studies of taste-creating institutions such as journals, publishing-houses, broadcasting and recording companies and of course the academy. Implicit in these studies is the larger theme of canon formation, to which a reception aesthetics is fundamental (*see* CANON (iii)).

2. AESTHETICS. It was at the University of Konstanz in the late 1960s that a coherent body of literary criticism known as 'reception theory' or 'reception aesthetics' was first developed, principally by Jauss and Wolfgang Iser. Drawing partly on Hans-Georg Gadamer's notion of a 'horizon of expectations', Jauss arrived at an understanding of literary history as a succession, and ultimately a 'fusion', of aesthetic horizons. In doing so his aim was above all to steer a course between objective historicism (which would deplete contemporary relevance) and 'mere' subjective interpretation. He went on to codify modes of interpretation, connotative categories and patterns of interaction, all of which serve to 'make concrete' the reader's experience of a text. Iser, concerned with the phenomenology of literature rather more than its history, developed further this reader-orientated approach, examining for instance how the 'implied reader' engages in gap-filling and image-making strategies as he or she produces meaning from a necessarily indeterminate text, a text which includes, as Iser put it, 'unwritten' as well as written parts. It is not difficult to see from this how reception aesthetics issued a challenge to the authority of the text, and therefore to any notion of a stable canon of great works. That challenge, it need hardly be said, bears on the study of music as well as literature.

The relevance to musicology has been addressed above all by Krummacher. He recognizes the differences from literary studies, arguing that, unlike literature, music employs a code system accessible only to initiates, that the understanding of music 'is bound to historical presuppositions and to that extent is also threatened by historical change', and that such change needs historical or anthropological reflection by initiates to make it comprehensible. (Lissa had made a similar point by granting privilege to 'expert listeners', who explicate those 'moments' that form the matrix of reception.) Yet for all the differences between literary and musical reception, certain fundamentals are common to both, and Krummacher was quick to recognize the larger value to the music historian of measuring the 'active present' (our own judgments) against a 'recovered past' (the evaluations of history). In Krummacher's work, as in the contributions of Danuser, Erik Fischer, Siegried Mauser and Susanna Grossmann-Vendrey to the Hanover symposium, reception studies hold out some promise for a productive fusion of history and criticism, where present-day and historical subjects might confront one another in such a way that 'the understanding of the text is conditioned by the self-understanding of the interpretation' (Hoy, 1978). Hoy's formulation, incidentally, lays bare the larger critical framework of philosophical hermeneutics within which a reception aesthetics ideally functions.

The value of reception histories for musicology has not, however, been universally conceded. Carl Dahlhaus in particular argued that they tend either to a relativism which treats all phases of reception as of equal value, or to a dogmatism which seeks to reinstate normative criteria of judgment. He further argued that the general tendency of a reception history is to collapse the history of music into the history of society. And finally he rejected the progressivism that he regarded as implicit in reception histories in favour of a so-called *kairos* or *point de la perfection* – a privileged receptive moment, in which the qualities of the work are perfectly attuned to the *mentalité* of its reception. These are thoughtful and challenging critiques, not least because they raise discomforting questions about just who is in a position to decide between the competing verdicts of a reception history. But Dahlhaus's critique has in its turn been countered by Krummacher, who argues that there can be a middle way between relativism and dogmatism, located in the relationship between the texts of musical works and the documents of their reception; the competing verdicts, in other words, 'can constantly be checked against the works themselves'. Krummacher further challenges Dahlhaus's theory of a *kairos* on grounds of retrospective and circular reasoning. As he put it, 'one had to know already where such a *kairos* was to be applied'.

Perhaps the most problematical dimension of a reception aesthetics concerns the stability of the work as a text. Reception studies, of their very nature, imply unstable, even receding, or 'vanishing' meanings for the artwork. Stanley Fish speaks of a 'disappearing text' (1980). Because of its challenge to determinacy – its tendency to deconstruct the work, to allow its edges to blur and dissolve – a reception study raises in a particularly acute form the issue of identity, the identity of the musical work. And for that reason it also challenges more traditional modes of historical and analytical enquiry in musicology. The challenge to analysis is arguably the more contentious, in that it reaches through to the central premise of musical analysis – the determinate musical work. Admittedly most reception studies do in practice reveal some degree of determinacy, in that although fixed meanings recede in the face of social mediation, they do so only to certain boundaries. Fish refers to 'the authority of interpretive communities', while Jan Broeckx speaks of salvaging 'residual layers of receptional insight' – precisely what an historically aware analysis sets out to do. Yet it is difficult to deny that a reception aesthetics highlights the relativity – the perspectival quality – of our analytical knowledge. Through our encounter with other historical subjects, we are constantly made aware that we ourselves construct the object of our enquiry, and that we do so within the terms of a particular 'horizon of expectation'.

JIM SAMSON

Recercada (Sp.: 'study', 'ricercare'). A term used in Diego Ortiz's *Trattado de glosas* (1553) for 27 pieces of varying intent (the 27th piece is called merely *quinta pars*). The first four pieces, for solo bass viol (called alternatively 'fantasia' in Ortiz's prefatory *dechiaratione*), all end on *G* and are devoid of any mensuration signs except a single transient *3*. There is no printed harpsichord accompaniment, but an instruction in the *dechiaratione* specifies that, if any is added, it must display ingenuity in imitating passages in the bass viol part. In the next six pieces, Ortiz assigns the *Spagna* tune to the accompanist as a cantus firmus around which the viol player weaves an unremitting contrapuntal line, with no rests. Melodic and rhythmic sequences add Baroque flavour; C is the mensuration sign in all six. The third section of *Libro secondo* contains eight contrapuntal melodies in ₵ mensuration – four to be played on a string instrument simultaneously with Arcadelt's madrigal *O felic'occhi miei*, four with Sandrin's chanson *Doulce memoire*. The last section comprises counterpoints to be played against various *tenores italianos*, repeated between two and seven times and including the *passamezzo antico*, the *passamezzo moderno*, the romancesca and the folia. The last piece is a fifth voice added to the Ruggiero pattern.

ROBERT STEVENSON

Recercar [recerchar, recerchare]. *See* RICERCARE.

Rechberger, Herman (*b* Linz, 14 Feb 1947). Finnish composer of Austrian birth. He studied graphic art and the classical guitar in Linz, Zürich and Brussels. After moving to Finland in 1970 he attended the Sibelius Academy in Helsinki, where he studied composition (with Sallinen; diploma 1976), electronic music, the recorder and the oboe. After working as a teacher, Rechberger became a producer of contemporary music at the Finnish Broadcasting Company and was head of its Experimental Studio (1979–84). A specialist in early music techniques, he has performed with the Sonores Antiqui ensemble and the vocal ensemble The Poor Knights, playing the recorder and other instruments. In 1977 he joined the board of directors of the Society of Finnish Composers and he was also a founder member of Ears Open, a society concerned with the promotion of contemporary music.

As a composer Rechberger may be described as a traveller in time and space. He uses medieval and Renaissance music as well as various ethnic sources, such as Arab music, in his compositions, and combines them with aleatory techniques, improvisation, graphic notation and other contemporary compositional devices. His works, more than 200, cover a multitude of genres, including music for tape and instruments, multimedia and

radiophonic works, happenings and sonic sculptures as well as the traditional genres. A key work in his output is *Venezia* (1985), a form of live multimedia, which depicts the life of a city with musical means but also using principles derived from fine arts, architecture and theatre. His reconstructions of ancient music include a performing version of Peri's *Euridice* (1983, revised 1993) and Greek songs of the Antiquity.

WORKS
(*selective list*)

Stage: Laurentius (church op, Rechberger), 1991; Die Nonnen (op, Rechberger, verses from the Carmina burana), 1995; Bortbytingarna [The Changeling Princesses], fairy ballet, 1997

Multimedia: L'Apparition de Papageno (musical monologue, Rechberger), 1 performer, insts, scenery, videotape/living birds, 1989; Firenze 1582 (Rechberger, O. Rinuccini), S, 2 T, Bar, 2 B, 3 tpt, 3 trbn, 1992; FIPOL–HUNGFRAITELUS (Rechberger), 2 Ct, T/Bar, B, fl, accdn, lute, t banjo, gui, kantele, db, stage equipment, 1993; Odysseia uuteen ääneen [An Odyssey into New Sound], variable ens, 1995

Radiophonic: Pekka Mikkosen nousu [The Rise of Mr Jonathan Smith] (Soile, Rechberger), 1978; The House of the Rising Sound (Rechberger), 1981; Magnus Cordius – Entries in a Diary (Soile, Rechberger), 1985; Ritmosaic, perc (5 players), tabla, synthesized perc, soundscapes, 1994

Tape: Cordamix, 1978; Noród [Nations], 1980; Moldavia, 1982; Rasenie jari [Rustle of Spring], 1984; Hangképék lóvakkal [Horses in a Soundpicture], 1985

Tape and insts: Consort Music 1, rec, inst ens, tape, 1976; KV 622 Iibis, cl, tape, 1978; fragebogen (E. Gomringer), db, pedal sounds, 1979; Sîrba, 4 cl, tape, 1982; Treis mythoi (Rechberger), rec/shawm, tape, 1982; Incantations, perc, tape, 1996; Albahr [The Sea], vc, darabuka, tape, 1997

Orch and ens: Kaamos [Polar Nights], 1973, rev. 1988; La macchina capriciosa, db, 2 fl, 2 ob, 2 cl, str, 1975; Himojen puutarha [The Garden of Delights], 1977; Consort Music 4, 1980; Consort Music 5, 1986; Golpe de corazón, gui, fl, ob, cl, bn, perc, str, 1992; Goya, 1992; Concierto floral, gui, 2 fl, 2 ob, cl, bn, hn, 2 tpt, str, 1993; Concerto nordico, gui, 2 fl, 2 rec, 2 cl, 2 tpt, 2 trbn, 2 accdn, str, 1993; La tentation de Saint Antoine, 1994; Il nave di pazzi, 1996; Opus nordicum, fl, ob, cl, bn, hn, str, 6 actors, 1996; Kahraba [Yellow Amber], vc, fl, ob, cl, bn, darabuka, str, 1996; Skab'mâ [Winter Darkness], fl, ob, cl, bn, tpt, str, 1996

ILKKA ORAMO

Récit (i) (Fr.). A generic term used in France during the 17th and 18th centuries for fragments or entire compositions for solo voice and, by extension, for solo instrument. The term was borrowed from spoken tragedy (*récit dramatique*), where it usually referred to a long monologue that brought passions to their highest point at the close of a tragedy (Brown, 109). The terms 'récit' and 'recitative' are not synonymous. All recitatives are a type of *récit*, because they are sung by a solo voice, but not all *récits* are recitatives. The difference was well understood by Lalande: within a baritone *récit* in the 'Juste judex ultionis' of his *Dies irae* (1690) he gave the label 'récitatif' to passages that were particularly declamatory.

Antoine Furetière was perhaps too restrictive in claiming (*Dictionnaire universel*, 1690) that the term was reserved for music 'sung by one solo voice and above all by a soprano'; he must have been thinking of the Versailles *grand motet* when he added that a '*belle musique* [occurs] when a *récit* is intermingled with a chorus'. As early as 1664 Lully used the term in his *Miserere* to differentiate solo from chorus; far from restricting *récits* to the soprano voice, he wrote several *récits* for two voices and one *récit* for five solo voices in the *Miserere*. Similarly, Pierre Robert combined first soprano, second soprano, *haute-contre*, tenor and baritone within 16 bars in the 'ensembles de *récits*' in the verse 'Testimonium in Joseph' from his *Exultate Deo*.

The *récit* in the *grand motet* is thus the equivalent of the *air* or *air* fragment in stage music. It may be a solo passage of a few bars' duration or, in the case of some of the later *grands motets* of Lalande, a highly developed concert aria (see, for example, 'Amplius lava me' from his *Miserere mei*).

Récit had a more specialized meaning in the 17th-century *ballet de cour* closer to its original meaning in drama. At first declaimed and after 1605 generally sung by a solo voice, *récits* were usually placed at the beginning of each section of the ballet, where they served as a commentary on the action. Although rare in the operas of Lully or Rameau, they are found occasionally in the works of the generation of opera composers after Lully that included Campra. The dramatic function of the *récit* in lyric tragedy at times approaches its role in spoken

tragedy (e.g. 'Il me méprise' from Campra's *Hésione*, 1700, which expresses the highpoint of Venus's jealous fury at Hésione).

The 18th century extended the meaning of the term to embrace solo instrumental sections in larger works; references to a *récit de violon* or *récit de flûte* are common. By mid-century the term 'récit' had fallen into disuse.

JAMES R. ANTHONY

Récit (ii). The third, short-compass, division of the classical French organ, played from an upper manual. Its soundboard was placed high in the main case so as to project the sound of melodic (solo) ranks (e.g. Cornet, Trompette, Hautbois) over the *Positif*. During the 19th century, the division became a full-compass *récit expressif*, enclosed in a swell-box (*see* SWELL, §1).

MARTIN RENSHAW

Recital. A term in use since the 16th century to denote a speech or a narrative account. In a musical context, the term denotes the performance or interpretation of a specific work. Since the mid-19th century, it has come to mean a concert given by one performer or a small group. For some early concerts described as recitals, it is not clear which of the two meanings was intended.

The use of 'recital' to describe a solo concert marked a major departure from the conventions of concert-giving. Since the early 18th century, most concerts put on by a musician in his or her own name – usually called a 'benefit concert', in German-speaking areas *Akademie* – involved a variety of performers, both vocal and instrumental (*see* CONCERT (ii)). The chief aim of such an event was not necessarily for the sponsor to display musical prowess and artistry, which was best done privately, but rather to demonstrate publicly the prominence of one's musical colleagues and patrons, and thereby to gain well-paid teaching engagements. The programme tended to be long and focussed on selections from operas and fantasies on the best-known and newest operatic melodies. Such concerts continued to be common throughout the 19th century.

Liszt can be credited for giving the most important early concerts that can justifiably be termed recitals. In his concerts of 1837–40, chiefly in Milan, Rome, Vienna and London, he reduced the number and significance of other performers in his programme, and sometimes appeared alone. He applied the term 'recital' to such an event in London on 9 June 1840 in the Hanover Square Rooms, using the term in the older sense of 'interpretation': one announcement stated that 'M. Liszt will give … Recitals on the pianoforte' and another that he would 'give a recital of one of his great fantasies'. Liszt indicated how novel and daring it was to give a concert entirely alone when he wrote to the Countess Belgiojoso during his Italian tour: 'wearied with warfare [with other musicians], not being able to compose a programme which could have common sense, I have ventured to give a series of concerts all by myself, affecting the Louis XIV style, and saying cavalierly to the public, "The concert is – myself"'.

The recital as it developed from the 1860s on was focussed on a Classical repertory, with new works generally placed towards the end. While Liszt did offer more works by Beethoven than was conventional among virtuosos of his time, the programmes where he performed alone were devoted chiefly to his own music and to contemporary works in related idioms. His programmes resembled those of a few unusually prominent performers of the late 18th and early 19th centuries – most notably Mozart and Hummel – who offered chiefly their own music but also included other soloists and an orchestra.

Other touring virtuosos performed alone from the middle of the century onwards, as the number and the pace of their concerts increased. In 1843 Ole Bull reported from Trondheim that he 'gave a concert without any assistance, playing nearly two hours without cessation. It was very fatiguing, but, at least, nothing was ruined by bad accompaniment and the audience was pleased'. Charles Hallé defined the recital as a musical institution in England. He reported in his memoirs that 'from the year 1850 I commenced to give pianoforte recitals, until then unknown in England. In London I gave them for several years at my own house, until I transferred them to St. James's Hall. In other towns I chose the most suitable concert-rooms, and found willing ears nearly everywhere'.

Recitals had become standard by the 1870s, chiefly through their close association with the newly established conservatories. In contrast with benefit concerts, they became the main context within which a performer – a pianist or violinist, with occasional exceptions – would be judged, and as such they served a specialized purpose within musical life. The widespread study of the piano by amateurs, and the proliferation of piano teachers, made the piano recital an important institution in determining the course of a musical career. This period saw the evolution of a specific genre of journalistic criticism for the evaluation of recitals. Amy Fay, an American studying in Europe, reported going to many recital-like programmes with other students at the Leipzig Conservatory in the late 1860s. She articulated the significance of such events when she declared that at two concerts Clara Schumann, her teacher, 'gave a full exhibition of her powers in every kind of music'.

The term 'recital' was subsequently adopted in France and other countries as a standard title for a concert given by a solo performer. In Germany or Austria, however, other terms – *Virtuosenconcert*, *selbständiges Concert*, *Claviervortragsabend*, *Matinée*, *Soirée* or simply *Concert* – were preferred. Both the practice of one musician performing alone and the term 'recital' were also adopted in various other contexts. Organists had long given solo concerts, and these were given the name 'recital' during the early 20th century in Britain and the USA. As the song became a major genre in its own right, concerts by individual singers emerged as a kind of recital, though they were not always so called; in Germany the Liederabend developed as a particular type of solo concert.

The recital established itself alongside the repertory of 'classical' works that was emerging as a standard for judging performers' abilities. The solo piano works of Haydn, Mozart and Beethoven, then Schumann and Brahms, became the core of this repertory, marking a dramatic change in the nature of musical virtuosity. Leading performers such as Joachim, Anton Rubinstein and Vieuxtemps who came to the fore during the 1860s adopted a less flamboyant demeanour and performed classical works much more often than most of their predecessors had normally done. In this regard the recital differed fundamentally from the benefit concert – indeed, it must be regarded as a fresh start in concert forms. The breadth and catholicity of programmes by 1900 was an important feature, establishing the expectation that a performer prove him or herself in negotiating the music of a few central composers. That was unthinkable in the days when pianists were composers and offered chiefly their own music and that of their friends.

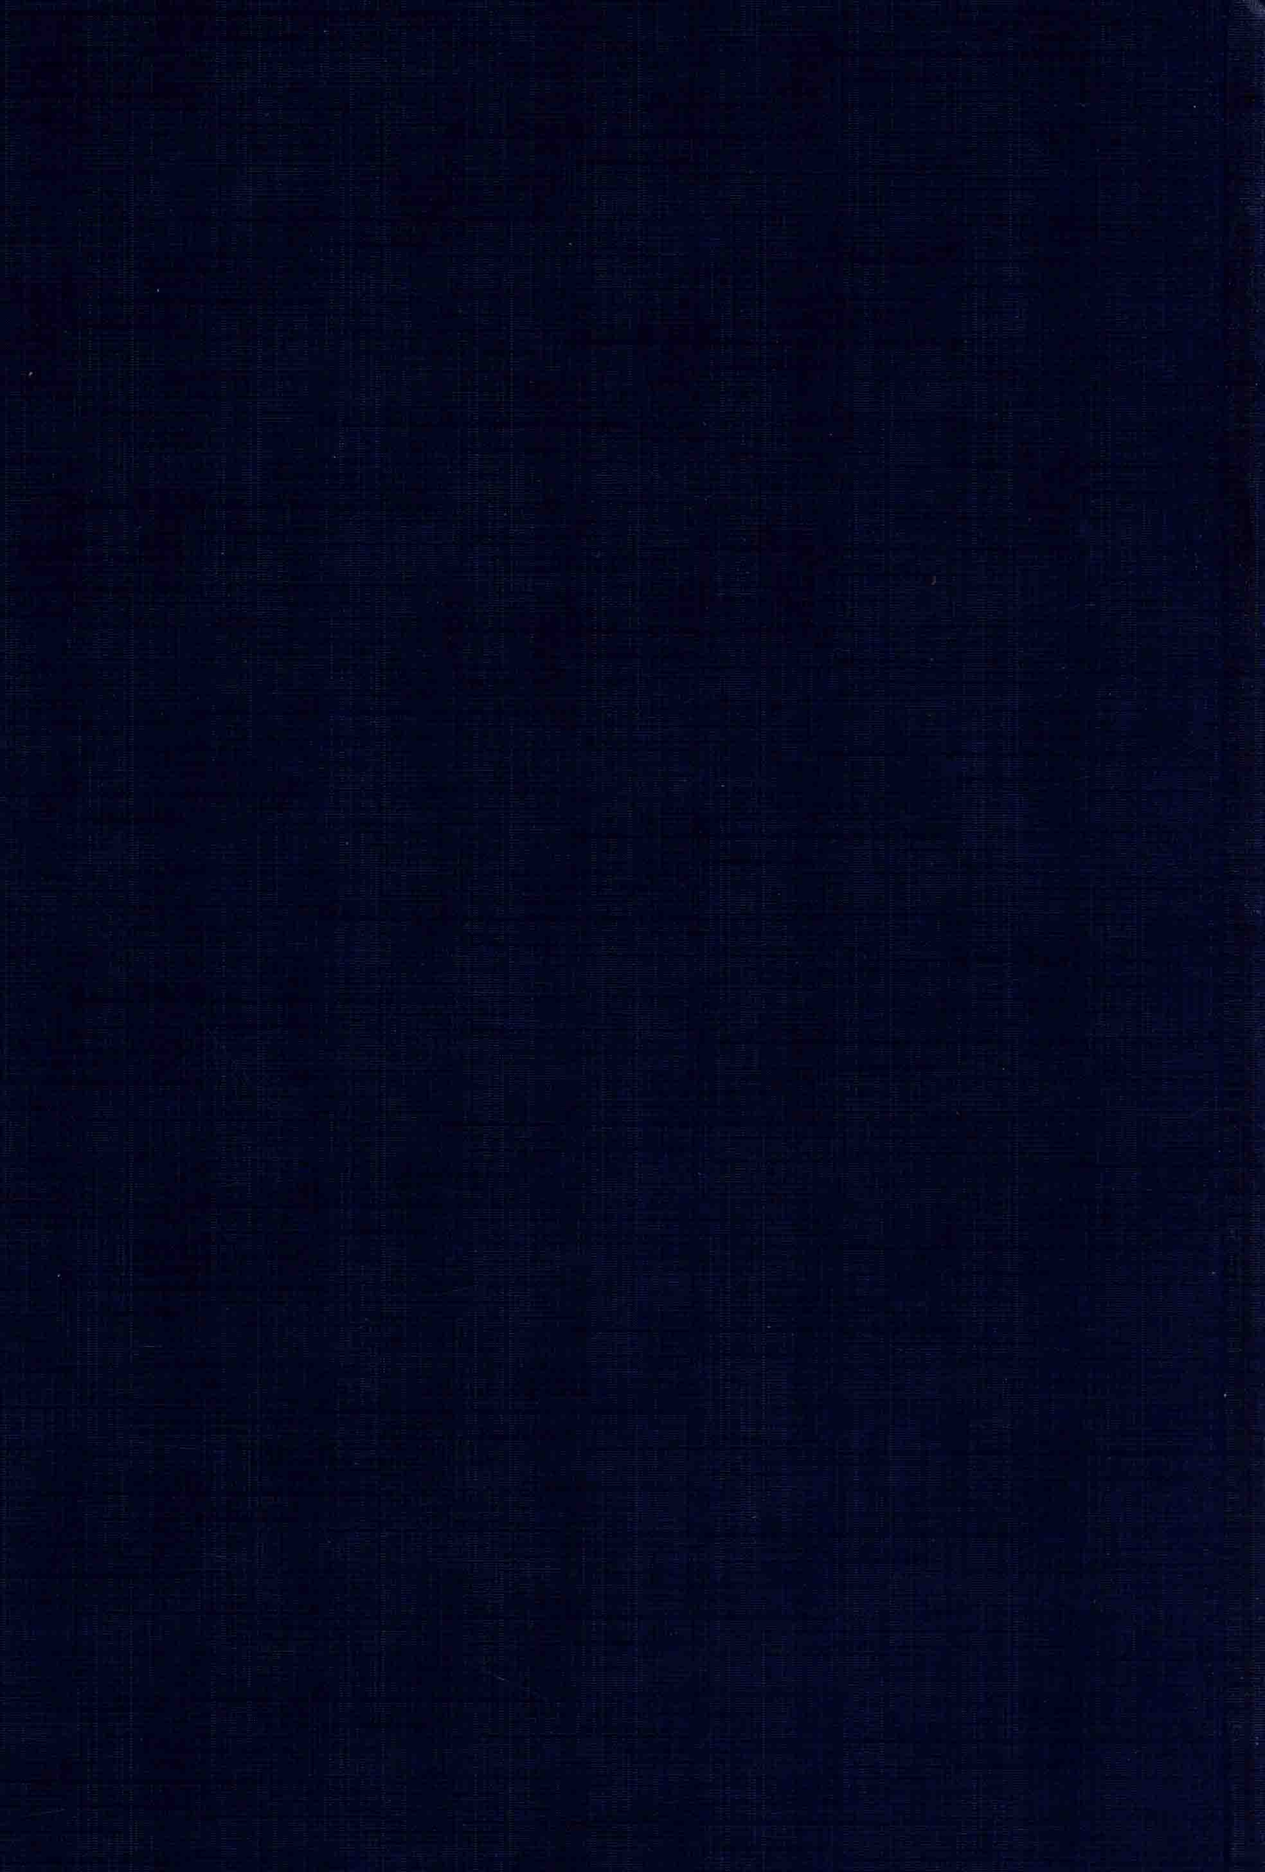
Recital programmes continued to bear a close relationship to those of vocal and chamber music concerts. A performer might offer a variety of works on the piano or the violin, along with one or more for a duo, trio or quartet, and a singer might also appear on the same programme. In 1861 Hallé included songs by Dussek and Macfarren in the first public 'Beethoven Recitals', as he called them. During the 1850s and 60s Arabella Goddard offered annual series of soirées along these lines at St James's Hall in London; on one programme she presented Mozart's String Quartet in E♭ and performed Mendelssohn's Sonata in E, the *Recueil des airs* by Dussek, Beethoven's Sonata in F♯ and Schubert's B♭ Trio. Clara Schumann gave frequent concerts of that sort, often with three other musicians but focussed on her own performances. It is therefore difficult to make a clear distinction between recitals and chamber music concerts in this period.

The growth of the international music business – piano manufacturers, publishers and most of all concert agents – gave a strong impetus to the recital. Before the middle of the 19th century a touring performer such as Spohr or Hummel went to a city not as a star performer but as a colleague; whatever his reputation, he had to establish good relations with local musicians if he was to put on concerts, and for that reason it was not proper to perform alone. By 1890 leading soloists had put their tours in the hands of powerful, highly professional agents such as Albert Gutmann in Vienna or Hermann Wolff in Berlin, who not only managed the many details of mounting a concert but also promoted musicians' careers on a broad plane. Concert life now had its own impresarios, who gave artists the status that formerly only opera singers had held. By relieving leading performers of the burden of arranging concerts, the agents helped give them far more lofty reputations than their predecessors.

By the early 20th century recitals had become one of the most common and most important concert formats. In Paris, for example, in the 1924–5 season, recitals for piano alone constituted 11% of the 2699 concerts given. In leading musical centres one or two halls have always tended to be the focus of recitals – the Bösendorfersaal in Vienna, the Beethovensaal in Berlin, the Wigmore Hall in London and Carnegie Hall in New York. One can see how rich the world of recitals – along with the teachers, conservatories and agents closely tied to it – had become in a city such as New York by scanning the issues of *Musical America* for the period. The prominence given to reviews of recitals in daily newspapers during the first half of the 20th century is itself noteworthy: evaluating a pianist's performance became the critic's most basic task. By 1890 a successful recital had become the instrumentalist's key point of entry into the world of solo performance. Recitals were a highly competitive arena from the start and usually cost performers more money than they earned. The unusually rich collection of correspondence between the highly regarded American pianist Richard Buhlig and his agents from 1905 to 1925, shows that a large part of the listeners had free tickets, that he almost never covered his expenses, and that the difference was made up by patrons and piano companies rather than by the agents. By the 1930s performers had become so hostile to agents that in cities such as Berlin they began establishing non-profit management companies.

A great variety of specialities evolved in the recital during this period. Programmes devoted to a single composer became common: Anton Rubinstein was the most important early performer of a Beethoven sonata cycle, as Schnabel was for Schubert and others were for Bach, Mozart, Paganini, Liszt and Brahms. The anniversaries of a composer's birth or death generated a related custom; Schnabel began playing Beethoven cycles in 1927. Other instruments likewise drew new interest: Wanda Landowska introduced the harpsichord as a recital instrument in 1903, and Andrés Segovia did the same for the guitar in 1908. Recitals became increasingly central to concert life by the mid-20th century. Myra Hess directed a series of recitals at the National Gallery of London during World War II that became the focal-point of musical life at that time. As fewer instrumentalists devoted themselves seriously to composition, appearances with orchestras became less important than they had been in the time of Bruch or Paderewski. Vladimir Horowitz, for example, focussed his career much more on recitals than on orchestral concerts.

The number of recitals declined significantly from the 1960s, following the decrease in the number of amateurs and the growth of competing entertainments. The rise in the importance and the fees of star performers may have played a part in this change, making it more difficult for moderately well-known performers to secure many bookings. By the end of the 20th century far fewer performers could mount an international career than had been the case in the time of Paderewski and Bauer. Performers increasingly became specialists in a particular area or period as the worlds of early music and new music developed. The recital became less important for solo performers than for ensembles known for particular kinds of repertory or performance practice.



At the same time, the greater ease of travel during the late 20th century made possible more concerts in smaller cities, especially university centres. The growing number and importance of prize competitions – the Tchaikovsky in Moscow, the Queen Elisabeth in Brussels and the Naumburg in New York, for example – brought a new vigour to the world of the recital. New kinds of celebrity recital developed, held in large outdoor venues accommodating up to 100,000 listeners. The largest of these were the concerts of the 'Three Tenors', Luciano Pavarotti, Placido Domingo and José Carreras, in the cities associated with the football World Cup in 1990, 1994 and

1998; Pavarotti drew a similarly large audience (150,000) with a televised concert in Hyde Park in London in 1992, the first classical music concert to be held in the park, while in June 1993 more than 500,000 people attended his performance on the Great Lawn of Central Park in New York, and millions more around the world watched on television.
